CYCLOPÆDIA OF INDIA

AND OF

EASTERN AND SOUTHERN ASIA,

Commercial, Industrial and Scientific:

PRODUCTS OF THE
MINERAL, VEGETABLE AND ANIMAL KINGDOMS,
USEFUL ARTS AND MANUFACTURES;

EDITED BY

EDWARD BALFOUR, L. R. C. S. E.,

DEPUTY INSPECTOR GENERAL OF HOSPITALS, MADRAS ARMY,

CORRESPONDING MEMBER OF THE IMPERIAL GEOLOGICAL INSTITUTE, VIENNA.

SECOND EDITION.

VOL. I.

MADRAS:
PRINTED AT THE SCOTTISH AND ADELPHI PRESSES.
1871.

Copyright.

PREFACE TO THE FIRST EDITION.

WHILST we find books of reference in most departments of Science and Literature in connection with European countries, daily becoming cheaper and more abundant, those who investigate or seek for information regarding the resources of British India, or any of the scientific and economic subjects connected with Eastern countries, still meet with much difficulty and hindrance, owing to the necessity of consulting numerous authors whose works are scarce or costly. And as some inquirers are without the pecuniary means of procuring all the requisite books and journals, or find it impossible to procure them at any cost, whilst others want leisure or opportunity for such extensive research, it is evident that progress in these branches of knowledge would be greatly facilitated, by collecting and condensing this widely dispersed information, thereby enabling future inquirers gain some acquaintance with the results of the investigations made by the many diligent and laborious individuals, who have devoted a great portion of their time to collecting information over the vast area of Southern Asia.

My avocations while employed in India, more particularly in the past seven years, have rendered necessary for me a collection of books of reference relating to India and the East, somewhat more numerous and varied in character than private individuals generally possess; whilst my employment as Secretary to the Madras Central Committees for the Great Exhibition of 1851, the Madras Exhibition of 1855, the Universal Exhibition held in Paris in 1855, and the Madras Exhibition of 1857, combined with my duties (since 1851), as Officer in charge of the Government Central Museum, have brought under my notice a rare variety of Eastern products and subjects of interest; and thinking that, before quitting the countries in which I have dwelt for nearly a quarter of a century, I might with advantage leave to my successors in a portable form, the notes made on the products of the East that have come under my notice, combined with an abstract of the useful information respecting them contained in my books, I have been led to show the results in the present shape.

A work of this aim and character might doubtless fully occupy the life-time of several men of varied attainments; and this *Cyclopædia of India and of Eastern and Southern Asia,* may therefore be regarded only as a first attempt towards the kind of book, the want of which has been long and generally felt. But although fully conscious of its incompleteness in many respects, yet, I trust it may still be received with all imperfections and omissions, as a useful and opportune addition to Asiatic Literature; at least by those who recognize the justness of the saying of Emmerson, that "the thing done avails, and not what is said about it: and that an "original sentence, or a step forward, is worth more than all the censures"* which may be made by such as are disposed to find fault, or who would demand in a work of this kind, a degree of perfection unattainable on a first trial.

The book is merely a novelty in form, the matter it contains being as old as our first possessions in India: it is simply a compilation of the facts and scientific knowledge, which authors and inquirers have been amassing and communicating since then, to one another and the public. But, "in our time, the higher walks of literature have been so long and so often trodden, that whatever any individual may undertake, it is scarcely possible to keep out of the foot-steps of some of his precursors;"† and this Cyclopædia, I may therefore avow to be but an endeavour to make generally available, in a condensed form, the information acquired by those who have in any way investigated the natural or manufactured products of Southern Asia, or have at any time made its arts or natural history the subjects of inquiry. Some of those whose writings I have made use of, have long since gone to their account, but many a labourer yet alive may find the result of his labours embodied here; and I have done this freely, because even those from whose writings I have most largely drawn, will acknowledge that the quaint old lines of Chaucer‡ still apply with full force; viz. that,

"Out of the old fields, as men sayeth,
Cometh all this new corn fro' yeare to yeare:
So out of old books, in good faith,
Cometh all this new Science that men lere."

Indeed, I have rather sought to collect and condense accurate and well ascertained facts, than to present novelties; for originality is but too often unconscious or undetected imitation. Byron, years ago, remarked that all pretensions to it are ridiculous; and a wiser one than Byron has told us that "there is nothing new under the sun." But if there be nothing absolutely new in this work, I hope it may yet be found to contain much which to many was unknown before; and which want of books, leisure, or opportunity, may have debarred them from learning.

---

* English Traits, p. 5. † Salad for the Social, page 317. ‡ Ibid, page 321.

The Cyclopædia is not intended to comprise the whole Science of Botany, nor that of Medicine, or Zoology; nor to instruct in all the matters useful in Commerce or the Arts; but, whether examined for information or amusement, the botanist, the medical practitioner, the naturalist, and the merchant, may perhaps each find something in it, which, from his engagements, he did not know before, or though once knowing he may have again forgotten. In both cases, the work may prove useful, since old thoughts are often like old clothes; put away for a time, they become apparently new by brushing up. It would have been better perhaps, had a work of this kind been undertaken years ago, or even now were it made the joint effort of several persons: indeed, to render it in any way complete, would call for the resources at the command of a Government rather than of individuals; but we cannot have every thing at the time we wish, nor in the way we wish, and it is better to have some one undertake it and do it the best way he can, *now*, than to postpone it to some further indefinite period.

With a view therefore of laying a foundation as a starting point for future inquirers, I now make the commencement of a work, towards which I hope to receive from many quarters aid and support as I proceed: being thereby enabled either to produce future enlarged and improved editions of the work myself,—placing it, as I hope, within the reach of all,—or seeing that task taken up hereafter, by younger men, with more time and opportunity than are now before me. A dinner of fragments is often said to be the best dinner; and in the same way, there are few minds but might furnish some instruction and entertainment, from their scraps, or odds and ends of knowledge. Those who cannot weave a uniform web, may at least produce a piece of patchwork;* and any items of information sent to me will be very acceptable.

There is another difficulty which inquirers in this country have had to meet and struggle with; I allude to the many languages and dialects in use in India and Eastern Asia, and consequently the variety of scientific, national, or even local names, by which the same thing is known. The only means of overcoming this difficulty was to frame a copious index of contents; for Pope has well said that

---

* Guesses at Truth.

"Index Learning turns no student pale,
Yet holds the eel of Science by the tail."

This Indexing will add to the bulk of the book, but greatly also to its value as a work of reference; and will be carefully completed.

PREFACE TO THE SECOND EDITION.

THE first edition with its two Supplements contained 29,870 names and the work was favourably received by the Public Press. But my acquaintance with these countries did not permit me to regard that number as other than a foundation for an enlarged and improved edition, and this second edition will contain about 100,000 names, under which much connected with India and with Eastern and Southern Asia will be found.

I have spared neither time nor labour to make the present edition as perfect as possible, but a Cyclopædia must necessarily ever be progressive.

A

A, a. In the English language, is the first letter in the alphabet, and the ordinary sounds, long or short, are as *a* in many ; a in all and as a in municipal.

In Arabic, Persian and Hindustani, the letter ا and the vowel mark have almost similar sounds, as in that part of the āzăn or mahomedan call to prayers الله اكبر Allahō ākbăr, unto God the Great, retaining the long sound invariably when in the middle or end of a word.

In Tamil, the English A and a, long and short, are represented by two initial letters அ ஆ equal to ă and ā ; and all the consonants have the inherent sound of short a, thus க ká ண ná.

In Telugu, the short a, is represented by the letter అ, initial, and by the mark ✓ placed on the top of a consonant, thus క ká. The long ఆ, initial, has the same sound as â in anger.

AACH or ATCHE. Tam. Morinda citrifolia.

AAL. Tam. Morinda citrifolia ; Morinda multiflora. See Dyes.

AAKAL. Arab. The fillet of the Arabs.

AALIN NAR. Maleal. ആലിൻനാര Fibre of Ficus Indica. Banyan tree.

AARD APPELEN. Dut. Potatoes.

AARDEGOED. Dut. Earthenware.

AARON, his burial-place is shown on Mount Ohod : his grave is also shown over the summit of Mount Hor.

AATALARI. Tam. Polygonum barbatum.

AB. Pers. Hind. آب Water. Hence, *Abi*, Pers. Hind. آبي Watery ; also *Ab-kari*, Hind, lit : آبكاري water making, i. e. the distillation of alcoholic fluids, &c., and in use as a revenue term in British India for that branch which superintends the license to sell all kinds of intoxicating substances, as arrack, toddy, opium, &c. *Do-ab*. Pers. Hind. دوآب literally, two waters, the fork or inverted delta caused by the junction of two rivers or the territory running between two rivers. *Punj-ab*, Pers. Hind. پنجاب five waters or five rivers, that territory on the North-West provinces of British India, conquered from the Sikhs, through which seven rivers flow.

ABA SIN. ابا سين Pusht. The river Indus.

ABA, or Camaline as it is called in the Persian gulf, is worn in Oman by all classes. It is the camel's hair cloak of Arab Shaikhs, and is often striped white and brown. See Camoleen, Keifyet.

ABA-BAKER, the father-in-law of Mahomed. See Khajah. Aboo-Bakr. Abu-Bakr.

ABABIL. Hind. ابابيل The Swallow. See Bird-Nests.

ABACA BRAVA. The wild or mountain abaca of the Philippines, a variety of the Manilla hemp plant, Musa textilis, the fibres of which serve for making ropes, called *Agotag* and *Amoquid* in the Bicol language.—*Royle's Fib. Plants, p.* 65.

ABAD. Pers. Hind. آباد Populous. A mahomedan territorial postfix to districts of country and towns, as Arungabad, Dowlatabad, Allahabad, Farrakhabad, Hyderabad.

ABAGASUS or ABALGASIUS. One of

the Greek Kings, successors to Alexander, who reigned about A.D. 70 or 80 in Arian Abakhafasa. Vologeses Professor Lassen supposes that this name is identical with Vologeses. Captain Cunningham described the Arian legend on the coins of Abalgasius A. D. 80, to be "of the Saviour King Abagasus, younger son of Undopherres." *Prinsep, Historical Results.* See Greeks : Kabul.

ABAI (Borneo). A small port or harbour in Lat. 6° 23' N. situated about 40 miles S. S. W. from Tanjong Sampan-mangaio, the north extreme of Borneo.

ABAK, Arab. ابك Mercury.

ABAN. Pol. Iron.

ABAR-MURDAH. Pers. ابرمرده Sponge.

ABAS BANDAR, Băndăr Abbas or Gambaroon, a town in Kirman. See Kirman.

ABASSI. Pers. عباسي A scymeter.

ABBAS. See Kashan.

ABBOTABAD, in Lat. 34° 10' N.; and Long 73° 9' E. in Márri, a small military sanitary station, N. N. E. of Chámba, at a height above the sea of 4,055 feet.—*Rob. Schl.* See Sanitoria.

ABBOTT, James, a distinguished officer of the Bengal Artillery who rose to high military rank. He was employed in the political department in Herat and the Punjab. He travelled from Khiva to St. Petersburgh and published an account of the journey. He contributed many scientific articles to the Transactions of the Bengal Asiatic Society.—*Buist's Catalogue.*

ABDAGASSES. A Bactrian successor of [illegible]xander who succeeded Gondophares in Aria B. C. 26. See Magasius : Greeks of Asia.

ABDALI. Hind. ابدالي A powerful Affghan tribe or sect, residing in every part of Affghanistan, but principally in Herat and Kandahar. They are termed Dourani, since 1747, when Ahmed Shah, Suddozye, on ascending the throne, gave them that name. The Abdali and Ghilzi, but particularly the former, arrogate to themselves a superiority over the other Affghan tribes, and from their greater numerical strength have exercised a greater power. The Abdali are also called Sulimani, from the mountains whence they came, having then dwelt in the district termed Tobeh Maroof.—*Latham.* See Barakzye.

ABDAR. Pers. ابدار Glancing as a gem or polished sword : In India a water cooler.

ABDULLA-IBN-SAOOD. The Wahabi chief captured by Ibrahim Pasha. See Wahabi.

ABDUL LATIF. The Amir Yahia, son of Abdul Latif-ul-Kasvini-ul-Shiai, died at Kasvin, his native city, A. D. 1552 Hej. 960. His book is styled the Lubbat-ul-Tuarikh and treats briefly of the history of Asia.—*Ouseley.*

ABDUL MUZUFFER Sultan, one of the Kutub-Shahi dynasty, A. D. 1580. See Hyderabad.

ABDUL HOSSAIN QUTUB SHAH. A. D. 1673—1683, a Kutub-Shahi king. See Hyderabad.

ABDUL KOORY, عبدالكري or ABD-UL-CURIA ISLAND. A rugged island midway between Socotra and Ras Jar 'd Afoon.

ABDULLAH, son of the Khalif Umar, who in A. D. 650 defeated Yesdejird. Yesdejird was then on his return from Khorassan, and for the last time put himself at the head of his subjects, and was defeated. See Istakhr.

ABD-UR-RAZZAQ. عبدالرزاق Jemal ud-din Abd-ur Razzaq bin Jelal ud-din Ishaq-us Samarkandi, was born at Herat in A.H. 816 (A. D. 1413), where his father was Kazi in the time of Shah Rukh. Shah Rukh, in 1441, sent him on an important mission to India, to the king of Vizianuggur. Subsequently on an embassy to Ghilan ; and he again was ordered to proceed as ambassador to Egypt. It was in January 1442, that Abd-ur-Razzaq, set out from Herat, and proceeding by way of the Kohistan and Kirman to Ormuz, thence sailed for India, arriving at Calicut after a long detention, wind-bound, at Muscat. He then proceeded via Mangalore and Bellour to Vizianuggur. Re-embarking from Calicut, he arrived in March 1444, at Kalahat in Arabia—*India in the Fifteenth Century.*

ABDUL-AZEEZ. See Wahabi.

ABD-UL-HAKAL. See Wahabi.

ABD-US-SHEMS or SABA, founder of Mariaba. Amongst his sons were Hamyar, Amru, Kahlan and Ashaar. See Saba.

ABDUL WAHAB. See Wahabi.

AB-DUKH. Pers. A food in use in Persia, not always to be met with. Though a favourite dish with the Persians, and very refreshing, it is not at all suited to the stomach of a European.—*Ferrier Journ. p.* 49.

AB-DUZD. Pers. A subterraneous passage of water near the fort of Atak (Attock) The term means "the stealing of the water."—*Mohan Lal's Travels, p.* 38.

ABELIA RUPESTRIS, a Chinese plant introduced into England by Mr. Fortune.

ABELMOSCHUS ESCULENTUS. *W. & A.*

Hibiscus longifolius, *Roxb.*
„ esculentus, *Linn.*

A herbaceous annual, a native of tropical America, largely cultivated all over India and Burmah, its capsules being held in much esteem as a vegetable. It is easily raised from seed and produces abundance of fruit, which is the only part of the plant that is eaten. The whole plant is mucilaginous, but the fruits or pods, the well known Bendi kai of the Tamils, are highly so. The fruits are boiled whole and served up as a vegetable: or the seeds are added like barley to soup, and are demulcent. The young pods are pickled like capers, its ripe seeds when allowed to dry, and parched, can with difficulty be distinguished from genuine coffee. Its mucilage has been recommended as a demulcent, in coughs, in the form of lozenges, but they are not easily digested. The deep purple juice of the stigmas can be communicated to paper. Doctor Riddell strongly recommends this plant as furnishing an excellent fibre for the manufacture of paper. The fibres are said to be exported to a small extent from India, as one of the hemps of commerce, and by Dr. Roxburgh's experiments, a bundle of them bore a weight of lbs. 79 when dry and lbs. 95 when wet. At the Madras Exhibition of 1855, samples were received from various districts, but nearly all discoloured and their strength impaired by steeping. They retain their gloss even when very brown and rotten.—*American Committee of Patents for* 1854; *O'Shaughnessy, Dispensary, pp.* 215-217; *Pharmacopœia, p.* 434; *Roxb. Flor. Indica,* III. *p.* 210; *Royle, Fib. Plants*; *Useful Plants*; *Madras Exhibition Juries' Reports*; *London Exhibition of* 1862; *Mason.*

ABELMOSCHUS FICULNEUS. *W. & A.; W. Ic.*

Hibiscus prostratus, *Roxb.*

Parupu Benda. TAM. | Nella Benda. TAM.

Flowers white. The bark contains a large proportion of white reticulated fibre similar to that obtained from the mulberry, and useful for gunny bags and paper. It grows abundantly on the black cotton soils of India. At the Madras Exhibition of 1855, Mr. Jaffrey exhibited a very good clean sample of this fibre, of great length, but not very strong.—*Madras Exhibition Juries' Reports*; *Robert Brown.*

ABELMOSCHUS MOSCHATUS. *Mœnch? W. & A.; W. Ic.*

Hibiscous abelmoschus, *Roxb. & Rheede.*

Mushk-dana.	...HIND.		

A gaudy flowering annual with blood coloured eyes, on its large yellow blossoms, a native, of various parts of India, flowering in the rainy and cold seasons. Its brown seeds are, the Hub-ul-Mashk of the Arabs, so called because of their smell and taste resembling a mixture of musk and amber, and, on burning, a similar odour is evolved. They are kidney-shaped and of the size of hemp-seed, and are used to perfume powders and pomatums. They are found in all the bazaars and are reputed to be useful in snake bites, when bruised and applied externally and internally, or bruised and steeped in rum or arrack. In Dr. Roxburgh's experiments, the fibre broke with a weight of 107 lbs. The plant, like A. esculentus, abounds in mucilage, and is said to be used in Northern India, to clariy sugar. Sir W. O'Shaughnessy did not find the seeds to have any emetic property as alleged by Dancer.—*Roxburgh, III.* 202; *O'Shaughnessy, p.* 217; *Mason's Tenasserim*; *Juries' Reports Madras Exhibition*; *Useful Plants of India.*

ABELMOSCHUS TETRAPHYLLA. At the Madras Exhibition of 1857, Mr. Jaffrey exhibited an excellent, white and strong fibre, obtained from this plant. Its flowers large, yellow, with a dark centre: abundant in Girgaum woods, Bombay. Wight in his Icones, 951, figures, also, A. angulosus.

ABERMOORDAH. PERS. ابرمرده Sponge.

ABGINAH. ARAB. آبگینه Glass.

ABGOON. PERS. آبگون Starch.

ABHAL. PERS. ابهل Berries of Juniperus communis: Juniper berries.

AB-I-DHANG. PERS. آب دهنگ This is the usual drink amongst the Ilyats in Northern Persia. It is butter milk weakened with water, and to which a little salt is added.

ABHAYA DEVA, a king of the Pala dynasty of Gaur, about A. D. 1439.

ABHIANGANA ST'NANAM. Amongst Hindus, a ceremonial, on the wedding day, when the bride and bridegroom are anointed with oil. See Hindu.

ABHIDHARMMA, the third division of the sacred writings of the Singhalese buddhists, addressed to the Dewas and Brahmas.—*Hyder's Eastern Monachism, p.* 433.

ABHIGNYAWA. Amongst the Singhalese buddhists, five great powers attached to the Rahatship.—*Hyder's Eastern Monachism, p.* 433.

ADHIKARANA-SAMATA-DHARMMA. A class of buddhist priestly misdemeanours.—*Hyder's Eastern Monachism, p.* 433.

ABHIMANIA. See Inscriptions.

ABHIR. HIND. Cow-herd.

ABHIRA, the shepherd country, an ancient name for the country between the Tapti and Devagurh.

ABHUTI TRASTVAR. See Hindu.

AB-I-BALAD, a mountain torrent in Susiana. See Khuzistan.

ABIES, the Fir genus of coniferous plants, has many species which produce valuable timbers. They grow in the Himalayas, in Japan, the Philippines and China. Dr. Hooker says, of the Sikkim Himalayas, that Abies Brunoniana, A. Smithiana, and A. Webbiana, with Larix Griffithii are the only pines whose woods are considered very useful; and that in Sikkim, none produce any quantity of resin, turpentine, or pitch, which may perhaps be accounted for by the humidity of the climate.—At Choongtam, in Sikkim, the yew appears at 7000 feet, whilst, on the outer ranges (as on Tonglo), it is only found at 9,500 to 10,000 feet; and whereas on Tonglo it forms an immense tall tree with long sparse branches and slender drooping twigs, growing amongst gigantic magnolias and oaks, at Choongtam it is small and rigid, and much resembling in appearance the English churchyard yew. At 8,000 feet, the Abies Brunoniana is found, a tree quite unknown further south. But neither the larch nor the *Abies Smithiana* (Khutrow) accompanied it. The yew, he says, spreads east from Kashmir to the Assam Himalaya and the Khasia mountains; and the Japan, Philippine Islands, Mexican, and other N. and S. American yews belong to the same widely diffused species. In the Khasia, (its most southern district) it is found as low as 5,000 feet above the sea level. In descending from Nango in East Nepaul, Dr. Hooker passed at first through rhododendron and juniper, then through black silver fir (*Abies Webbiana*), and below that, near the river, he came to the Himalayan larch, a tree quite unknown, except from a notice in the journals of Mr. Griffith, who found it in Bhutan. It is a small tree, twenty to forty feet high, perfectly similar in general characters to a European larch, but with larger cones, which are erect upon the very long, pensile, whip-like branches. He adds, its leaves, now red, were falling, and covering the rocky ground on which it grew, scattered amongst other trees. It is called "Saar" by the Lepchas and Cis-Himalayan Tibetans, and "Boargasella" by the Nepaulese, who say it is found as far west as the heads of the Cosi river: it does not inhabit Central or West Nepaul, nor the North-West Himalaya. The distribution of the Himalayan pines, he says, is very remarkable. The Deodar has not been seen east of Nepal, nor the *Pinus Gerardiana*, *Cupressus torulosa* or *Juniperus communis*. On the other hand, *Podocarpus* is confined to the east of Katmandoo. *Abies Brunoniana* does not occur west of the Gogra, nor the larch west of the Cosi, nor funereal cypress (an introduced plant however) west of the Teesta, in Sikkim. Of the twelve Sikkim and Bhotan *Coniferæ* (including yew, juniper, and *Podocarpus*) eight are common to the North-west Himalaya (west of Nepal) and four are not: of the thirteen natives of the North-west provinces, again, only five are not found in Sikkim, and, he adds, I have given their names below, because they show how European the absent ones are, either specifically or in affinity. I have stated, he continues, that the Deodar is possibly a variety of the Cedar of Lebanon. This is now a prevalent opinion, which is strengthened by the fact that so many more Himalayan plants are now ascertained to be European than had been supposed before they were compared with European specimens; such are the yew, *Juniperus communis*, *Berberis vulgaris*, *Quercus ballota*, *Populus alba* and Euphratica, &c. The cones of the Deodar are identical with those of the Cedar of Lebanon: the Deodar has, generally, longer and more pale bluish leaves and weeping branches, but these characters seem to be unusually developed in English gardens; for several persons, well acquainted with the Deodar at Simla when asked to point it out in the Kew gardens, have indicated the Cedar of Lebanon, and when shown the Deodar, declare that they never saw that plant in the Himalaya.—*Hooker's Him. Jour.* vol. II. p. 41. Mr. Hodgson in his Nagasabi (pp. 342-3) gives nine species of Abies, as occurring in that island, viz.,

A. Tsuga S and Z.
A. (Picea) firma „
A. („) homolepis „
A. Microsperma. LIND.
A. Veitchii LINDLEY.
A. Alcoquiana, LINDLEY.
A. Bifida. S and Z.
A. Jezoensis
and
A. Smithiana, LOUDON.

Some botanists bring some of the pines, into this genus, while others put species of Abies amongst the pines. A. Araragi of Siebold, is a Japan tree with a brown wood, used for various domestic purposes, and the A. Momi, Sieb. also of Japan, is valued for the whiteness and fine grain of its wood.

Notwithstanding the similarity between the Deodar and the cedar of Lebanon, the Pinus cedrus of Linnæus, which grows in Lebanon and the Taurus Range, the latter seems a distinct species.—*Dr. Hooker's Him. Journ. Vol.* II, *p.* 41; *Hodgson's Nagasaki* 342-3; *Punjab Report.*

ABIES BALSAMEA, the Balm of Gilead. See Evergreens, Gums and Resins.

ABIES BRUNONIANA, *Hooker.*

Pinus Brunoniana, *Wall.*
„ dumosa, *Lamb.*

Deciduous Silver Fir. ENG. | Semadoong. TIB.

Grows in Nepaul, Bhutan and Gossain Than. This species is repeatedly noticed by Dr. Hooker; who at one place, says, that the wood of *Abies Brunoniana* ("Semadoong") is like the others in appearance but is not durable; its bark is however very useful. Stacks of different sorts of pinewood were stored for export to Thibet, all thatched with the bark of *Abies Brunoniana*. In the dense and gigantic forest of *Abies Brunoniana* and silver fir, he measured one of the former trees, and found it twenty-eight feet in girth.—It grows occasionally in dense forests, to a height of 70 to 80 feet, with a clear trunk of from 14 to 20 feet, and a spreading, very branching head.—*Eng. Cyc.: Hooker's Him. Journal*

ABIES DEODARA.

Pinus Deodara, *Lambert.*
Cedrus, do.

Sacred Indian Fir,	Eng	Kelon of Kullu and Kangra.	
Deodara,	„		
Diar,	Hazara.	Deva dara,	Hind.

A magnificent tree with a trunk from 12 to 30 feet in girth, growing on the mountains of Kedar Kantha, Nepaul and Thibet, up to heights of 7,000 and 12,000 feet, as also in the woods of Almorah, at Kullu and Kangra and in Kaghan Hazara. It resembles the cedar of Lebanon, but, unlike it, the resinous wood of the Deodar is very durable, lasting from 200 to 400 years. It has succeeded well in England. —*Royle's Illustr. p.* 350; *Eng. Cyc.*; *Hooker's Him. Jour.*; *Punjab Report, p.* 79 & 180.

ABIES KHUTROW. Syn. of Abies Smithiana.

ABIES KŒMPFERI.

Pinus Kæmpferi, *Lamb.*

A native of Japan; found wild upon the mountains of Fako.

ABIES LARIX. See Evergreens.

ABIES MORINDA. Syn. of Abies Smithiana.

ABIES PICEA. See Evergreens.

ABIES RESINA. See Turpentine.

ABIES SMITHIANA, *Hooker.*

Abies Khutrow ?
„ morinda ?
Pinus Smithiana, *Wallich.*

Indian Silver Fir.	Eng.	Rai.	Kullu.
Spruce Fir.	„	„	Kangra.
Seh.	Lepch.	Kachan.	Kaghan.

This tree attains an enormous size on the slopes of the Himalayas, growing with nearly opposite branches. Dr. Hooker, at one place, tells us, that the spruce, *Abies Smithiana*, "Seh" has white wood, which is employed for posts and beams. At another, when mentioning that the beautiful Deodar was seen towering above the other trees, and, although all the specimens were comparatively young, they were yet striking and graceful, he adds that, near it, was *Abies Smithiana*. It had a dark and sombre appearance, yet it was peculiarly graceful, owing to its symmetrical form and somewhat pendulous habit. Again, he says, that towards Lamteng, in Sikkim, the path left the river, and passed through a wood of Abies Smithiana, which is also called *A. Khutrow*, *A. Morinda*. Dr. Hooker had not before seen this tree in the Himalaya: it is a spruce fir, much resembling the Norway spruce in general appearance, but with longer pendulous branches. The wood is white, and considered indifferent though readily cleft into planks.—*Hooker's Him. Jour.*; *Punjab Report.*

ABIES THUNBERGII.

Pinus Thunbergii, *Lamb.*

A scarce plant in Japan.

ABIES TORANO, *Siebold.*

ABIES PINDROW, *Royle.*

Pindrow,	Hind.	Morinda,	Hind.

A magnificent species, even to the limits of the forests, growing in Kemaon along with the Deodar. It comes near, and Hooker describes it as identical with A. Smithiana, A. Webbiana, —*Royle's Illustr.*

ABIES WEBBIANA, *Hooker.*

Pinus spectabilis, *Lamb.*
„ Webbiana, *Wallich.*

Webb's Fir.	Eng.	Gobrea.	Hind. ?
Purple coned Fir.	Eng.	Sallur.	„ ?
Silver Fir.	„	Oonum.	„ ?
Chilrow of Northern Himalaya.		Dunshing.	„ ?
		Tos, Kullu and Kangra.	

This fir tree grows at great elevations on the Himalayas, where it is one of the principal ornaments of the forests. It attains a height of 80 or 90 feet, with a diameter near the ground of thirty or forty feet. Dr. Hooker tells us that at Choongtam, this tree attains thirty-five feet in girth, with a trunk unbranched, for forty feet. As the subject of firewood is ~~of every day~~ interest to the traveller in these regions, he mentions that the rhododendron woods afford poor fires; juniper burns the brightest, and with least smoke; *Abies Webbiana*, though emitting much smoke, gives a cheerful fire, far superior to larch, spruce, or *Abies Brunoniana*. At Darjiling, oak is the common fuel; alder is also good. Chesnut is invariably used for blacksmiths' charcoal. Magnolia has a disagreeable odour, and laurel burns very badly. According to Hooker, the silver fir (*Abies Webbiana*, Dunshing) also splits well; it is white, soft, and highly prized for durability. Dr. Cleghorn says it is not much valued and is used for shingles. The larch of Northern Asia (*Larix Europœa*) is said to produce a pungent smoke which Dr. Hooker never observed to be the case with the Sikkim species.—*Hooker's Him. Jour*; *Royle's Ill. Him. Botany, p.* 350; *Timber Trees*, 2nd Ed. *p.* 189; *Punjab Report.* See Evergreens.

AB-i-GUL. Pers. Rose Water.

ABIM. Sing. Opium.

AB-i-MA. Pers. Literelly mother of the waters, the Amoo or Oxus river.

ABINATTA. SINGH. Poppy seed.

ABIR. AR. Ambergris.

ABIR. عبير ARAB. RANDA. HIND. a perfumed powder, which is rubbed on the face or body, or sprinkled on clothes to scent them: There are many receipts, but one kind is composed of rice flour, or the powdered bark of the mango tree or deodar, camphor and aniseed. A superior kind is prepared from powdered sandalwood or wood aloes, Curcuma zerumbet (Kuchoor), or Curcuma zedoaria (ambi huldee), rose flowers, camphor, and civet cat perfume, pounded, sifted and mixed. In every case it is a mixed perfume, of which the principal ingredients are yellow sandal, violets, orange flowers, aloes-wood, musk, true spikenard and rose water. It is a term applied in India, to any perfumed powder, and is often given to Curcuma zerumbet and saffron q. v.—*Herklots*. See also Abeer.

AB-i-RAWAN. PERS. Fine Muslin.

AB-i-SHEREEN. PERS. The Hindyan River.

ABISHEGAM. SANS. Makes a part of the Pancha Shegam, a hindu ceremony which consists in pouring milk on the lingam. This liquor is afterwards kept with great care, and some drops are given in the Pancha Shegam to dying people, that they may merit the delights of the Kalaisson. Traces of this Abishegam ceremony are found in the earliest antiquity. The primitive race of men had a kind of sacrifices, called Libation, which was performed by pouring some liquor, but especially oil, in honour of the divinity. The natives of India have preserved this custom, not only in respect to ~~the lingam~~, but also in honour of their other deities. They usually offer them libations, wash them with cocoanut oil, melted butter, or water of the Ganges. They always rub them with oil or butter when they address prayers, or present offerings to them; so that all their idols are black, smoked, plastered, and dirtied with a fetid grease. The Talopoins of Pegu, and Ava, and the priests of Siam, also wash their idols with milk, oil, and other liquids. It is well known also, that the Jews have had sacred stones, which they anoint with oil, and to which they gives the name of Betyle.—*Sonnerat's Voyage, p.* 159 & 160.

ABISTADA LAKE, between Hamoon and the Kabul river, is a receptacle for the waters of Affghanistan. No two authorities, however, agree about its extent, which no doubt varies with the seasons; some describe it as being in appearance an inland sea, while others confine its diameter to a few miles.—*British World in the East*, *Ritchie*, *Vol* II. *p.* 12.

AB-i-ZAL. A river in Khuzistan which unites with the Kherkha river.

ABKARRY. Revenue derived in India from duties levied on the manufacture and sale of inebriating liquors, as toddy, pachwai, and arrack; also on intoxicating drugs, whether in substance, infusion or extract, as opium, bhang, churrus: also on certain licensed distilleries, and on shops licensed to sell by retail.—*Wilson*.

ABLAK. ابلق ARAB. HIND. PERS. Piebald.

ABLOOS. BENG. Diospyros ebenum, Indian Ebony or Smooth date plum tree.

ABLUTIONS amongst the Hebrews, Hindus and Mahomedans are very carefully attended, and are included as part of their religious rituals. They are allotted to various periods of the day, and varied to meet particular forms of purification. The Hebrew ceremonial, as still practised by their Jewish successors, is laid down in the books of Moses and is generally followed by mahomedans, both for men and women, mahomedans using dry sand of the desert when water is not obtainable for their Wazu, before prayers. The hindu ritual is severe on this point, and along the banks of the sacred Ganges crowds of men and women may be daily deserved. Their Sthnanam, however, as also their ritual purification before eating may equally be performed in their own houses. The Buddhists of Asia are less strict. Though so frequently enjoined in the Bible, as parts of religious ceremonials they are even more stringently carried out by Hindus, though less stringently so by Mahomedans. The Hebrews, in Genesis XXXV. 2, were ordered to put away the strange gods; be clean, and change your garments, and a Hindoo considers those cloths defiled in which he has been employed in business, and always changes them before eating and worship. Again, in Genesis XLIII. 24, "The man brought the men into Joseph's house, and gave them water, and they washed their feet," and with Hindus, as soon as a guest enters, one of the first civilities is presenting water to wash his feet. So indispensable is this, that water to wash the feet makes a part of the offerings to an image. Solomon's Song, v. 3, says, I have washed my feet; how shall I defile them? A Hindu wipes or washes his feet before he retires to rest. If called from his bed, he often excuses himself, as he shall daub his feet; and as he does not wear shoes in the house, and the floor is of clay, the excuse seems very natural. In Leviticus XIV. 8, 9, and 52; relating to personal uncleanness, there are similar customs prevalent among the Hindus, but in the Mosaical institutions there is no law like that of the Hindus, which rules that a Bramhan becomes unclean by the touch of a Sudra, or a dog, or the food of other castes.—The Hindu food ritual is given in Mark VII. 3, where the Pharisees and all the Jews, except they wash their hands oft, eat not, for bathing is an indispensable pre-requisite to the first meal of the day, and washing the hands and feet is equally so before the evening meal. Mahomedans use water or sand, before prayers, before meals, and after many ordinary occurrences.—*Ward's Hindus*; *Herklot's Kanun-i-Islam.*

ABNUS, آبنوس Arab. Guz. Hind. and Pers. Diospyros ebenaster. See Ebony, Diospyros, Ebenus.

ABOO or ABU in Lat. 24° 45' N. and Long. 72° 46' E. in Rajwara, the highest peak in the Aravalli range, 50 miles N. E. of Deesa, the top of the peak, at the station, being 3,850 feet above the sea. It is a large isolated mountain, in the territory of the Rao of Serohi; 45 miles N. E. from the military cantonment of Deesa, and to the S. W. of the Aravalli range, from which it appears to be distinct. It is situated on the western border of the desert of Rajpootana, and one of the philanthropic Lawrence Asylums has been located on it. It is a magnificent mass of mountain in the western extremity of Ajmeer, with a fine lake on the top of the hill, of which drawings were taken by Captain Grindlay. Its summit is covered with exquisite vegetation, in which white and yellow jasmin and wild roses predominate; every glen and knoll has its tradition and romance, and the Jain temples of white marble offer examples of architectural decoration which probably are unequalled in the world for elaboration and costliness. Its fame is of great antiquity, and pilgrims appear to have been attracted to its sacred temples since A. D. 1034, though no notice was taken of it in the maps of India before the year 1806. Hindoo temples are said to have existad here in remote ages, dedicated to Siva and Vishnu: but all traces of them have disappeared. On their traditional site at Dilwarra, the famous Jain temples now stand, built by Bimul Sah, a rich Jain merchant, and others; for, in Hindu-Jain estimation, Aboo is the holiest spot on earth. The base of Mount Aboo is about 13 miles long, 11 broad, and 50 in circumference. It rises abruptly from the sandy plains, and the ascent is consequently steep and winding. The slopes of the hill are generally speaking, covered with trees and shrubs; the intervening herbage affording pasturage during most parts of the year to the adventurous village cattle. The summit of the hill is very irregular; consisting of peaks, ridges, and valleys, sloping plateaux, and extensive basins. The highest point is called Guru Sicher, and is 5,700 feet above the level of the sea. The average height of the station is 4,000 feet. Colonel Tod describes the neighbourhood of Mount Aboo, as the site in which, from the most ancient times, the ascetics known as Aghora or Marda-khor, or man-eaters have resided. The aborigines of the hill appear to have been a sort of Bheels. They seem at some time or other to have become mixed with marauding Rajpoots from the plains, and with the workmen who were so long engaged in building the Dilwarra temples. This mixed race call themselves Loke, and are now in possession of almost all the land under cultivation.

Taking a section of about sixty miles in the Alpine Aravalli, from the ascent at the capital of Oodipoor, passing through Oguna, Panurna, and Meerpoor, to the western descent near Sirohi, the land is inhabited by communities of the aboriginal races, living in a state of primeval and almost savage independence, owning no paramount power, paying no tribute, but with all the simplicity of republics; their leaders, with the title of Rawut, being hereditary. Thus the Rawut of the Oguna commune can assemble five thousand bows, and several others can on occasions muster considerable numbers. Their habitations are dispersed through the vallies in small rude hamlets near their pastures or places of defence. Aboo is subject to frequent shocks of earthquakes. The Rao of Sirohi, at first with some difficulty, was induced to approve of the sacred ground being used as a station for European residents and soldiers. As a Sanitarium, the most beneficial season for a change to Aboo is the hot weather. The cool and mild monsoon season, is also adapted to many cases that droop and sink in the hot monsoon weather of the plains. The winter months from December to March are very healthy to most men, but should be avoided by those suffering from any organic visceral disease, lung affections, syphilitic or rheumatic weakness.

ABOO AREESH, a district of Yemen. See Jezan.

ABOO BAKR, the first Kalif after Mahomed. Mahomed married his daughter. See Ali; Masailma El-Aswad, Abu-bakr.

ABOO KARIB, the most powerful of the Himyaritic monarchs. He was commonly called Tobba. In A. D. 206, he covered the Kaaba with a tapestry of leather and supplied its door with a lock of gold. See Kaba.

ABOOL-FAZL, or according to the Arabic pronunciation, Abou'l-Feda, a mahomedan historian, who lived in the time of the Emperor Akbar. He was the eminent minister of that great king, and his land settlements are still quoted in India. He was, also, enabled, by the most assiduous researches, and the assistance of the Pundits, to publish a Compendium of Hindu Jurisprudence in the Ayeen Akbaree, which may be considered as the first genuine communication of its principles to persons of a different religion.—*Chatfield's Hindustan, p.* 316. See Kashmir. Samarcand.

ABOO MAHATMA. A valuable ancient book presented to the Royal Asiatic Society, by Colonel Tod.—*Rajasthan,* Vol. I. p. 6.

ABOR. BOR and ABOR is an Assamese name for a people who call themselves Padam. Bor means tribute, hence Abor free from tribute, and the Padams are so arranged, into the payers of, and non-payers of tribute. They occupy the mountains to the north of the valley of the Brahmaputra river. They dwell in about lat. 27½ north and long. 95 east to the south of the Bor-Abor, and on the west or left bank of the Dihong river, on the southern face of the Himalayas on the borders of Thibet and China. Their capital is Membu, and higher up are the Bor Abors, whose capital is Simong. The capital of the Abors contained about 300 houses : the prerounding country contains palms, jack and ~~the in~~rubber trees, and they practice artificial irrigation and use suspension bridging of rattan. It is not uncommon for one Abor woman to have two husbands, living under the same roof, they being brothers. They bring to the plains in the cold weather, musk, skins of the musk-deer, ivory, copper pots and a poison called "Bees" extensively used in Assam to poison arrows, and probably a product from one of the Aconites. When first known they made periodical descents on the plains. They do not eat beef, but eat the buffalo. They carry bows and arrows, some of which are poisoned. Their dress is made of the bark of the Udhal tree. Bor is also said to mean "*great,*" and the term Bor Khampti is employed. The Bor Abor is the more distant, the more independent and stronger portion. Their unmarried men live in the *Morang,* a large building in the centre of the village for the reception of strangers, and in this custom, they resemble the practice of some of the Archipelago races. They sacrifice to certain deities of the woods and hills. The Bor Abor lie on the higher hills, and the similarity, or otherwise of their language to the Abor is not known. Considerable numbers of these people are also found on the shores of the two great northern branches of the Brahmaputra river.—*Indian Annals ; Latham's descriptive Ethnology* —See Bibor, Jubar, Kulta : India ; Semang ; Mishmi.

ABORIGINES of INDIA. There are large nations and innumerable smaller races scattered all over India, whose origin or date of arrival in the country is wholly unknown. The bulk of these immigrants seem however to have come from beyond the Himalayas on the north, at times ranging between 3,000 and 1,000 years before the Christian era. Small bodies, in the N. W. corner of the Peninsula, appear to be of Western origin, probably from ancient Babylonia. There are people in the Southern parts of the Peninsulas of India and Malacca, with marked Negro features, and such recur in the Archipelago Islands, with traces also, in the valleys of Northern India, as if there had once been a great Negro wave setting to the East. It is a subject of much value to Ethnologists, and notices of many of the races will be found under INDIA. The Aboriginal tribes of the Himalayas have been described in the Orient. Chris. Spec. 1842, Vol. III. Second Series, I.—4. Those of India by General Briggs, in Edin. Phil. Jl. 1851, 331, and the language of the Aboriginal Hindoos, Dr. Stevenson, in Bom. As. Trans. Vol. I. 163. Mr. H. R. Hodgson, however, has been the largest contributor, and has described the Aborigines of India, their languages, &c., in Bl. As. Trans. 1847, Vol. XVI. Those of the Sub-Himalayas, Ibid, 1848, Vol. XVII. 73, and gave a Vocabulary of the languages of those of Southern India, N. Eastern, and Central India, Ibid, 1849, Vol. XVIII. and Vol. XVI. p. 551. Those of the Neilgherry Hills—Buddagars, Todawars, Cotters, and Mulli-kurumbers, have been given by Col. Lambton, in Bom. Geo. Trans. Vol. IV. 23.

The great bulk of the settlers in India, labourers, farmers, foresters, shepherds, milkmen, artificers and professional races, seem to have come from the North-west by way of Kabul and Candahar ; down the valleys of the Indus, of the Ganges and Brahmaputra, and to have streamed through the gaps in the Himalayas, and from the practice followed of living apart in castes, who neither eat together nor intermarry, each of the immigrant Hindu tribes and races are now as distinctly marked as on the day of their first appearance. The Mahomedans, even, who have less of such caste habits, although they also to a considerable extent follow the ancient custom of marrying amongst their own people, are still readily distinguishable from one another ; tall, powerful, fair men of the Affghans, fair robust Moghuls from Tartary, fair slender nou-aits from Southern Persia, the darker men of Arab origin, and the powerful, large made traders, known in the south as Labbe. All these, amongst the Hindus, Brahmans, Chetris, Vesyas and Sudras, and amongst the Mahomedans, Syeds, Shaikhs, Moghuls and Pathans, are in great nations. But, throughout all India, in hamlets, in forests and the plains, in towns, in mountain valleys, and on the mountains, are innumerable smaller bodies or tribes, with forms, and habits, and following pursuits, quite distinct from each other. There is no doubt, however, that their languages show two great divisions, Arian and Turanian. Mr. Hodgson mentions, that of seven of the southern tongues, five belong to the cultivated class, viz., Tamil, Malayalam, Telugu, Carnataca, Tulava; and two to the uncultivated class, viz., Curgi and Todava. In regard to the cultivated tongues of the south, Mr. Elliot observes that the aptitude of the people at present to substitute prakritic words for aboriginal ones is such a stumbling block in the search for affinities, as to require pains and knowledge to avoid; and he instances (among others) the common use of the borrowed word rakta for blood, in lieu of the native term nethar, by which latter alone we are enabled to trace the unquestionable ethnic relationship of the Gonds (even those north of the Vindhya) with the remote southerns speaking Telugu, Canadi and Tulava. The Himalayan languages form an exception to this assumed general prevalence of the Tamulian type of speech. On the subject of the local limits and mutual influence at the present day of the cultivated languages of the south upon each other, Mr. Elliot remarks that "all the southern dialects become considerably intermixed as they approach each other's limits. Thus, the three words for egg used indifferently by the people speaking Canarese, (matte, tetti, gadda) are evidently obtained, the first from the Tamulian, matta; the last, from the Telugu, gadda. This intermixture, which is of ordinary occurrence in all cognate tongues, is here promoted specially by extensive colonization of different races, as of the Telugus into Southern India under the Bijanagar dynasty, where they still exist as distinct communities—and of the followers of Ramanuja Achary into Mysore, where they still are to be seen as a separate class speaking Tamil in their families, and Carnataca in public. The Reddis also, an enterprising race of agriculturists, have migrated from their original seats near Rajahmundry, over the whole of Southern India, and even into the Maharashtra country, where they are considered the most thriving ryots, and are met with as far north as Poona." The cultivated tongues of Southern India, are noticed in Ellis' Dissertation and Wilson's Mackenzie Manuscripts. Of the uncultivated tongues of Southern India, he observes that the dialects of the Curumbers and Irulers and other mountain races of the south are well worth exploring. The pagan population of India is divided into two great classes, viz., the Arian, or *immigrant*, and the Tamulian or *aboriginal*. The unity of the Arian family, from Wales to Assam, has been demonstrated. The Tamulian race, confined to India and never distinguished by mental culture, offers a humbler subject for inquiry than the Arian. But, as the moral and physical condition of many of the scattered members of the Tamulian body is still nearly as little known as is the (assumed) pristine entirety and unity of that body, this subject has two parts, each of which is of interest, to the philosopher and the statesman. The Tamulians are now, for the most part, British subjects: they are counted by millions, extending from the snows to Cape Comorin; and, they are as much superior to the Arian Hindus in freedom from disqualifying prejudices, as they are inferior to them in knowledge. In every extensive jungly or hilly tract throughout India there exist hundreds of thousands of human beings in a state not materially different from that of the Germans as described by Tacitus. These primitive races are the ancient heritors of the whole soil, from all the rich and open parts of which they were expelled by the hindus. It is a worthy object to ascertain when and under what circumstances this dispersion of the ancient owners of the soil took place, at least to demonstrate the fact, and to bring again together the dissevered fragments of the body, by means of careful comparison of the languages, physical attributes, creed and customs of the several (assumed) parts. It is another object, not less interesting, to exhibit the positive condition, moral and material, of each of these societies, at once so improveable and so needful of improvement, and whose archaic status, polity and ideas offer such instructive pictures of the course of human progression. The unity of the Arian race has been demonstrated chiefly through lingual means, and much has been done, of late years similarly to demonstrate the unity of the Tamulian race. But this is difficult, for there is an immense number of spoken tongues among the Tamulians, whereof have already been ascertained not less than 28 in the limited sphere of Mr. Hodgson's inquiries; and all these, though now so different as to be mutually unintelligible to the people who use them, require to be unitised. The long and perfect dispersion and insulation of the several members of the Tamulian body have led to an extremity of lingual diverseness which, as contrasted with the similarity of their creed and customs, is the enigma of their race. In Hindi and Urdu, though the structure is the same, vocables make a difference which is broad and clear, owing to the evidently foreign elements of the diversity. Not so, however, in the Tamulian tongues, in which there is very little of foreign element: all is homogeneousness in the vocables, and from its sameness of kind is less open to distinct separability. A summary comparative vocabulary was framed some years back by the Rev. Mr. Brown, and it has been extensively filled up with the dialects of the mountaineers round Assâm. With regard to the determination of the moral and physical status of each aboriginal people, none of the Tamulians have any old authentic legends, and being all very uninformed, save in what respects their immediate wants and habitual ideas, it is exceedingly difficult to learn any thing of this sort from them *directly*; their creed especially is a subject of insuperable difficulty, through the sole medium of direct questioning: their customs, again, are apt to afford but negative evidence, because, being drawn from nature, they tend to identity in all the several nations; and lastly, their physical aspect is of that osculent and vague stamp, that, what it does prove is general, not particular.

The great Scythic stem of the human race is divided into three primary branches, or the Tungus, the Mongol, and the Turk. The first investigators of this subject urgently insisted on the radical diversity of these three races: but the most recent inquirers more incline to unitise them. Certainly there is a strong and obvious character of physical (if not also of lingual) sameness throughout the Scythic race: and it is remarkable that this peculiar character belongs also to all the aborigines of India, who may be at once known, from the Cavery and Vigaru to the Cosi and Bhagarati, alpine feeder of the Ganges, not its Bengal defluent, by their quasi-scythic physiognomy, so decidedly opposed to the Caucasian countenance of the Arians of India, or the hindus. Mr. Hodgson apprehends that there will be found among the aborigines of India a like lingual sameness, and that very extended and very accurate investigation will consequently alone suffice to test the real nature and import of the double sameness, physical and lingual. That all the aborigines of India are Northmen of the Scythic stem, seems decidedly and justly inferrible from their physical characteristics. But, inasmuch as that prodigious stem is everywhere found beyond the whole Northern and Eastern boundary of India, not merely from Attok to the Brahmaputra, where these rivers cut through the Himalaya, but from that point of the latter river all the way to the sea; and inasmuch as there are familiar ghats or passes over the Himalaya throughout its course along the entire confines of India from Kashmir to the Brahmakund, it follows of necessity that very careful and ample investigation will alone enable us to decide upon the question of the unity or diversity of the aborigines of India, in other words to decide upon the questions, whether they owe their confessed Scythic physiognomy to the Tungus, the Mongol or the Turk branch of the Tartars or Scythians, and whether they immigrated from beyond the Himalaya ("the hive of all nations") at one period and at one point, or at several periods and at as many points. Between Gilgit and Chittagong there are 100 passes over the Himalaya and its south-eastern continuation to the Bengal Bay; while for the time of passage, there are ages upon ages before the dawn of legend and of chronicle. Mr. Hodgson inclines to the opinion that the aborigines of the *sub-Himalayas*, as far east as the Dhansri of Assam, belong to the Thibetan stock, and east of that river to the Chinese stock—except the Garos and other tribes occupying that portion of the Hills lying between Assam and Sylhet; and that the aborigines of the *tarai* and *forest* skirting the entire sub-Himalayas, inclusive of the greater part of the marginal circuit of the Assam valley, belong, like those last mentioned, to the Tamulian stock of aborigines of the plains of India generally. But what is this Tamulian stock? what the Thibetan stock? and what the Chinese? and to which of the three grand and well known branches of the Scythic tree (Tungus, Mongol, Turk) do the Tamulians, the Thibetans and the Chinese belong? Of the aborigines of Central India, of seven of whose languages, the three first came from Chyebassa, where they were prepared by Colonel Ouseley's Assistant, Captain Houghton; the 4th and 5th direct from Colonel Ouseley himself at Chota Nagpur; the 6th from Bhaugalpur prepared by the Rev. Mr. Hurder, and the 7th from Jabbalpur where Col. Sleeman's principal Assistant drew it up, the affinities of the tongues are very striking: so much so that the five first may be safely denominated dialects of the great Kol language: and through the Uraon speech we trace without difficulty the further connection of the language of the Kols with that of the "hill men" of the Rajmahal and Bhagalpur ranges. Nor are there wanting obvious links between the several tongues above enumerated—all which may be classed under the head Kol—and that of the Gonds of the Vindhia whose speech again has been lately shown by Mr. Elliot to have much resemblance both in vocables and structure to the cultivated tongues of the Deccan. Mr. Hodgson's hypothesis, in his essay on the Koch, Bodo and Dhimal, is that all the Tamulians of India have a common fountain and origin, like all the Arians; and that the innumerable diversities of spoken language characterising the former race are but the more or less superficial effects of their long and utter dispersion and segregation, owing to the savage tyranny of the latter race in days when the rights of conquest were synonymous with a license to destroy, spoil and enslave. That the Arian population of India descended into it about 3,000 years ago from the north-west, as conquerors, and that they completely subdued all the open and cultivated parts of Hindostan, Bengal and the most adjacent tracts of the Dekhan, as Telingana, Gujerat and Maharashtra or the Mahratta country, but failed to extend their effective sway and colonization further south, are historical deductions, confirmed daily more and more by the results of ethnological research. Brachmanes nomen gentis diffusissimæ cujus maxima pars in montibus (Ariana (Cabul) digit, reliqui circa Gangem. Cell. Geogr. And we thus find an easy and natural explanation of the facts that in the Dekhan, where the original tenants of the soil have been able to hold together in possession of it, the aboriginal languages exhibit a deal of integrity and refinement, whilst in the north, where the pristine population has been hunted into jungly and malarious recesses, the aboriginal tongues are broken into innumerable rude and shapeless fragments, but which may yet be brought together by large and careful induction.- *Mr. Hodgson, in Ben. As. Soc. Journ.* See India.

ABRA, surnamed Moochwal, or whiskered, one of the Bhooj family who came from Cutch in the time of Rinna Sowah, into whose family he intermarried. His son had offspring by a woman of impure caste and they assumed the name of Waghair with the distinctive appellation of manik or gem. The last four chieftains of this race were Mahap, Sadul, Samiah and Mulu-manik, who with all his kin and company of Waghairs, Badhails, Arabs, &c., after a desperate defence was slain in the storm or retreat.—*Tod's Travels, p.* 220, 440, 441. See Kattyawar.

ABRAHAM, ابراہیم the patriarch of three religions, Jewish, Christian and Mahomedan, is the earliest Hebrew personage, whose date can be fixed chronologically: from the emigration of Abraham, and the institution by him of religious ordinances, the consciousness of moral personality and, as a natural consequence, the consequence of personal chronology, may be said to date. He was a son of Terah, and brother of Nahor and Hanan born at Ur, and commonly called آل خلیل اللہ Ul Khalil Ullah the friend of God. His original language may have been Chaldaic, but the possibility of the language of Abraham remaining in its original state, during the 216 years that he and his family resided in Canaan, and the 430 years that the Hebrews abode in Egypt, and the 400 years, from the Exodus to the reign of David, that they dwelt in such intimate connection with the people of Palestine, is untenable.—*Kennedy on the origin of languages, p.* 25. *Bunsen, pp.* 373, *Vol.* I. ABR-MURDAH. PERS.? Sponge.

ABROMA AUGUSTUM, *Linn.*

Ulut kambal.	...BENG.	Perennial Indian hemp....	...ENG.
Smooth stalked Abroma	... ENG.	Do. do. flax....	ENG.

A small perennial tree or shrub with soft velvetty branches and drooping flowers of the family of Sterculiaceæ, a native of various parts of the interior of India, and as far east as the Philippines, and grows so rapidly as to yield annually, two, three, or even four cuttings, fit for peeling. On this account, and on account of the beauty, strength, toughness and fineness of its fibres, it is deserving of more than common attention. The produce is said to be three times greater and one-tenth stronger than that of Sunn. It can be cultivated as an annual. If maceration be employed, its continuance must be guided by the heat of the weather. To prepare the fibre, the bark is steeped in water for about a week, beyond which they require no further cleaning, and in this state, without any subsequent preparation they are not liable to become weakened through exposure to wet. A cord made from these fibres bore a weight of 74 lbs., while that of Sunn only 68 lbs.—*Royle. Riddell. Roxb.* iii. 156, *Voigt* 108. *Cyclopædia of Natural History. Useful Plants.*

A native of India, Bengal, Assam, Burmah and the Moluccas, but now introduced into Africa and America. There are three varieties of this tree, designated from the colour of the flowers and seeds, erythrospermos, or red seeded with a black eye, leucospermos or white seeded also with a black eye and melanospermos or black seeded with a white eye, the colours of their flowers being respectively rose, dark and white. Those of a bright scarlet colour, with a jet black spot at the top, are used by the jewellers and druggists as weights, also for beads and rosaries, whence the specific name. From their extreme hardness and pretty appearance, people prize them for necklaces and other ornaments. They form an article of food in Egypt, though considered hard and indigestible. In fine powder goldsmiths use them to increase adhesion in the more delicate parts of manufactured ornaments.

The roots abound in sugar and mucilage, and are employed as a substitute for liquorice, for which they are perfectly suited in every respect. The leaves have a similar taste, and, mixed with honey, are applied externally in swellings of the body. Horsfield says that in Java the root is considered demulcent, and the mucilage is there combined with some bitter. It is a popular belief that they almost uniformly weigh exactly one grain, troy; but they vary from one to two grains. The Burmese use them within a fraction for two grain weights. One hundred and twenty, by one mode of reckoning, and one hundred and twenty-eight by another, make one tickal, which weighs, according to Captain Low, 253·75 grains troy. The wood is of no value—Wight in his Icones, 33, figures A fruticulosus, and Voigt names A. pulchellus—*Riddell. Useful Plants. Mason. O'Shaughnessy. Ainslie. Roxb. iii,* 257. *Voigt.* 228 *Mason. Faulkner.* ~~*Wight.*~~ *Bombay Products.* See also Liquorice Root.

ABSALOM. It is supposed he was interred near the spot where he was killed, for we read in 2 Sam. xviii. 17:—"And they took *Absalom*, and cast him into a great pit in the wood, and laid a very great heap of stones upon him."—*Robinson's Travels, Palestine and Syria, Vol. I. p.* 130-1.

ABSINTHIUM WOOD. See Wormwood.

ABU ABID ULLAH MAHOMED. A moor of the family which reigned over Malaga after the fall of the Kalifat.

ABUBA. TEL. ఆబూబ CapparisRoxburghii, *D. C.*

ABU-BAKR. The father-in-law of Mahomed and his successor in the Khalifat, in A.H. ii A.D. 932. See Kajar: Khalifs.

ABUK, AR. ابک also ZIBAKH, ARAB. زیبق Mercury.

ABU KUBAYS hill bounds Meccah on the east. According to many Mahomedans, Adam, with his wife and his son Seth, lie buried in a cave here. Others place Adam's tomb at Muna; the majority at Najaf. The early christians had a tradition that our first parents were interred under Mount Calvary; the Jews place their grave near Hebron. Habil (Abel), it is well known, is supposed to be entombed at Damascus; and Kabil (Cain) is believed to rest under Jebel Shamsan, the highest wall of the Aden crater, where he and his progeny, tempted by Iblis, erected the first fire-temple. The worship however, was probably imported from India, where according to the Vedas, Agni (the fire god) was the object of man's early adoration.—*Burton's pilgrimage to Meccah, Vol. III. p.* 198-99.

ABUL FARAGH, or Al-mufrian: Mar Grigorius Abul Faragh bin ul Hakim Haroun ul Malati, author of the book of dynasties, which he finished in Arabic, in the reign of Arghoon Khan, the last of Genghis Khan's grand-sons. He was a Jacobite Christian of the city of Malatia in Cappadocia. It was arranged in ten Chapters 1. On the Saints since Adam. 2. The Judges of Israel. 3. The Kings of Israel. 4. The Chaldean Kings. 5. The Kings called the Magi. 6. The ancient Greek Kings. 7. Latin Roman Kings. 8. Christian Greek Emperors. 9. Mahomedan Arabic Kings. 10. The Mogul Kings. He is the Abul Pharagius of history; though an Arabian writer, he was a Christian by religion and Prideaux notices him.—*Chatfield's Hindoostan, p.* 245.

ABULFEDA. This author of the geographical book, Taqwim-ul-bildan was the sovereign prince of Hama Syria. His name and titles at length were, Sultan Almalic Almuayd Amadaddin Abulfeda Ismael, the son of Malic Alafdal Nouradden Aly, son of Jumaladdin Mahmoud, son of Omar, son of Schahinschah, son of Ayoub, of the family of Aoubites. He died in the year 1331, A.H. 732.—*History of Genghizcan, p.* 409.

ABUL GHAZI. See Kathi: India. 309. Saba.

ABU OSAIBI. An Arab of the tribe Khazerij.

ABU RIHAN AL BIRUNI (born 970 died 1038) spent forty years in India, and composed his excellent work, the Tarikh-i-Hind, which gives a complete account of the literature and sciences of the Hindus at that time. Al Biruni had been appointed by the Sultan of Kharazm to accompany an embassy which he sent to Mahmud of Ghazni and Masud of Lahore.—*Muller's Lectures, p.* 141. See Tibet.

ABUSIVE TERMS, in Southern Asia, in character more resemble those occasionally used among the Hebrews than such as the people of Europe employ, the Eastern abuse being personal rather than spiritual. *In Samuel* xvii. 43, are the words. 'The Philistine cursed David by his gods,' and a hindoo sometimes, in a fit of anger, says to his enemy, 'The goddess Kalee shall devour thee.' 'May Doorga destroy thee.' But (1 Samuel xx, 30) says 'Thou son of the per-verse rebellious woman,' and the Mahomedans and Hindoos often cast reproaches in some such words as those: 'Thou son of a loose woman.' 'Thou son of a beggar woman.'—*Ward's Hindoos.*

ABUSHAHR, generally abridged into Bushahr, or Bushire, a town in the Persian Gulf which rose into notice during the last century, and is said to have been previously an inconsiderable village, the Arabic word *Abu* ابو signifies a "father": also "possessing," or "endowed with" &c., and *Shahr* شهر a "city or town"—*Ouseley's Travels, Vol.* I. *p.* 192.

"ABU SHAM." A familiar address in El Hejaz to Syrians. They are called "abusers of the salt," from their treachery, and "offspring of Shimr" (the execrated murderer of the Imam Husayn,) because he was a native of that country. —*Burton's pilgrimage to Meccah, Vol. III. p.* 114.

Voigt mentions twelve species of Abutilon as growing in India; this species, a small plant 2-3 feet, common in most parts of India, and cultivated in Burmah. It yields a rather strong fibre fit for the manufacture of ropes. The leaves are used in the same manner, in India and Burmah, as the marsh mallows in Europe, in decoction as an emollient fomentation, and an infusion of the root as a cooling drink in fevers. Wight remarks that there is no character of any importance to separate this species from the A. asiaticum.—To obtain the fibre, the plants are gathered and freed of their leaves and twigs, and are put out to dry in the sun for a couple of days. They are then taken up, tied into bundles, and placed under water for about ten days, after which they are taken out, and the fibres are well washed to remove the bark and other foreign matter that may be adhering to them, and are placed in the sun to dry.—*Voigt.* 114. *Roxb. III.* 179. *Drs., Wight, Mason, Short. Useful Plants.*

ABUTILON POLYANDRUM. *W. and A.*

Sida polyandra. *Roxb.*
„ Persica. *Burm.*

Grows at *Kandallà* on the Neilgherries and Nundidroog; yields a long silky fibre, resembling hemp, fit for making ropes, samples of which, as well as of that of the A. tomentosum, were shown by Mr. Jaffrey at the Madras Exhibition, though those of the latter were not considered of a superior quality.—*Roxb. III.* 173. *Voigt.* 114. *Jur. Rep. Mad. Ex., Useful Plants.*

ABU-ZAID-UL-HASAN. A writer of A.D. 915. See Tibet.

ABWAB. ابواب Heads or subjects of taxation: miscellaneous cesses, imposts and charges.—*Wilson.*

ABYSSINIA is at present divided into three great portions, that of Tigre comprehending the tract between the Red Sea and the Takazze, that of Amhara, to the west of the Takazze and the provinces of the south. The Abyssinians of Tigre and Amhara are of Semitic origin and profess Christianity, being acquainted with the chief truths of the Bible, but all much blended with merely human notions. The latest polemical agitations have been as to the two or three births of Christ,—born of the father before all worlds; made man; and in the baptism at Jordan receiving the holy spirit. As regards the two natures of Christ, they are extreme monophysists. Monogamy is their church law, but concubinage is universal: when the Arabs threw off the Abyssinian yoke, the remnants of the Abyssinians in remote parts of the country were reduced to servile avocations and form the Khadim of Yemen. See India, p. 310. Kirk. Somal. Beer-el-somal. Khadim. Valentia.

ACACIA, a very extensive genus of plants, numbering about three hundred species. Of these, several are well known in the South and East of Asia, the foliage of some being attractive, while others furnish valuable timber, useful gums and products valuable to man: the specific names of a few are doubtful and some of those species described by Roxburgh have been removed to other genera. On the Neilgherries near Wellington, flourishing plantations have been formed of the Australian Eucalyptus and Acacias. They are intended to supply both fuel and building timber to these hills, and are of very large extent. One plantation near Coonoor, of 130 acres, and of about ten years' growth, contains many trees of from 40 to 50 feet high, and 3 feet girth. It would be difficult to find such a noble forest of planted trees of the same age in any part of the world. The seed is sown in nursery beds and well watered till it springs up. When the seedlings are from 6 to 18 inches high, they are taken out, and the roots of each packed in moss, or, in pots formed of one joint of the large Kuttung bamboo. They are then replaced in the nurseries and watered every day till they are from 2 to 3 feet high, when, during the rainy weather, they are planted out in trenches 6 feet apart and 18 inches square, filled with surface earth and any decayed vegetable matter : after planting out, the young trees are left to themselves ; growing close together, they keep each other straight and clear of side branches. During the first two or three years, very rapid progress is not observable, but after that period, having obtained a good hold, their growth is extremely rapid, and at ten years old, they form a noble and profitable plantation, from the necessary thinnings, both for building purposes and for fire-wood. Most of the species now described under the genus Acacia, were formerly, by Linnœus, Roxburgh and other authors classed as Mimasæ, but Voigt names as growing in India the following 39 Acacias, viz. :

Altissima.
Amara.
Arborea.
Arabica.
Buchanania.
Cæsia.
Catechu.
Cavalum.
Diluta.
Dumosa.
Elata.
Ferruginea.
Frondosa.
Fruticosa.
Glauca.
Herbacea.
Horrida.
Intsia.
Kalkora.
Leucophlœa.
Latronum.
Lophautha.
Miamonsis.
Modesta.
Mollis.
Mycrophylla.
Odorotissima.
Pennata.
Rugata.
Semicordata.
Sirissa.
Suma.
Sundra.
Smithiana.
Stipulata.
Tomentosa.
Tortuosa.
Vera.
Wightii.

Several of this genus, still remain without specific names. Of these, three occur in Burmah, the Kuk-ko, the Po-peeah, and the Nway khyo, A. arborea was introduced from Jamaica : A. Wightii is a tree of Malabar and Dindigul. A. Kalkora, a tree of Assam. A. Frondosa, of Patna. A. Glauca, a shrub of S. America, A. Horrida, a tree introduced from S. Africa or Arabia, A. Semicordata is a tree of Malabar, A. Cavalum, a tree of Bengal, A. Procera, Willde, a tree of Coromandel, and the A. planifrons of W. and A. is the umbrella tree of the peninsula of India. There is still considerable confusion amongst the species of this genus, as shown by the many synonyms of different writers. See Gums and Resins ; Charcoal.

ACACIA. Silk tree Acacia. Choukur, HIND. A common low tree in many parts of Rajwarra. The flowers are long, cylindrical, one-half yellow, the other half bright pink and not mutable ; the colored stamina exactly resemble tufts of floss silk : the wood is put to no use. —*Genl. Med. Top. of Ajmere.*

ACACIA. SACRED ACACIA. ?

Rewa, HIND.

A large tree common in Rajwarra, sacred to the Matajee, around whose shrines groves of this tree are commonly found. The wood is hard, dark colored, and durable, but only the decayed trees are used.—*Genl. Med. Top.* See Pilgrim tree.

ACACIA, TRAVELLER'S ACACIA.

Rheonj. HIND.

A very common tree in particular parts of Rajwarra, upon which travellers at certain parts of the roads suspend shreds of their cloths as in other parts of India. To the extremities of the young branches are suspended innumerable masses of exuded sap of large size.—*Genl. Med. Top. p.* 197.

ACACIA ABSTERGENS. Go-go, TAG. in Manilla, the fibrous part of the bark is used by ladies for washing their hair.

ACACIA AFFINIS. See Evergreens.

ACACIA ALBA. WILLD. Syn. of Acacia leucophlæa.

ACACIA AMARA. *Willd.*

Mimosa amara, *Roxb.*

Bel kambi...	... CAN.	Wunjah Maram.	...TAM.
Lallye... ...	...MAHR.	Nalla-regu. ...	...TEL.

This tree grows in Coimbatore, and is common in the more inland jungles of the Bombay presidency, but less so on their coasts : Dr. Gibson says it grows above the ghats of Canara and Sunda, not inland and not north of the Gungawalli river. It is a tolerably large tree in Coimbatore, but of rather low stature. Its flower is very beautiful. In Coimbatore the wood is dark colored and hard. In the Bombay Presidency, the wood is always very crooked, otherwise, when ripe, it is strong and tough and might be applicable to domestic purposes. From its black colour, the natives of Canara and Sunda deem it (wrongly) a species of ebony.—*Roxb. Il.* 548. *Voigt.* 261. *Dr. Wight. Dr. Gibson.*

This yellow flowering and rather ornamental tree is met with in varying abundance throughout Southern India. It is of rapid growth and requires no water, flourishing on dry arid plains and especially in black cotton soil, where other trees are rarely met with. In the western Dekhan of the Bombay Presidency, it is most frequent in the interior, less common on the sea coast and hardly known in its southern jungles. We do not find mention of it as occurring in Burmah, Pegu or Tenasserim, nor do we remember observing it there. In Ganjam and Gumsur, it attains an extreme height of 25 feet with a circumference of 2 feet: in Nagpoor, the maximum length of its timber is 14 feet, with 3½ feet of girth, but 10 feet long and 3 feet in girth is the average, and it sells there at 6 annas per cubic foot. The height from the ground to the intersection of the first branch is about 8 feet. It can never be had of large size, and is generally crooked, but it is a very hard tough wood and is extensively employed for tent pegs, ploughshares, sugar cane rollers, for the spokes, naves, and felloes of wheels; for the knees and ribs of country ships, and generally for all purposes to which a hard bent wood is applicable; it is not attacked by white ants. Although in great demand for ship building, when so applied, it does not last above 16 years. Amongst its other useful products, may be named its gum, bark and seeds, the latter being extensively used in the Dekhan for feeding sheep. The bark is very largely employed in the centre of the Peninsula as a tanning material, and when properly managed, makes a good leather, with a reddish tinge, though in native hands, the leather is often porous, brittle, and ill coloured. Dr. Buchanan mentions that, in Mysore, the bark was employed in the process of distilling rum; but in this he probably mistook another Acacia. The ground bark mixed with the expressed seeds of the Sesamum orientale has been used as food in times of scarcity. A decoction of the bark makes a good substitute for soap and is used in dyeing various shades of brown. It yields an abundance of transparent gum which flows out from incisions or fissures in the bark and hardens in lumps of various sizes and figures. This is used in India as a substitute for the true gum arabic, which is the product of A. vera. In the medicinal practice of the people, the bark is used internally as a tonic and astringent; in decoction as a wash for ulcers, and finely powdered and mixed with gingelly oil externally, in cancerous affections. Dr. Gibson, for years, advocated extensive planting of this useful tree, in the Bombay side of India, and several forests of it at Khangaum, Kasoordee and other places, have been preserved. He tells us that the Acacia Arabica, Babool, is most common in the interior; less so on the coast, and hardly known in the southern jungles. As the vernacular term,' Babool, is generic, and applied in the Mahratta, Guzerati and Hindi to various species, there are he adds, two if not three varieties or species of Babool, Ram Kanta and Eree Babool. The first is the most common species, the second less so, and distinguished from the first by its straight stem, and general appearance, resembling that of a gigantic broom. The wood is quite equal to that of the common Babool. The third species is distinguishable from the first by its more horizontal mode of branching; the smaller branches long and stretched out, the side branches from them going off at right angles nearly. The bark also is much more reticulated, broken, and corky than that of the other, and as its wood is very inferior, as regards its use for agricultural implements, house, material, &c. the distinction between the two, should always be kept in view as practically important. The pod of this third species, also, is much broader margined; very partially moniliform, and can be at once distinguished from that of the first two species which is so contracted between each seed as to be nearly severed. The pods and tender branches of all the three species form important articles of food for sheep, goats and cattle, from February to the beginning of the rains. The flesh of lambs fed on the pods has a flavour equal to that of the best Europe lamb. *Captain Sankey. Drs. Wight, Cleghorn, Gibson. Mr. Rohde. Reports of the Juries of the Madras Exhibition. This tree grows on the Malabar and Coromandel coasts, in the Dekhan, the Northern Circars, is one of the most common trees of the Bombay coast and its ghaut jungles, grows at Serampore, Monghyr, Rajmahal, Delhi, Nepaul, on the Mooring Mountains and Assam; it is common all over the plains and scattered over the hills of British Burmah, in great quantities in the forests of the Prome and Tharawaddy districts. Immense numbers of these trees are annually cut down and made use of for the extraction of catechu. There are several varieties differing in shade, specific weight, and yield of catechu. A cubic foot weighs from lbs. 56 to lbs. 70. In a full grown tree on good soil the average length of the truuk to the first branch is 20 feet and average girth measured at 6 feet from the ground is 6 feet. The wood possesses great strength and is considered more durable than teak. It resists the attacks of insects, and is employed for posts and uprights of houses, for spear and sword handles, bows, &c. The catechu, formerly known as Terra Japonica, is extracted from the wood. The Burmese variety called "sha" is common all over the plains and scattered over the hills of British Burmah.—*Roxb. II.* 562. *Voigt*, 259, 260 ;—*Dr. McCelland. Major Drury. Drs. Gibson and Brandis.* See Catechu.

Roxburgh says it is a native of every part of India, in Sind, Silhet Assam, Bengal and both peninsulas. It is a large shrub or small tree armed with thorns, but in waste places in the Western Dekhan, where it occurs also in garden hedges, it is only a scrubby shrub. Dr. Gibson says its wood is only applicable for tent pegs and firewood, but Voigt mentions that the wood is hard, tough, and used for ship knees, and tent pegs. A delicious perfume is distilled from the flowers, and the tree exudes a considerable quantity of useful gum.—*Dr. Gibson. Major Drury. Roxburgh* ii. 557. *Timber Trees.*

It grows in the Dekhan, in the woods and hills of peninsular India, in Coimbatore, in some parts of the Southern Mahratta Country, and in the Sholapore districts between the Bheema and the Kistna rivers. Its specific name and its Hindi, Tamul and Telugu names are given from the whitish or pale yellow colour of its bark, which, in Southern India, is one of the ingredients used in distilling arrack. In Coimbatore the tree attains a medium size with a round head, but in the Dekhan it is never of a size fit for anything beyond posts to small houses. The wood it furnishes, however, is strong, good and dark coloured, though generally small. It is easily distinguished by its panicled globular inflorescence and stipulary thorns. A tough and strong fibre, in use for large fishing nets and coarse kinds of cordage, is prepared from the bark by maceration, after four or five days beating. Under the Hindi name of Rohnee, this is described as a tree of Jubbulpoor, abundant in the Deinwah valley and Hoosingabad, yielding an excellent and tough wood, but which does not work smoothly.—*Cal. Cat. Ex.* 1862. *Dr. Wight. Dr. Cleghorn. Major Drury. Mr. Rohde. Voigt*, 262. *Roxb.* ii. 558.

This large handsome tree grows over all the peninsula of India, in any soil, on the coast or in the interior, and is found in Bengal, Assam, the eastern provinces of Burmah, Pegu and Tenasserim. In the Madras Presidency, about Coimbatore, it is of rapid growth and in considerable abundance, attaining the height of 30 to 40 feet. It often attains a good size in the Bombay presidency, but in Nagpoor, it is only in gardens that its dimensions are great, the timber it yields in other localities being as a general rule, of small scantling. It is, even there, however, obtainable in beams from 15 to 18 feet long and three feet in girth, at 5 annas per cubic feet. In Coimbatore, beams one foot square are procurable. The heart wood is dark coloured, turning almost black with age; is strong and heavy and takes a good polish; the grain being ornamental, though rather open. In Nagpoor it is described as being distinguishable from the timber of the Pentaptera tomentosa, only by its much straighter grain and greater lightness. It has an outer ring of white wood of from 2 to 3 inches, in Nagpoor, but which Dr. Gibson says, is, in the Western Dekhan, always 3-4ths of the whole. This part alone is assailable by white ants; but by being creosoted, it could probably be made a useful railway timber. All accounts describe its heart wood as strong, hard and heavy; in Nagpoor of sufficient size to form rafters, and excellently suited for naves and felloes of wheels, but there is an uncertainty as to its powers to bear moisture. A beam an inch and half square sustained a weight of 570 lbs. The oil manufacturers of Nagpoor use it for their mills and it is there generally employed to make carts. The wood is said to deserve being better known for the general purposes of carpentry.—*Voigt.* 261, *Captain Beddome. Captain Sankey Dr. Mason. Dr. Wight, and Dr. Cleghorn. Major Drury, Dr. Gibson, Dr. McClelland, quoted in Cyclopædia of India*, 1st and 2nd Supplements. *Rohde*, *Roxb.* ii. 546. *Sankey. Madras Exhibition Juries Report.*

ACACIA RAMKANTA. Under this name Drs. Gibson and Riddell describe an ornamental species of Acacia or a variety of A. Arabica, as common in the Dekhan, though less abundant than A. Arabica from which it is distinguishable by its straight, tall, erect stem and general cypress-like appearance, or resembling that of a gigantic broom, and the colour of its legumes. Its wood is quite equal to that of the Acacia Arabica, being hard and used for cart-wheels, ploughs, &c., but the natives attach some superstitious notions to the use of the tree.

ACACIA ROBUSTA, the large Australian or Cape Acacia, introduced from the Cape, is now growing freely on the Neilgherry Hills. At the Madras Exhibition of 1857, Mr. McIvor exhibited specimens of bast, from this tree, strong, very tough and durable, also pliable when wet ted, and constantly made use of, for all the purposes to which Russian bast is put in gardens in Europe. This bast can be procured cheaply and in large quantities, as the trees when cut down throw up numerous young shoots, to the height of from six to twelve feet in one year. The bark of the tree is also a powerful tanning material. *Mr. McIvor. Madras Exhibition of* 1857.

Grows in the peninsula of India, Bengal, Nepal, Sylhet, Assam, Moulmein on the Attaran and Dr. Gibson says it grows in the Ghaut jungles generally of Canara and Sunda. The legumes are used for washing the hair, and by Hindus for marking the forehead. The leaves are acid and used in cookery instead of tamarind and with turmeric they give a beautiful green. Pods and bark are exported from Canara, the former as a washing material, the latter for dyeing and tanning fishing nets.—*Voigt.* 263 *Roxb.* ii, 565. *Dr. Gibson. This, the Mimosa sirrissa of Roxburgh, in the Madras Exhibition Juries' Reports, is stated to be the Acacia sirrissa which is extensively planted along the banks of the Ganges canal. Like the seet of the Burmese, described by Dr. Mason and Dr. McClelland, it is a tree of large size and rapid growth, but the seed is described as giving a red wood or of a dark colour, and that of the speciosa as white or light coloured. This large tree is plentiful in Pegu, particularly in the Tounghoo district; it is found on the Irrawaddy and may exist in the Tenasserim Provinces. In Ganjam and Gumsur, it is very plentiful, and attains an extreme height of 30 feet and circumference 4½ feet, the height from the ground to the intersection of the first branch being 22 feet. It is used for sugar crushers, pestles, mortars, and ploughshares. It is common in the forests of the Bombay presidency, grows in Travancore, on the Coromandel Coast, and is a common tree in Coimbatore, where it is frequently seen growing by the road sides on account of the shade that its large head affords. The timber is easily procured in Madras, and is said to be white or light coloured, durable and very hard and strong, for Dr. White found a 1½ inch bar sustain 560 lbs. Dr. Gibson seems to refer A. speciosa to A. odoratissima, and to think that their Sirris and Ran Sirris are not different. Others describe it as a large, red or dark coloured timber, very hard, adapted to cabinet making and ship building, and Voigt who identifies Roxburgh's mimosa sirissa with this tree also says that the timber is large, dark coloured, very hard, and close enough grained for furniture, and that large masses of very pure gum are often found on it. *Dr. Mason. This tree grows in the peninsula and the Sunderbuns, but varies in size, in different localities. Dr. Gibson mentions that it is common in the jungles of Bombay, there always scrubby, small and crooked; and though rather plentiful in the forests under the ghats, he had not seen it of a size capable of affording planks. It is somewhat abundant in the jungles, and a rather large sized tree. At Guntoor, Mr. Rohde mentions he had obtained planks one foot broad; that posts five feet long are procurable at 12 Rupees per 100, well suited for fencing, and that the natives regard it as the most durable wood for posts in house building, though from its non elastic nature it is unfavorable to the holding of nails driven into it. The wood is, however, not obtainable in the market generally in planks of any size. The wood is of a dark colour, very hard, heavy and very strong, a one-inch bar sustaining a weight of 500 lbs. It is also used for rice pestles. A resin similar to that which excludes from the A. catechu, is procured from this tree. The two trees are nearly alike, the uncertainty of the prickles absent or present, being a distinguishing characteristic of this one.—*Mr. Rohde. Dr. Wight. Voigt* 260. *Cleghorn's Reports. Sumr	Arab.	Gum Arabic tree	...Eng.

The Acacia vera is a tree of the African desert, and according to Wellsted, of Arabia, its leaves yield the camel the sole forage it can meet in those arid regions. Two products are obtained from it, one natural, the other artificial, namely, the dried Acacia juice and gum arabic. The Acacia juice (Akakia of Dioscorides and eastern writers) is a solid, dark colored shining substance, soluble in water which it colours red. It is obtained by pounding the unripe fruit, and the juice is thickened before the sun, and then placed in bladders in which it gradually dries. The little bladders of Akakia found in Europe contain about 5 or 6 ounces each; it is sold in the bazars of Bengal in thin, very black cakes about the size of a rupee. It was much lauded by Hippocrates and Dioscorides. Wellsted found the Sumr trees of great size, and the gum exuding in considerable quantities, but very little of it was collected by the Bedowins, who complained that the price it brings in Maskat, does not repay them for their trouble. The great and most important article of commerce as an export from the Soudan, is the gum arabic. It is produced by several species of Mimosa, the finest quality being a product of Kordofan; the other natural productions exported are senna, hides, and ivory.—*Wellsted, Vol.* 1. *p.* 73 *and* 106. *Baker's Albert Nyanza. ACEITE DE PALMA. Sp. Palm Oil.

ACEITUNAS. Sp. Olives.

ACER. Dr. Royle mentions, that immediately we commence ascending the Himalayas, either in Nepaul or Sirmoor, we meet with species of the Acer or Maple family, seven new species have been discovered in these mountains, of which Acer oblongum, is that which descends to the lowest level, being found in Nepaul and further north in the Dehra Doon, between 2,000 and 3,000 feet of elevation. Acer cultratum is found at 6,500 feet on the Mussooree range, and at similar heights in Sirmoor and Gurhwal; while A. caudatum (Wall. Pl. As. Rar. t. 132, and A. acuminatum? Don) sterculiaceum and villosum, are only seen with pines and birches on the loftiest mountains, which are for many months covered with snow. A. sterculiaceum (Wall. Pl. As. Rar. t. 105) is closely allied to A. vellosum, which differs but little from a pseudo-platanus, or sycamore; and as this affords timber which, from being light and tough, is much used by turners, and for making saddle trees, so it is probable that both the Himalayan species would answer equally well for the same purposes. The wood of A. cultratum is white, light and fine-grained, and might be turned to the same uses as that of the maple, which is esteemed by turners, and also occasionally for making gun-stocks. A. caudatum is also found in Kunawar, and A. sterculiaceum, extends to Cashmere. Though this family contains one other genus, Negundo, which has been separated from Acer, a new one, Dobinea, has been discovered in Nepaul by Dr. Hamilton, and is distinguished, according to Mr. Don, by its monœcious flowers, companulate 4-toothed calyx, with the eight stamens united into a column round the sterile style. It is only a shrub of six feet in height, but judging from the dried specimens, it must, when in flower, have a very light and elegant appearance.

Acer (Negundo) fraxinifolium, is a native of North America, from which sugar is said to be made. Mr. Hodgson, in his Nagasaki, p 342-3, gives the following as the species of the genus Acer, growing in Japan, viz:

A. carpinifolium	*S. & Z.*
A. cratægifolium	„
A. distylum,	„
A. dissectum,	*Thunb.*
A. Japonicum,	„
A. palmatum,	„

Poun-ya	Burm.	Chuka	...Malay.
Pyroligneous acid	Eng.	Sirka	... Pers.
Vinegar ...	„	Kadi	... Tam.
Sirka, also Khall	Hind.	Pul'su	... Tel.

The ordinary vinegar of the Indian bazars is prepared from the Dolichos uniflorus. Dr. O'Shaughnessy discovered that much pyroligneous acid passes over along with other gases, in preparing the charcoal for the Echapore powder works, and he recommends for India the practice followed in Germany, where a strong acetic acid, is obtained cheaply and rapidly by causing a mixture of one part of spirit, four water, and about 1000th part of honey or yeast to filter into a cask containing wood-shavings, and provided with holes to secure a free circulation of air. A very large surface being thus exposed, the alcohol is rapidly converted into acetic acid. The fluid drops from the cask into the receiver and should be repassed over the shavings four times. The action is most effective when the temperature ranges from 75° to 100°. In India, teak shavings well boiled in water and subsequently steeped in good vinegar should be employed. The casks should be provided with a perforated tray at top to receive the mixture, the perforations being about the size of a quill, and furnished with cotton wicks to moderate the flow of the liquid. The tray should also have four air-holes an inch in diameter, with glass tubes to permit of the circulation of air.—*Beng. Phar. p.* 233.

ACHE OR ACHIN. See Acheen: India.

ACHEEN. (Sumatra) Athi of the Malays, Atsjin of the Dutch, Lat. 5° 22′ N. Long. 95° 46′ E. The capital of a kingdom of the same name, situated near the N. W. extreme of Sumatra, and formerly one of the principal trading ports of the Indian Archipelago, its position, near the entrance of the Straits of Malacca, enabling it to command the navigation of what was then the only channel of communication between the Islands of the Indian Archipelago and the countries of the West. Every vessel entering the Straits was then obliged to call at Acheen to obtain a pass, but the arrival of Europeans in these seas who were by no means inclined to acknowledge the authority of a sovereign who was looked upon as a barbarian, set at defiance the assumed authority of the kings of Acheen, and it has gradually decreased in importance until the present time. This monarchy arose from the usurpation of Sultan Saleh-ood-din in A. D. 1521, previous to which time, Acheen had been a province of Pedir and governed by a viceroy from that kingdom. The kingdom extended, in former times, from the north-west promontory of the island of Sumatra (called Acheen Head, a well-known and bold landfall for ships) to beyond Batu Bara river, on the north side of the island. But the territory in modern times, on the north coast, may be said to commence from Diamond Point, as it has ceased to exercise authority over Langhat, Delli, &c. The Acheenese differ much in their persons from the other Sumatrans, being in general rather shorter and of a darker complexion. They are by no means, in their present state, a genuine people, but are supposed to be a mixture of Battas and Malays, with Chuliahs, as they term the natives of the west of India. The town of Acheen is situated on the banks of a river, which, after traversing a broad plain bounded on each side by ranges of hills, forms a delta and falls into the sea by several mouths. The roads are tolerably secure, especially from April to November, when the south-west monsoon prevails and blows usually off the land. During the remainder of the year, north-west gales are sometimes experienced, but the islands in the offing afford considerable shelter, and a ship well found in ground tackle, is not likely to incur any danger of being driven on shore. The usual anchorage is in from 9 to 15 fathoms, with the principal mouth of the river from S. to S. E., and about 2½ or 3 miles off shore. They are an active and industrious people, and show much mechanical ingenuity, but are not scrupulous with regard to their commercial transactions. They are strict mahomedans, and great numbers resort in the Arab vessels to Mecca, with the view of becoming Hajis or pilgrims, which entitles them to high respect among their compatriots on their return. The Arabs, from their supposed sanctity, had formerly great influence among the Acheenese, but this has subsided of late years, owing to the turmoils which their selfish chicanery produced in the State. The most influential individuals now are the "Padri," a species of religious fanatics, chiefly Malays of the Menangkabao states of the interior, who have been for many years past occupied in opposing the encroachments of the Dutch in the interior of Sumatra, but are now chiefly congregated in the kingdom of Acheen, as the last hope of their race. Acheen was not only one of the principal trading ports of the Archipelago, but also one of the most powerful kingdoms, on the first arrival of Europeans, and its naval expeditions continued to be a source of great annoyance and alarm to the Portuguese as long as they continued in power. Its decline, however, had already commenced before the English and Dutch first visited the Indian seas towards the close of the 16th century, chiefly owing to the efforts of the Portuguese to concentrate the trade of the Archipelago at Malacca. Acheen has since continued to decline until its capital has become a port of minor importance even within its own territories. The nominal boundaries of the kingdom still continue to be much the same as formerly, namely, Baroos on the west coast, and Batu Bara on the east coast, but the encroachments of the Dutch on the one hand, and the spirit of independence displayed by the petty Rajahs on the other, have reduced the actual authority of the Acheenese kings to limits which scarcely extend beyond the immediate neighbourhood of the capital. The natural productions of Acheen and its neighbourhood, include gold dust, which is chiefly produced by washing the sands of the rivers; camphor, which goes by the name of "Baroos camphor," and is highly prized in China; sapan-wood, bees'-wax, dammer and rattans. Cattle are abundant, and also small horses of an excellent breed, (the best, indeed, in the Archipelago with the exception of those of Bimah in Sumbawa) which are exported in considerable numbers to the settlements in the Straits of Malacca, especially Penang, where some very favourable specimens of the breed are to be met with. The better kind have fine crests, and good strong shoulders, in which latter particular, as well as in height of wither, they differ very much from the horses of Java and the islands to the eastward, which are generally deficient in these points. Sheep are almost unknown, the nature of the grasses being apparently unfitted for them. The coasts abound in fish, which the Acheenese are very expert in taking. Rice, pepper, betel-nut are the chief agricultural products. All the principal fruits of the Archipelago, mangostein, durian, mango, pine, and lansat; orange, lime, and many smaller fruits are produced, and of a quality rarely equalled and never excelled in the east. The great beauty of the country in the neighbourhood of Acheen, the green hills backed by the lofty Golden Mountain, and the sea studded with islands, must have made a very favourable impression upon the early navigators, to whom Acheen was generally the first spot that presented itself; and their expectations concerning the richness of the Archipelago must doubtless have been extravagant, when they found so fertile and productive a country lying at its very threshold. The Acheenese manufacture cotton cloths of very durable texture, and also small quantities of silk taffetas, which are handsome, but so excessively dear, that they can only be purchased by the wealthier people, and are seldom exported except as curiosities or as presents. The material of the cotton cloths is of home growth, but the raw silk is imported from the continent of India. The Acheenese are also expert workers in gold, and were formerly skilful in casting small brass cannon or "lelahs," but the manufacture of these articles is now confined almost exclusively to Palembang, on the east coast of Sumatra, where it was introduced by settlers from Java. Acheen port is rarely visited by European vessels for purposes of trade, although it is often resorted to by ships bound to Calcutta or Penang which have become short of water or provisions, from having met with baffling winds in the neighbouring seas, which are very likely to occur at certain seasons, especially towards the close of the year.—*Journ. Common Sapota. ...	„	Ratami. ...	.. Singh.
Sapoddilla Plum ...	„	Siuni Elupei maram.	Tam.
Thwoot-ta-bat.	...Burm.	Sima Ippa Chettu..	Tel.

A native of China, cultivated in the west Indies and S. America. In India, only grown as a fruit tree, has been introduced into the Dekhan from Goa, wood hard and close grained. The seeds are aperient and diuretic; in over-doses they are dangerous. The bark is said to be a good substitute for Cinchona. The *Tamil* name of this tree is liable to be confounded with Mimusops and Bassia.—*Jaffrey. Riddell. Roxb. Voigt.* 339; See Sapodilla. Diospyros sapota.

ACSHA. Sans. An astronomical term. Acsha ansa, and Acsha Bhagas, degrees of terrestrial latitude, Acsha Carna, Hypothenuse; but in its Astronomical sense, means what Europeans call the argument of the latitude, as well as Patana Chendra.

ACHULIYAJA. Beng. Long leaved Itea macrophylla.

ACHU VANAM. See Jews.

ACHYOOT. Beng. Morinda tinctoria.

ACHYRANTHES. A genus of plants of the natural order, Amarantaceæ, some of the species formerly placed with this, have now been removed to other genera. Wight in his Icones, figures A. alternifolia, aspera, bidentata, brachiata, diandra, ferruginea, fruticosa, lanata, lappacea, Monsoniana, muricata, orbiculata, prostrata, rubrofusca, scandens, sericea, triandra.

ACONITINA or BIKYA, prepared from Aconitum ferox, is a formidable poison, 1-10th of a grain killed a goat in one of Dr. O'Shaughnessy's experiments in 12 minutes. The animal evinced severe distress and died in convulsions. The pupils were widely dilated. It is used in an ointment, one grain being mixed with a drachm of lard and is an invaluable local application in many forms of neuralgia, especially in tic-doloreux. It almost immediately occasions a tingling sensation in the part, then numbness, and relief of the pain.—An Extract of Aconite, was also prepared from the A. ferox by Dr. O'Shaughnessy. It is, however, a dangerous internal remedy, Externally, it is used in ointment as a substitute for the preparations from the expressed juice of the leaves of the Aconitum napellus.—*Beng. Pharm. pp.* 265, 286.

ACONITUM. *Linn.* This genus of the Ranunculaceæ is almost entirely confined to Europe and Northern Asia, a few only being American. Throughout the temperate part of the Himalayas, the species occur, but most frequently to the Eastward in the moist parts of Nepaul and Sikkim. Four of the Himalayan species are endemic, but three are also common to Europe. The roots of several, A. ferox, luridum, napellus and palmatum, are all extensively used as the Bikh poison, and throughout the Himalayas are indiscriminately so called, nor can the dried roots be distinguished from each other.—*Hooker, fils, et Thompson.*

ACONITUM FEROX. *Wall. Cat.*

Aconitum virosum. *Don.*

This is the best known of those poisonous plants known as Bikh. It was first indentified and described by Dr Wallich in his Plantæ Asiaticæ Rariores. It is a native of the Himalayan mountains, Sirmoor, Kumaon, and Nepaul, growing at 10-14,000 feet, and one of the most celebrated articles in Indian medicine and toxicology. It is found at high elevations, sometimes at 10,000 feet above the sea, and Dr. Wight asserts, that wherever, within the tropics, we meet herbaceous forms of Ranunculaceæ, we may feel assured of having attained an elevation sufficient to place us beyond the influence of jungle fever. The root of this species of Aconite is highly poisonous, equally fatal taken internally or applied to wounds, but the effects of the aconite are witnessed in a concentrated state when the extract is introduced into a wound. A preparation of the root is much used in all the hilly districts in Northern India to poison arrows for the destruction of wild beasts, and tigers are destroyed by the poisoned arrows being shot from bows fixed near the tracks leading to their watering places. It has been used on several occasions to poison wells and tanks, and doubtless might be made a formidable means of defence against the invasion of the territories in which it abounds. The Goorkhas say that they could so infect all the waters with the dreadful root that no enemy could advance into their mountain fastnesses.—*O'Shaughnessy B. Dis.* 166. *Phar.* 265-286. *Useful Plants. Honigberg. Hooker f. et. Th.*

ACONITUM HETEROPHYLLUM. *Wall. Royle.*

Atis... ... ...HIND.

This plant occurs in abundance on the lofty mountains of Choor Shalma and Kedarnath but varies greatly in the size and form of its leaves, from which circumtsance it derives its specific name. It was first described and identified by Dr. Wallich in Plant: Asiat: Rariores, and has received additional notice from Prof. Royle. The root is composed of two oblong tubera, of a light ash colour externally, white internally, and of pure bitter taste and it has been long known in Indian medicine as a tonic and aphrodisiac. Honigberger mentions that the roots are given also in pectoral affections, coughs, &c. The roots are said to be eaten by the Kunawar hill men as a pleasant tonic under the same term Atees. But, two substances are met with in the bazar, one of them quite inert, up to two drams (120 grs.) having been given by Surgeon Walter without any effect.—*Useful Plants. Honigberger. O'Shaughnessy, p.* 166-8. *Ind. Ann. Med. Sci. Ap.* 1856, *p.* 395. *Hooker f. et. Th. Beng. As. Soc. Proceed.* See Atees.

ACONITUM LURIDUM. *H. f. et. T.*

This plant grows at Tankra and Chola in Sikkim at an elevation of 14,000 feet; the native names are supposed to be identical with those of A. ferox. *H. f. et. Th.*

ACONITUM LYCOCTONUM. *DeC.* A plant growing at from 7,000 to 10,000 feet in the Himalayas.—*H. f. et. Th.*

This genus of the Acoraceæ is a native o, Europe also of North America and cultivated in the moist and cool parts in India, Amboyna, Ceylon, Nepaul, Khassia Hills, Malabar, Bourbon, and Burmah, for its medicinal properties. The whole plant is aromatic but the root alone preserves the flavour in drying. It is a favorite medicine among the hindoos as a stimulant in flatulency. It occurs in the shops in longitudinal pieces, wrinkled and marked with projecting points, and might be easily substituted for more expensive spices or aromatics. The root is an aromatic stimulant, useful in ague. The Calamus aromaticus of the ancients is referred by Royle to the Andropogon Calamus aromaticus.—*O'Shaughnessy, p.* 626. *Royle, Pereiera. Roxb. Mason. Useful Plants.*

ACORUS ODORANT. Fr. *Sweet Flag.*

ACORUS ODORATUS. *Lamb. Rheede.* Syn. of Acorus calamus. *Linn.*

ACORUS VERUS differs much from A. calamus, and has been attributed erroneously to the Gentiana chirayta.—*O'Shaughnessy, p.* 626.

ACQUA-DI-RASA. It. Turpentine oil.

ACROCHORDUS, See Hydridæ.

ACRE, or AKKA, the Ptolemais of the Greeks: from the terrace on the top of the convent, there is a very fine panoramic view of the town. On the west, the walls are washed by the Mediterranean Sea, and, on the south, by a magnificent bay, extending from the city as far as Mount Carmel, being three leagues broad and two in depth. It was originally called Accho; but being in after times improved and enlarged by Ptolemy the first, it was called after him Ptolemais. Subsequently, falling into the possession of the Saracens, it recovered some semblance of its Hebrew name. It was first taken by the Saracens in 636. The Christians first became masters of it in 1104. Salah-ud-din got possession of it in 1184, and held it till 1191, when it was retaken by the Crusaders. The latter held it for exactly one century, when the Saracens finally wrested it from them and retained it until they, in their turn, were obliged to cede it to the Turks in 1517. From this time Acre remained neglected till about the middle of the last century, when the Arab Sheikh, Daher, took it by surprise. Under his wise administration, it recovered a part of its trade. He was succeeded by the famous, or rather infamous, tyrant Jazzar Pacha, who fortified and embellished the town. In 1799, it rose into importance and consideration by its gallant and successful resistance to the arms of Bonaparte, directed by Sir Sidney Smith, a British officer.—*Robinson's Travels, Palestine and Syria. Vol. I. p.* 198, 199.

ACRIDOTHERES TRISTIS. See Birds, Ornithology.

ACROCEPHALUS DUMETORUM. See Ornithology.

ACROSTICHON, a genus of ferns of the West and East Indies, and Australia. Dr. Hooker mentions that one of the genus clothes the betel palms on the Megna, with the most elegant drapery. It is the *Acrostichum scandens*, and is a climbing fern with pendulous fronds; at another place he found parasitic orchids growing on the trees, which were covered with this climbing fern, so that he easily doubled his flora of the river banks before arriving at Maldah.—*Hooker's Him Jour. Vol.* II. *p.* 338 *and* 351.

ACROSTICHUM FURCATUM. See Graminaceæ.

ACTÆA, a genus of the Ranunculaceæ, of which two species occur in India and China.

ACTÆA SPICATA. *Linn.* The Baneberry. A native of the Caucasus and Siberia. Roots astringent; the whole plant acrid and poisonous. The Actea acuminata, (Wall.) is found on the Choor and Acharanda mountains.—*O'Shaughnessy, page* 170.

ACTÆA ASTERA is sometimes collected in China, as the scouring-rush is, for cleaning pewter vessels, for which its hispid leaves well fit it.—*William's Middle Kingdom, p.* 286.

ACTEPHILA NEIGHERRENSIS. *Wight.*

A. Javanica. *Miq.*
Savia actephila. *Hassk.*
Anomospermum excelsum. *Dal.*

A small tree not very uncommon in the central and southern parts of Ceylon, up to an elevation of 2,000 feet —*Thwaites.*

ACTINIADÆ. See Zoantharia.

ACTINODAPHNE, a genus of trees of which several species, elegans, glauca, Molochina, Monii, speciosa and stenophylla, all small trees, are described by Thwaites as occurring in Ceylon.—*Thwaites.*

AD ALLI. a Semitic race on the west of the Red Sea. See Semitic races.

ADAM. آدم The Gnostics, in framing their theological system, ranked Adam as Jeu, "the primal man," next to the Noos and Logos, and therefore the third emanation, from a deity. Mahomed styles Adam, Awal-ul-ambia the First of the Prophets, also Khalifa-ul Akbar, the first (of God's) vice-gerents, and in the tenth century, his grave in Ceylon became the established resort of mahomedan pilgrims. Adam's stature according to mahomedan legends, was about 36 feet. His burial-place is shown by the Arabs, at the hill Abu Kubays, and according to these legends Adam and Eve dwelt at Mount Arafat, where Adam's place of prayer is shown. According to Hippolytus, the Chaldæans gave the name of Adam, to the man who was born of the earth, but who afterwards became a living soul. The Hebrew word Adam is equivalent to the Aramaic Enos: both being the ordinary terms for man. But, Adam seems to be applied as man from the reddish complexion of the men of Canaan and Phœnicia, and Enos from the possession of manly strength. Adam or Edom, thus means the Red man of Canaan, and Phœnicia, or the fair complexioned, in distinction to Ham, the Dark, the Black, the inhabitant of Egypt, and Sem, the oldest patriarch of Israel, the glorious, the renowned; Japeth, the bright, the fair, the white man of Northern Asia.—*Ch. Bunsen, Vol.* iv. *p.* 373, 385, & 998——*Burton's Pilgrimage to Mecca, Vol. III. p.* 393. *Sir J. E. Tennant, Ceylon.* See Menu; Persian Kings. Prithivi.

ADAM, Dr. J. A Bengal Medical Officer, who was Secretary to the Bengal Medical Board; Founder of the Calcutta Medical Society. He wrote on the Geology of Bundelcund and Jubbulpore, in a Memorandum in the Bl. As. Trans. 1842, Vol. XI. 392. *Dr. Buist's Catalogue*

ADAM, WILLIAM. He reported on the state of Education in Bengal and Behar, in 1836 and 1838. He also wrote in the Calcutta Review in 1841, No. IV.; and in the As. Soc. Jl. 1838, Vol. XXVII.

ADAMANT, the modern Corundum. Professor Tennant states that the adamant described by Pliny was a sapphire, as proved by its form, and by the fact that when struck on an anvil by a hammer it would make an indentation in the metal. A true diamond, under such circumstances, would fly into a thousand pieces. Adamant is the Shamir of the Hebrews, spoken of in Ezek. iii. 9 : and Zech. vii. 12.—*Curiosities of Science, page* 103.

ADAMS, an Englishman who visited Japan about the year 1599, and resided at the Court of Jeddo for many years. By his influence, Captain Saris delivered a letter from James I. to the Emperor and a treaty was signed in September 1613, granting privileges to the E I. Co.

ADAM'S BRIDGE, a narrow ridge of sand and rocks, mostly dry, forming the head of the gulf of Manaar, and with the Islands of Ramiseram near the mainland and Manaar near Ceylon, almost connecting this island with the continent ; a channel called the Paumben Pass, was deepened to 13 feet, by the Government of Madras.—*Sir J. E. Tennant's Ceylon.*

ADAM'S NEEDLE. ENG. Yucca gloriosa. See Liliaceæ.

ADAM'S PEAK, آدم کا پہاڑ the summit of a lofty mountain in Ceylon. A hollow in the lofty rock that crowns the summit was said by the Brahmans to be the footstep of Siva ; by the Buddhists, of Buddha ; by the Chinese, of Fo ; by the Gnostics of Jeu ; by the Mahomedans, of Adam ; and the Portuguese were divided between the conflicting claims of St. Thomas and the Eunuch of Candace, Queen of Ethiopia. Mr. Duncan, in a paper in the Asiatic Researches, containing " Historical remarks on the Coast of Malabar," mentions a Native Chronicle in which it is stated that a Pandyan, who was contemporary with Mahomed, was converted to Mahomedanism by a party of dervishes on their pilgrimage to Adam's Peak.—*Tennant's Ceylon. See Mahawelli-ganga.*

ADAM SHAH. The first of the Kalora amirs of Sindh.

Bulkokra... ...Beng.

A large timber tree of Silhet and Chittagong, wood very hard. A. nereifolia R. of the Coromandel coast and A. cordifolia R. of Moluccas.

ADEN. A British settlement, on a part of Yemen, which is almost the most southerly point on the Arabian Coast: it is situated in lat. 12° 47' N., and long. 45° 10' E. and is a peninsula of about 15 miles in circumference connected with the continent by a low narrow neck of land, 1,350 yards in breadth, nearly covered by the sea at high spring tides. It consists of a large crater, formed by lofty and precipitous hills, the highest peak of which has an altitude of 1,775 feet: the town and part of the military cantonments are within the crater, and consequently surrounded on all sides by hills, save on the eastern face, where a gap exists, opposite the fortified islets of Seerah. The crater has also been cleft from north to south and the rents thus produced are called the northern and southern passes; the former better known as the Main pass, being the only entrance into the town from the interior or harbour. The principal harbour, or Back Bay, is the space between the northern shore of the Peninsula and the south coast of the continent. It is about 3 miles wide at the entrance, and affords an admirable shelter in all weathers for vessels which do not draw more than twenty feet of water. It is unsurpassed by any on the Arabian or adjacent African Coasts, being capacious, easily made, and free from rocks and shoals. Water of a good quality, but in limited quantities, is found at the head of the valleys within the crater and to the west of the town. As the wells approach the sea, they become more and more brackish, and those within the town are unfit for any purpose save ablution. These are in number about 150, of which probably 50 are potable, and yield an aggregate quantity of about (15,000) thousand gallons per diem. They are sunk in the solid rock to a depth of from 120 to 185 feet, and, in the best one, the water stands at a depth of 70 feet below the sea level. The Banian well, the best in Aden, is 185 feet deep, the bottom is 70 feet below the level of the sea, and, before being drawn, it contains about 4,000 gallons. *The wells within the town have an unlimited supply at from 30 to 40 feet, but the water, is unfit for drinking.* An inexhaustible supply of water is procurable on the northern coast of the harbour, but the difficulty of bringing it into Aden, and its liability to be cut off by hostile Arabs, render it almost unavailable. Many of the best wells have been excavated since the British conquest, and the oldest does not date further back than A. H. 906 (A. D. 1500.) Previous to this period, the place was supplied partly by means of reservoirs about 50 in number, and partly by an aqueduct which communicated with a well in the interior. There is no certain record of the construction of these reservoirs, but it is probable that they were first commenced about the second Persian invasion of Yemen, in A. D. 600. It is certain that they cannot be attributed to the Turks, as the Venetian officer who described the expedition of the Rais Suleiman in 1538,the first occasion of Aden being conquered by that nation, says that "they (the inhabitants of Aden) have none but rain water, which is preserved in cisterns and pits 100 fathoms deep," Greene, Vol. I. p. 91. Ibn Batuta, p. 55, also mentions this fact as being the case in his day. When Captain Haines visited Aden in 1835, several of the reservoirs appear still to have been in a tolerably perfect condition. The annual fall of rain in Aden seldom exceeding six or seven inches; and the reservoirs were constructed to preserve this. To remedy this scant supply the sovereign of Yemen, Melek-el-Mansur-Tak-ed-din Abdel-Wahâb-bin Tahir, towards the close of the fifteenth century, constructed an aqueduct to convey the water of the Bir Hamed into Aden, but it has long been ruined and disused. During the North-east monsoons from October to April, the climate of Aden is cool and agreeable; during the remainder of the year, hot sandy winds occur, known as the Shamal. Aden was anciently one of the most celebrated cities of Arabia, and owed its riches and importance to being the general entrepot of the great carrying trade which existed between India, Persia, Arabia and Africa and the various nations of Europe, Egypt and Phœnicia. Ships from the east conveyed the treasures of their respective countries thither, for transmission up the Red Sea, by means of smaller craft, to the ports of Egypt; rich caravans brought to it the produce of the thuriferous regions, and merchants from all parts of the east and west formed their commercial establishments, and imported the goods of their various lands, either for consumption in the country or to be forwarded to the further east. The author of the Periplus of the Erythrœan Sea informs us that, shortly before his time, Arabia Felix or Aden, had been destroyed by the Romans; and Dean Vincent is of opinion that the Cæsar in whose reign this event took place, was Claudius. The object of destroying so flourishing a port is not difficult to determine:—from the time that the Romans first visited Arabia under Ælius Gallus, they had always maintained a footing on the shores of the Red Sea; and it is probable that Claudius, being desirous of appropriating the Indian trade to the Romans, sought a pretext for quarrel with Aden, in order that he might, by its destruction, divert the Indian trade to the ports of Egypt; this he was the more confident of effecting, as the direct passage across the Indian ocean had been discovered, some time previously, by Hippalus, a Greek of Alexandria. In the time of Constantine, Aden had recovered its former splendour, and, as a conquest of the Roman empire, it received the name of Romanum Emporium. Under British rule, ever since its conquest in 1839, its rise has been rapidly progressive. The port of Aden was declared free by Act X of 1850. The result as follows:—during the seven years ending 1849, trade amounted to Rs. 1,30,95,578. During the seven years after 1850 the trade aggregated Rs. 4,21,07,337, the last year exceeding the first by Rs. 59,07,448. Owing to intestine disturbances and famine, but particularly to the entire cessation of the Hijaz trade, in consequence of the Jedda massacre of 13th June 1858 and disturbances in Yemen, the decrease in the exports of coffee amounted to Rs. 10,24,442, and of Ivory Rs. 3,97,183. In 1857, the population consisted of—

This is a large and handsome tree, growing at times 100 feet high and found in most of the forests of India. It is not very plentiful in Burmah, being widely dispersed; but it is met with in sufficient quantity in the Rangoon, Pegu and Toungboo districts It grows in both peninsulas of India, in Sylhet, Bengal, Assam, and the Moluccas. The inner wood of large, old trees, is deep red, hard, solid, and durable suitable for cabinet-maker's purposes, from which in Upper India, it gets its name of Raktochandan, or red Sandal wood; but the true red Sandal or Red Sandars wood of commerce, is the Pterocarpus santalinus. The wood is said to yield a red dye; ground to a paste with water, it is used by hindus to make the sectarian marks on their foreheads. The seeds are of a highly polished scarlet colour, with a circular streak in their middle on each side, and are used as weights by jewellers, and as beads in bracelets, necklaces, &c. Books represent these as usually weighing four grains, and selected seeds are in use by the Burmese, for that weight. Many however do not weigh more than two or three grains each. A cement is made by beating them up with borax and water. The powdered seeds are said to be used as a farina, the pulp of the seeds mixed with honey is applied externally to hasten suppuration in boils and abscesses.—*Hooker's Him. Jour. ADI-GRANTH, a sacred book of the Sikhs compiled in 1581 by Arjun Mul. See Sikhs.

ADI or Ai Island, in New Guinea, the Pulo Adi of the Malays, Wessels Eylandt of the Dutch, and in Lat. 4. 19' S. Long. 143° 47' E. (East Point), Modera, is about 25 miles in length lying to the N.N.E. of the great Keh, distant about 60 miles, and being the south-western—most of a group of high islands which, until lately, were considered as forming a part of New Guinea. The inhabitants are Papuans or Oriental Negroes, and as they do not bear a high character among their neighbours, they are rarely visited except by traders from Goram and Ceram Laut, who have found means to conciliate them. The sea is unfathomable at a short distance from the island, but there are several indifferent anchorages on the north side. No vessel should attempt to visit the island for purposes of trade without previously obtaining a pilot at Goram, who will also act as interpreter, the natives not being acquainted with the Malayan language. Wild nutmegs, trepang and tortoise-shell are to be obtained here, but not in sufficient quantities to tempt a European vessel to visit the island for purposes of trade, particularly as these articles can be obtained more readily at some of the adjacent ports of New Guinea. Red calico, parangs or chopping knives, coarse cotton shawls and handkerchiefs, with iron, Java tobacco, muskets and gunpowder, are the principal articles in demand. The chief traffic is in slaves which are distributed among the neighbouring islands of the Archipelago, and are sometimes carried as far as Bally and Celebes. This probably accounts for the deficiency of other articles of export. Pulo Adi is separated from the large island of which Cape Katemoun forms the S. W. extremity, by a strait 8 miles wide, which seems to be full of dangers, and should only be ventured upon with the greatest caution.—*Jour. Ind. Arch.*

ADITYA. The twelve Adityas, in hindu mythology, are said to be the offspring of Aditi, and Casyapa who is called the mother of the gods. They are emblems of the Sun for each month of the year; and are themselves called Suns: their names are Varuna, Surya, Vedanga, Bhanu, Indra, Ravi, Gabhasti, Yama, Swarnareta, Divakara, Mitra, and Vishnu.—(Gita, p. 144.) Of these Vishnu seems to be considered as the first, for Krishna, describing his own pre-eminence, says, "among the Adityas, I am Vishnu."—The verbal meaning of Aditya, is the attractor. The names of the twelve vary according to some authorities.—*Coleman, p.* 85. *William's, Nala, p.* 122.—See Hindoo, Lakshmi, Mewar, Surya.

ADITYA BHAKTI. TEL. ఆదిత్యభక్తిచెట్టు Helianthus annuus, *L.—R.*

ADITYA VARMA. See Inscriptions.

ADJUNTA, in Kandesh, is celebrated for its numerous caves, excavated out of the mountain. The period of this gigantic labour seems to have been towards the decline are buddhism in the peninsula of India, before or about the eighth century. The subjects are buddhist; one of the inscriptions commencing with the formula, "Ye dharma." The language is Pali, and the character used is intermediate between those of the Lat and Allahabad. But, there is one resembling the Balibhi and one in the Seoni parallelogram headed character, which is of the eleventh and twelfth centuries. These inscriptions appear to be of different ages, from variations in the character. The figures of three Chinese are represented in some of the fresco paintings in the caves. The paintings are admirable for their spirit and variety of subjects. In some, the sculptures and paintings evidently represent royal personages and royal doings. One of the numerous inscriptions is of interest from the character resembling that of Wathen's Balibhi inscription, which with others show the gradations of the character upwards into antiquity. The caves are remarkable for their paintings as well as sculptures They were first described by Lieut. Alexander in the Royal Asiatic Society's Transactions (*Vol. p.* 558) and afterwards copied by Captain Gill.

Some of the many fresco paintings in these caves, are still very perfect, having escaped the observation of the mahomedans when they invaded the Dekhan early in the fourteenth century and destroyed similar paintings in the Buddhist caves of Ellora. Though their date is uncertain, the series may extend from the first or second century before Christ to the fourth and sixth century of this era. One large picture represents the coronation of Sinhala, a Buddhist

King. He is seated on a stool, crowned with a tiara with necklaces, armlets and bracelets of gold, and girls are pouring corn over his shoulders. Naked to the waist, he wears a striped dhotee covering from the waist to the knee with one passed across his chest and over his left shoulder; most of the men as attendants are similarly clothed with dhotees reaching from the waist to the knee. The soldiers present, spearmen and foot and horse, and groups of soldiers with long oblong shields and curved swords, have short waist cloths only, tied like a kilt. All the women are naked to the waist. Another picture of two male figures seemingly discussing something and wearing dhotees only, is skilfully drawn. In a picture of two holy men, seemingly Greeks, one has a long robe reaching to his feet, with loose sleeves, the other with a nimbus round his head. A large picture represents the introduction into Ceylon, of buddhism, and all the figures of men and women in it have only short waistcloths or kilts. Another graceful picture represents a holy buddhist being carried through the air by two naked women, and in a representation of Buddha teaching, his right arm is naked, and female figures stand, in different attitudes, around, all naked, but have necklaces, earrings and bracelets, and one has a girdle of jewels round her loins.—*Ed. Rev. June* 1867, *pp.* 131-2. *Taylor's Mackenzie M. S. S. B. As. Soc. Journ.*

The Bel, Bengal quince, or larger wood apple, is a large thorny tree which flowers during the hot season, and its large spheroidal fruit ripens after the rains. The tree is common on the Bombay side, in waste places, inland forests, and old gardens. It is found in gardens in the south of India, and about towns and villages throughout the Prome district and also about Tonghoo, more especially on the Shan side of the river, where the large spheroidal fruit may be had in great quantity from the end of February to the end of July. The wood is light coloured, variegated with veins, compact and hard, but is not used, partly perhaps from a religious feeling on the part of the hindus, with whom the tree is sacred to Siva and partly from the value of the tree from the great medicinal virtues of the fruit. It belongs to a family, the Aurantiaceæ or orange tribe, remarkable for the excellence of its wood, which is usually small. This wood is very strong, and, in the Godavery districts, the native dhol or drum, is often made of it. In Ganjam and Gumsur, it attains an extreme height of 30 feet and circumference of 3 feet. The height from the ground to the intersection of the first branch, being 10 feet. The wood is ground with water into a sort of oily paste which is poured on the lingum in the temples dedicated to Siva. The leaves are offered to Siva and to the female divinities in the same way that the leaves of the toolsee are offered to Vishnu. The fruit is delicious to the taste and very fragrant. It is smooth, resembling an orange, with a yellow hard rind, which is astringent and used in dyeing yellow. The fruit has been long in use, in diarrhœa, and its aperient and detersive qualities and its efficacy in remedying habitual costiveness, have been proved by constant experience. It has lately been brought into repute when fresh and in conserve as a remedy in some kinds of dysentery. When dried before it is ripe, the fruit is used in decoction in diarrhœa and dysentery, and when ripe and mixed with juice of tamarinds, forms an agreeable drink. The mucus which surrounds the seeds is, for some purposes, a very good cement; Dr. Gibson thinks this beautiful ready made varnish which surrounds the seeds, may some day be turned to use in the arts. Its dried fruits Belgar also Belgiri are used in medicine. The roots, bark and leaves are reckoned refrigerant in Malabar. The bark of the root, especially is given in decoction, in intermittent fever, and the leaves are applied as a poultice in ophthalmia. They abound in a volatile fragrant perfume known as marmala water, which is distilled from the flowers, and is much used by the natives as a perfume for sprinkling on visitors. Lest the resemblance of the wood apples to the fruit of the Nux vomica might give rise to accidents, it should be remembered that their strong aromatic smell like that of all other fruits belonging to the orange family will distinguish them easily from the Nux vomica, which is devoid of aroma.—*Drs. McClelland. Wight. Gibson. Brandis. O'Shaughnessy. Riddell. Waring. Cleghorn. Major Drury's Useful Plants. Mr. Elliot. Cal. Cat. Ex.* 1862. *Hog. p.* 138. *Roxb: Ind. An. Med. Sc. of* 1854, *p.* 222. ÆSCHYNOMENE PALUDOSA.

Pouk...	...BURM.	Nya...	...BURM.

Synonim of Æ. aspera.

ÆRIDES, or air plants, are numerous in all the humid parts of South Eastern Asia, and as they are worth much in England, they are often exported. The closer they are confined, the better will be their condition on reaching the place of destination. They are not much cultivated by Europeans in their Indian gardens, the exotic flowers of their native land being most thought of, but Dr. Mason truly says they might be a rich acquisition to our tropical parterres. The Tennasserim Provinces abound in air-plants or orchids, most of which grow on trees and are epiphytes, not parasites. More than fifty different species have been described, and there are probably as many more unknown to science. The flowers of some of the species are great favorites with the Burmese and are sought after to adorn the hair. The Burman books say that the trees around King Wathandria's hermitage were covered with orchids, and that after being plucked they would retain their fragance seven days. They are very numerous in the Andaman islands, where, in the course of a few hours, a vast number can be collected. The following are figured by Wight—A. cylindricum, 1744; Lindleyanum, 1677; radicosum, 917: and Wightianum, 1669 and Roxburgh and Voigt. notice eight species.

ÆRIDES AFFINE. *Wall.*

With large rose coloured flowers, of Assam, Nepal and the Khassia Hills.—*Voigt.* 631.

ÆRIDES AMPULLACEUM. *R.*

Grows on trees and blossoms in May.—*Roxb.* See Æceoclades ampullacea.

ÆRIDES CORNUTUM. *R.*

In Dacca and eastern Bengal.

ÆRIDES GUTTATUM.

Perida Mara, TEL. Syn. Saccolabium retusum. A lofty parasitic species, growing on trees near Dacca.—*Roxb. p.* 471.

ÆRIDES MULTIFLORUM, *R.*

A large and beautiful species of Silhet with large purple and white flower.—*Roxb.* iii, 475.

ÆRIDES ODORATUM, *Lour.* A sweetly fragrant plant, with large white flowers, with a tinge of rose. It is met with at Dacca, the Khassya Hills, Chittagong; in the Bombay Ghats, on the Mahabaleshwar Hills, Tenasserim, Moulmein, China and Cochin-China; the flowers hang in long racemes of a light flesh colour and spotted, from six inches to a foot long. They grow from the axils of the leaves, appearing in April and May.—*Voigt.* 631. *Mason.*

ÆRIDES PALLIDUM. *R.* Found on trees in Chittagong and Eastern Bengal.

ÆRIDES RADIATUM. *R.* Found on trees in the Gangetic delta.

ÆRIDES ROSTRATUM. *Roxb.* Blossoms in April and May in Silhet.

ÆRIDES SUAVEOLENS. *Roxb.* Found on trees in Chittagong, has very fragrant flowers all the year long.

ÆRIDES TESSELATUM. *Wight.* With large flowers of a greenish yellow, grows in the Circars—*Voigt.* See Cymbidium. Epiodendrum. Æceoclades. Saccolabium.

ÆROLITES.

Devi-gola ... ...HIND. | Dew-gola. ... HIND.

These are not uncommon in the possession of hindus, who worship them. The guardian of a temple showed Baron de Bode, a flat black stone in the recess of the window, which appeared to be an ærolite, weighing several pounds, and let him into the secret of its wonderful properties, namely, that of being propitious to mothers who wish to be blessed with a numerous family, and who, on pressing it to the heart, must recite some prayers. This peculiarity bears some resemblance to what is told of the temple of *Halgah-Baal,* at Emessa, on the Orontes, in Phœnicia. Ærolites have in general played a conspicuous part in the early religions of the Semitic nations. There are two varities of aërolites or meteorites, that have been seen to fall from space. The one consists of stony masses, often containing particles of iron, and of these many have been observed in their fall: the other variety is composed, for the most part, of iron. The actual fall of iron aërolites has been but rarely witnessed, though many masses of metallic iron have been found on the earth's surface, of the meteoric origin of which there can be no doubt. Since 1852 three meteors have been seen to fall, on the southern part of the peninsula of India. One in the Nellore Collectorate, another in the extreme south, pieces of which have been lodged in the Madras Museum, and one on the 21st September 1865, in the Muddoor taluk of the Mysore country, the pieces of which have been lodged in the Mysore Museum at Bangalore. The falling of the following meteors in India has been established.

As those of 1852, 1857 and 1865, were sent to the Madras and Mysore Museums, both of which Dr. Balfour had formed, and was then in charge of, the account he received of one of them may be given from the Rev. H. S. Taylor's letter who thus wrote:—Near the village of Parnallee in this Talook, two meteoric stones had fallen. Both fell on Saturday, the

28th of February, 1857, at about noon a little south east of the village of Parnallee, Latitude North, according to the Government Map, 9° 14', Longitude, 78° 21' east. The larger one fell a few seconds before the smaller one, and from two to three miles north of it. As was manifest from the hole it made in the ground when it fell, it came from a direction some ten degrees west of north, making an angle of about 15 or 20 degrees with a line perpendicular to the earth's surface. It struck the earth (or at least lay in the bottom of the hole made by it) flatwise, on the side that is most convex. The most round or convex side of the smaller stone also was downward, this being the position they would naturally assume as they passed with great velocity through the resisting atmosphere. The larger stone sank into the earth when it fell, two feet and five inches, in a perpendicular direction. The smaller one two feet and eight inches. The smaller one fell also, about perpendicularly. The smaller does not appear in any respect like a fragment of the larger one. The specific gravity of the smaller one, when it fell was about 3·3, water being the standard of unity. He observed that the specific gravity was increased after exposure to a shower, as that of the smaller one was. He did not try that of the larger. The crack on the convex side of the larger one he did not perceive at all till it had been wet, and then, at first, it was but just perceptible. Afterwards it gradually opened, he supposes, owing to the oxidation of the native iron it contains, perhaps, however to other causes. The stones had not been wet till they came into his hands, April 21st. They, each of them, fell in cultivated fields, one of which had been harvested. The stock in the other was still standing. The noise seems to have been terrific to the Natives, causing those near to crouch from fear. It came like two claps of thunder, as they fell one after the other, and continuing for some time, but gradually growing less loud. As they fell through the whole depth of our atmosphere, this would naturally be the case. The noise appears to have been heard at Tutacorin, forty miles distant. At this place sixteen miles north, it excited considerable interest among those abroad at the time. The noise must have been great, occasioned by their great velocity. Taking their specific gravity into the account, say 3·3, their size being about that of large cannon balls, some allowance also being made for their irregular shape, from the depth they penetrated the soil, which was of about common hardness, those who have observed the power of projectiles in such cases, will be able to calculate, approximately, what that velocity was.

He mentions that there was nothing peculiar in the state of the atmosphere, It was a clear day. The noise made as they came through the air made a deep impression on the mind of the people in that region, and was heard, as was reported, along the sea shore up to Teruchooly. They fell about three miles apart from each other. The smaller one weighs about 37 pounds and sunk in the earth, when it fell, two feet and eight inches. The larger one is from three to four times as large, and sunk in the earth two feet and four inches. It struck the earth flatwise. The smaller one fell about perpendicularly. The larger fell (coming from the North a little to the West,) making an angle, with a perpendicular line, of about fifteen degrees. Persons were standing near each place where they fell. Many worshipped them. The villagers gave them up to him, on condition that he should inform you, and save them from trouble (or rather which they feared some officials might make.) Dr. Buist mentions that a remarkable ærolite fell at the village of Manigaon, near Eidulabad, in Khandesh.—See Capt. J. Abbott, in Bl. As. Trans. 1844, Vol. XIII, p. 880—See also account of one which fell at Rajahmundry in Mad. Lit. Trans. Vol. XIII, p. 164, and Dr. Buist's list of Bom Geo. Trans. 1850. Vol. IX, and Professor Powell's Report, Brit. Ass. 1847 & 1852.—*Dr. Buist's Cat. Madras Museum Records. Mysore Museum Records. Vienna Museum List.*

ÆTILES. Stones worshipped as sacred objects. See Salagrama. Aerolites.

AFA, also **AFI.** ARAB. A poisonous serpent.

AFGHAN. A name applied in Europe to the various peoples in Afghanistan. They are mahomedans, having been converted to this creed within half a century from the first promulgation of that religion, but they are not one people and they have scarcely ever, for any lengthened period, rendered a common obedience to one ruler. In the territories known as Afghanistan are four principal towns, Kabul, Ghizni, Kandahar and Herat, and the prevailing language is Pushtu or Pukhtu ; but the routes of the great race migrations and of the large armies under Alexander and his successors, under Timour, Baber and Nadir Shah, were through these countries, and these races and conquerors all left remnants and colonies behind them, who have never up to the present day amalgamated, and parts of whose languages remain distinct. Though no mention is made of Kabul, Alexander in his advance to the Indus must have passed close to the site of the present city. Even in his time, the countries through which, after crossing the Indus at Attock, he passed southward to the delta of the Indus, were inhabited by numerous small nations and tribes. We read of the Malli, the people of the Multan of to-day ;—the Oxydracæ, the people of Outch ; the Cathei, the Katheri of Diodorus Siculus,—the present Khetri tribe. As soon as he had crossed over to Taxilas, on the east side, Ambisacies, king of the Indian mountaineers, whom Rennell supposes to be ancestors of the Ghickers, sent ambassadors with presents to him. From the conflux of the Ascesines with the Indus, Alexander passed through the countries of the Sogdi, Musicani, Oxycani, Sindomanni and Patalans, and seems to have encountered the nomade races in Baluchistan. This variety of tribes and nations has been a feature of those regions from the most ancient time. Several of their races are alluded to in the Mudra Rakshasa, or Signet of the Minister, an ancient political drama in sancrit by Visakhadatta, perhaps of the 12th century, in which the events relate to the history of Chandragupta, the Sandracottus of the Greeks. In the tale, Rakshasa was the minister of Nanda and afterwards of Chandragupta. And in the scene, where Viradha Gupta visits Rakshasa he is asked,

Rak.—What news from Pashpapur.
Vir.—I have not much to tell Sir :
Where shall I commence.
Rak.—With Chandragupta's entry in the city.
Whatever my agents since have done, inform me.
Vir.—You will remember, Sir, when in close league
United by Chanakya, Parvateswara
And Chandragupta in alliance, led
Their force against the city,—a wild multitude
Of Sakas, Yavanas and mountaineers
The fierce Kambojas, with the tribes who dwell
Beyond the western streams and Persian hosts
Poured on us like a deluge.

These Sakas of the hindus cannot be other than the Sacæ or Sakai of classical geography. They are frequently named in various works and seem to have been known on the borders of India or in its western districts in the first century preceding Christianity. Vikramaditya, King of Ougein, being known as the Sakari or enemy of the Sacæ, his era dates B. C. 56, and it would appear that about this date, some northern tribes had settled themselves along the Indus, constituting the Indo-Scythi of Arrian. Their attempt to penetrate further to the east, by way of Kandesh and Malwa, was not improbably arrested by Vikramaditya, whence the epithet Sakari. The Sacæ are supposed by Professor Lassen to be the Szu Tartars who were expelled about 150 B. C. from the Ili valley by the Yuetchi or White Huns whom he supposes to be the Tochari. After occupying Tahia or Sogdiana for a time, they are further stated by the Chinese to have been driven thence also by the Yengars some years afterwards, and to have established themselves in Kipen, in which name Lassen recognises the Kophen valley in Kohistan. The term Yavanas, in the same poem, is in modern times applied by hindus of Northern India to mahomedans of every description, but in the above quotation and in works prior to the mahomedan era, some other people must have been intended. The interpretation of the word by Sir W. Jones, is Ionians or Asiatic Greeks, and there are some considerations in its favour, although the chief argument in its behalf is the difficulty of attaching it to any other people. The mountaineers, or Kiratas of the quotation may have come from any part of India. They are known in classical geography as the Cirrhadæ or the Cirrodes, the latter in Sogdiana, near the Oxus. The Kambojas are the people of the Arachosia, or north eastern province of Persia. The site of the Bahikas, as they are termed in the text, is explained in the Mahabarat, and the Parasikas speak for themselves.

The name Afghan by which the tribes are at present known does not however give any aid in tracing their origin. Its meaning and derivation, are both quite undetermined. According to one supposition it is the Arabic plural of the word *feghan*, which is said to have been applied to them about the time of Sultan Abu Said of the race of Jengis Khan, because of their constantly disunited state among themselves; and there is in Hyderabad a great body of these people's descendants, who usually recognise this as the derivation of the word. The primitive tribe of the Afghans, was called a Taifah, a word which corresponds with that of nation. The first division of this primitive tribe are called Farqah, tribe; and the sub-divisions of this, tirah or branches.—Some of the Afghans have asserted that they are remnants of one of the Hebrew tribes, and in this view, they do not object to the designation of Ban-i-Israil, which of course does not include the Yahudi or Jew, and Count Bjornsterna (p. 233-234) states, that they affirm that Nebuchadnezzar after the destruction of the temple of Jerusalem, removed them to Bamean, and that their present name came from their leader Afghana, who was son of the uncle of Asaf (Solomon's wazir,) who was the son of Berkin. Mr. Masson, however, (Journeys, Vol. I. p. xii-xv.) explains that the introduction of the mahomedan faith, with the legends and traditions of that religion, has induced all the Afghans to pretend to a descent from the Jewish patriarchs and kings,—a pedigree, however, which Mr. Masson regards as only due to their vanity, and which does not require to be too seriously examined. In another sense, they affirm that they are all Ban-i-Israel, or children of Israel, which merely means that they are not heathens; for they affirm Christians, although not acknowledging their prophet, and Shias, whom they revile as heretics, to be, equally with themselves, Ban-i-Israel, although they exclude Hindus, Chinese, and all idolaters.—He says at another place, that the term Afghan is acknowledged by a multitude of tribes speaking the same dialect, —the Pushtoo or Afghani, but that the term itself has no known signification, and is manifestly borne by many people of very different origin, though the people are said to call themselves Pushtoon. General Kennedy observes that all arguments on the claim of the Afghans to Hebrew descent may be dispensed with in consideration of their real history. Our most eminent modern oriental, Mountstuart Elphinstone and the late Mr. T. M. Dickinson (Journal of the Asiatic Society, Vol. IV. p. 246.) reject it; and in Lieutenant Leech's valuable vocabulary of the languages west of the Indus (Proceedings of the Bombay Geographical Society for 1838), he states that the Afghans were "originally a Turkish or Moghul nation, but that, at present, they are a mixed race, consisting of the inhabitants of Ghaur, the Turkish tribe of Khilji, and the Perso-Indian tribes dwelling between the eastern branches of the Hindu Kush and the upper parts of the Indus." Respecting the tribe of Joseph, the Eusufzye, noticed among them, we are expressly informed that they have been settled only about 300 years on the upper parts of the Indus, having been originally emigrants from the country of the Baluches, about Kelat-i-Nassir. (Kennedy's Ethnological Essays, p. 7.) In India, these people and their descendants have always been known as Pathan (Butan ?) and they themselves invariably assume the honorific designation of Khan. Some of them are known also in India, as Rohilla. Recent travellers, Burnes, Masson, and Ferrier, met with tribes who claim a Grecian descent. According to Burnes, the Mir of Badakhshan, the chief of Darwaz in the valley of the Oxus, and the chiefs eastward of Darwaz who occupy the provinces of Kulab, Shughnan, and Wakhan, north of the Oxus; also the hill states of Chitral, Gilgit and Iskardo, are all held by chiefs who claim a Grecian descent. The whole of the princes who claim descent from Alexander are Tajiks;

who inhabited the country before it was overrun by Turki or Tartar tribes. The Tajiks, now Mahomedans, regard Alexander as a prophet. The Badakshan family are fair but present nothing in form or feature resembling the Greek. They are not unlike the modern Persian, and there is a decided contrast between them and the Turk and Uzbek.

On this point however General Ferrier (*Journey, p. p.* 162-3) mentions that on reaching Gazergah he was much surprised to find there a small encampment of persons in the dress of Uzbeks, but whose configuration of features clearly indicated quite another origin. In conversations with them they stated that they were the descendants of the Yunanes (Greeks) whom Alexander the Great, Iskander Roomi, had left in these countries; and when he heard this he recollected that Marco Polo, and after him Burnes, as well as other writers on oriental history, mentioned the existence of Macedonian tribes which had settled on the north-west frontier of Chinese Tartary. He wished to convince myself that they had not been led into error on this subject; and, from the replies he received to the numerous questions he put to these people, he was convinced of the existence of the real descendants of the ancient Greeks in those countries. These Yunanes are not isolated and dispersed here and there but are united in tribes, occupying a considerable tract of country; nothing, however, either in their language or their habits, betrays their origin. They are mussulmans, and have the reputation of being somewhat fanatical, and are not held in much consideration by the Tartars, amongst whom they are settled, but they are respected, for, like their ancestors, they are brave, and the consequences of their hatred are terrible to those who are the object of it. Burnes, while admitting the existence of the descendants of these Greeks in Central Asia, appears to doubt whether some of their chiefs are, as they affirm, the descendants of Alexander, for the historians of the son of Philip assure us that he left no heir to reap the fruits of his immense conquests.

Alexander built a city in his route eastwards towards the Indus to which he gave his own name, but the name it now bears and its particular site have been lost. It was called Alexandria near the Caucasus, and Rennel points to Bamian as the quarter in which he would place it. General Ferrier, however, mentions that the fortified town of Herat, is supposed to have been founded by Alexander the Great, but he does not quote his authority. This city, he tells us, is a quadrangle of 3½ miles long on the north and south sides, and rather more on the east and west. Its extent would be immense if all the suburbs were included, particularly those stretching to the west of the town beyond the Darwazah-i-Irak. After the death of Alexander the Great, Persia as well as Syria, fell to the lot of Seleucus Nicator, who established the dynasty of the Seleucidæ. Antiochus Soter succeeded Seleucus Nicator, and in the reign of his successor, Antiochus Theos, Arsaces, a Scythian, who came from the north of the Sea of Azoff, induced the Persians to throw off the Greek yoke, founded the Parthian empire, and made Rhages his capital. This was likewise the period of the foundation of the Bactrian kingdom by Theodotus, the governor of it, who finding himself cut off from Syria by the Persian revolution, declared his independence. Arsaces is called Aateh by Eastern writers, and is said to have been a descendant of the ancient Persian kings. When he gained the kingdom, it is said he promised to exact no tribute and merely to consider himself as the head of a confederacy of princes, united for the double object of maintaining their independence and freeing Persia from a foreign yoke. This is the commencement of that era of Persian history called by Eastern writers, Malook-ul-Tuaif, or common-wealth of tribes. In A. D. 906, Rhages was taken by Ismail, founder of the Samanee dynasty. It ceased now to be a seat of empire, and in A. D. 967, became the capital of the house of Shemgur, a race of petty princes who maintained a kind of independence, while the dynasties of Saman and Dilemee divided the empire of Persia. In A. D. 1027, Rhages was the last conquest of Mahmood of Ghuzni. (*Smith's Dic. Malcolm's Hist. of Persia, quoted in Ferriers Journeys, p.* 55.) The history of the lands adjacent to Kabul during the centuries immediately preceding and following the present era, is but little indicated in books, but has been, to a considerable extent, traced out by several learned men, Mr. James Prinsep, Mr. H. T. Prinsep, Professors Wilson and Lassen from coins of Greek, Arian, Bactrian, Scythian, Partho-Scythian, Ario-Parthian & Indo-Scythian kings and dynasties, which the researches of Sir Alexander Burnes, Mr. Masson, Generals Court and Ventura had brought to light, as also from the engravings on rocks and on relics found in topes in all the regions around Kabul. The characters in which these legends are engraved are Arian or Bactrian, Greek, and Sanscrit. On coins, these are sometimes single, but many dynasties adopted bi-lingual legends, Arian and Greek, or Greek and Sanscrit, the Greek becoming gradually more barbarous towards the present era, until at length, it became unintelligible. Mr. Prinsep considers it as established that the Arian or Bactrian language was long the vernacular of the Paropamisan range, of Kabul, and perhaps of Herat and Kandahar, up to the Indus, for it has been found in the topes of Manikhyala in the Panjab and on the rock at Bamian. Unlike the Greek and Sanscrit, it is written like the Semitic tongues from right to left but the letters being always separate, they could at pleasure be written from right to left, and the customs of ancient races, on this point, were various. The earliest Greek was written alternately, as a plough is drawn, and tombs of Tuscan kings opened some years since, contain inscriptions in Greek characters, written from right to left. The Mongolians who adopted the Syrian characters write it in lines downwards like the Chinese. The Arian character was adopted first on the coins of the Greek kings from Eucratides down to Hermæus. It was then taken up by the Scythians, who crossed the Paropamisus, Imaus or Hindu Kush, and also by Parthians who asserted their independence in Afghanistan. The Arian alphabet character, in the course of years, seems to have undergone a change, and the same forms are not to be recognised in later coins, nor the same epithets and titles, and the inscriptions discovered in topes are all in the less simple though later character. Mr. James Prinsep, Mr. H. T. Prinsep and Professor Wilson have considered this Arian language to have a close affinity with Sanscrit, but Dr. Moore has recently put forth that it is Hebrew. It seems to have superseded the ancient Sanscrit of the days of Asoka, which was adopted by Agathocles and Pantaleon, the first of whom we know, from the pure Greek style of his other coins, to have been one of the earliest of the Grecian kings. After them, however, Sanscrit characters were entirely disused. Menander, the known Indian conqueror, never seems to have coined with the language of Asoka, from which circumstance Mr. H. T. Prinsep infers that the characters on the coins of Agathocles and Pantaleon were not vernacular, but had been introduced by the Indian sovereigns, who, following the first Chandra Gupta, retained dominion over the provinces ceded by the first Seleucus, until they were restored by Asoka to the Great Antiochus. At Manikbyala, where there is a tope solidly built of quarried stones and lime cement,—a great cupola, 80 feet high and 310 to 320 feet in circumference was opened by General Ventura, but there are fifteen other and smaller cupolas there, which were opened by General Court. Monuments of the same kind are met with at Rawal pindi (in the Panjab) in the Hazara country west of Kabul, at Jelalabad, Lagman, Kabul, Bamean and in the Khyber Pass. Many of those west of Kabul were opened by Mr. Masson. In one, N. N. E. of the village which was opened by General Court, a sculptured stone was found, in Arian characters, along with Roman coins and coins of Kadphises and Kanerkes, a fact alone sufficient to indicate that the territories around had been under the sway of rulers of varied races. Among the earliest of these were the successors of Alexander the Great. Alexander's death occurred in the spring of the year 323 B. C. His empire, though only of ten years growth, was not transient. His colonies and their institutions, manners and language had a lasting action in central Asia, the effects of which were felt for at least five hundred years after his decease. Though he left his brother Aridæus and the posthumous child of Rashana or Roxana, called Alexander, neither of these succeeded him, for his military commandants assumed sovereign power, and in B. C. 315, Antigonus assumed the regal title of king of Asia.

In B. C. 305, Seleucus gained a great victory over Nicanor, a lieutenant of Antigonus, and followed it up by seizing and adding to his own government, the whole of Media, Hyrcania, Parthia, Bactria, and Aria, and all the countries as far as the Indus. In 303, he crossed that river to make war on Chandra Gupta, who, during these contentions, had expelled the Grecian garrisons from the Panjab, and so had recovered that country for the native sovereigns of India. Seleucus being called to a final struggle with Antigonus, made a hasty peace with Chandra Gupta, ceding the Panjab as far as the Indus. According to Strabo, Arachotia was also ceded, but this seems doubtful. Kuchchee to the Bolan Pass with the valley of the Indus may have been the region ceded. Seleucus drove Antigonus into Phrygia, where he was defeated and slain in 301 B. C. Seleucus Nicator was assassinated in 280 B. C. by Ptolemy Ceraunus, from which date the whole of Asia to the Indus and Jaxartes was under the Syrian king Antiochus Soter, who from 280 to 261 B. C. reigned undisturbed over the same territory, and left it to his son Antiochus Theos.

In 256 or 255 B. C., Bactria declared for independance under Theodotus or Deodotus. Parthia followed about the year 250 B. C. under the rule of Arsaces, who is variously described as a native of Soghd, as a Bactrian, and by Moses of Chorene, as of Balkh, this last author adding that the dynasty was known as Balkhavenses or Pahlavian. He used Greek only on his coins and in his public letters and correspondence. His coinage is ordinarily with the head of the sovereign on one side and only one coin has a lingual inscription. Great king of kings was a title first adopted by Mithridates II.

Arsaces I, B. C. 254-250, the first of the Arsacidan kings, a native of Balkh, revolted under Antiochus Theos, is supposed to have been killed in action with Ariarathes of Cappidocia, but the date and circumstances not known.

Arsaces II, (Artabanus ?) son of Arsaces I, about B. C. 220, at first extended the Parthian empire but was afterwards driven into Hyrcania by Antiochus Magnus in B. C. 212; allying himself with the Scythians he recovered Parthia.

Arsaces III, B. C. 196, called Priapatius or Phriadavius, son of Arsaces II reigned 15 years, left three sons, Phrahates, Mithridates and Artabanus.

Arsaces Mithridates I, B. C. 177, made Balkh his capital, subdued Media and Persia and captured Babylon, brought under his dominion Western Bactria, Aria, Seestan, and Arachosia and made a successful expedition into India.

Arsaces Phrahates II, B. C. 139. In his reign Bactria seems to have been subjugated entirely by Scythians. He was defeated and slain in B. C. 130, when restraining the Parthians from ravaging the country.

Arsaces Artabanes, B. C. 126, uncle of Phrahates and youngest son of Priapatius, died of a wound received in action from the Tochari Scythians.

After many kings, the Greco-Parthian or Arsacian dynasty in Central Asia ended with Arsaces Artabanus in A. D. 215, who was involved in a war with Rome, but ultimately slain in battle at Balkh by one of his Parthian officers, Ardeshir Babakan or Artaxerxes, who established his own, that of the Sassanians, in A. D. 235. It lasted nearly 500 years. The capital in the time of the Cæsars was at Selucia on the Tigris. The system of Government was Asiatic, by Satraps, or rulers possessing full power over the persons and properties of all the subjects of the State.

The history of the country of the Kophones river, *i. e.* Bactria, Aria and Kabul, is different.

Many of the coins have bilingual inscriptions the one Greek, on the obverse, some of excellent workmanship often of very barbarous forms, the other, on the reverse, in that called Arian, Arianian, Bactrian and Kabulian. According to the prevalent authority, of Lassen, James Prinsep, Professor Wilson and others, this language is said to be Sanscrit, but Doctor Moore asserts it as Hebrew. It is written from right to left.

The first Theodotus or Diodotus B. C. 256, reigned about the same time as Arsaces I.

Theodotus II, B. C. 240, is said to have reigned in the Kabul valley.

Euthydemus, B. C. 220, reigned in the time of the expedition of Antiochus the Great, and was defeated in battle near Merv by the united Syrian and Parthian armies. He then urged Antiochus to receive him in alliance and so extend the Greek influence to the Indus. A peace was concluded, and Euthydemus led the Syrian Army through Bactria, *i. e.* by the route N. of the mountains to the Kabul valley and across the Indus in B. C. 206. There, Antiochus made peace with Sophagasenus (Asoka), which that sovereign recorded by edicts on rocks and pillars in various parts of India, in characters exactly resembling those on the coins of Agathocles. In B. C. 205, Antiochus returned by way of Arachotia. The translation of the edicts of Asoka, is in the Asiatic Society's Journal for 1838, and that on the Girnar rock names Antiochus (Antiochia Yona Raja).

Eukratides, B. C. 178; (Prinsep B. C. 181, Bayer, Wilson B. C. 165, Visconti: B. C., Lassen 175). He seems to have made an expedition to India in 165 B. C., and on his return from it, to have been murdered by his son. Numerous of his coins have been found in Bactria and Afghanistan and Mr. H. T. Prinsep considers that he ruled originally in Bactria, subsequently made conquests in and south of Parapamisus in Kabul and, first of all the Greeks, coined in the bilingual Arian inscription. The first use of two languages however, is also ascribed to Agathocles, who used Greek and Sanscrit while Eukratides used Greek and Arian. Eukratides was certainly, amongst the earliest of the Greek kings of Bactria, Kabul and Aria, who adopted bilingual inscriptions on his coins, and his so doing is supposed consequent on his conquest of the Parapamisus, after assumption of the title of Great King. On his death, his wide dominion is supposed to have been broken into several independent kingdoms.

Heliocles, B. C. 155, the parricide of Eukratides, used bilingual inscriptions on coins in pure Greek and Arian. His rule though short, extended over Bactria and the Paropamisus.

Antimachus, B. C. 150 coined with Greek and Arian.

Agathocles, B. C. 190, coined with Greek and Sanscrit, is supposed by Lassen to have ruled Kabulistan to the Indus, and Mr. H. T. Prinsep supposes him to have been the Governor left by Antiochus in Kabul, after his treaty with Asoka.

Pantaleon, B. C. 195, coined in Greek and Sanscrit.

Professor Lassen supposes four Greek kingdoms, viz., that of Bactria. One eastern, under Menander and Apollodotus, comprehending the Punjab and valley of the Indus, with Kabul, and Arachotia or Kandahar added in times of its prosperity. Another western, at Herat and in Seestan. A fourth central of the Paropamisus, which latter region, Mr. Prinsep is inclined to give to Bactria, because of the bilingual as well as the pure Greek coins of Heliocles and Antimachus, Kings of Bactria.

Of all the kings who followed Eukratides, Menander and Apollodotus alone are mentioned by classical authorities.

The Scythian kings, followed the Greek kings, in adopting their forms of money. They coined similar pieces with superscriptions similar, and in the same languages, but inscribed on them their own names and titles, and varied the emblems and devices.

Maues, B. C. 135, is supposed to have been a Scythian, the head of one of the tribes that broke into Bactria between 150 to 140 B C, and he seems to have held communication with Azes. On the obverse, his coin contains the king with a trident, a Tartar war weapon, setting his foot on a prostrate enemy.

Azes, B. C. 130. The greatest of Scythian kings, on whose coins are bilingual inscriptions, with plain, distinct Greek characters ΒΑΣΙΛΕΩΣ ΒΑΣΙΛΕΩΝ ΜΕΓΑΛΟΥ ΑΖΟΥ. In Arian, Maharajasa Raja Rajasa Madatasa Ayasa. The figures on the coins are various. Professor Wilson thinks he was an Indian Buddhist king, about 50 B. C. Professor Lassen regards him as a Sacian Scythian, who conquered the Kabul valley in the time of the second Mithridates, and finally destroyed the kingdom of Menander and Hermæus in about 120 B. C. He considers he was succeeded by Azilises.

Azilises, B. C. 115, reigned with the same titles as Azes. On one coin, the name of Azes is on the Greek obverse, and that of Azilises on the Bactrian reverse.

Vonones, B. C. 100, called Balahara, supposed to have been a Parthian Satrap who asserted independence, and created a kingdom for himself out of the dominions of Azilises.

Spalirisus, B. C. 85, sometimes read Ipalirisus, supposed a Parthian king.

Spalypius, B. C. 75, had many coins in two languages, he was a vice regent, son of Vonones and perhaps brother of Spalirisus. About this time, as indicated by his coins, was a ruler, whose name is not known,—

Soter Megas, B. C. 70, the nameless Great Soter King, had coins with an Arian legend which James Prinsep and Professor Lassen ascribed to Azes. On all is a peculiar monogram with three prongs. The same monogram was continued in coins of Kadphises and of the Hercules type derived from Hermæus. Mr. H. T. Prinsep considers him to have been contemporary, but not identified, with Vikramaditya and that he assumed the title of Soter Megas, which was continued down by the Kadphises kings. He considers that the nameless kings, with titles on whose coins are the words Kodes or Hyrkodes, although mere local chiefs such as now rule at Kulm, Kunduz, and Balkh, preceded the conquest of the Panjab by Vikramaditya, B. C. 56.

Vikramaditya. About this great king, India affords nothing but fables, but a passage of the Periplus mentions that his capital was Ozene (Ujein) and it is known that he extended his empire to Kabul about B. C. 56. This dominion in the Kabul valley must have been temporary; his empire fell to pieces after his death, and nearly a century elapsed before Chandra Sena restored the sovereignty of Hindustan in its unity.

The Kadaphes or Kadphises dynasty consisted of three rulers, who ruled in Kabul, from the downfall of the kingdom of Vikramaditya. Kadphises' name is on the Arian reverse of the Hermæus coins of Hercules type. There is no indication of a settled worship. The Hercules worship was readily borrowed from the Greeks by the wild Scythians, as a mere reverence of physical strength. The Kohistan is supposed to be the district of the first rise of Kadphises, while Kabul and its valley were subject to Indian rule; and while there, the chief seems to have retained his Scythian title and rude worship of Hercules. Afterwards, overpowering the Indian governors who had followed Vikramaditya into the Kabul valley and Panjab, he or his descendants seem to have adopted the Hindu religion, coining with Greek, and dropped their Scythian title. In a gold coinage by Kadphises king, Siva occurs in the mixed male and female character, and very general accompanied by the bull Nandi. Professor Lassen discovered in Chinese history, that Khi-out-chiu-hi Kui-tsi-kio, a Yuchi or Yeutchi or white Hun, conquered the Szus or Azes Scythians in about 40 B. C. and dying at the advanced age of 84 years, his son Yen-kao-Ching prosecuted his career of victory and reduced the Indus valley and Panjab to subjection in about 20 B. C. The names are scarcely recognizable, but the facts and period correspond to the career and supposed era of the Kadphises kings.

Korosoko Kosoulo Kadphises, B. C. 50 in Arian Dhama + + rata Kujula kasa Sabashakha Kadaphasa. His coins are of the Hercules and Hermæus type.

Zathos Kadaphes Khoranos, B. C. 20. On the reverse of the coins is a sitting figure, with the arm extended, and wearing a loose flowing Indian dress. They have monograms the same as the Azes coins. The Siva worship had not yet been established as the State religion.

Vohemo Kadphises, B. C. 5. His copper coins have the king standing in a Tartar dress, with coat, boots and cap, his right hand pointing downwards to an altar or pile of loaves, and having a trident separate on one side and a club on the other. The reverse has the Siva Nandi bull.

The readings of the Arian inscriptions on coins of the Kadphises kings, by Lassen, James

Prinsep and Wilson, are somewhat different, and it is suggested that the words Koroso Kosoulo, Koranos and Zathos, were titles short of royalty. Professors Lassen and Wilson carry the dynasty of Kadphises through the whole of the first century of the present era, and consider it to have been then overpowered by a fresh swarm of Scythians under the Kanerki kings. Mr. H. T. Prinsep supposes that during the ascendency of the Kadphises kings, the Græco-Parthian party still held out in cities and communities, abiding their time to re-assert their independence and rose again about the middle of the first century of our era; amongst these, coins show

Undopherres, A. D. 40, calling himself King of Kings in Greek, and in Arian, Maharajasa Raja Rajasa, Tradatasa, Mahatasa Pharahitasa.

Gondopherres or Gondophares, B. C. 55, who took the same Arian name of Pharahitasa.

Abagasus, King of Kings. A. D. 70, in Arian Abakhafasa. Professor Lassen supposes this name to be identical with Vologeses. Mr. H T. Prinsep supposes these coins to be of Parthians, who established for themselves a separate and independent sovereignty in Kabul and the Parapamisus

Abalgasius, A. D. 80, Captain Cunningham ascribed the Arian legend on the coins to be of "the Saviour king Abagasus, younger son of Undopherres."

Kanerki dynasty. At the close of the first century of our era, when the above Ario-Parthian supposed dynasty ceased to reign in Kabul and the Panjab, a new race of Scythian kings appeared, who issued gold and copper money of quite a different device and style from anything before current. These bear a title of Kanerkes, at first with the title of Basileus Basileon, but afterwards with the Indian title of Rao Nano Rao. The number and variety of the Kanerki coins indicate a long dominion for kings of the race. The only characters on their coins are Greek, but these become at last so corrupt as to be quite illegible. On their obverse is the king standing, or in bust to the waist, in a Tartar or Indian dress, with the name and titles in a Greek legend round: while on the reverse are Mithraic representations of the sun or moon with ΗΛΙΟΣ, ΝΑΝΑΙΑ, ΟΚΡΟ, ΜΙΟΡΟ, ΜΑΟ, ΑΘΡΟ, or some other mystical name of these luminaries, also in Greek letters. And on all the Kanerki coins, is the same monogram as the Kadphises dynasty used, and which was borrowed apparently from the nameless Soter Megas. This would seem to indicate that the Kanerki dynasty, though interrupted as Mr. Prinsep supposes by the intervention of Ario-Parthians, was yet a continuation of the same tribe and nation as its predecessors of the name of Kadphises.

The state religion seems to have been Mithraic, whence derived, not known; but on their coins, the Siva bull device is also found on the reverse, the bull's head being to the left, —in the coins of the Kadphises being to the right. A list of their kings cannot be framed, but their power seems to have lasted for more than two centuries. The style and device, of the Greek, of the gold coins especially, of the coins both of Kadphises and the Kanerkis, was carried on till it grew more and more corrupt, and was at last, entirely lost, through the deterioration of art, under the princes of Hindu race, who succeeded to the more energetic Greeks and Scythians.—*(On the Historical results deducible from recent Discoveries in Afghanistan by H. T. Prinsep, Esq.)*

Of all these conquerors, only the routes of Alexander, Timur and Nadir Shah, have their particulars on record.

After the death of Alexander, his Lieutenant, Seleucus, succeeded to the sovereignty of Afghanistan and the other Asiatic conquests. Under his grandson, Afghanistan was taken from the Seleucidæ, by the aboriginal chiefs, and soon after, formed with Bactria an independent State which existed during 150 years. Subsequently, the Tartars made themselves masters of Afghanistan and appear to have held possession of it up to the death of Mansoor, when one of his officers, Sabaqtagin, established an independent dominion over all the southern parts of Afghanistan, making Ghizni his capital His son Mahmood, who died A D. 1028. enriched Afghanistan, with the spoils of India. In the reign of the cruel Bahram, one of the Tartar's descendants, the Sabaqtagin dynasty were deprived of all but the Punjab, and this too, in A. D 1160, they lost.

Timur in his route from Kabul towards Hindoostan, according to Sherif-ud-din, went by way of Irjal, Shenuzan, Nughz, Banou, (or Bunnoo), and thence to the Indus, at the very place where Jelal-ud-din, king of Kharazm fought with Jengis Khan and so heroically swam the river after his defeat in 1221. It must not be omitted, that Timur crossed an extensive desert in his way to Batnir. In his return from the banks of the Ganges, he proceeded to the north-west, along the foot of the Sewalik mountains, by Meliapur, Jallindhar, and Jummoo, to the Indus, which he crossed at the same place as before, and in the same manner; and returned to Samarcand by way of Bunnoo, or Banou, Nughz or Nagaz, Kabul, Bacalan, and Termed.—*(Rennell's Memoir, pages* 112 *to* 121.*)*

Afghanistan, at the death of Timoor comprehended the principalities of Cashmir, Lahore, Peshwur, Kabul, Bulkh, Khulm, Kandahar, Multan, and Herat; those of Kelat and Beluchistan as well as Persian Khorassan, acknowledged her as suzerain. Sind also, though not having paid for five years the tribute agreed upon by Mir Fathah Khan, chief of the Talpoora, was nevertheless classed as amongst the number of her dependencies.

Nadir Shah's route into India was the ordinary one, by Attock and Lahore, and he returned, as appears by Abdul Karim and M. Otter, by nearly the same route; save that instead of crossing the Indus at Attock, he went higher up, and passed the borders of Sewad, in his way to Jalalabad and Kabul.

"The boundaries of Afghanistan have fluctuated with the vicissitudes of war from the middle of the tenth century. At the date of the recent invasion of the country by the British, the kingdom consisted of four subdivisions, Cabul, the Huzara country, Candahar, and Herat. Taken in this extent, Afghanistan is bordered on the north by Bokhara, Kunduz, and Kaferistan; on the east by the British province of Peshawur and the Soliman range of mountains; on the south by Beloochistan; and on the west by Persia. Its greatest length from north to south is about six hundred miles; its breadth measures about the same distance. (*Townsend's Outram and Havelock's*, p. 85.)

The British frontier line commences from the top of the Kaghan glen (a dependency of Huzara) near Chelas on the north-west corner of the Maharajah of Jummoo's territory, and then passes round the north-west boundary of Huzara, on the east side the Indus to Torbeila; then crossing that river, it winds round the north and north-west boundary of the Peshawur Valley to the Khyber Pass, then round the Afreedee Hills to Kohat; then round the western boundary of the Kohat District, along the Meeranzye Valley and touching the confines of the Cabul dominions; then round the Wuzeeree Hills to the Bunnoo one and to the head of the Sulimani range; and then, lastly, right down the base of the Sulimani range to its terminate on the upper confines of Sind and of the Khelat kingdom. The extent of this frontier is very vast, and its length is full 800 miles. It is also as arduous in its nature as it is extensive. Along the outer side of this frontier line, and therefore beyond British jurisdiction, there dwell a series of independent tribes. On the inner side of this frontier, up to the right bank of the Indus, there also dwell various tribes, in many respects resembling the first-named tribes, but who are British subjects. These latter will be adverted to, though with less prominency than the former. The topographical position of each tribe, both without and within the frontier, may be enumerated in their local order as follows:—

INDEPENDENT TRIBES.—Dwelling along the outer face of the north-west Punjab frontier and inhabiting hills, adjoining frontier of Huzara District,—Hussunzyes.

Adjoining Frontier of Peshawur District.—Judoons, Bunoorwalls, Swatees, Baneezyes, Osmankheylees, Upper Momunds.

Adjoining Frontier of Peshawur and Kohat Districts — Afreedees.

Adjoining Frontier of Kohat District.—Buzotees, Sepahs, Orukzyes, Zymoosht Affghans, Toorees.

Adjoining Frontier of Kohat and Dehra Ishmael Khan Districts.—Wuzeerees.

Adjoining Frontier of Dehra Ishmael Khan District —Shcoranees, Oshteranees, Kusranees, Bozdars.

Adjoining Frontier of Dehra Ghazee Khan District.—Khutrans, Kosahs, Lugharees, Goorchaniees, Murrees.—Boogtees.

British Tribes,—Tribes within the frontier, and British subjects, inhabiting partly hills and partly plains.

Huzara District.—Turnoulees, Gukkars, Doonds and Suttees, Kaghan Syuds and other tribes of Huzara.

Peshawar District.—Eusufzyes, Khaleels, Momunds of the plains.

Peshawar and Kohat Districts.—Khuttuks.

Kohat District.—Bungushes.

Dehra Ishmael Khan District.—Bunnoochees, Murwutees, Butanees, Chiefs of Tank, Chiefs of Kolachee, Chiefs of Dehra Ishmael Khan, Nootkanees, Loonds

Dehra Ghazee Khan District.—Dreshuks, Muzarees.

General Ferrier gives the following approximately as the amount of the population in Afghanistan.

In the Provinces of		
Herat. . .	300,000	Afghans.
"	600,000	Parsivans or Eimaks.
Kandahar..	600,000	Afghans.
"	300,000	Parsivans and Baluchi.
Kabul.	1,600,000	Afghans.
"	800,000	Parsivans and Kuzzulbashes.

Total 2,500,000 Afghans, and 1,700,000 Parsivans, Eimaks, Baluchi and Kazzilbash making a General Total of 4,200,000 inhabitants.

Though the population of the Affghan States is not numerous they are all above the English standard in height, and are brave to recklessness. The races in Affghanistan, the Affghans properly so called, are at present the dominant race, and in Kandahar, Kabul and Herat, hold the Tajiks in subjection. The Tajiks are the descendants of the ancient conquerors of the country, and may be subdivided into the Parsivans or inhabitants of towns, speaking Persian, and the Eimaks or Nomades. The Uzbeks are in numbers; the Hazaras, of Tartar, perhaps a Turkoman origin, and the Eimaks who graze their flocks in the Parapamisus, are brave and relentless, and Affghans when travelling whether proceeding from Balkh, Kabul, Kandahar or Herat, never enter into the mountain districts of these intrepid nomadic tribes. One of the Eimak tribes is known as the Feroz Kohi after the city of that name about 63 miles from Teheran. Timur exasperated at the depredations which they committed, transported the whole of them into the mountains lying between Persia and India. The races occupying Affghanistan are distinguished by marked characteristics, moral as well as physical. General Ferrier tells us that the Affghans of Kabul consider themselves as Indian Affghans, whereas those of the Herat say they are Khorassani; one tribe repudiates another, and denies its Affghan origin, and there is not the least sympathy between them. The names of Patan, Rohilla, Affghan, which serve at the present time to designate the Affghan nation, are really those of so many distinct races now confounded in one. (*General Ferrier, p.* 5.

Military strength of the States of Afghanistan.

Nations.	Principalities and Khanats.	Cavalry of each State.	Total Cavalry of each Nation.	Infantry of each State.	Total Infantry of each Nation.	General Total.
Afghan ..	Herat	8,000	41,500	10,000	31,000	72,500
	Kandahar	12,000		6,000		
	Kabul	21,000		10,000		
	Laush-Jowaine ...	500		5,000		
Uzbek ...	Khulm	8,000	18,000	3,000	8,100	26,100
	Balkh	2,500		1,000		
	Siripool	2,000		2,000		
	Akkchu	200		...		
	Andkhoo	1,800		600		
	Shibbergan	2,000		500		
	Meimana	1,500		1,300

	Taymooni	1,200		10,000		
		75,350	75,350	61,200	61,200	136,550

The Balooches of Seistan are not included in this statement, because they are not in Afghanistan. General Ferrier tells us that an enterprising and clever chief could in Afghanistan obtain from fifteen to eighteen thousand excellent Balooch infantry; but it would be difficult to keep so large a force under the same flag for any length of time, so long as Seistan is in their possession. In General Ferrier's time the whole of the Afghan army consisted of the three divisions of Kabul, Kandahar, and Herat; of these, the troops called Daftari, presented the following effective force :—

(*a.*) Kabul.........	15,000	Afghan Horse.
	6,000	Parsivan or Kuzilbash Horse.
	6,000	Afghan Mountaineers, Infantry.
	4,000	Parsivan, Hazarah or Usbek Infantry.
(*b.*) In Kandahar there were......	12,000	Afghan Horse.
	3,000	Afghan Infantry.
	3,000	Balooch Infantry.
(*c.*) In Herat the army consisted of............	8,000	Afghan Horse.
	4,000	Hazarah Horse.
	10,000	Parsivan Infantry.

That officer says that the reason of their success against the other Asiatic hordes up to this day has been their élan in the attack, their courage, but not any clever disposition or a knowledge of military operations. He mentions that for the theatre of combat between their armies the Afghans always select large plains, in order that their numerous cavalry, on which they place a blind reliance, may be able to deploy freely. Though they are entirely ignorant of the art of attack and defence of towns and fortresses, the Afghans are remarkable for the obstinacy of their resistance and the correctness of their aim when they are behind walls. The arms of the Afghans are the firelock, the carbine, the swivel-gun, or a pair of lead pistols; sometimes a bow, or a lance with a bamboo handle.

The languages spoken in the western border of India, between it and Afghanistan, of India adjoining Afghanistan, are dialects of Hindi, but sufficiently distinct to be called Sindi, Panjabi and Kashmiri. The late Lieut. Leech indeed has given vocabularies of seven languages spoken on the west of the Indus. The western border tribes are still mostly under patriarchal governments. In the south are the various Baluch tribes in the territories to which they give their name and whose language is said by Captain Raverty to be a mixture of Persian, Sindi, Punjabi, Hindi and Sanscrit. The Brahui tribes in Saharawan and Jholawan, whose great chief is the Khan of Kelat, ethnologists consider to be of the same Scythic stock as the Dravidian races in the south, and infer from this that the passage of Dravidian tribes from Turan was along the valley of the Indus.

Further north, in the Derajat, are warlike Baluch and Afghan tribes, the most unyielding of whom are the Waziri, who long continued to resist the efforts made by the English to restrain their inroads on the plains. Still further north and west are the numerous tribes of Afghanistan, of whom may be mentioned the powerful Durani race and the Tajik tribes. The Mongols of Kabul, Persia and Herat, called Kalmuks in Herat and Afghanistan and Eimak and Charmak in the Hazara, dwell north of Kabul and Herat. In the Bunnu valley, there are mixed races, and we may notice the Durdu in Giljit and Chulas.

According to Captain Raverty, the people who dwell about Kabul and Kandahar, Shorawak and Pishin are designated B'r-Pushtun or Upper Afghans; and those occupying the district of Rob, which is near India, are called L'r-Pukhtun or Lower Afghans. Persian is the official language of Afghanistan, but colloquially the Pushto is alike the common tongue of the uneducated people, of the families of the Sadozye Kings, and of the dwellings of the Amir. There are however two divisions of the Afghans, termed Pushtun and Pukhtun, who speak Pushto and Pukhto respectively. The Pushto being the western dialect with affinity to Persian, and the Pukhto the eastern with many Sanscrit and Hindi words. The Pushto is spoken, with slight variation in orthography and pronunciation, from the valley of Pishin, south of Kandahar, to Kafiristan on the north; and from the banks of the Helmand on the west, to the Attok, Sindhu or Indus river, on the east;—throughout the Sama or plain of the Yuzufzye's,—the mountainous districts of Bajawar, Banjhkora, Suwatt and Buner to Astor, on the borders of Little Tibet,—a tract of country equal in extent to the entire Spanish peninsula. Also, throughout the British districts of the Derajat, Banu Tak, Kohat, Peshawar and the Samah or Plain of the Yuzufzye's, with the exception of Dera Ghazikhan, nine-tenths of the people speak the Afghan language. Since the invasions of Mahmud of Ghazni, in the twelfth century, there has been a constant influx into India of Afghans, as conquerors and settlers and this has been so great from particular districts that some tribes have altogether disappeared from Afghanistan. In some localities in India, the Afghan settlers have preserved the Pushto, almost in its purity, up to the present day, having from the outset married amongst themselves. In some parts of Bandalkand and in the territory of the Nawab of Rampur, whole towns and villages may be found in which the Afghan language is still almost exclusively spoken and is the medium of general communication. Captain Raverty considers that although, on numerous points the Pushto bears a great similarity to the Semitic and Iranian languages, it is totally different in construction and idiom also from any of the Indu—Sanscrit dialects.—(*Capt. H. G. Raverty's Grammar and Dictionary to the Pushto, Pukhto, or Afghan language.*)

The Afghans, General Ferrier tells us, are tall, robust, active, and well formed; their olive and sometimes sallow complexions and strongly marked hard features give their countenances a savage expression; the lids of their black eyes, which are full of fire, are tinged with antimony, for this, in their opinion, gives force and adds beauty and a dazzling brilliancy to them; their black beard is worn short, and their hair, of the same colour, is shaved off from the front to the top of the head, the remainder at the sides being allowed to fall in large curls over the shoulders. Their step is full of resolution, their bearing proud, but rough. They are brave even to rashness, excited by the smallest trifle, enterprising without the least regard to prudence, energetic, and born for war. They are sober, abstemious, and apparently of an open disposition, great gossips, and curious to excess. Courage is with them the first of virtues, and usurps the place of all the others: "Their principle is Give or I take." Force is their only argument, and it justifies everything; an individual who is merely plundered considers himself extremely fortunate, as, generally speaking, life is also taken. There is no nation in the world more turbulent and less under subjection, and the difficulties in rendering them submissive to a code of just laws would be almost insurmountable. Afghans are as incapable of a continuous course of action as of ideas; they do every thing on the spur of the moment from a love of disorder or for no reason at all: it matters little to them who give them laws; they obey the first comer directly they find it is to their advantage to do so. Their cupidity and avarice is extreme; there is no tie they would not desert, to gratify their avidity for wealth. This surpasses all that can be imagined; it is insatiable, and to satisfy it they are capable of committing the greatest crimes. For it they will sacrifice all their native and independent pride, even prostitute the honor of their wives and daughters whom they frequently put to death after they have received the price of their dishonor. Gold in Afghanistan is, more than anywhere else, the god of the human race; it stifles the still small cry of every man's conscience, if, indeed, it can be admitted that an Afghan has a conscience at all; it is impossible to rely on their promises, their friendship, or their fidelity. They enter into engagements, and bind themselves by the most solemn oaths to respect them, only to depart from them if they see advantage in so doing.

Capt. Burton, on this point, says that the Afghans and Persians are, probably, more formidable liars than the Sindhis, both on account of superior intellect, more stubborn obstinacy, and greater daring in supporting the falsehood.—(*Richard T. Burton's Sindh, p.* 404.

Excitement, says General Ferrier the clash of arms, and the tumult of the combat are to the Afghan life; repose is for an Afghan only a transitory state of being, during which he leads a monotonous existence; the sweets of domestic life, mental quietude, the endearments of his family, have no charms for him, and a life without commotion and agitation loses all its poetry. He is only really a man when he is fighting and plundering; then his eye is full of fire. There is no shade of difference between the character of the citizen or the nomade; a town life does not soften their habits; they live there as they live in a tent, always armed to the teeth, and ready for the onslaught, devoid of a right-minded feeling, and always animated by the most ferocious instincts. Though they are full of duplicity, their greatest anxiety, is to ascertain how they can get their daily bread without having to pay for it.

This habit of living at the expense of other people forces the Afghans to practise sobriety and frugality. They throw away the lean, as they say it produces diarrhœa. The principal food of the villagers and nomades is kooroot, a kind of pudding made of boiled Indian corn, bruised between two stones: or simply bread, on which they pour rancid grease, mixed with a substance which in the East is known under the name of keehk, the settlement in whey.

They will not eat meat unless it is halal (lawful), that is, the animal must have its face turned towards Mecca, and its throat cut in a particular part of the neck, the following sacrificial words being pronounced during the operation, in accordance with their law and rule of faith—Bismillah-ur-rahman-ur rahim (In the name of the most merciful God). In eating, they mix one dish with another, knead them together with their fingers, and then place the morsel into their mouths. They make two meals, one at noon, the other at nine o'clock at night; they frequently smoke the chalam, a kind of water pipe, but very inferior to the narghilah of the Turks, or the kalian of the Persians.

The Persian language is met with all over Afghanistan; the great families speak it, and other correspondence is carried on in that tongue: the people are acquainted with it, but they prefer speaking the Pushtoo, the language of their nation, which is a mixture of ancient Persian, Arabic, and Hindostani. They have a few works in this language, but they read Persian authors by preference, and have through them formed imperfect ideas of geography, astronomy, medicine, and history; but these works, full of fictions and deficiencies, have not materially assisted in developing their faculties.

Some young chiefs have their robes ornamented with gold lace or embroidered with gold thread. This is done in the harems by the women, who excel in this kind of work, particularly in Kandahar. The ordinary people never change their garments, not even the shirt, until they are completely worn out; and as they very rarely wash themselves, they are constantly covered with vermin, great and small.

The Afghans are Sunni mahomedans with the exception of the tribe of Beritchi, who are Shiahs. The Parsivans and Eimaks, who are subject to the Afghans, profess mahomedanism. Besides the two sects just mentioned some of them are of the Ali-illahi sect.

The nomades are generally of a sickly complexion, this is to be attributed to the pernicious quality of the water, which is almost all alkaline. The diseases to which they are most subject are fevers, cutaneous and nervous disorders, and especially blindness.

They have a great dread of the Evil Eye, and they cover themselves and their domestic animals with amulets.

The munificence of the Persian, Tartar, and Indian monarchs has enriched Afghanistan with many fine buildings and works of public utility, as mosques, caravanserais, reservoirs of water.

But a person may travel whole months in their country without finding any other shelter than the tent of the nomade.

The rich use plaster; and the Kandahar people especially decorate their rooms with great taste and talent. Their houses are generally low, rarely consisting of more than one floor, and they take no precautions against the cold, which is, however, never severe at Herat or Kandahar —*Ferrier's His of* the *Afghans, p. p.* 288-296.

AFRICA. Ethnologists are of opinion that Africa has had an important influence in the colonization of India and the islands in times prior to authentic history or tradition, and that the numerous races of an Africo-Turanian type found in India, the marked African features of the people in the extreme south of the Peninsula of India, the negro and negrito races of the Andamans, Nicobar, the Jakuns of the Malay Peninsula of India, and the Negrito and Negro races of the islands of the Indian Archipelago, Australia and Polynesia. Much of this needs further inquiry, but it is a subject which will reward investigators During the past four thousand years, also, historical research has shown how frequent were emigrations and conquests between Media, Arabia, Persia, Palestine and Africa. AFRASIAB, See Persian Kings.

AFREDI. Of the Khybar tribes proper there are three great divisions, the Afredi, the Shinwari, and the Orak Zye. Of these, the Afredi, in their present locality, are the most numerous; the Shinwari, more disposed to the arts of traffic and the Orak Zye, the more orderly, if amongst such people any can be so pronounced. The Afredi occupy the eastern parts of the hills, nearest Peshawar; and the Shinwari the western parts, looking upon the valley of Jelalabad. The Orak Zye reside in Tirah, intermingled with the Afredi, and some of them are found in the hills south-west of Peshawar. *It was a malek or chief of this tribe who* conducted *Nadir Shah and a force of* cavalry by the route of Chura and Tirah, to Peshawar when the principal road through the hills was defended against him. The Shinwari, besides their portion of the hills, have the lands immediately west of them, and some of the valleys of the Safed Koh range. More westerly still, under the same hill range, they are found south of Jelalabad, and are there neighbours of the Khogani. These are in the condition of unruly subjects. There are also some of them in Ghor-band, and they dwell in great numbers bordering on Bajor to the north-west, where they are indenendent, and engaged in constant hostilities with the tribes of Bajor and of Kafristan.

Tirah and Chura are said to be fertile and well peopled valleys, enjoying a cool climate, in comparison with that of Peshawar; and it was not unusual for the sirdars, and others, who had an understanding with the inhabitants, to pass the warm weather in the former of these places; which also frequently became a place of refuge to the distressed. [illegible] Chura resided Khan Bahadar Khan, [illegible] who attained eminence amongst his tribe from the circumstance of his attendance at Court during the sway of the Sadoz Zye. Shah Sujah married one of his daughters to, and on more than one occasion, found an asylum with him. The Khybari, like other rude Afghan tribes, have their maleks, or chiefs, but the authority of these is very limited; and as every individual has a voice on public affairs, it is impossible to describe the confusion that exists amongst them. Of course, unanimity is out of the question, and it generally happens that a nanawati, or deliberation on any business, terminates not by bringing it to a conclusion, but in strife amongst themselves. The portions of the Afredi and Shinwari tribes who inhabit the defiles of Khybar, through which the road leads from Peshawar to the Jelalabad valley, are but inconsiderable as to numbers, but they are extremely infamous on account of their ferocity, and their long-indulged habits of rapine. Under the Sidoz Zye princes, they received an annual allowance of twelve thousand rupees on condition of keeping the road through their country open, and abstaining from plunder. They called themselves, therefore, the servants of the king. It would appear, from every statement, that they were in those days *little scrupulous. Still, kafilas followed* their road,—so manifestly the better and nearer one,—submitting to their exactions and annoyances, and satisfied with being not wholly rifled. Their stipend being discontinued by the Barak Zye Sirdars,—to whom the attachment they evinced to Shah Sujah had rendered them very suspicious,—they threw off all restraint, and the consequence was that the Khybar road was closed to the traders of Peshawar and Kabul.

"They are, in the mass, very numerous. [illegible] is boasted that the Afredi tribe [illegible] muster forty thousand fighting men,—of course an [illegible],—or one which might be improbable to include every man, woman, and [illegible] amongst them. On various occasions, when their strength has been exhibited, from two to five thousand men have assembled.—(*Masson's Journeys, Vol. I. p. from* 162 *to* 165.)

The Afredi tribe is, doubtless, the most important of all on the Panjab frontier. Their territory, commencing in the hills between the Kabul river and the Khyber pass, forms the western boundary of the Peshawar valley; then it stretches round the south-western corner and skirts a portion of the southern boundary of the Peshawar District till it approaches the Kuttuk lands. It thus projects abruptly into the British frontier, separates the Peshawar [illegible] from that of Kohat, and forms the nor[illegible] boundary of the latter district. The [illegible] hills, intervening between the Kohat [illegible] Peshawar districts, are crossed by two principal passes, communicating from one district to the other, the best of which is the well-known Kohat pass or Gullee and the other the Jewakee pass. The frontage of the Afredi hills towards British jurisdiction extends over a total length of 80 miles, and their territory stretches far back in a westerly direction towards Cabul. Thus the Afredi hold a large geographical area and have a long border conterminous with the British. The Afredi are entirely independent. Their hills are lofty, steep and rugged, most arduous for military operations. The villages are strongly posted and difficult of access. The Afredi are fierce by nature. They are not destitute of rude virtues, but they are notoriously faithless to public engagements. They are split up into factions. The sub-divisions of this tribe are numerous. They can muster 15,000 or 20,000 fighting men. As soldiers, they are among the best on the frontier. They are good shots. Their tactics resemble those of the other tribes. They retreat before the foe as he advances and press upon him as he retires. From the size of their country, and the strength of their numbers, the Afredi, if united, might prove formidable opponents; but they rarely or never combine. If their independence were threatened, or if some peculiar opportunity offered, they might act together, otherwise they will usually be found at war with each other. And India would have to deal with one or two sections only at a time. If one be hostile, another will be friendly and *vice versâ*, consequently the tribe is not so formidable as it might at first appear.

The Afredi of the Khyber Pass, among faithless tribes, [illegible] considered the most faithless. A [illegible] of these, named the Kookee-kheyl, manifested symptoms of a friendly spirit towards the British. The Afredi on the south-western corner of the Peshawur border have not signalized themselves.

The British Government was concerned chiefly with the Afredi of the two passes (*i. e.*, the Kohat Pass or Gullee and the Jewakee Pass.) For the guardianship of these passes the Afredi received some kind of consideration from successive dynasties, Ghiznivide, Mogol, Doorance, Barukzye, Sikh and British; and broke faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawar market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation on their rugged hillsides would not alone suffice to afford. The British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afredi to sore straits. The Gullee or Kohat Pass is the direct and best route from Kohat to Peshawur. The government post between these two important stations runs usually by this route.

The Afreedees of the Jewakee Pass, even among the Afreedee clans were considered particularly daring and ferocious. Their mountains are very strong. When the Afreedees of the Kohat Pass misbehaved, the Jewakee Afreedees offered to engage for that Pass, or to conduct the communication through their own Pass The Jewakee Pass was actually used for a short time, but the Jewakee Afreedees soon proved themselves to be worse even than their neighbours. They committed numerous raids and murders in the Peshawar and Kohat districts, and even robbed boats on the Indus. They also murdered a British officer, named Dr. Healy, who was travelling towards Kohat, for no other reason than that he was a defenceless Christian, with a little property about him —*Records of the Government of India.* See Khyber.

This wood is much prized throughout the east, as a perfume. The best specimens appear to be a mass of resin in decayed wood, and melt away under heat giving forth a very fragrant odour. The tree is said to be void of it, when in a healthy state, and only to exude this résinous substance when in decay, or even after it has died. There appear to be at least three kinds of Agallocha or wood aloes, the trees producing which are not fully identified. Dr. Roxburgh, followed by Dr. Royle, admits doubtfully the existence of two, viz., the Aquillaria agallocha of Roxburgh, and Aquillaria ovata, Cor, the Garo de Malacca of Lamarck; and an inferior sort is said to be derived from Excœcaria agallocha which need not be taken into account. But Loureiro maintains that the best Lign-aloes or Calambac, which appears to be the Ud-i-kamari of the Indian bazaars, is derived from a tree which he calls Aloexylon agallochum. Roxburgh and Dr. Royle consider the Malayan *agila*, the Aquila and eagle wood of commerce, and the ud-i-hindi of the bazaars, to be the produce of Aquillaria agallocha which grows plentifully to the N. E. of Bengal and that it is probably identical with A. ovata of Royle. The Aloexylon agallochum of Loureiro, yields a scented wood used by the Chinese in medicine and perfumery, and is said to bring £30 the cwt. in Sumatra. The lign aloes brought to Burmah is the produce of a tree that grows on the Mergui Islands, and imported into Mergui by the Selungs. Specimens of Amboyna wood, of the odoriferous sandal-wood from Timor, clove wood and other choice woods, from the Moluccas and Prince of Wales' Island, were sent to the Great Exhibition of 1851. The Hakims of India administer it in their electuaries in combination with spices, ambergris, &c.—*Honigberger. Mason. Simmonds. O'Shaughnessy. Elliot's Flor. Andhrica. AGAR. Hind. Sans. اگر Eagle-Wood. Wood Aloes.

AGAR-AGAR, the Malay name for the tenacious jelly or glue, made from the Plocaria (Gigartina) tenax, a marine fucus. It is imported into China from the Eastern Archipelago, though the Chinese likewise manufacture it for themselves, and apply it as size to many useful purposes and use it as food. The bamboo lattice work of lanterns is covered with papersaturated with this gum, which, when dried, is semi-transparent : it is also used in paper and silk manufactures. It is incomparable as a paste, and is not liable to be eaten by insects. When boiled with sugar, it forms a sweet glutinous jelly, called, in Canton, Wong-leung-fan, which is used as a sweetmeat, and sold on stalls in the streets. It is brought from New Holland and New Guinea and other adjacent islands : between 400 and 500 peculs are imported annually by the Chinese at a prime cost of from 1 to 2 dollars per pecul. Its cheapness and admirable qualities as a paste render it worthy the attention of other countries; when cooked with sugar, it resembles calf's foot jelly. Of the three kinds of Agar-Agar, sent to the Exhibition of 1862, from Malacca, the first quality was from a sort of Tripe de Roche an edible sea weed which grows on the rocks that are covered by the tide. It is much used for making a kind of jelly which is highly esteemed both by Europeans, and Natives for the delicacy of its flavour. Exported to China, at 19s. per 133⅓ lbs. The Agar-Agar of the 2nd quality from Macassar and the Celebes is an edible seaweed collected on the submerged banks in the neighbourhood of Macassar by the Baju Laut or Sea Gypsies, for exportation to China. 12s. 6d. per 133⅓ lbs. The Agar-Agar of Singapore is collected on the reefs and rocky submerged ledges in the neighbourhood of Singapore, and constitutes the bulk of the cargoes of the Chinese Junks on their return voyages. It is much used as a size for stiffening silks, and for making jellies. The quantity shipped from Singapore is about 10,000 peculs annually.—Though deserving of being better known, it does not appear to be an article of Indian import, or, if so, it is brought in under some other name. The whole thallus of the Ceylon Moss is sometimes imported from Ceylon, and used in Britain for dressing silk goods.—*Hon'ble A. Morrison. Exhib. Jur. Reports and Catalogue. Simmonds. Tomlinson. T. William's Middle Kingdom.* See Euchemia Spinosa : Gigartina tenax. Gracillaria tenax. Fucus tenax. Plocaria candida. Edible seaweed.

AGATHIS LORANTHIFOLIA. *Salisb.*

Dammara loranthifolia, *Linn.*
Pinus dammara *Linn.*

Theet men...	...Burm.	Dammar Pine	...Eng.

A large tree, found on the very summits of the mountains of Amboyna, Ternate, and in many of the Molucca Islands. Griffith mentions a tree under that name as a member of the Tenasserim flora, and Dr. Mason has seen the young plants of the tree, to which Griffith referred, and which the Burmese call Theet-men or tree governor. The leaf is precisely that of the dammar pine, but the Tenasserim tree is not known to yield any dammar. The timber of the Archipelago tree is represented to be light and of inferior quality, wholly unfit for any situation exposed to wet, but answering tolerably well for in-door purposes. The wood of the Tenasserim tree on the contrary is white, rather light, and bears a considerable resemblance to some kinds of pine. It is used by Burmese carpenters for various purposes, and the Burmese have a superstition that the beams of balances of their scales, ought to be formed of this wood. *Drs. Griffith ; Mason and Riddell. Eng. Cyc.*

This plant has smallish bright yellow flowers. It grows in Nepaul, the north of India, the Morung Hills. And is a common and abundant plant in the bazaar, supplied chiefly by the lower ranges of the Himalayas. All parts of the plant are extremely bitter and are identical in composition with the common gentian. It is highly esteemed as a tonic and febrifuge all over India and is a perfect substitute for gentian. The whole plant is pulled up at the time that the flowers begin to decay, and is dried for use. The root is considered the bitterest part, and it is best administered in the form of an infusion or tincture ; the nuts of Guilandina bonduc are sometimes pounded and given with it.—*Cleghorn. Voigt. Cat. Ex.* 62.

Baka, also Baka-pushpam... ...	Sans.		

Of this plant there are two varieties, the one variety called A. albiflora, and the other A. coccinea. It grows all over India and Burmah is seen in every town and village of the Tenasserim Provinces, and in the betel gardens of peninsular India, where it is cultivated for shade, and as a trellis for the support and shelter of the piper betel, and is easily recognized by its large white and bright scarlet flowers. Its wood, is soft, only fit for fuel, and of no use in carpentry or cabinet work, but the tree grows with great rapidity, and could be usefully planted to shelter young trees of slower growth. There are varieties of the Agati, some with variegated and some with red flowers, and the leaves and flowers of a white variety, known in Tamul as the Agati-kire-pu, are used by the natives in soups, curries and as greens. On the Madras Coast, the legumes which are 12 to 18 inches long are not frequently eaten, but they are a favourite vegetable with the natives of Burmah. Medicinally, the bark is a powerful bitter tonic : and the leaves are used in infusion in catarrh, as an aperient. There are few trees in such common request.—*Mr. Jaffrey. Useful Plants. Mr. Elliot, Drs. Riddell, Mason, and O'Shaughnessy. Voigt.* 216 *Roxb.* 331 ; *R. Brown. Rhode. M.S.S.*

AGAVE AMERICANA. *Linn.*

Agave cantula. *Roxb. II.*, 167.
Aloe Americana. *Rumph.*

AGAVE VIVIPARA *Linn.*

Bastard Aloe, ...	ENG.	Pithakalabanda...	TAM
Kathalay	TAM.	K'lamanda	„

Dr. Royle considers the A. vivipera to be closely allied to this species, which he describes as common in the Bengal Presidency, and growing freely in Malwa, yielding fibres from twenty to thirty inches in length, and on testing their strength Captain Thompson found them quite equal to the best Russian hemp.—*Royle, p.* 8. See Kathalay.

AGAVE YUCCÆFOLIA. A plant naturalised in India, capable of yielding fibres.—*Royle, p.* 43.

AGHA, ARAB. PERS. A title in use in Persia. The North Eastern tribes write it as Aka, but in familiar conversation the gh or k are dropped and the word sounded A'a, as a in almond—*Archer, Ouseley's Trav.* 11.59.

AGHASTIA. SANS. Agati grandiflora. Aghati-kal TAM.; phalli HIND, its pods; kire TAM. bhaji HIND. greens of Agati grandiflora.

AGEL HOUT. DUT. Eagle wood.

AGELLA. A wood of this name was exhibited at the Madras Exhibition of 1857, and was supposed by some to be the Indian Cedar wood "Aquilaria agallocha." It was a light coloured wood with a fine even grain, appeared admirably adapted for furniture and many domestic purposes. It is said to be abundant in Malabar and has been already used for a variety of purposes by the railway engineers.—*M. E. of* 1857.

AGERATUM CŒRULIUM and A. Mexicanum, exotic flowering plants, cultivated for their pretty flowers in sandy soil; must not be too much shaded if cultivated in pots. A. conyzoides is a native of India.—*Voigt. Riddell. Jaffrey.*

AGGANA SUTTAN. a discourse of Buddha. See Wijao.

AGGUR, HIND. Probably from Agara, SANS. Eagle Wood.

AGHARI or **AGHORAPANTHI,** a hindu religious Saiva sect, who originally made Devi the object of their worship in some of her terrific forms, said to have required even human victims for its performance. The Aghora wand and waterpot were a staff set with bones and the upper half of a skull: the practices were of a similar nature, and flesh and spirituous liquors constituted at will the diet of the adept. The sect had died out, by the beginning of the nineteenth century, only a few disgusting wretches, universally feared and detested, being then met with, whose odious habits and practices rendered them objects of aversion. They are now unheard of.—*Wilson.* Colonel Todd says that he had heard that such wretches did exist, not only in the sacred Aboo, but amidst the impenetrable recesses of the other mounts dedicated to the Jain faith, in the peninsula of the Sauras. He mentions that D'Anville speaks of them as "*une espece de monstre,*" whose existence he doubted, though he quotes from Thevenot, who remarks "Les habitans de ce bourg, (Debca), estoient autrefois de ceux qu'on nommoit *Merdi-Coura,* ou Antropofages, mangeurs d'hommes; et il n'y a pas grand nombreed'annees qu'on y vendoit encore de la chair humaine dans le marche."—(*Voyages de M. de Thevenot*; Paris, 1684. D'Anville adds, that this "*espere de bete,*" this *Merdi-cour,* or properly Mardi khor, from the Persian mard man and khor eater, should have been noticed by Pliny, Aristotle, and Ctesias, under nearly the same name, *Martichora,* showing that this brutalized sect is of ancient date; secondly, that the Persians must have had an intimate intercourse with these regions in early times; and thirdly, that the western historians must have had more recourse to Persian authorities than we at present are aware of. Colonel Tod adds that he passed the gopha or cave of the most celebrated of these monsters of the present age, who was long the object of terror and loathing to Aboo and its neighbourhood. One of the Deora chiefs told him that a very short time previously when conveying the body of his brother to be burnt, one of these monsters crossed the path of the funeral procession, and begged to have the corpse, saying that it "would make excellent chatni," or condiment. He added, that they were not actually accused of killing people. The head quarters of the caste are at Burputra (Baroda), and in Colonel Tod's time, there still existed on the old site a temple dedicated to the patroness of the order, Aghor-eswar-Mata, represented as "Lean Famine," devouring all. Her votaries are brought into the compendious class of ascetics, of whom they are the most degraded, beyond all controversy; they eat whatever falls in their way, raw or dressed, flesh or vegetables, and drink whatever is at hand, spirits, or their own urine. Marco Polo (Marsden, Marco Polo, p. 252) speaks of a class of magicians who are akin to the Indian Aghori "The Astrologers, who practise the diabolical art of magic, are natives of Cashmere and Thibet. They exhibit themselves in a filthy and indecent character ; they suffer their faces to remain uncleaned by washing, their hair uncombed, being in a squalid style. Moreover, they are addicted to this horrible and beastly practice, when any culprit is condemned to death, they carry off the body, dress it with fire and devour it." The word Aghora, Panthi is SANS. from Aghora, a name of Shiva, and pant'ha, a way. —*Tod's Travels, pp.* 84 *and* 85. *Wilson's Hindoos.* See Aghori. Hindoo ; Kattyawar, Kerari.

AGHRI DAGH. A name of Mount Ararat.

AGHVAN or AVGHAN, a name of the Afghans. See Afghanistan.

AGIAH or AUGIAH grass, described by Hamilton, vol. 1, p. 2 as growing about the thickness of the wrist and to a height of thirty feet in the belt of low land running from Africa along the whole Northern frontier.

AGILA also AGILA-GAHRU, MALAY. Eagle-wood.

AJMIR, a Rajput state among rugged mountains, and close valleyss ; which long preserved independence, and in a great measure, down to the present time is in respect of Hindoostan, what the country of Switzerland, is to Europe, but much more extensive, and populous. From Mahmud to Aurungzebe, the Indian conquerors were contented with the nominal subjection of the hardy Rajpoot tribes of Rajpootana among whom military enthusiasm, grafted on religious principles, is added to strength and agility of body ; and this race is disseminated over a tract equal to half the extent of France.—*Rennel's Memoir. p.* xlvi, xlvii.

AGISI, (*V. Avisi*) TEL అగిశి-(అవిశి.) Agati grandiflora. *Desv.*

AGLAIA MIDNAPORENSIS. *Carey.*

A. grata. *Wall.*

This tree grows in the forest of Midnapore : wood not known.—*Voigt.*

AGLAIA ODORATA, *Lour.*

Cammunium Sinense, *Rumph.*

This grows in Cochin-China and China. It is a flowering shrub with ternate and pinnate leaves, and very small yellow flowers in axillary racemes with a very agreeable perfume. Both the *Aglaia odorata*, and *Murraya exotica* are very sweet scented and much cultivated by the Chinese.—*Fortune's Tea Districts, p.* 7 *Riddell. Voigt.* 136. *Hog.* 171.

AGLAIA SPECTABILIS.

Kayan Kayo. BURM.

A large tree met with in Tenasserim and along the banks of rivers in the Pegu and Tounghoo districts. It affords a light serviceable timber somewhat stronger than the American pine, and capable of being wrought with little labour. Wood, red coloured, strong and adapted for house building.—*Mc. Clelland. Mason.*

AGLAIA ROHITOC. *Mc. Clell.* Khayan Kayoe. BURM. Of this no information.

AGLEMARAM. TAM Chickrassia tabularis.

AGNI, (IGNIS) the hindoo god of fire. About a fifth of all the hymns in the Rig Veda refer to this god, exclusively, and most of the ten books open with hymns addressed to him. In Vedic mythology, Agni is the personification of fire, and the regent of the south-east division of the earth. He is variously described : sometimes with two faces, three legs, and seven arms, of a red or flame colour, and riding on a ram, his *vahan* or vehicle. Before him is a swallow-tailed banner, on which is also painted a ram. He is by others, represented as a corpulent man of a red complexion, with eyes, eyebrows, head, and heir of a tawny colour, riding on a goat. From his body issue seven streams of glory, and in his right hand he holds a spear. Agni is the son of Kasyapa and Aditi. His consort or *sacti* is Swaha, a daughter of Kasyapa. Swaha, the *sacti* of Agni, resembles the younger Vesta, or goddess of fire, of the Romans, who had no images in their temples to represent her. Thus Ovid has said.

> "No image Vesta's semblance can express,
> Fire is too subtle to admit of dress."

Neither do we meet with an image of Swaha. Those of Agni are usually seen in pictures—*Cole. Myth. Hind. p.* 115 *and* 117.—See Vedas. Agnihotra Brahmans. Brahminicide. *Indra.* Hindu : Vahan : Vedas. Yavana Zonar or Zennaar.

AGNICULA. A general term for four tribes of hindus, supposed of Parthian descent, the Chohans, the Purihars, the Solanki and Pramara, who are fabled have been produced by a convocation of the gods on Mount Abu—*Tod. Vol.* II. *page* 451, *quoted in Prinsep's Antiquities by Thomas, p.* 247. See Khutri, Rajpoot. Chohan.

AGNIDHRA. See Hindu.

AGNIHOTRA BRAHMANS, the remnant of the worshippers of Agni, who still preserve the family fire, but in other respects conforms to some mode of popular Hindu devotion. According to prescribed rule, where a perpetual flame is maintained, it is used to light the fire round which the bride and bridegroom step at the marriage ceremony, and the funeral pile of either ; but the household fire is preserved only by this particular sect, the Agnihotras, and the great body of the people have nothing of the kind. In this case they distinguish between the sources whence they obtain the kindling flame according to the purposes of its application, and the fire of the marriage rite is taken from the hearth of a respectable person, or from a fire lighted on some auspicious occasion, whilst for the funeral pile, "any unpolluted fire may be used. It is only necessary to avoid taking it from another pile, or from the abode of an out-cast, of a man belonging to the tribe of executioners of a woman who has lately borne a child, or of any person who is unclean." Notwithstanding these exceptions, it is at present the common practice of the hindus of ordinary rank in the western provinces to procure fire from an out-cast to light the funeral pile.—*Wilson's Hindu Theatre, The Toy Cart. Art* 112. *Colebrooke on the Religious Ceremonies of the Hindus. Asiatic Res.* XXI. 241, See India. Inscriptions. Tripandra.

AGNIHOTRI. SANS. from agnis, fire, and hotre, a sacrificial priest, always of the brahminical order. See Tripandra.

AGNI MATA, SANS. (*v.* Chitra mulum, అగ్నిమాత-(చిత్రమూలం) Plumbago Zeylanica, *L.*

AGNIMUNDA.—SANS. Physalis angulata formed of fire,—an ethereal voice heard from the sky proceeding from a meteor or flame.

AGNIPURI. See Acasanavi.

AGNI VENDRAPAKU అగ్నివేంద్రపాకు. Ammania vesicatoria, R. i. 426.—*W.* & *A.* 939.

AGNYASTRA, the first shaft invented by Viswakarma in the war between the gods and the daityas or Titans. See Viswakarma.

AGOU, a Semitic nation in Africa. See Semitic races.

AGRA in 27° 10' 2"; 78° 1' 7", is a large city on the right bank of the Jumna. It was the seat of government from the time of Akbar the greatest of the Mogul emperors, whose sway extended far beyond the limits of British India. It remained the seat of government of part of Hindustan under the shorter lived dominion of the Mahrattas; it was retained as the seat of government after the conquest by the British during some of the brightest periods of British rule, and continued so till the removal of the seat of government to an unhealthy spot in the confluence of two rivers whose yearly deposits of alluvial soil keep up a perpetually renewed supply of fever and malarious disease. Its abandonment seems to be recognized as a grave political error, while, for strategical purposes a few more soldiers would have sufficed to ensure its supremacy. As one of the finest cities of upper India, from which in past times the edicts of imperial dominion were issued to the furthest limit of Hindustan—and which even in its changed and ruined state still retains throughout Rajputana and Central India the prestige of an imperial city, there can be but one feeling, that of unfeigned regret that the imperial city, which held the palace and the throne of the Indian Cæsars, should have been deprived of its fame and title as the political if not the commercial capital of Upper India with the historical associations of centuries. When the two viceroys, Lord Canning and Lord Elgin, met the assembled princes and chiefs of Upper India, it was to Agra they were summoned. And fifty years hence whatever changes may come over India, in spite of the influence of railways and metalled roads, when a future viceroy shall summon the future chiefs of India to his durbar, it will be either at Agra or Delhi that they will flock with all their retinue and barbaric pomp. Independent chiefs and princes covet to possess land and houses at Agra and Scindia and Jeypore have eagerly availed themselves of the opportunity to purchase valuable estates, the one close to, and other actually within, the limits of a British cantonment. The Ram Bagh garden merits attention and the magnificent tomb of Itimad-ud-Dowlah, the vizier of the emperor Jehangir, and father of the famous empress Nurjehan, who built the tomb.—*Mundy's Sketches in India, Vol. I. p.* 53. *Thurlow's Company and the Crown. Delhi Gazette. Robert Schlagentweit.* See Inscriptions: India. Kama: Sakya muni. Oojein. Rama. Saud.

AGRADANA or AGRIHARIKA in Bengal, a brahmin of an inferior order who conducts funeral obsequies or sraddhas for hire, called Mahápátra and Mahábráhmana ironically.—*Wilson.*

AGRAHAYANA, a hindu month falling in November and December. See Brahma, Hiranyagharbah.

AGRESTO, IT. Verjuice.

AGRICULTURE.

KhetKaru	.... HINDU	Zarayat	.. ..PERS.
Kheti Bari	... .. HIND.	Pairoodagaradoo	TAM.

Agriculture, in all countries the chief branch of industry for the millions, is, in South Eastern Asia, almost the exclusive occupation of the people and the great source of revenue to the respective governments, who are usually regarded as the proprietors of the soil, and sublet the lands to tenants or fewers in perpetuity so long as the holder pays the established ground rent or tax or few-duty. The holder can sell or otherwise dispose of his holding, and cannot be dispossessed, provided his tax be duly paid, so long as the land is cultivated. In reality, in many parts of India, the sparse population and rack renting are such as to leave the lands of little marketable value, the property in it consisting of the labour bestowed on it from year to year. Nevertheless, the craving of all eastern races for their patrimonial inheritance is as intense as when Naboth said to Ahab, I. Kings xxi. 3. 'The Lord forbid it me, that I should give the inheritance of my fathers unto thee :' and the hindoos are as strongly attached to their homesteads as ever the Jews were ; as Mr. Ward observes, though the heads of the family may be employed in a distant part of the country, and though the homestead may be almost in ruins, they cling still to the family inheritance, with a fondness bordering on superstition, and it is the use and wont in India, for governments to allow proprietors or their descendants to re-occupy lands long left waste. Amongst the earliest notices of agriculture are those in the Old Testament. How Adam lived is not mentioned, but of his two sons, Abel was a shepherd and Cain had become a tiller of the ground. In Noah's time the vine was cultivated and its juice fermented and Noah's descendants in the line of Shem appear to have followed the shepherd life and to have been nomades wandering over extensive countries, to winter and summer quarters, to the available grazing grounds. These do not seem ever to have cultivated any of the grasses for food to their cattle; and to the present day throughout South-Eastern Asia, the natural herbage is exclusively relied on. The Gaoli races of the towns purchase some food materials, but the Dhangar who pasture horned cattle and the Kurambar who rear sheep roam over great tracts, living with their herds for months, apart from cities or towns, and even where they may have formed villages on which advancing civilization with its agriculture has encroached, their homesteads are abandoned for less inhabited tracts. But in Noah's time agriculture seems to have made great progress. There is no reason to doubt that the Aryan tribes who moved southwards from near the Pamir steppe were both cattle-breeders and cultivators, and their Menu is considered by many to be Noah. The remains of the races who in some unknown time came down the valley of the Indus through the valleys of Baluchistan attest the prevalence there in pre-historic times of water tillage in the usual form of the wet cultivation of India where the grounds are carefully levelled and put into small plats or compartments into each of which the water courses are led in the manner noticed in Proverbs xxi. 1. where it is said 'The king's heart is in the hand of the Lord : as the rivers of water [rather, as a 'water-course'] he turneth it whithersoever he will' an allusion to the practice of the eastern farmer in irrigating his field, when he conveys the water in channels along the fields, turning it with his foot or hand in all directions, so that every part of the field may be watered, and a good crop insured. Noah's descendants in the line of Ham, who took possession of Egypt, applied themselves to the tilling of the ground, and with so much ingenuity, industry and success, that, owing to the inundations of the Nile, and the consequent fertility of the soil, Egypt was enabled in the time of Abraham, and still more so in the time of Joseph, to supply its neighbours with corn during a period of famine. Nor were the inhabitants backward in assisting the liberality of nature : they busied themselves in embanking, irrigation, and draining, in order to derive all the benefits which the benignant river was capable of affording them. These works are said to have been carried on with particular spirit under the auspices of Sesostris, 1800 years before the Christian era. So sensible were the Egyptians of the blessings which agriculture afforded, that in the blindness of their zeal, they ascribed the invention of the art to their god Osiris, and the culture of barley and wheat to their goddess Isis. The Pelasgi who occupied Greece, were great agriculturists, and the Romans had but two avocations, war and husbandry.

The Jews, whilst in Egypt, seem to have been shepherds. But after occupying Canaan, in their respective allotments, cattle-grazing, agriculture and horticulture alike engaged their attention, of which the Scriptures contain many notices, and the modes of tillage still in operation in eastern countries illustrate various texts of the Bible. As in describing Canaan, it is mentioned that the land whither thou goest in to possess it, is not as the land of Egypt from whence you came out. (Deuteronomy xi. 10.) Where thou sowedst thy seed, and wateredst it with thy foot as a garden of herbs, which is still everywhere seen, as the mode of watering the lands in garden cultivation.

After ploughing, the farmers of India in their wet cultivation, form the ground with a hoe into small squares with ledges on either side, along which the water is conducted. Besides preventing its spreading, these embankments also serve to retain the moisture on the surface for a longer period. When one of the hollows is filled, the peasant stops the supply by turning up the earth with his foot, and thus opens a channel into another. An allusion to this custom, of the gardener changing *with his foot* the channel of a stream of water, furnishes the king of Assyria, in his threatening message, with a very appropriate image. " With the *sole of my foot,*" says he, " I have dried up the rivers of besieged places." The practice of Arabia is also familiar to the modern Portuguese husbandman.—(*Wellsted's*

Travels, Vol. I. *p.* 282) and Deuteronomy, xxv. 4. 'thou shalt not muzzle the ox when he treadeth out the corn' is a method of separating the cereal grains from the ear common throughout India though some farmers do muzzle the ox on that occasion, and others do not. The wild beasts are still as troublesome as in Psalm lxxx. 13. where 'the boar out of the wood doth waste it, and the wild beast of the field doth devour it' for the wild hogs, elephants, buffaloes and the deer tribe make sad havock in fields and orchards. The buddhist races in Burmah and China use manure largely, not old manure as in Europe but fresh refuse of every kind, only vastly diluted. The farmer races in India, except such gardeners as are near towns rarely use manure of any kind, but trust exclusively to the water of tanks in wet cultivation, or to the natural rains in dry cultivation. The latter is analogous to the tillage of England, with this marked difference that in temperate England the farming operations can be carried on all through the year and the crops are long on the ground, but in India, the rain being periodical, may last for two, three or four months, and the whole work of the Indian farm must be carried on with grains and plants that come rapidly to maturity so as to be completed before the inclement dry hot season re-commence. In this respect, there is a similarity to the range of the cropping seasons of inclement northern countries, where everything has to be suited to the shortlived though hot summer and where the grains in use, are of a kind that rapidly mature—the two elements,* inclement heat and inclement cold, compelling the same procedure. The instruments in use in India are of very simple manufacture, though in their objects of great value. The poverty of the people and the necessity of simplicity in articles for countries with few artizans and the fact that old and young, man, woman and child of the households are all employed in the m-work, necessitate the retention of imements of the simplest forms, and the dinary agricultural implements, used in mple tillage, are often of the very rudest scription. But the climate does not permit ep sowing, for the seeds must either soon rout up or rot, and the influence of the abunnt rains and vast electric forces, on the soils India are of a very different character to hose of England and do not require either the same amount or kind of mechanical treatment in order to produce the requisite effect. The implements used in Dharwar agriculture may be given to illustrate this part of the subject. A large plough is used on ground being brought into cultivation for the first time and ploughed with this, lengthways and crossways. If the land is heavy, eight, ten or twelve bullocks are used, if light, four are sufficient. It is used in cotton and also in grain cultivation.

A small plough is used in black soil at intervals of from six to ten years, and worked with two or four bullocks according to the depth of ploughing and stiffness of the soil. It is used in cotton and also in grain cultivation, and in red soils it is used every year.

The 'Kooloo' is a heavy harrow, used with two bullocks after ploughing for further breaking up the soil, and also used without previous ploughing in the years when the black cotton soil is not ploughed. After the seed, whether cotton or grain, is sown with the drill, the iron and wooden supports are removed from this implement, and the soil smoothed over the seed with the upper wood alone, drawn by two bullocks, and kept steady by the foot of the driver.

The 'Tephun' or drill is used for sowing cotton, it is drawn by two bullocks. It has two seed tubes each fed by a woman.

'The Koolpee' is drawn by two bullocks between the rows of cotton, to eradicate weeds; by this means, also, the soil about the roots of the cotton plants is loosened and piled up—a rough substitute for hoeing.

The Kooric, or drill is used in sowing grain, worked with two bullocks, which one man drives, and this man feeds the receptacle for the seed communicating to the four tubes, and a third man works the extra tubes at the side, with which another description of seed or oil seed is very commonly sown in every fifth row.

The Kolpa is drawn by two bullocks, and used for rooting up the weeds between the rows of grain; the row of grain is left untouched in the interval in the middle; the earth is also by the same operation loosened around the roots of the grain. Two of these are frequently worked together with one pair of bullocks and two men.

'Hullee Bandee' or cart is not seen much of large size in the Deccan, but is very common in the Southern Mahratta country drawn by eight bullocks. The tires are commonly six inches deep. A pair of wheels costs up to 120 Rupees; they last 50 or even 100 years, and are handed down as heir looms in families.

'Nangur' or plough is used for rice cultivation. Worked with two bullocks. Rice land is ploughed with this two or three times every year.

'The Don' or clod-crusher is drawn with two bullocks; the driver stands on the implement when working it.

The 'Kooloo' is used after the clod-crusher for levelling the ground. With the scarifier removed, it is used for covering in the seed after it is drilled in.

The 'Koree,' or drill used in rice cultivation, is similar to the drill used for the other grain, except that there are six tubes, and no extra tube for other grain is used, rice being sown alone: worked by two bullocks.

'Khorpee,' or weeder is for cleaning away any weeds which may have escaped the koolpa or weeder drawn by bullocks.

There are other implements in use in other parts of the country, or similar articles with different names. Thus in Assam the plough is called *'Negalu.'* The harrow, *'Halaway.'* The Sowing-machine *'Koorigay.'* Weeding-machine, 'Koontey,' Levelling-machine 'Halabey' Harrow Hegguntey 'Rumtee.' Kodali or mattock.

These will show that the people of India are well advanced in agricultural skill: and that they are doing as much as their humble circumstances; the climate, the soil and the required crops will admit. Their aids,—the buffalo and the bullock are chiefly employed for draft and for pack carriage, are sledges, carts with wooden or stone wheels, or wheels of solid blocks of wood as the nature of the country and the state of the roads demand. In India nearly all the cultivators are hindus and each village has a small number of hereditary out-caste labourers. The following receipt for a bait for rats, so often troublesome to agriculturists, will be found useful. Powdered Assafœtida 2 grains. Essential oil of Rhodium 3 drachms. Essential oil of Lavender 1 scruple Essential oil of Aniseed 1 drachm. Mix the assafœtida with the aniseed, then add the oil of rhodium, and still mix the assafœtida in a mortar, after which add the lavender, cork the mixture close, and put a little in a saucer into the middle of a large iron trap: taking care that a rat once caught does not escape.—*Ward's Hindus. Tropical Agriculture. Exhibition of* 1862.

AGRIMONIA NEPALENSIS. Don. A plant of Nepaul, with small yellow flowers. It is very closely allied to A. Eupatoria of Europe. —*O'Shaughnessy, p.* 325 *Honigberger. Voigt.* 196.

AGRO DE LIMONE. It. Lemon juice.

AGROSTIS, a genus of grasses of the natural order Graminaceæ of Lindley, several species of which are met with in pastures and barren-land.

AGROSTIS LINEARIS. Retz. Syn. of Cynodon dactylon. Pers.

AGUARDENTE. Port. Brandy.

AGUARDIENTE. Sp. Brandy.

AGUARRAS. Sp. Turpentine oil.

AGUBA or ABUBA అగూబ.-(అబూ.బ).—Capparis Roxburghii, D. C.

AGUILA BRAVA. Willd. Eagle-wood.

AGUMUKI. Beng. Bristly bryony. Mukia scabrella.

AGUR. Tam. Hugonia mystax. *Linn.*

AGURI. Beng. a low caste, mostly cultivators.

AGYNEIA COCCINEA.

H'ta h'men. *Burm.* H'soke gyee. *Burm.*

The roots of this curious flowered plant are used medicinally by the Karens.—*Mason.* Wight gives a figure of A. bacciformis, and Voigt. names A. puber of the Molluccas.

AHALOTH. Heb. Eagle-wood.

AHAK. Arab. Quick Lime.

AHALYA BAI. A Mahratta princess, of the Holkar family who ruled in the middle of the 18th century. See Benares. Holkar. India. Mahratta Governments of India.

AHAN RUBA. Pers. Loadstone.

AHARWARRAH. A territory on the north-east frontier of Malwa which contains many districts. The Ahar tribe or caste from whom the territory derives its names of Aharwarah and the Aharat are spread through Rohilcund and other districts in the N. W. Provinces, following pastoral pursuits. They claim to be descended from the Yadu race of Rajputs.—*Malcolm Centc. Ind. Vol. I. p* 325. See Rajpoot. These seem to be the Ahir, q. v.

AHEL? Eagle-wood.

AHETA or NEGRITO, a Papuan race, the second name, meaning little Negro, being given to them by the Spaniards; but that of Itas or Ahetas, written Ajetas, is their usual appellation among the planters and villagers of the plains. The woolly haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago, they were estimated, by M. Mallat, in 1842 to amount to 25,000. The islands Samar, Leyle, and Zebu, have not any of them; but they are found in Negros, Mindanao, Mindoro, and Luzon. In the early accounts of them by the Spaniards, they are described as being smaller, more slightly built and less dark in colour, than the negros of Africa, and as having features less marked by the negro characteristics, but as having woolly instead of lank hair; and their social condition could not then have been much better than now, since they are described as living on roots and the produce of the chase; and as sleeping in the branches of the trees, or among the ashes of the fires at which they had cooked their food. They are all well formed and sprightly, but very low in stature, as they rarely exceed four feet and a half in height. The character of the Negrito is untameable, and it is impossible to surmount their tendency to idleness. Prompted by an irresistible instinct to return to the place of their birth, they prefer a savage life to all the charms of civilization. The Ajetas or Negritos are ebony-black like negroes of Africa. Their hair is woolly, and as they take no pains in clearing it, and do not know how to arrange it, it forms a sort of crown round the head, which gives them an exceedingly fantastic aspect, and when seen from a distance, makes the head appear as if surrounded with a sort of aureole.—*Earl's Papuan's, p.* 121 *to* 131.

AHILEKA also **AHILEKUM.** Sans. Bryonia scabra.

AHILLA. Singh. Cathartocarpus fistula.

AHIMATA ROGA, name of a mysterious disease.—*Hyder's East : Monachism, p.* 433.

AHINSA in buddhism, the non-injury of animal life.

AHIR. Pers. Connessi seed, Wrightia antidysenterica.

AHIR, a pastoral tribe numerous in the N.W. of India, but who are spread through the Central Doab, in the Upper Doab, on the west of the Jumna and in the Lower Doab and province of Benares. Some of them have been converted to mahomedanism, but the bulk are hindus. They have three races, the Nand bansa, Jad-Yadu, and Gomala Bansa, who intermarry and marry the widow of an elder brother.—*Wilson's Glossary.* See Aharwarah; India, Kol : Kutch.

AHLADA MARA. Can. Ficus Indica.

AHLIM? Eagle-wood.

AHMEDI-JAMI. A celebrated poet and sage, native of Jam, known generally as Jami. He is the author of many works of high estimation. His romance of Yusuf and Zuleika, so much admired in the East, is taken from the story of Joseph and Potiphar's wife. He flourished in the fifteenth century, and died about the year 1486; he was contemporary with sultan Hussain Baicara, a prince of the descendants of Timur, who reigned in Khorasan, and whose capital was the city of Herat.—*Fraser's Journey into Khorasan p.* 39.

AHMED KHAN SADOZYE, on the assassination of Nadir Shah in 1747, declared himself king of Kabul, and laid the foundation of the Durani kingdom. He greatly added to the wealth and fame of his own family and his kingdom by six successive invasions of India, in all of which he was successful, but in one he obtained the highest renown among mahomedans by the memorable defeat that he gave to the Mahratta army at Paniput, a few miles to the northward of Delhi. The famous action was fought in January A. D. 1761. It was a contest between the mahomedans and hindus for the sovereignty of India. The mahomedan army amounted to sixty thousand men, of whom not one half were Affghans : but his own troops were those upon which Ahmed Shah most depended. The Mahrattas were computed between seventy and eighty thousand. They were defeated with great slaughter. In November 1763 he again appeared on the Indus, irritated against the Sikh sect for the trouble they had given him, not less than from bigoted zeal against all non religionists. He signalized his march through Amritsar by the demolition of the Sikh temple of Harmandur and of the sacred talao, or tank. The first was blown up with gunpowder, and the reservoir, besides being defaced and filled up, as far as materials and time permitted, was polluted with the blood and entrails of cows and bullocks, a sacrilege even greater in the eyes of the schismatic disciple of guru Govind than of the orthodox braminical hindu. Pyramids were erected of the heads of slaughtered Sikhs, and Forster (Travels, Vol. I. p. 279) relates that Ahmed Shah caused the walls of those mosques, which had been polluted by the Sikhs, to be washed with their blood, to remove the contamination and expiate the insult.—*Malcolm's History of Persia, Vol. II. p.* 235. *History of the Punjab, Vol. I. p.* 219. *Burnes Kabul* : See India : Kandahar, Karez : Paniput ; Khyber ; Kazzlbash.

AHMEDNUGGUR, a city and fortress in the province of Aurungabad, ceded to the British in 1803 : it is the principal artillery station of the Bombay Army. It is on the right bank of the Seenah river. Its fortress, in the centre of a great plain, consists of a curtain with bastions, and was surrendered to Colonel Wellesley, a few days after the storm and capture of the Pettah, which also is surrounded by a curtain and bastions. The population in 1828 was 21,208, and in 1835, 23,774.

It is in lat. 19° 5' N. and L. 74° 55' E. It was the capital of the territories of the Nizam Shahi dynasty, and their many extensive palaces, the Farrah bagh and Rashk-i-Irm are now in ruins A pretty little mosque, the Damri Masjid is to the S. of the fort. The Nizam Shahi dynasty and its servants built several valuable Karez.

AHMEDZYE, an Afghan tribe. See Afghanistan. Kelat. Wazira.

AHOM, also **EHOM**, a branch of the Tai family.

AHOM in Burmah, the name of the people of Assam, their religion was the worship of a god called Chang. In 1665, the reigning Rajah Chu Kum, adopted hinduism. See India.

AHOO, a soft, though fine, but not very close-grained light Ceylon wood.

AHRIMAN, also known as Ahrimanes and Ingromaniyus. The ancient Persians held, and modern Parsees hold, a dualistic belief in Ormuzd the good and Ahriman, the deadly principle from whom all evils spring. See Aryans. India. Parsees.

AHSHTAR, a plain on the borders of Assyria. See Luristan.

AHVI. Tam. ஆவி Atmospheric Air.

AHVI MARAM, Tamul; or "steam-wood," from its emitting steam when the root is cut; is a Malabar tree, growing to about ten inches in diameter, and fifteen feet long: it is of little value, and not very durable; but at times it is used for inferior purposes in the frames of native vessels, in repairs, &c.—*Edye, Malabar and Canara.*

AHWAZ, a town in Khuzistan or Arabistan. This once celebrated city is ninety-two miles North-East of Bussorah, on the banks of the river Karoon, in the province of Khuzistan, the ancient Susiana. It became extensively known after certain districts had been combined under the name Al Ahwaz, and their capital was designated Suq-ul-Ahwaz, the mart or emporium of Al Ahwaz —*Mignan's Travels*, 294.

AIGAREET MYIT. MALAY? This root is said to deprive spirituous liquor of all its strength, and a decoction given to an intoxicated person is said to render him immediately sober.—*Cat. Ex.* 1862.

ARGHA-NATHA, a title of Iswara, the lord of the boat shaped vessel. See Yavana.

AI, an island of the Moluccas, the Pulo Ai of the Malays, Pulo Way of the British, situated about ten miles to the westward of Banda Lenthor or Great Banda. It is about 8 miles in circumference, and moderately elevated, its entire surface consisting of nutmeg plantations, this spice being its sole exportable product.—*Jour. Ind. Arch.*

AIKAMENIL. TIMOR. Sandal-wood.

AIL. FR. Garlic.

AIDUMA, an island on the S. W. Coast of New Guinea, near the entrance of Triton's Bay or Warangari in Lat. 3. 58' S. Long. 134. 15' E. Modera. It is 7 miles long and 2½ to 3 miles wide, and is separated from the mainland of New Guinea by a narrow but unfathomable strait, through which the tides run with great rapidity. The chief exportable products are wild nutmegs, several kinds of odoriferous bark, ebony, and kayu-buka; which, with tortoise-shell and small quantities of trepang, form the return cargoes of the Ceram and, sometimes, Macassar prahus, that visit the port annually for purposes of trade.—*Jour. Ind. Arch.*

AILANTHUS EXCELSA. *Willd. Roxb. II. Vol.* 450. *Voigt.*

Ailantus excelsus.

Indian Ailantus...	ENG.	Peru Maram ...	TAM.

Peru Mara...	MALEAL.	Peyyapa Pedda-manu	"
Arala...	SANS.		

This tree grows in Coromandel, Surat, Baroach, Baroda, and the Dekhan. It resembles the ash in its general appearance and attains a large size, flowering in January and February. It is common about old buildings and in raviny ground of the Dekhan and of Guzerat, about Baroach and Baroda. It is seldom found as a tree in the Bombay forests. It is common in the Northern Circars, and in the Godavery forests, and is met with in Coimbatore. Doubts seem to exist as to the value of the wood. Dr. Wight says it had been described as hard, close-grained and heavy, and fit for gun stocks, and he had been told that it is much used in Bombay, in cabinet-making, but he greatly doubted the correctness of the information, in which Dr. Gibson concurs. Dr. Cleghorn in the Madras Exhibition Jury Reports, describes the wood as light and white and he and Graham say it is used for making sword handles, &c. It is also employed to make sheaths for spears, and catamarans, but is not durable. On the Godavery, the natives never use it.—*Roxb. II.* 450. *Drs. Wight, Cleghorn, Riddell, Gibson, Useful Plants, Mr. Elliot, Mr. Jaffrey, M. E. Jurics' Reports, Captain Beddome. Voigt. p.* 186.

AILANTHUS MALABARICUS.

Madde Doop ..	CAN	Peru Mara ...	TAM.
Perri Maram ..	MALEAL		

A large tree of the Anamallai forests, Travancore, Malabar, and in Canara and Sunda, above the ghauts. Its rough, very thick bark is studded with grains of a bright coloured resin, and it yields, on incision, the mattipal resin. The bark, resin and fruit are used in native medicine.—*Ainslie. Wight. Gibson. Useful Plants.*

AILANTHUS GLANDULOSA. DESF. [illegible] tree of China and the Moluccas.

AIMAK, a Mongolian, Mantchu and Tu[illegible] word meaning a tribe. Of these, there are [illegible] Kabul and Persia four tribes, the Char Aim[illegible] They dwell to the north of Herat and Ka[illegible] in the range of the undulating country which in some places assumes a mountainous in others a hilly character, and in some parts is well watered, in others bleak and rough, forming a water-shed of two natural divisions from the western of which flows the Murghab, the Tejend and the Farrah-rud, and from the eastern, the Helmund, the south-eastern feeders of the Oxus and the N. Western feeders of the Kabul river. It is said that Timur, exasperated at the depredations committed by the people inhabiting Mazanderan, south of the Caspian, transported the whole of them into the mountains situated between India and Persia. The descendants of that people form a small tribe of Eimaks known under the appellation of Firoz Kohi, after the city of that name (situated about sixty-three miles from Teheran), where they were defeated and taken capture by Timur. According to Latham, the Aimak are of the Sunni sect of mahomedans, and are in number four, viz, the Timuni, the Huzara, the Zuri and the Timuri. The Timuri and the Hazara lie beyond the boundaries of Kabul and are subject to Persia. Vambery says that the four tribes are the Timuri, Teimeni, Feroz, Kohi and Jamshidi, and that the whole are of Iranian origin and speak Persian. The Timuri dwell about Gorian and Kah'san, the

Teimeni from Karrukh to Sabzwar: the Feroz Kohi near Kale No, and the Jamshidi have the shores of the Murghab. In their reverence for fire, their respect to the east to which their tent doors look, they retain many of the fire-worshipping views. The Aimak tents are Turk, those of the Timuri are Afghan. They live in well fortified castles but in tents rather than houses, prefer a despotic government, eat horse flesh, and mix the flour of a nut called Khundzik (chesnut ?) with that of their wheat. The Aimak settled in the 13th century and their number is estimated at 400,000.—*Latham's Descriptive Ethnology, Ferrier's Hist. of Afghans, p.* 3. *Vambery's. Sketches of Central Asia.*

AIMANT. FR. Loadstone.

A'IN-I-AKBARI. PERS. From A'in, a law, and Akbar, the name of the Emperor who framed this code of regulations. See Akbar. See Suhogum.

AIN. MAR. also Arjun MAR. Syn. of Pentaptera arjuna. P. tomentosa and P. glabra *p.* 18-9.

AINDRA-JALIKA. HIND. Conjuring is so called from Indra 'the Hindu deity;' and Jala 'a net.'—*Hind. Theat. Vol. II. p.* 306.

AINDRI, the Sacti of Indra. See Sacti.

AING. BURM. Dipterocarpus alatus.

AINKUDI KUMMALAR. The five artizan [illegible]tes of Malabar. See Kummalar.

AINO. The aboriginal races of Yezo, whose severe treatment by the Japanese, has led them to other countries, and they also occupy the southern part of the island of Seghalin, which is in possession of the Japanese. They are despised in Japan. Their number does not today exceed 80,000; they are strong and muscular, but they are despised as Jews are by the Arabs. The women are handsome, have a profusion of black flowing hair, but their appearance is not cleanly, their lips are tattooed beautifully blue. They do not speak Japanese; and servants from Hakodate connot converse with them.—*Hodgson's Nagasaki, p.* 52. See Amoor, India: Kurilians.

AINSLIE, DR. Sir Whitelaw, a Madras medical officer, who wrote observations on Cholera Morbus. 1 Vol. 8vo.;—On atmospherical influence. Lond. As. Trans. Vol. I. p. 378;—On the climate of Seringapatam, As. Jl. 1835, Vol. XIX. pp. 25—34;—Materia Medica Indica, Madras, 1 Vol. 4to.; 2nd Ed. Lond. 2 Vols.;—Remarks on climate and diseases of Eastern Regions, Lon. As. Trans. Vols. II. p. 13; III. p. 55.—*Dr. Buist's Catalogue.*

AIOU or YOWL, a group of 16 low circular islands on the W. Coast of New Guinea, and 30 miles N. E. from the island of Waygiou in the Gillolo Passage. The largest lies in about lat. 0° 25' N. long. 131° 0' E. The group is surrounded by a coral reef, nearly a degree in circumference, the south-western portion of which is separated from the main reef by a narrow but deep channel. Aiou Baba, the largest of the group, and of chief resort lies on this detached portion of the reef, and is about 7 miles round and 500 feet in elevation: The north-eastern or larger reef, contains the islands of Abdon and Konibar, with several coral islets, and is said to have an opening on the N. W. side which admits large vessels within the reef. The inhabitants are Papuans, few in number and occupied almost exclusively in fishing and in catching turtle, with which the lagoons within the reef abound. The chief exports are tortoise—shell of good quality, which is obtained here in large quantities, and trepang. These are purchased by Chinese and sometimes European traders from Ternate, in Moluccas, the king of which place assumes supreme authority over all those parts of the coast of New Guinea which his subjects have been in the habit of visiting for purposes of trade. The traders to Aiou all employ small vessels, which alone are adapted for going within the reef of Aiou-Baba, their chief resort. They bring red and white calicoes, thick brass wire, old clothes, glass beads, and all sorts of ornamental finery in which the negroes of New Guinea delight, as much as those of Africa. The natives, are tolerably friendly to strangers, but are inclined to be treacherous and revengeful, which is the character indeed, of all the Papuan tribes. A vessel visiting these islands for purposes of trade should always be provided with a native of Ternate or Tidore to act as pilot and interpreter.—*Journal Ind. Arch. Horsb.*

AINO-JAPANESIA. A name proposed by Mr. Logan to designate all the Japanese and Aino Islands from Formosa to Kamtos-chatka. See India.

AIR	ENG.	Air Atmospherique..	FR.
Lay	BURM.	Howa	HIND. PERS.

AIR. Amongst the mahomedan races of India the air and the water together, Ab-o-howa, are reckoned to constitute climate. Amongst hindus, the water alone is regarded as the agent acting on the climate.

AIRAPADAM, in hindu mythology, the name of one of the elephants who support the earth, his image is placed in the temples of Vishnu, of a white color, having four tusks, his body loaded with trinkets and magnificently dressed.—*Sonnerat's Voyage, p.* 189.

AIRAVATI, the elephant vahan of Indra.

AIR BLADDER of certain fish is in much request as an article of diet and in the arts. It is a white membrane close against the spine, known also as the sound or swim. Russian Isinglass is prepared from the sounds of the sturgeon, *Accipenser sturio,* found in the Caspian and

Black Seas and their tributary rivers. In America, from the *Labrus squeteague*, the intestines of the cod, *Morrhua vulgaris*: in Calcutta, from the sounds of the Polynemus sela, the *Salea* of Bengal and the sounds of two Madras fish, the *Korwa*, and *Katali*, Tam., are so employed, and they are largely exported to China.—*O'Shaughnessy p.* 68.

AIRUN, a temple in Bhopal built in the first year of the reign of raja Tarapain, by Dyanya Vishnu, the confidential minister and brother of raja Matri Vishnu. The inscription is the first in honour of the boar incarnation of Vishnu and the boar coins probably belonged to this family of princes, who worshipped Vishnu as the Boar. In the inscription, the minister Dyanya or Dhanya obtained his office by public election, and through the grace of God! Dhanya is called a Rishi amongst the Brahmans and the devoted worshipper of Bhagavan; but there is not any preposterous eulogy of Brahmans. The language of the inscriptions is Sanscrit but with words written corruptly, and probably about the 8th century of the Christian Era. The character used in the inscriptions is that subsequent to Kanouj Nagari, or Allahabad, but before the Gaur or Harsha character. Another inscription is on a pillar in front of the temple, the King mentioned is Budha Gupta, who governed the country between the Jumna and the Narmada. The pillar was raised, at the expense of Dhanya Vishnu, before the temple of the preceding inscription, by Vaidala Vishnu, who had been elected to the regency. The notice of a new Gupta, and a date of the dynasty, 165, is of great interest, as Buddha Gupta necessarily followed those mentioned on the Allahabad and Bhitari columns, and up to Buddha Gupta's time, if he belonged to the Kanouj dynasty, its duration had been only 165 years. In the early part of the fifth century, A. D., FaHian found a buddhist king at Kanouj; and in the early part of the seventh century Huian Thsang found a hindu king reigning. The dynasties, therefore, had been changed between the fifth and seventh centuries, and the Gupta family had sprung up in the interval—*Ben. As. Soc. Vol.* VII, *p.* 634.

AJAIB-UL-MAKHLUKAT, a book on natural history.

AJAM, Arab. This word literally means foreign; but, in the southern part of Arabia, Al Ajam is applied to the opposite part of the coast of Africa. Ajam by the Turks means Turkish Arabia. Persia is Bald-ul-Ajam, and the north-eastern coast of Africa, is Bar-el-Ajam. The Arabs divide the world into two great bodies, first themselves, and, secondly, "Ajami," *i. e.* all that are not Arabs. Similar bi-partitions are the hindus and mhlechas, the Jews and Gentiles, the Greeks and Barbarians, &c., &c., *Playfair's Aden.—Burton's Pilgrimage to Mecca, Vol. II. p.* 26.

AJAMODA. Sans. Parsley.

AJATA SATRA, king of Magadha who collected the remains of SakyaMuni and deposited them in one large stupa at Raja Griha. He reigned for 32 years and died B. C 526. His race were Bhattiya brahmans. See Buddha: Chinese.

AJATASWARA. A king of Magadha, in the eighth year of whose reign Sakya became eminent. See Chinese.

AJETAS. A Papuan or a Negrito race in the Phillippines, Negros, Mindanao, Mindoro and Luzon. See Ahetas.

AJGARA. Sans. A. python.

AJI A river of Iran.

AJIPALA, one of the Chohan dynasty who founded Ajmir. A. D. 145.

AJIT SINGH. A celebrated king of Kanouj who was murdered, A. D. 1680. See Rahtor.

AJMOD. اجمود Sans. Apium involucratum also Petroselinum sativum, parsley.

AJOOWAN. Beng. Lovage, Ligusticum ajowan.

AJO SATIVO. Sp. Garlic.

AJUGA DEALSINGHI (perhaps A. reptans; A. fruticosa, or A. chamœpytes) from the lower ranges of the Himalayas where it is given in quartain ague.—*Honigberger.* See Anisomeles.

AJUGA DECUMBENS, Don. Hills of Cashmere, where, from its manifold virtues, it is called jan-i-adm, *i. e.* the life of man. Given in tormina and inflammation of the gums.—*Honigberger.*

AJUGA FRUTICOSA. *Roxb.* Syn. of Anisomeles Malabarica.

AJMA. Hind. Perhaps, Ptychotis ajwain.

AJMIR, the capital town of a small territory in Rajputanah ruled by Chouhan Rajputs. Ajipala of this race founded it in A. D. 145, and it was lost to the Mahomedans by Dola Rai in A. D. 1024 to Mahmud of Ghazni. The territory is also styled Rajasthan. There is an artificial lake near L. 74° 52' E. See Chohan; India; Inscriptions; Kattyawar. Khetri Lakes; Rajputs.

AJUNTA in the province of Arungabad, is celebrated for its Buddhist and Jaina Vihara or monastery and caves. The Chaitya cave is supposed to be the oldest in India. One of the Chaitya caves there has the dagopa perfect, with the tee with the three umbrellas in stone. The great structural dagopas are generally shorn of this appendage, which is the origin of the three and nine storied towers of China. One of the Viharas at Ajunta looks more like the brahmanical caves at Ellora than a Buddhist Vihara. Its pillars have similar cushion capitals to those in Elephanta and at Ellora. The Ajunta, are the most complete series of Buddhist caves in India, without any mixture of Bramanism and contain types of all the rest. some are elaborately carved.

The Ajunta caves are in the northern face of a ravine, which has a westerly direction parallel to the face of the ghauts, as they overlook Kandesh. There are many ravines or koras near; one of these commences at the town of Ajunta and winds to the south and west for about 3 miles opening there into Kandesh. Near its mouth is another ravine taking a westerly direction, for two miles with several windings, at one of which, on the northern face of the rock these caves have been excavated. This ravine, no where exceeds 400 yards from brink to brink, above five hundred yards at its bottom. Ajunta is the only town of any size near, but it too is quite a small place, walled, with gates, and a bridge.

Major R. Gill, of the Madras Army continued drawing and photographing these caves for nearly 30 years, sometimes residing in a cave for days. He built a house at Fardapoor, now the travellers bungalow, but latterly he resides at Ajunta. The natives call the caves verrula, the same name as they give to those which Europeans call Ellora. The hindus call them also Lena, and both terms mean drawings.

The caves are about 25 in number, several of them have fallen in, many have been injured by the percolating water, and all have a noisome damp smell, with the nauseous odour of bats, which in the larger caves are multitudinous.

The ordinary form is a central hall, with a walk around the wall, separated from the hall by pillars. A single door-way leads to the interior and opposite it is a recess, in which Buddha is seated preaching. In that are numerous figures seated in almost similar attitudes. The walls also have sculptured figures and arabesques, as have also the lintels of the doors, and the tops of the pillars. There are innumerable figures of men and women standing upright, and sitting, and those on the tops of the pillars seem to be soaring. In the ghat of the Taptee at Baug, on the north side of the valley of the Taptee, are three ancient Buddhist caves. See Adjunta ; Cave Temples.

AJWAIN SEED.

Amoss	...Ar.	Ajwain ...	..Hind.
Asma	...Guz.	Ajma... ...	...Mahr.
Juvani	...Beng.	Nan-khoah...	...Pers.
Amus	...Arab.		

In Hindustan, ajwain is the seed of Ligusticum ajowain, *Roxb*. The Plychotis ajwan D. C. In the Dekhan it is used as the name of Anethum sowa or Bishops' Weed. The Korassani ajwain is wholly different, being the seeds of the henbane and poisonous. The small fruit or seed possesses an aromatic smell and rather warm pungent taste. The plant is known everywhere in India, and P. sylvestris, Royle, is the Arab ajwain called by the Persians Nan-khoah, largely used as a carminative and in flatulent colic, and, Honigberger states, in stoppage of urine. It is propagated by seed and grown in square beds; in the Dekhan, the seed is sown in September and October, and sold at five pice the seer, the plant is grown by the Native gardeners for the seed only, which is used in curries. Care must be taken not to confound, under the native names, the seed of the Ptychotis ajwain with those of the poisonous Khorasanee Ajwain which are the seeds of the hyosciamus or henbane. The Ptychotis ajwain seeds are very small, stalked, conical, pointed, streaked with yellow stripes, and stalks of the seeds of a bright-yellow. Henbane seed is grey, not ribbed or streaked, shape obscurely triangular, and flattened, surface rough and dotted. Other seeds, especially of umbelliferous plants, are sold under both these names.—*O'Shaughnessy. Fleming. Faulkner. Honigberger. Riddell. O'Shaughnessy.*

AK also AKH. اک also AL. ال Duk. Hind. Calotropis gigantea; also Morinda citrifolia, *Linn.* See Madar.

AKA, tribes occupying the western extremity of the hills which form the northern boundary of Assam. See India.

AKA. Turk. a chief, an Agha.

AKABA, a gulf at the N. E. part of the Red Sea : also, the town there.

AKAD, a city of Assyria. See Babel.

AKAJU-NUSSE. Ger. also Westindische anakarden. Ger. Cashew nut.

AKAKALIS. Greek. Cassia absus, also an inspissated cold extract of the leaves of the Acacia vera.

AKAKIYA. Hind. A red stone brought to Ajmire from Delhi containing iron; used as a tonic, in the dose of one tola: one seer for two rupees.—*Genl. Med. Top. p.* 125.

AKAKIAH. Arab. اقاقيه It is spoken of both by Hippocrates and Dioscorides. It is an extract from the fruit of the Acacia vera, or from its leaves, which are pounded and the juice inspissated. The inspissated juice of the sloe, Prunus spinosa, is substituted for the ancient Akakia. The Akakia is not now used in medicine of Europe.

AKAL, Sansc. from "a" privative and "kal," death, meaning immortal.

AKALI, armed Sikhs; religious devotees and fanatics, violent, and ignorant. They were first established by the guru Govinda, the founder of the Sikh faith, and they zealously supported him against the innovations of the ascetic Banda, the byragi. Their Boonga or temple, on the side of the holy reservoir at Amratsir, at Lahore, is a fine building, but others are met with all over the Punjab, though chiefly in the Manja territory, between Lahore and the Gharra, where Tarantara is their chief town. A considerable number are settled at Nandair on the banks of the Godavery but are quiet and peaceable. In reality wealthy, they affect poverty and beg; but, in the time of the Sikh rule, their begging was an insolent demanding, and as they were a bold united body who made common cause, and did not scruple to expose their own lives or to make false accusations of crimes, these wild looking men enforced their demands with an insolent independence, which those only could understand who have witnessed a band of drunken Akali, almost in a state of nudity, brandishing their naked swords, and bawling out abusive and obscene language: their power to enforce their demands therefore was very great. They particularly showered their angry words on Europeans; but, until Ranjit Singh mastered them, even his life was several times in da[illegible] Under the British rule, and with power [illegible] oleration, they are never heard of. [illegible] extort alms from chiefs and others, by interdicting them from the performance of religious rights, and a chief unpopular with the Akalis, who made common cause with each other, risked his authority. Their name is derived from Akalipurusha, 'Worshippers of the Eternal,' the word Akal being a compound of kal, 'death,' and the privative 'a' meaning 'never-dying,' or 'immortal.' It is one of the epithets of the Deity, and is given to this class from their frequently exclaiming "Akal, Akal," in their devotions. They wear blue chequered dresses, and bracelets of steel round their wrists, which all Sikhs do not wear; though it is indispensable for a Sikh to have steel about the person, and it is generally in the shape of a knife or dagger. They formerly initiated converts, and had almost the sole direction of the religious ceremonies at Amritsur. The Akalis had a great interest in maintaining the religion and government of the Sikhs, as established by guru Govind, upon which their influence depended. They often went profusely armed, with half a dozen swords; perhaps also a matchlock, and several steel discs on their turbans.—*Masson's Journeys, Vol. I. p.* 451. *Mohun Lals Journeys p.* 9. *History of the Punjab, Vol. I. p.* 130, 131. *Steinbach's Panjab p.* 8-9. *Malcolm's Sikhs, p.* 116. *Ward's View of the Hindus, Vol. II. p.* 273-4. *As. Res. Vol. XI. McGregor's History of the Sikhs, Vol. I. p.* 81, *p.* 236-237. See Amratsur; Banda; Boonga; Discs; Manja; Sikhs; Tarantara.

AKA-PODWAL, a caste in Malabar and Canara who follow the rule of Marumakatayam, or descent from mothers, the descensus ab utero of the Locrians, who drove the Sicilians out of a part of Italy. See Polyandry.

AKAR-CHIRIT-MURAI. Malay. A plant yielding an elastic gum.

AKAR-KANTA. Hind. Alangium decapetalum.

AKARKARA. Hind. Pers. The roots of two species of Anacyclus, A. pyrethrum and A. officinarum.

AKARKOUF, the ground around the ruined pile called by the Arabs Tall Namrud, and by the Turks Namrud Tapassi. Both these terms mean the hill, not the tower, of Nimrod and the term Akarkouff or Agargouf given by the Arabs, is intended to signify the ground, only, around it. It is about 9 miles from Baghdad.—*Porter's Travels, Vol. II. p.* 281. *Mignan's Travels, p.* 102. See Namrud.

AKAS. Arab. عقاس A hoop of a black colour, worn by the Hodelyah Arabs, to retain the dark colored square of cloth on the head. The outer rim is inlaid with pieces of delicately engraved mother-of-pearl, rather larger than a shilling.—*Hamilton's Sanai.*

AKASA GARUDA GADDA, also Muru donda ఆకాశగరుడగడ్డ. Bryonia epigœa. *Rottl.* B. glabra, *R.* iii. 725. This name is more used in the S. Telugu districts.

AKASALINGA. Kar. Goldsmith.

AKASAM. See Acasanavi; Hindoo.

AKASANANCHYAYATANA, in Buddhism, the lowest of the incorporeal Brahma-lokas.—*Hyder's Eastern Monachism, p.* 433.

AKASA TAMARA, also (Antara tamara.) ఆకాశతామర, also (అంతరతామర.) Pistia stratiotes, *L.*—*R. iii.* 131.

AKASH BULLI. Beng. Cassyta filiformis. *Linn.*

AKAS KUKHI. See Hindoo.

AKAS-MUKHI. Sans. from akas, the sky and mukha the face, religious, ascetic mendicants, among the Saiva hindoos, who hold up their faces to the sky, till the muscles of the back of the neck become contracted and retain that position. See Urdha bahu.

AKATS-JA BULLI. Maleal. Cass[illegible]liformis.—*Linn.*

AKBAR, Jalal-ud-din Mah[illegible], reigned in India from A. D[illegible]e was grandson of the emperor [illegible]venth in descent from Timur. H[illegible]e eldest son of the emperor Hamayun [illegible] was born at Amirkot, in the valley of the Indus, on the 14th October 1542, while his father was in exile. Hamayun re-gained the throne in 1555 and died a few months later. Akbar in the course of his reign extended his sway over Rajputanah, and from Afghanistan to Ahmednuggur in the Dekhan and from the Suliman mountains on the west to Bengal and Assam in the east. He was an enlightened monarch who introduced religious tolerations, equal justice, encouraged literature, arts and science, and the Ain-i-Akbari or institutes of Akbar, a revenue work, was compiled under his orders. Akbar was succeeded by Jehangeer, Shah Jahan, and Aurungzib. Prior to this sovereign, of all the dynasties that had yet ruled in India, that of the house of Timur was the weakest and most insecure in its foundations. The houses of Ghazni and Ghor depended on their native kingdoms which were contiguous to their Indian conquest: and the slave dynasties were supported by the national influx of their countrymen: but though Baber had been in some measure naturalized in Cabul, the separation of that country under Kamran had broken its connection with India, and the rival of an Affghan dynasty turned the most warlike part of its inhabitants as well as of the Indian mahomedans into enemies. Colonel Tod remarks (Rajasthan Vol. I. p. 522) that it affords an example of the hindu doctrine of the metempsychosis, as well as of the regard which Akbar's toleration had obtained him, that they held his body to be animated by the soul of a celebrated hindu gymnosophist: in support of which they say, he (Akbar) went to his accustomed spot of penance (*tapasya*) at the confluence of the Yamuna and Ganges, and excavated the implements, viz., the tongs, gourd, and deer-skin, of his anchorite existence. Assuredly says Elliot a more extraordinary man never sat on the throne of India. Brought up as a mahomedan, he was a rationalist and deist, and never believed anything, as he himself declared, that he could not understand. The religion which he founded, the so-called Ilahi religion, was pure deism mixed up with the worship of the sun as the purest and highest emblem of the deity. Though Akbar himself could neither read nor write, his court was the home of literary men of all persuasions. Whatever book, in any language, promised to throw light on the problems nearest to the Emperor's heart, he ordered to be translated into Persian. Leedes, the adventurous English merchant, vi[illegible] Akbar's court and one of his four c[illegible]s entered the Emperor's service. [illegible]hed all arbitrary land taxes and [illegible] according to the values of the [illegible]s, fallow, out of cultivation, in rotati[illegible], middling and bad lands and over-flooded [illegible]nds. It was in his reign that his physician, Budyn, introduced the rhinoplastic operation for restoring the nose, and he bestowed on Budyn, a jaghire at Kangra. The Fasli or harvest era of Northern India has been traced to the year of Akbar's succession to the throne, the 2nd of Rabbi-us-sani, A. H. 963, A. D. 14th February 1556. The first mention of thugs, occurs in his time, for 500 were executed at Etawah. In his invasion of Kashmir, he was opposed by the warrior pastoral race of Gulu-wan.—*Elliot, Historians of India*, p. 248. *Tod*. See Fasli; Guluban; Kangra Khiraj; Leedes; Thugs.

AKCHEE. Pers. See Andkho.

AKEEK. Guz. Hind. عقیق Pers-Cornelian; Calcedony.

AKESINES, the Greek term for the river Chenab. See Chenab.

AKH-KA-JHAR, MADAR. Hind. آک کا جهاڑ Calotropis gigantea.

AKHARWAI a division of the Kurmi tribe.

A-KHASSA a region described by Ptolemy, the snowy land of Ladak. See *Kha*-changul.

AKHBAR. Ar. Pl. News Akhbar-kaghaz, newspaper. Khalassat-al-akhbar, the summary of news, a work by Khond Amir. See Khond Amir.

AKHIRI-CHAR SHAMBAH, A feast held amongst mahomedans on the last Wednesday of their second month Saffur.

AKHOOND, the high priest of the Swat tribe. See Khyber.

AKHOZYE, an Afghan tribe in the valley of Kabul. See Afghan.

AKHROT. Maleal. Sans. fruit of Aleurites triloba also Hind. the walnut or Juglans regia.

AKI, the Lignum vitæ of New Zealand, it is the Metrosideros buxifolia, and is a rambling shrub climbing by means of its lateral roots to the highest trees. See Metrosideros.

AKINCHANYAYATANA in Buddhism, the third of the incorporeal Brahma-lokas.—*Hyder's Easter Monachism*, *p*. 433.

"AKINDO," the Japanese name for merchant. In Japan the "akindo" are not permitted to ride on horseback, and with astonishment the officials see British merchants galloping about.—*Hodgson's Nagasaki*, *p*. 12.

AKIT, it is a drink in use by the Arabs but has different names in all parts of Arabia; even in the Hejaz it is known by the name of Mazir, as well as "Iqt," (a corruption of Akit). When very sour, it is called "Saribah," and when dried, without boiling, "Jamidah." The Arabs make it by evaporating the serous part of the milk, the remainder is then formed into cakes or lumps with the hand, and spread upon hair cloth to dry. They eat it with clarified butter, and drink it dissolved in water. It is considered by the Arab a cooling and refreshing beverage, but boasts few attractions to the stranger. The Beluchi and wild Sindhian tribes call this preparation of milk "krut" or kurut and make it in the same way as the Bedouins. It is perhaps the source of the English word curds. *Burton's Pilgrimage to Meccah, Vol. I. p.* 362.

AKKARAKARAM. Tam. அக்காரகாரம் Pellitory. Anthemis pyrethrum.

AKKARAPUTTA. Sing. Pellitory; Anthemis pyrethrum.

AKKUSH. Beng. Rottlera laccifera.

AKKYE, or Ryot Laut, the subjects of the sea, a litoral race in Quedah who dwell on the shores and islets of the Peninsula. See Kedah or Quedah.

AKO, a hill tribe in Assam. See India.

AKOLA. HIND. SANS. اکولا Alangium decapetalum : also A. hexapetalum.

AKOLA, L.24° 42N, & L 77°1'E. in Berar is built on an open plain near the Murna, the mean height of the plain according to Cullen being 808 ft. The tower of Akolah is built on a hill of green-stone amygdaloid overlooking the Murna river and presents the appearance of a citadel, indeed there is a small curtain at the top, and the whole town is surrounded by a curtain with bastions, which have been recommended to be removed. Akolah has the railway within two miles of it, and is now the chief Civil station of West Berar, in the Hyderabad Assigned Territories.—*Balfour.*

AKOMANO, a name of Ahraman. See Ahraman ; Zoroaster.

AKOND. SANS. Calotropis gigantea.

AKORA, a Hindu monastery. See Asthol, also Math.—*Balfour.*

AKU PATRIKAM, TEL. ఆకుపత్రికం, leaves of Cinnamomum eucalyptoides, *Nees*—C. Malabathrum. *R.* ii. 297.—*O'Sh.* 539. The leaves are used as a spice and medicinally.

AKUSALA, in buddhism demerit, constituent of "a" privative and Karma.—*Hyder's Eastern Monachism, p.* 438.

AKUT CHUNI. Small rubies or garnets, brought via Pali to Ajmere and used as an aphrodisiac : one tola for two rupees.—*Genl. Med. Top. p.* 125. See Yakut.

AKYAB. The chief town in Arracan, on the right bank of a rapid river. It is the seat of a Commissioner. The European part is beautifully laid out.—*Balfour.*

AK-YAU. BURM. Wood aloes.

AL OR AACH. BENG. آل HIND. MAR. Morinda citrifolia.—*Linn.*

AL, in Kabul, a fabulous, præternatural being, resembling a woman of twenty years of age, named the Ghoul in Persia and Turkey. The Persian women attribute the disasters of parturient women to her malevolence.—*Richard F. Burton's Sindh, p.* 399.

ALABANDIC CARBUNCLES of Pliny, a kind of garnet, q. v.

ALABASTER, the αλαβαστρος of the Greeks, from Alabastron, a village in Egypt. It is a hydrous sulphate of lime in a peculiar crystalline state, sometimes quite pure, sometimes containing small quantities of carbon or iron. It is very abundant in nature, and when pure is of spotless white and in texture and colour is almost unrivalled amongst minerals. It is found to a large extent in lower Egypt, and perhaps this is alluded to in 2nd Kings xxi and 13. It is said to occur in the Boogtee Hills near Jacobabad. It is not known to occur in India proper, the images of the Burmese being from a stalagtitic carbonate or granular carbonate of lime, though commonly called alabaster.

It is of two kinds, a carbonate and a sulphate of lime. The finest alabasters are from near Volterra in Tuscany : between Cecina and Leghorn. An inferior kind occurs near Derby in England, at Mont Martre near Paris and in the Tyrolese, Swiss and Italian Alps.—*Mason. Tomlin. Balfour.* See Gypsum.

AL' ABBAS. This race reigned as khalifs, in Baghdad from A. D. 749-50 to A. D. 1258-9, when Baghdad was besieged and taken by the Ali-Khan, grandson of Jenghis Khan and its reigning Khalif, Mustasem, put to death. Ali Khan is the Hulagu of western authors.—*T. Prinsep, p.* 304.

ALABU. BENG. Bottle-gourd, Lagenaria vulgaris.

ALABUVU, S. or Anapa kaya. అలాబువు-అనపకాయ. Lagenaria vulgaris, *Ser.*

ALACA, in hindu mythology, the splendid palace of Kuvera, the god of wealth.

This is a small [illegible] rocky places in the hotter and dryer p[illegible]eylon, in Coimbatore, in Cochin and M[illegible] and throughout the Peninsula of India. It grows in Guzerat, is common, on the Bombay side, both in the open country and in some of the jungles towards the coast, but, there, it is less a jungle tree than one found in hedges and village lanes. It grows in the Khassia hills, and in Assam up to the base of the Himalaya, and is found in the Malay Peninsula and in Cochin-China. The wood is said by Dr. Roxburgh to be beautiful, and in Dr. Wight's experiments, he found it sustain a weight of [illegible]lbs., but neither Dr. Wight nor Dr. Gibson had ever seen a ten inch plank, and Mr. Rohde says it wants size; Captain Beddome, however, describes it as an ornamental, beautiful wood, attaining a fair size in the forests of the Godavery and Circars. The astringent fruit is eaten by the Natives, its roots are aromatic and used in Native medicine in snake bites. —*Mr. Jaffrey, Roxb.* ii. 502. *Drs. Wight and Gibson. Mr. Elliot. Voigt. p.* 40. *M. This tree is said to grow in Burmah, Coromandel, Malabar, Gumsoor, Ganjam, Bengal and Allahabad. According to Captain Macdonald it attains an extreme height of 30 feet, with a circumference of 2¼ feet, the height from the ground to the intersection of the first branch being 12 feet. In Ganjam and Gumsoor the leading bull in a herd of buffaloes, has a wooden bell called "Lodoko" attached to its neck which is heard at a great distance in the jungle, and it is always made of this peculiarly sonorous wood.—*Rohde. AL-BAIDAWI, the chief commentator of the Koran, q. v.

ALBANIA, a country to the east of Kartelania, q v. The Albanians of Asia are supposed by M. Ruffin to have formed the basis of the present Afghans. He says that they were a warlike people, known as Aghvan or Avghan, that Afghan is a Greek word, but in consequence of their numerous revolts, they were transferred from one extremity of Persia to another and driven into Khorasan. The Albanians, says Burton are at most half Asiatic as regards manners. As in the east, generally, the host drinks of the cup, and dips his hand into the dish before his guest, for the same reason that the master of the house precedes his visitor over the threshold. Both actions denote that no treachery is possible, and to reverse them, as amongst Europeans, would be a gross breach of custom, likely to excite the liveliest suspicions.—*Chev. Bunsen. Chesney. Latham.—Burton's Pilgrimage to Meccah, Vol. I. p.* 199.

ALBANY ISLANDS, in Torres Strait, are situated a few miles to the south-east of Cape York, the N. E. extremity of Australia. They lie close to the mainland, are moderately elevated, and slightly wooded with gum trees, but covered with grass. They have long been known, and their eastern side was examined by Captain King, the celebrated Australian Hydrographer, but the strait which separates them from the main-land was surveyed by the Bramble, tender to the surveying ship "Fly," and found to be clear of dangers, with an average depth of 14 fathoms. It is suited for a harbour of refuge, and a depôt for carrying on trade with New Guinea. An opinion had long been entertained that the natives of the north eastern parts of Australia are less friendly to strangers than the other tribes of this continent, which was confirmed by the massacre of Mr. Kennedy, and the greater portion of his party, when exploring the country between Rockingham Bay and Cape York.—*Jour. Ind. Arch.*

ALBARICOQUE. SP. Armeniaca vulgaris.

ALBATROSS. Several birds with this name are familiar to all travellers in the southern seas —the common Albatross, the Diomedea exulans of Linnæus, being very common. D. fuliginosa of Latham is also to be seen, and D. chlororynchus Lath. also met with. Mariners distinguish them by other names. Diomedea exulans, *Linn.* is the wandering Albatross. The D. spadicea, is the green-bill or Nelly of sailors. D. chlororynchus, their mollymaux or yellow-bill, and D. fuliginosa, the sooty albatross.

ALBICORE, the Scomber thynnus, *Linn.* an inhabitant of the southern seas, the back is bright purple with a golden tint; eyes large and silvery, belly silvery, with a play of iridescent colours, is in length from 3 to 6 feet. —*Ben. p.* 22.

ALBINO. This variation from natural colours is met with frequently in all Asiatic countries, in Southern Asia, in Hindustan, Peninsular India, Siam, the Malay States and Eastern Archipelago, and when occurring in man it is more noticed than amongst the fairer races of Europe, because of the contrast with those around them and because of the scant apparel in use. Albino men or women are not regarded with any peculiar feelings, being familiar to all, and it is not men and women only, but in Asia, elephants, buffaloes, monkeys and crows are also met with. White crows with pink eyes, also white deer, occur in Tipperah, albino crows are not uncommon in Malabar and albino monkeys in Ceylon, but a kind of white monkey of Ceylon has been said not to be albino, though doubtless so, and one of the titles of the king of Burmah is lord of the White Elephant.—*Balfour.* See Kyans; Yule's Embassy; Madras Museum Records.

ALBIZZIA, a genus of plants into which some of the Acacias have been placed, (See Acacia elata. Ac. stipulata), an undefined species of the genus may here be noticed.

ALBIZZIA. SP. Kokoh. BURM. A tree of the northern district of Pegu, on and near the hills. The wood is valued by the natives as much as the Padouk, Pterocarpus dalbergioides, or even more so. It is used for cart-wheels, oil-presses, and canoes. In the Prome district a special tax was levied on the felling of "Kokoh" and "Padouk," under the Burmese rule. Large trees are becoming very scarce in the Irrawaddy valley, but are not uncommon in the Toungoo district.—*Cal. Cat. Ex.* 1862.

AL-BORDSH, the Haro-berzeaiti of the ancients is supposed to be on the western slope of Belur Tagh, on the high land of Pamir. See Arian.

ALBUMEN occurs abundantly in nature both amongst plants and animals, as in the white of egg; the saps and juices of vegetables and is used largely as food, and in the arts its chief value in these being its facile solidification under a moderate heat.

ALBUQUERQUE. Don Alphonzo de Albuquerque, an officer in the service of the king of Portugal, was sent to the Indies, in 1506; he took Muscat, and the Curia Muria islands and other important places on both sides of the Arabian Gulph. On the 18th February 1513, he started from India on an expedition consisting of 20 ships, manned by 1,700 Portuguese and 800 Indians, and failed in an attempt to take Aden by escalade, he afterwards wintered at the island of Kamaran, and returned from the Red Sea. He landed on Perim island, in 1513, on his return from the Red Sea, erected a high cross and called it Vera Cruz. De Barras, the historian was his companion.—*Playfair's Aden.* See De Barras; Perim.

ALBYROUNI, a cotemporary of Avicenna who served under Mahmud of Ghazni in the 11th century. He mentioned the disappearance from Ceylon, of the pearl oyster and their appearance at Sofala, in the country of the Zends. —*Tennant's Ceylon.* See Pearls.

A. verticillata. *Roxb.* ii. 112.

Malika jhanji . . . ...Beng.

A herbaceous plant of Europe and Bengal with small white flowers.—*Wight.*

ALE. The bitter ales manufactured at Burton-upon-Trent, have for many years, been most extensively imported into India. Burton brewers have long been celebrated for their beer, and their success is generally supposed to be dependent on the quality of the well water used: but it is more probable that their fame has been acquired by the use of the best materials and employing great care in the process. On analysis, the water is found to contain a large quantity of sulphate of lime, a good deal of the sulphates of potash and magnesia, and a considerable amount of carbonate of lime; the lime and magnesia in the state of carbonate, being held in solution by carbonic acid, the excess of which is so great as to redden litmus paper. The Burton well water, therefore, is a *hard* water, and might be regarded as but ill-adapted for the purposes of brewing, but the boiling expels the excess of carbonic acid in the water, which kept the carbonates of lime and magnesia in solution: and these salts are precipitated. Again, the alkaline phosphates present in malt have the power of decomposing and precipitating sulphate of lime, phosphate of lime and a soluble alkaline sulphate being formed, and the greater part of the phosphate of lime so formed is redissolved in the acid formed during fermentation. The water, from being at first hard, thus becomes comparatively soft, and in this state is well suited for the extraction of the active properties of the malt and hops used in the manufacture of bitter beer. The water used is remarkable from its complete freedom from organic matter. The Burton ales speedily become bright and clear, never require finings to be employed; and are fit for use almost as soon as brewed. This is no doubt owing to the depurating power of lime, to the presence of which in the Burton water and its precipitation during the boiling, the transparency and brightness of the beer are attributable. An analysis shows the following results as the contents of an imperial gallon:—

	Messrs. Allsop & Sons, Brewed,		Messrs. Bass and Co. Brewed.	
	March 1854.	20th March 1851.	For Home consumption 3rd March 1852.	For Home consumption 25th Nov 1851.
	Grains.	Grains.	Grains.	Grains.
Sugar, ...	200	320	390	420

Per centage of Alcohol ..	70·000	70 000	70·000	70 000

The above general analysis shows that the bitter beers of Messrs. Allsop and Sons, and of Messrs. Bass and Co, contain only a moderate amount of alcohol, and an unusually large quantity of bitter extract, consisting of the extract of hops. The specific gravity of their beers of various ages, was found to vary: the former from 1007 to 1020, and the latter 1008 to 1024; as a rule the solid contents and extractive matter of beer is greatest in the newest and strongest beers, and these are, to a considerable extent, indicated by the specific gravity. Dr. Hassal reports, that, after the most scrutinizing examination, microscopical, chemical and physiological, the examiners failed to detect any other ingredients than the products of malt and hops, and the constituents of pure spring water. From the pure and wholesome nature of the ingredients employed, the moderate proportion of alcohol present, and the very considerable quantity of aromatic anodyne bitter, derived from hops, contained in these beers, they tend to preserve the tone and vigour of the stomach, and conduce to the restoration of the health of that organ when in a state of weakness or debility. These bitter beers differ from all other preparations of malt, in containing a smaller amount of extractive matter, thus being less viscid and saccharine, and consequently more easy of digestion ; they resemble, indeed, from their lightness, a wine of malt rather than any ordinary fermented infusion, and they are strongly recommended by the medical profession. The various firms, under whose names beers appear in the market in India are merely agents for Messrs. Allsop and Bass. In the year 1853, there was exported from Great Britain, to Aden, British India, China, and Hongkong, 103,130 barrels of beer and ale, the declared value of which was £295,481, and the four years 1852-53 to 1855-56 inclusive, Madras imported it to the value of Rupees 16,26,009.—*Hassal*, 448. *Trade Statement. Balf. Commercial Products.*

ALECTORIA JUBATA, Kek Kieo, Ramree. This lichen is gelatinous and eaten by the natives with rice.

ALEEVEREE. TAM. Linseed. Beng. Common cress.

ALEPI, a town on the coast of Malabar, in lat. 9° 30' N. and 27 miles from Cochin, it is situated in the territories of Travancore and is a depôt for the timber from the territories of the rajah of Travancore.—*Horsburgh. Bmst.*

ALEPPO, the ancient Berrœa, is styled by the natives Haleb-us-Shabha It is 76 miles inland, from Iskanderoon in L. 36. 11. 215 N. & L. 37. 9. E. and from Antioch by the road 90 miles. It probably first rose in to importance on the destruction of Palmyra, to which it succeeded and like Palmyra it was admirably situated for the purposes of trade, so long as the communication with the east, by the desert, was the only one known and the productions of Persia and India were brought hither by caravans from Bagdad and Bassora. Aleppo stands in an open plain, encompassed at the distance of a few miles by low hills and the city is about three miles and a half in circumference surrounded by walls of hewn stone, about thirty feet high, and twenty broad. The population is estimated at about 100,000 ; Turks and Arabs, 70,000 ; Christians of all denominations, 15,000 ; Jews, 10,000 ; but this is probably three times the true census. The warlike Rhinds in Beluchistan are said to have been brought from Aleppo.—*Taylor's Saracen*, p. 213. *Robinson's Travels*, *Vol. II.* p. 353. See Kelat, p. 485, 493 and 495 of Cyc. Ind. Sup. p. II.

The Oil.
Kekune ? Lambang?
Kekui ? Lambang ?

This prolific large sized tree is a native of the Society Islands from which it was introduced into India, and a variety of it, the A Moluccensis, known to the Javanese under the name of Kamira is well known in Australia. A. triloba is now indigenous in several parts of India, the Moluccas, Java, the Malay Islands, Ceylon, plentiful near Hyderabad of the Dekhan, in the Southern Mahratta country about Belgaum, in Bengal and Assam. Almost all parts of it, are covered with a farinaceous substance, and a gummy substance exudes from the seeds (as also, it is said, from the tree itself), which is chewed by the natives of Tahiti. The quality of its wood is unknown. It has been introduced from the Moluccas into Java, where it is grown as a shade to the nutmeg plantations. In Java the cultivated nut is eaten as a fruit, and the flavour closely resembles that of the almond. The fruit of the uncultivated variety of the Canari tree produces a nut remarkable for the quantity of clear oil it contains, which is collected in large quantities by the inhabitants of the Moluccas, and is palatable and in general use for cooking and burning in lamps. In fact it there supersedes cocoanut oil, which is scarce. In Tahiti, tissues are made from the bark but its most valuable product is its fruit, which is roundish, two celled, each containing a nut, resembling in flavour the filbert or English walnut. The nuts, strung on a thin slip of bamboo are burned as a candle. They are considered aphrodisiac in the Moluccas but this can only be from the oil they contain and like other similar fruits are apt to purge and produce colic, unless roasted, or kept for a year. About 50 per cent. (or according to Simmonds 31½ Gallons of the nut yield 10 gallons,) of a useful, fine, clear, lamp oil.—*Roxb. Fl Ind. ALEURITES LACCIFERUM, is the Rottlera laccifera, Voigt. q. v.

ALEXANDER III., [illegible] Great, was the son of Philip [illegible] settling affairs at home, he directed his arms to the east, and in the course of eleven years, made such impressions on the countries he overran or marched through that to this day his name, cities that he built and dynasties to which he gave origin, continue. He succeeded his murdered father Philip, B. C. 336, crossed the Hellespont in 334, fought the battle of Issus, in 333; conquered Egypt in 331, and the same year defeated Darius at Gangamela,—the following year, 330, Darius was murdered by Bessus at Bactria. Alexander crossed the Indus into India in 327, reached Susa in 325, and Babylon the same year, and in 323 he died. The duration of his successes has doubtless sprung from various causes. His mode of settling the Egyptian Government is mentioned by Sharpe as the earliest instance that history has recorded of a conqueror governing a province according to its own laws, and allowing the religion of the conquered to remain as the established religion of the State; and the length of time that the Græco-Egyptian monarchy lasted, and the splendour with which it shone, prove the wisdom and humanity of the founder. This example has been copied, with equal success, in British Colonial and Indian Governments; but we do not know whether Alexander had any example to guide his views, or whether his own good sense pointed out to him the folly of those who wished to make a people open not only their gates to the garrisons, but their minds to the religious opinions of the conquerors. At any rate the highest meed of praise is due to the statesman, whoever he may have been, who first taught the world this lesson of statesmanlike wisdom and religious humanity. Except Alexander, all the great conquerors of Hindustan have sprung from the frontier provinces towards Tartary, and the northern parts of Persia, and their routes to the interior parts of the country have led through the Panjab. They have, therefore, generally penetrated into India by the way of Cabul, Candahar, and Ghizni.—(*Chatfield's Hindoostan, p.* 20, 21) a route still followed.

Major Rennel apprehends that Alexander never greatly deviated from the direct line of march, from the foot of Caucasus, or the range of mountains called Hindoo Koh, to the Indus near Puckholi, or Peucelaotis. His route from the S. E. coast of the Caspian Sea, lay through Aria, Zaranga, &c., to Arachosia, or the modern Herat, Zarang, and Arokhage, to the S. of Candahar; thence he marched towards Cabul and Ghizni, crossing mountains covered with snow. In order to chastize Bessus, who had fled into Bactria he passed the mountains between Ghorbund and Bamian, at whose foot geographers have placed the Paropamisan Alexandria, the first station, in his future march towards the Cophenes, or the Kow river.

Alexander set out from Arachotana (which seems to be admitted to be Herat), and proceeded in pursuit of one of the murderers of Darius to the royal city of the Zarangæi, which is recognised in Zarang, an ancient name for the capital of Sistan. He thence directed his march towards Bactria, and on his way received the submission of the Drangæ, the Gedrosians, and the Arachotians. He then came to the Indians bordering on the Arachotians. Through all these nations he suffered much from snow and want of provisions. He next proceeded to Caucasus, at the foot of which he founded Alexandria, and afterwards crossed the mountains into Bactria.

The Drangæ are probably the same as the Zarangæ: Arachotia is explained by Strabo to extend to the Indus, and Gedrosia certainly lay along the sea. There are two ways from Sistan to Bactria, one by Herat, and the other by the pass of Hindu Cush, north of Cabul, the mountains between those points being impassable, especially in winter, when this march took place. Alexander took the eastern road, and if he had marched direct to Bactria, as might be supposed from the proceeding passage, he could have met with no snow at any time of the year, until he got a good deal to the east of Candahar, and he must have left Gedrosia very far to his right. The murderer of whom he was in pursuit was made over to him by the Indians.

The Cabul river, therefore, must be the Cophenes, and the Indians are under the mountains between it, its upper branch (the Punjshir river) and the Indus.

The city that Alexander built in his route eastwards towards the Indus he gave his own name to, but its name and its particular site have been lost. It was called Alexandria and was near the Caucasus, and Rennell points to Bamian as the quarter in which he would place it. General Ferrier mentions that the fortified town of Herat, is supposed to have been founded by Alexander the Great, but he does not quote his authority. This city he tells us is a quadrangle of 3½ miles long on the north and south sides, and rather more on the east and west. Its extent would be immense if all the suburbs were included, particularly those stretching to the west of the town beyond the Darwazah-i-Irak. General Ferrier thinks that Alexandria was probably at Begram, 25 miles N. 15 E. from Cabul, the ruins of which are described in a memoir by Mr. Masson, in the Journal of the Asiatic Society of Calcutta, Vol. V. p. 1.

Recent travellers, Burnes, Masson, and Ferrier, met with tribes who claim a Grecian descent. According to Burnes, the Mir of Budakhshan, the chief of Darwaz in the valley of the Oxus, and the chiefs eastward of Darwaz who occupy the provinces of Kulab, Shughnan, and Wakhan north of the Oxus; also the hill states of Chitral, Gilgit and Iskardo, are all held by chiefs who claim a Grecian descent.

The whole of the princes who claim descent from Alexander are Tajiks who inhabited this country before it was overrun by Turki or Tartar tribes. The Tajiks now mahomedans regard Alexander as a prophet. The Badakshan family are fair but present nothing in form or feature resembling the Greek. They are not unlike the modern Persian, and there is a decided contrast between them, the Turk and Uzbek. Rennell takes it for granted that he crossed the Indus, at, or near the site of Attock, because it is the pass leading from the quarter of Cabul and Bijore, from whence Alexander came. As Alexander entered India at the very point where it is most easily assailed, he passed the Indus in the district of Peucelaotis (as Arrian writes the name) or Peucolaitis (according to Strabo), and Rennell supposes that he crossed the river at Attock where it was passed by subsequent conquerors. The bridge of boats which had been prepared by Hephæstion and their ally Taxiles, as described by Arrian, corresponds very nearly with that used at the present day. Boats are fixed in the stream a short distance from each other, by skeleton frameworks of wood filled with stones, and the communication is completed by planks covered with mud. Having effected his passage in the months of May, B. C. 327 he halted his army for thirty days, to refresh the soldiers, who had undergone severe service in fighting their way to the river through the warlike and ferocious tribes which inhabited the mountainous districts on the other side. This portion of India was then partitioned amongst a great number of petty princes, independent of, and often in hostility with, each other. At this critical period, two of the most powerful of these Rajas, named Taxiles and Porus, were at war, and the former, in order to crush his adversary, joined the invader. The territory of Taxiles appears to have been the Doab between the Indus and the Hydaspes (Jelum); that of Porus, who had subdued most of his neighbours, extended as far as the Hyphasis. Alexander had an army of 135,000 men, 15,000 being cavalry, with a great number of elephants. This force included a large body of hardy mercenaries from the hills west of the Indus and north of the Punjab, under a chief named Ambisares. At the head of this force he marched to the Hydaspes, which he reached in the month of August. On the other (left) side of the river, Porus was posted with 30,000 infantry, 4,000 cavalry, 200 elephants, and 300 war chariots. Alexander, finding the river much swollen by the rains, sent for boats from the Indus, which were brought overland, in the meanwhile amusing Porus by marching and counter-marching his troops along the banks of the river, as if searching for a ford. On the arrival of the boats, he passed the river at Jelalpore, 114 miles from Attock, where it is, in the rainy season, upwards of a mile broad, and never fordable. Mr. Elphinstone crossed the river at this very pass, and its features were found to tally exactly with the description given by the Greek writers. In the battle which ensued, Porus was defeated and taken prisoner. It was at this part of the Hydaspes, on its right or western bank that the conqueror, in commemoration of this event, built the cities of Nicæa and Bucephalia. He built a third city on the Acesines. After the [illegible] of Porus, Alexander marched ac[illegible] Doab between the Hydaspes and th[illegible] described as a flat and rich cou[illegible] through the territories of Porus, passed the latter river, and advanced to the Hydraotes (Ravi), where he captured Sangala, represented to be a strong city of the Cathæi (the modern Cathi), the most valiant and skilful in war of all the Indians. A body of the Cathæi was encamped before the city, which Alexander, having defeated them in a pitched battle, took and razed. Sangala is supposed to have been situated to the south-east of Lahore; and Burnes states that there are the remains of a city answering to Sangala in the vicinity south-east of that capital. From hence, the conqueror marched to the Hyphasis (Beas), whether above, or as more probable below, its junction with the Sutlej, is not quite clear. His historians do not mention the latter river, and they allude to a desert beyond the Hyphasis, which exists below the conflux of the two rivers. Here the soldiers received such appalling accounts of the deserts they would have to pass, and of the countless hosts assembled to oppose their progress, that, struck with consternation, and exhausted by fatigue and suffering, they refused to march farther, and Alexander was constrained to give orders for their return.

Some traditions of Alexander exist in the Rajpoot state of Bikanir: a ruin near Dandosir is said to be the remains of the capital of a prince of this region punished by the Macedonian conqueror.

This, therefore, was the extreme limit of Alexander's progress eastward. He recrossed successively the Hydraotes, the Acesines, and the Hydaspes, where a large fleet had been prepared for a descent of that river. The boats, 800 in number, were built of timber procured from the mountains; and Burnes says that in none of the other Punjab rivers are such trees (Deodar, a kind of cedar) floated down, nor do there exist such facilities for constructing vessels, as in the Jelum. About the middle of

November, B. C. 327, Alexander who had been in the field since May, therefore all through rainy season, embarked on board one of his vessels, and whilst the fleet, which he commanded in person, dropped down the stream two divisions of the army marched along the Hydaspes, and a third along the Acesines, to the confluence of these streams, whereafter a voyage of five days the fleet arrived much shattered. The Greek historians, as well as those of Timur describe the confluence as accompanied by terrific violence, whereas Burnes, who saw the waters at their height, says that the junction is effected "with a murmuring noise" but the velocity of the current is inconsiderable. The army was now distributed into four divisions [illegible] of which marched at some distance fro[illegible]r in parallel columns, whilst the [illegible]der the king, advanced inland, from t[illegible], to drive the Malli into the other divisions. On arriving at the junction of the Hydraotes with the Acesines, the king had several combats with this tribe, whose capital he took pursuing them to the other side of the Hydraotes. In these conflicts Alexander exhibited much courage, exposing himself to great personal danger, and was severely wounded with an arrow. Thence he marched into the countries of king Musicanus, king Oxycanus, qu-Musa Khan the Sindomanni (the Sindians) and other districts on the Lower Indus. Subsequently, deputies from the Malli and the Oxydracæ came, with presents, to solicit peace, alleging, by way of excuse for their obstinate resistance to the Greeks, their strong love of liberty.

Descending the Indus, Alexander arrived at Patala (Tatta) but Wood prefers the site of Jerk, "where the river divides into two great branches." According to Arrian, Patala, in the Indian tongue, signified the same as delta in the Greek. Alexander proceeded down one of the branches (probably the Piti) to the sea, and afterwards returned to Patala, whence, leaving his fleet with Nearchus he marched with his army to Persia by way of Gedrosia (Mekran) and Caramania (Kerman), in September, B. C. 326.

Alexander himself, on quitting Pattala (said to be Tattah) on the Indus, proceeded, with his army, through the dominions of the Arabitæ, a part of the present province of Lus, and in it forded the Arabis (Poorally) river. To the westward of that diminutive stream, he traversed the territory of the Oreitæ, and thence, crossing over one range of mountains, he entered the province of Gedrosia (Mukran), in which his troops were thinned by the accumulated hardships of thirst, famine and fatigue. This march was incontestably to the southward of the Brahooik chain, and had the Greek historians been even less explicit, the nature of the country alone must have decided any question that might have arisen on this point.

Crateras, who was charged with the guidance of the heavy baggage and invalid soldiers by Arachosia and Drangiana, as certainly marched far to the northward.

The political state of the country at that period may be discerned even in the loose notices left us. Arrian states that there was then a family enjoying supreme dominion in India, which derived their pedigree from Budæus, probably Buddha, whose creed extended widely over this and the neighbouring countries down to the fifth century of our era. The authority of this paramount Indian sovereign, however, did not reach the Punjab, which was severed into separate kingdoms and principalities. That of Musicanus, we are told, was governed by Bramins, and Burnes conjectures that the powerful kingdom of Alore, or Arore, which extended from the ocean to Cashmere, and from Candahar to Kanouj, ruled by Bramins so late as the seventh century, was the kingdom of Musicanus. The Oxydracæ (probably the Cutchi), and the Malli (no doubt the people of Multan, which is still called Malli-than, 'the place of the Malli')—who though generally at variance, combined against Alexander and brought against him an army of 90,000 men,—seem to have possessed much power in the south-western parts of the Punjab. Besides those nations, the Greek writers mention seven independent states in the country of the five rivers.

Alexander had not time to establish any system of government in the vast provinces he conquered in the east; where his authority was acknowledged, it was exercised through military commanders, who, after his death (323 B. C.), became, in the natural course of things, and by the force of circumstances, supreme. Seleucus, governor of Babylon not only secured the country, but extended his power, by the destruction of his competitors, as far as the Indus, which he crossed, B. C. 305, to attack Sandrocottus (identified with the Chandragupta of Indian History), who had expelled the Greek garrisons from the Punjab, which was thus restored to native rule. Seleucus is said to have passed the Hesudrus (Sutlej), and, after gaining several victories over Sandracottus, being suddenly recalled to defend his own territories, to have concluded a treaty of peace with that monarch, to whom he ceded the Punjab and valley of the Indus as far as Peshawar.

After the death of Alexander the Great, Persia as well as Syria, fell to the lot of Seleucus Nicator, who established the dynasty of the Seleucidæ. The era known as the Alexandrian dates from the entry of Seleucus Nicator into Babylon. Antiochus Soter succeeded

Seleucus Nicator, and in the reign of his successor, Antiochus Thoes, Arsaces, a Scythian who came from the north of the Sea of Azoff, induced the Persians to throw off the Greek yoke, founded the Parthian empire, and made Rhages his capital. This was likewise the period of the foundation of the Bactrian kingdom by Theodotus the Governor of it, who finding himself cut off from Syria by the Persian revolution, declared his independence. Arsaces is called Asteh by Eastern writers, and is said to have been a descendant of the ancient Persian kings. When he gained the kingdom it is said he promised to exact no tribute and merely to consider himself as the head of a confederacy of princes, united for the double object of maintaining their independence and freeing Persia from a foreign yoke. This is the commencement of that era of Persian history called by Eastern writers, Malúk-u-Tuaif, or commonwealth of tribes.

In A. D. 906, Rhages was taken by Ismail founder of the Samanee dynasty. It ceased now to be a seat of empire, and in A. D. 967, became the capital of the house of Shemgur, a race of petty princes who maintained a kind of independence, while the dynasties of Saman and Dilemee divided the empire of Persia. In A. D. 1027, Rhages was the last conquest of Mahmud of Ghazni.—*Smith's Bio. Dic. ALEXANDERS, a name given to the umbelliferous plant Smyrnum olustratum, used similarly to celery.—*Hog. p.* 383.

ALEXANDRIA in Egypt. This city, in lat. 31. 12 N., lon. 29. 53 E., was founded by Alexander the Great, B. C. 323, near the Canopic or western branch of the Nile. It gradually became a place of so much importance that, in the time of the Roman emperors, it was second only to Rome itself in extent and population. In A. D. 638 it was besieged and taken by the caliph Omar, by whom the celebrated Alexandrian library is said to have been destroyed, its decline dates from that time. In after ages the city suffered severely from its Saracen and Turkish conquerors. The French took possession of it in July 1798, at which period the population was reduced to about 7,000. The modern city occupies but a small portion of the ancient site. The present population of Alexandria is estimated at 80,000, including the garrison, sailors of the fleet, and workmen employed in the arsenal and docks.

ALEXANDRIA, near Herat. This city was built by Alexander in his route towards India, and Rennell points as its site to the quarter of Bamian; but he considers that it is impossible to guess its particular situation. At all events he says (p. 170-71) that the proximity of Alexandria to the northern mountains, a fact which Arrian impresses very strongly, renders it an almost impossible case, that Alexandria and Candahar can be one and the same place. Vigne was much inclined to think that the pretensions of Bamian to be the Alexandria ad Caucasum are far from being without foundation; and in that case, Vigne adds that if Bamian be Alexandria ad Caucasum, then he would identify Beghram with Nicæa, or perhaps Kabul is Nicæa; both places lie in the route from Bamian on the high road to India, and in the Caucasus.—*Vigne's. A Personal Narrative p.* 198 *and* 199. *Rennell's Memoir, p.* 170.

ALFOEREN or ALFOERS, Moderns name of new Guinea.

ALFOEREN, Alfours or Arafuras. Until within the last few years, it was considered by ethnographers that the Alfoeren, Alfour, or Arafura, were a distinct race of people, inhabiting the interior of New Guinea, Ceram, and all the larger islands in the south-eastern part of the Indian Archipelago; but Mr. Earl's inquiries satisfied him that it was a term generally applied to the inland inhabitants of these islands to distinguish them from the coast tribes. The term is of Portuguese origin: and "Alfores," or "Alforias," was formerly applied in the same sense by the Portuguese in India, precisely as the Spaniards called the aborigines of America "Indios," or Indians, and the Mahomedan inhabitants of Sulu and Mindano, "Moros," or Moors. The Portuguese term "Alforias," signifies "free-men," or "manumitted slaves;" but the root "fora" means "out," or "outside," and therefore the term "Alfoers" became naturally applied to the independent tribes who dwelt beyond the influence of their coast settlements. Among the Alfoers, the treatment of their dead betrays in the greatest degree their uncivilized condition, and the uncertainty which exists among them as to their future state. When a man dies, his relations assemble, and destroy all the goods he may have collected during his life, even the gongs are broken to pieces, and thrown away. In their villages, Mr. Earl met with several heaps of porcelain plates and basins, the property of deceased individuals, the survivors entertaining an idea that they have no right to make use of them. After death the body is laid out on a small mat, and supported against a ladder until the relatives of the deceased assemble, which seldom takes place until four days have elapsed; and as decomposition will have commenced before this, the parts where moisture has appeared are covered with lime. Fruitless endeavours to stop the progress of decay! In the mean time, damar or resin is continually burnt in the house, while the guests who have already assembled, regale themselves with quantities of arrack, and of a spirit which they themselves prepare from the juice of a fruit, amid violent raving, the discord, being increased by the beating of gongs, and the howling and lamentation of the women. Food is offered to the deceased; and when they find he does not partake of it, the mouth is filled with eatables, siri (betel-leaf) and arrack, until it runs down the body, and spreads over the floor. When the friends and relatives are all collected, the body is placed upon a bier, on which numerous pieces of cloth have been laid, the quantity being according to the ability of the deceased; and under the bier are placed large dishes of China porcelain, to catch any moisture that may fall from the body. The dishes which have been put to this purpose are afterwards much prized by the Alfoers. The body is then brought out before the house, and supported against a post, when attempts are made to induce it to eat. Lighted cigars, arrack, rice, fruit, &c., are again stuffed into its mouth, and the bystanders, striking up a song, demand whether the sight of all his friends and fellow-villagers will not induce the deceased to awaken? At length, when they find all these endeavours to be fruitless, they place the body on a bier, adorned with flags, and carry it out into the forest, where it is fixed upon the top of four posts. A tree, usually the Pavetta Indica, is then planted near it; and it is remarkable that at this last ceremony none but women, entirely naked, are present. This is called by the Alfoers 'sudah buang,' by which they mean that the body is now cast away, and can listen to them no longer. The entire ceremony proves that the Alfoers are deprived of that consolation afforded by other religions; and that they only give expression to the grief they naturally feel at parting with one to whom they have been attached."—*Kolff, "Voyage of the 'Dourga',"* *p.* 161, *et seq Earl's Papuans, pages* 108, 109.

ALGÆ, the sea-weed tribe, belonging to the natural order Fucaceæ. Of these leafless, flowerless water-plants, Wallich's Catalogue only enumerates two Indian species, borrowed from Buchanan's Herbarium. Royle mentions none, but says that Rottler's Herb contains a *few species of Conferva collected from the neighbourhood of Tranquebar.—Dr. Hooker gives what the Rev. M. J. Berkeley, has written on the Indian Algæ which occur principally in different parts of the Himalayan range, in the* hot-springs of Soorujkoond in Bengal, Pugha in Tibet, and Momay in Sikkim; and on the Fungi of the Himalayas. He adds that the *Algæ from lower localities are but few in number, and some of them of very common forms.* Almost all the plants of this order yield soda and iodine on incineration. Until very recently, they were collected in large quantities, and burned for the sake of the soda yielded by the ashes; after separating the alkali, iodine was obtained from the mother liquors. Although the trade in kelp (the local name in Britain for sea-weed soda) has been nearly annihilated by the plan for making soda from common salt, still sea-weed ashes constitute the sole source from which iodine is manufactured. The green Conferva which floats on the salt-water lake near Calcutta readily yields iodine. It should be dried, burned, the ashes packed in crucibles and heated to bright redness. The residue, treated with water, on evaporation yields a saline mass of muriate and sulphate of soda, chloride of potassium, and iodide of potassium and sodium. Mr. Royle informs us that the natives of the districts at the base of the Himalayas use in the treatment of goitre a dried leaf "brought from a great distance," and which they call *gillur ka pulla*, or goitre leaf. It much resembled fragments of a common fucus. Algæ are found plentifully on the coast from Canagana in Japan, at low water, when they are gathered for victuals, and they prepare the *Alga marina* for the table in the following manner: there are chiefly two sorts of plants found growing upon the shells they take up; one is green and narrow, the other reddish and broader. They are both torn off and assorted, each sort is afterwards put into a tub of fresh water and well washed. This done, the green sort is laid upon a piece of wood, and with a large knife cut small like tobacco, then again washed, and put into a large square wooden sieve, two feet long, where there is fresh water poured upon it, to make the pieces stick close together: having lain there for some time, they take it up with a sort of a comb made of reed, and press it with the hand into a compact substance, squeezing the water out, and so lay it in the sun to dry. The red sort, which is found in much less quantity than the green, is not cut small, otherwise they prepare it much after the same manner, and form it into cakes which are dried and sold for use. Sea-weed is an article imported from abroad into China by junks, as well as collected on the Chinese coast; the foreign sort is principally the *leung fan tsoi*, from which agar-agar is made, but few particulars can be ascertained regarding the trade. In China, this sea-weed is eaten after merely cleaning and stewing it in fat or oil.—*Morrison. Voigt. p. 745. Hooker's Him. Jour., Vol. II. p. 389. O'Shaughnessy, p.* 671. *Kæmpfer's Hist. of Japan, Vol. II. p.* 518.

ALGAROBA BEANS. Ceratonia siliqua, or Prosopis pallida. The seed pods or bean of the carob tree, a tree common in the Levant or south of Europe. The pods contain a large proportion of sweet fecula, are used as food, and frequently by singers, being considered to improve the voice. During the peninsular war, the cavalry horses were fed principally on these beans, of which about 40,000 quintals are annually exported from Crete.—*Simmonds.*

ALGIERS : its temperature,

Mean for the whole year.	69·13°	Spring...	61·04
Winter.... ...	62·13°	Summer	75·09
		Autumn....	78·26

The mean temperature of Algiers for the whole year being 69° 13', it most approaches that of Malta; but exceeds it by 2°, Malaga by 3°, Madeira by 4°, Rome by 9°, Nice by 10°, and Pau by 13°, Cairo is 3°, higher (mean), yet its winter is 4° colder than that of Algiers. The people are partly of Moorish, partly of Arab origin. See Semitic races.

ALGUADA REEF, called also Sunkea, also Drowned Island, is in lat. 15° 42½' N. and S. S. W. 3½ leagues, from Lychime or Diamond Island off the Ava coast. It is a very dangerous reef of rocks, level with the sea, extending N. and S. about 1½ miles, with detached rocks around it, at considerable distances; on some of which the sea breaks in bad weather. A light house has been erected by Captain Fraser of the Bengal Enigneers, after the labour of six years from 1859 to 1865. To show the tremendous force, exerted by the sea at the reef during the south-west monsoon, it may be mentioned that stones weighing a ton each had been washed sixty feet away, from the place in which they were left and lifted at least five feet above their former level. Mr. Blanford supposes it to be a peak of the great Arracan or Yomai range of mountains, which separate Burmah proper from the province of Arracan. According to the opinion of Mr. Blanford, the Alguada reef is composed of a ledge of sandstone. When struck violently by heavy waves of the sea, it is said to tremble, showing clearly that its base, reposing at the bottom of the ocean, cannot be very extensive. The workmen were chiefly Chinese, and the materials were obtained from Calagouk or Curlew island. The centre stone of the first course weighed three tons and three quarters. The centre stone of the second course was about three tons and nearly a half. The foundation consists of large blocks of granite, which fit together with mathematical accuracy, and the work proceeds along lines of radii, from centre to circumference in a succession of concentric rings.

ALGOSA. BENG. Round headed dodder, Cuscuta capitata.

ALGUM-WOOD of scripture is supposed to be an Indian product, and assumed to be Sandal-wood. The articles mentioned along with it ivory, gold, apes, and peacocks, are indigenous in India. The algum-tree, if interpreters are right in taking algum or almug for sandal-wood, is found indigenous on the coast of Malabar; and one of its numerous names there, and in Sanscrit, is vulguka. This vulgu (ka) is clearly the name which Jewish and Phœnician merchants corrupted into algum, and which in Hebrew was still further changed into almug. In this very locality Ptolemy (VII. 1) gives us the name of Abiria, above Pattalene. In the same locality hindu geographers place the people called Abhira or Abhaira; and in the same neighbourhood MacMurdo, in his account of the province of Cutch, still knows a race of Ahirs, the descendants, in all probability, of the people who sold to Hiram and Solomon their gold and precious stones, their apes, peacocks, and saudal-wood.—*Mulber's Lectures*, *p.* 191.

This shrub grows in the deserts of Egypt, Syria, Mesopotamia, Beluchistan, Sind, in Guzerat, the Southern Mahratta country, at Monghir, Benares, Delhi. It sends forth leaves and flowers, in the hot season, when almost all the smaller plants die, and affords a grateful food for the camel, in desert places. Hebrew manna the turunjabin of the bazaars, exudes from its leaves and branches, but is secreted apparently only on Persia and Bokhara. Mr. Royle considers A nepalensis, identical with the Alhagi Maurorum, and states on strong grounds that no manna is secreted by either in India, Arabia, or Egypt. Persia and Bokhara seem its proper districts, and hence the turunjabin is imported into India. In Calcutta it is difficult to procure it of good quality: when pure it sells in Bengal for 10 rupees the seer. This lowly plant affords a beautiful exemplification of the merciful care of providence for it abounds in the deserts of Arabia, India, Africa, Tartary, and Persia, and in most of these wilds it is the only food of the camel, that valuable inhabitant of such unfriendly wastes. —*Voigt. p.* 224. *Mignan's Travels*, *p.* 240, 241: *Pottinger's Travels*, *p.* 185.

AL-HAMD-UL-ILLAH YA RAB-UL-ALIMIN. Ar. Praise be to Allah, Oh Lord of the (three) worlds!" A pious ejaculation by Mahomedans which leaves their lips on all occasions of concluding actions.—*Burnes.*

AL HAMIR. This word appears to be derived from the Arabic root hamara, which signifies to be, or become, red. It is the translation of this word which gives the name of the Red Sea.—*Mignan's Travels*, *p.* 267.

ALHAMBRA one of the four wards of the ancient city of Granada. The term is deducible from the Arabic root " hamar." It was so called by the Moors, from the red colour of its materials, Al-hambra, signifying a red house.—*Mignan's Travels*, *p.* 267.

ALI, often styled, ul Ilahi, the devine, the son of Abu Talib, was the cousin and companion of Mahomed, also his son-in-law, he having married Fatimah, Mahomed's only surviving child; he was the first of the family of the Koreish to adopt the new faith. Notwithstanding these claims, and his personal merits and valour, on the death of Mahomed in his 63rd year, in A. D. 632 and in the eleventh year of the Hejira. Ali was not recognized as his successor, but Abu Bakr was so elected and after a reign of 'two years was succeeded by Omar who was assassinated in the twelfth year of his reign. He was succeeded by Othman, and then in A. D. 656 by Ali. With Ali's rule severe political convulsions ensued. The earliest arose from the intrigues of Aiesha and after these were settled, the governor of Syria, Moawiyah Ibn Abi Sofian, threw off his allegiance to Ali and had himself proclaimed Khalif of the western provinces. An appeal to arms resulted in the defeat of Ali, after a desultory war of 102 days, and Ali then retired to Kuffa in Chaldea, on the banks of the Euphrates. The people of Karund in the south of Persia, believe Ali to have been a god, and they are styled the Ali Illahi. The Shiah sect of Mahomedans consider that Ali ought to have been the first Khalif. In Khorassan, Ali is usually styled Shah-i-mardan " King of men." The Khajah race and the entire Ismaili sects all worship Ali as an incarnate deity and the present incarnation (1867) is Aga Mahomed, a pensioner of the British Goverment at Bombay.—*Ferrier's Journey*, *p.* 210. ALKALI.

Khar... ... ... Hind. | Sajji Khar... ... Hind.

Southern India is particularly rich in alkaline and earthy minerals, the origin of which seems to be the decaying granites of the country. The most common form of alkali, is the Dhobee's Earth, a whitish grey, sandy efflorescence, which often covers miles of country where decayed white granite forms the surface soil; this earth contains from 13 to 25 per cent. of crude carbonate of soda and begins to accumulate in the dry whether; immediately after the rains, it can be scraped off the surface to the depth of two or three inches, and by repeated boiling and the addition of a little quick lime, the alkali is obtained of considerable strength. With a little care, very clean carbonate of soda can be obtained, fit for the manufacture of toilet soap, white glass, and glazes for pottery. The crude earth in different states was exhibited at the Madras Exhibition of 1857, from almost every district, some in large quantities for manufacturing purposes. The Nellore, Cuddapah, Masulipatam and Chingleput District, yield this earth in great quantities. Repeated attempts have been made to prepare from it Barilla for exportation and very fair specimens have been exported at different times, but the moderate price of the carbonate of soda of England prepared from sea salt will always prevent this from being a remunerative article of export. Colored frits for bangle glass, have lately however become an article of export from the Madras Presidency.

Nitrate of Soda.—Samples of this salt were exhibited from Bellary and Hyderabad where it seems to form a natural efflorescence. Its chief use is as a substitute for saltpetre for the manufacture of nitric and other acids and chemical substances. It is too deliquescent for making gunpowder, though it answers well for some descriptions of fireworks.

Muriate of Soda, mineral salt, of every fair quality was exhibited from Mysore, Bellary and Hyderabad, and is known to occur also in the Guntoor and Nellore Districts and to be almost invariably accompanied by some interesting minerals; viz., gypsum, magnesian limestone, sandstone, sulphur, red and brown iron ores, and alum slate. The Salt Range in the

Punjaub, runs from the Eastern base of the Suliman mountains to the river Jhelum in the Punjaub, Lat. 32° 30′—33° 20′.

The rocks in this part of the range are, magnesian limestone, new red sandstone, fossiliferous sandstone, red clay and sandstone containing coal and mineral sulphur, rock salt, gypsum, brown and red iron ore and alum slate. The lower beds contain no organic remains but the upper abound in them. The iron ore is a red or brown Hæmatite, so rich that in many places the needle of the compass becomes quite useless even at a considerable distance from the rocks, owing to their being highly magnetic, from the quantity of iron which they contain. The sandstone abounds with the exuviæ of enormous animals, either Saurians or Sauroid fishes.

The hills at Kala Bagh contain great quantities of aluminous slate, from which alum is obtained at various manufactories in that town. The slate, well sprinkled with water, is laid in alternate strata with wood, until the pile reaches a height of 25 to 30 feet ; it is then lighted and the combustion continued for about twelve hours, in which time the color of the slate is converted from greyish black to dark red. This change of color indicating that the process has been carried to a sufficient extent, the mass is thrown into a tank holding as much water as it is computed the alum is competent to saturate. After three days the water, which becomes of a dark red color, is drawn off, mixed with a due proportion of potash and boiled down. The residuum on cooling becoming a solid mass of alum.

A series of salts, consisting chiefly of the muriate and carbonate of soda from the Loonar Lake in the Hyderabad territories, was exhibited in 1857, by Dr. George Smith, Residency Surgeon, Hyderabad. The following is a condensed report of their chemical composition.

No. 1. Dalla, a carbonate of soda with a faint trace of muriate of soda about 2 per cent. of impurities.

No. 2. Nimmak Dalla, nearly pure muriate of soda.

No. 3. Khappul, carbonate of soda, with water and about 2 per cent. of impurities.

No. 4. Pappree, nearly pure carbonate of soda.

No. 5. Mad-khar, an impure salt containing

carbonate of soda	27
Clay and sand	30
Water about	17
Common Salt	25

No. 6. Bhoonkee, a crude impure substance containing

neutral carb. of soda...	26
Insoluble matter chiefly sand and clay.	58
Water, ...	16
Common Salt	2

No. 7. Travertin contains

carb. of lime.	78
Carbonate of Magnesia	4
Insoluble matter with oxide of iron, &c.	9
Chloride of Sodium	2
Water	3

The Natron lake of Loonar occurs in the Circar of Mehkur, Soubah of Berar, about 45 miles N. W. of Hingolie, in Lat. 20 N. It is about 510 feet below the level of the surrounding ground, in a kind of crater of 5 miles in circumference ; the lake being about 3 miles in circumference and surrounded by luxuriant vegetation ; springs of clear soft water occur close to the lake, which has evidently been extending its bounds lately, as numerous dead trees are standing within its margin, and a well of sweet water, protected by a wall, is now completely surrounded by the water of the lake. An intolerable stench of sulphuretted hydrogen is emitted by the lake during the heat of the day, and its waters, prove destructive to animal and vegetable life, though flocks of duck and teal dot the surface of its waters. There are two saline springs near the centre of the lake, and about ½ a mile apart. These never become dry. It is supposed that the muriate of soda from this source, coming in contact with the carbonate of lime which abounds in the vicinity causes the deposition of the carbonate of soda or Natron salt in a greater or less state of purity. The depth of the lake near the salt springs varies from 6 feet during the hot months to 12 or 14 feet during the rains. The salt is raised by divers, who bring it up in their hands It is much prized and finds a ready sale in both Berars, Nagpore, Candeish, and Poonah, to which places it is carried in bamboo baskets and retailed by dealers. The Lake has not been regularly worked since 1836, in which year 2,136 candies of the different salts were raised, valued at Rs. 60,081. In 1853 Major Johnston raised 35 candies, valued at Rs. 1,461-4-0.—*M. E. J. R.* of 1857.

AL-KA-JHAR. HIND. آل کا جھار Morinda citrifolia.

ALKANET.

Anchusa tinctoria.
„ officinalis.

Dyer's Bugloss...	ENG.	Ancusa	IT.
Orcanette	FR.	Arcaneta	SP.

The three plants, Anchusa paniculata, A. undulata and A. officinalis have been introduced into India but no success recorded. The A. officinalis is a native of the Peloponnesus, the island of Cyprus and the deserts about Alexandria ; but is cultivated in England, Spain and the south of France. The root yields a fine red color to oils, wax ; all unctuous substances, and to spirits of wine. Its chief uses are for colouring lip salves, ointments, staining wood and dyeing cotton, but it is also used for colouring many of the beverages sold under the name of port-wine, and the corks used for the bottles in which this fluid is sold.—*Tomlinson. Faulkner.*

ALLAGUTTA, a town in India, in L. 76° 20′ E. and L. 14° 18′ N.

ALLAHABAD, L. 25° 26′, N. L. 81° 51′. 9, E. in India, a large military station at the confluence of the Ganges with the Jumna, 316 feet above the level of the sea. Its ancient name seems to have been Vaisali, from its founder Visala or Besa-biraja, one of the third solar line of Vesala, of the Surya Vansa or solar dynasty. The spot is considered sacred by the hindus. At this town is one of the famed Lat, an obelisk or pillar, a monolith containing a Gupta inscription written on its surface. Another inscription, not inpure sanskrit, has seventy lines metrical, the rest prose, and its date is the seventh or eight century. The character used in the inscriptions is Allahabad, or Gaya. There are mentioned on it Dhanada (Kuvera), Varuna, Indra and Antaka (Yama) Vrihaspati, Tumburu, Narada and the Ganges coming from the hair of the lord of men (Siva) is noticed. Samudra Gupta is said to put to shame Indra, Yama, Kuvera, and Varuna. The kings or princes mentioned on it are Sri Gupta, son Sri Ghatot Kacha, son Chandra Gupta, son Samudra Gupta, son Chandra Gupta, the second, then living. This is the last revised reading by Mr. J. Prinsep. The column was probably raised again by the dewan of Chandra Gupta, II. A curious thing in the inscription is the use of ka, the prototype of the modern genitive sign in Hindi. None of the numerous kings named are met with in the Puranas, and few of the countries even. No mention of Brahmans whatever. The poet Dhruva Bhuta calls himself the slave of the feet of the great king, and hopes it will be acceptable to the dewan Hari Sena. It is professed to be executed by the slave of the feet of the supreme sovereign, the criminal magistrate, Tala Bhatta, and uses the terms Shahanshahi, king of kings, which applies to the Sassanian dynasty of Persia, extinct in the seventh century. The Scythians and Huns are mentioned. By this inscription the power of Brahmanism was plainly only incipient. In historic times, the Rajpoots obtained a footing in this district and now occupy several estates, but between them and the Brahmins there exists deadly enmity. The incursions of the Rajpoots seem to be the foundation of the present proprietary rights in the land; each pergunnah has a separate and distinct tribe, although in a few estates other denominations of Rajpoots are to be found. The Rajpoots seem to have had their particular leaders, who, after locating themselves and their followers, displaced the original inhabitants by degrees, and extended themselves as far as they could. Thus in pergunnah Jhoonsee the Bais rajpoots trace their origin to two leaders, viz., Bowanee and Jootan; to the descendants of the former the large estate of Mowaya was allotted, and to those of the latter the nine estates. Some entire mouzahs in each of these talooks were subsequently assigned to different branches of the family, and the remainder held jointly by all, but as they are now divided into separate estates, the holdings are strangely intermixed, as in some of the villages nine talooks have shares, not howev of any one distinct portion, but they are di ded field by field; and as in process of ti sales and mortgages took place and some the fields became the property of other estates; the intermixture has greatly increased.—*Vol. VI. p.* 970 to 980 of the *Bl. As. Soc. Jour.* See Supp. II. Cyc. of India, Buddha. India p. 327. Inscriptions pages 371, 372, 373; 375, 383. Kols. 536. [illegible] Surya Vansa; Triveni.

ALLAS, a town on the east end of Sum[illegible]wa, in lat. 8° 42′ S. Long. about 116° 45′ [illegible] gives its name to the strait that separates S[illegible]bawa from Lombok. This is much frequented by ships outwards bound to China by way of Macassar Strait or the Eastern Passages, chiefly on account of its having soundings at moderate depths on the western side, where vessels can anchor either to await the turn of tide, or to obtain refreshments from the villages on Lombok. Allas is insignificant being rarely, if ever, visited, Talewang bay, a little to the south and Pijow and Labu Hadgi on the opposite coast engrossing all the foreign traffic.—*Journl Ind. Arch.*

ALLAS, a village on the south coast of the island of Timor, in about Lat. 9° 23′ S. Long. 123° E. The produce of the neighbouring territory, consists chiefly of bees' wax and sandal wood and is carried overland to Dilli, the capital of the Portuguese possessions, which lies on the N. W. coast of the island in a due north direction, distant about 50 miles; or to Atapoupa, a settlement of the Dutch, also on the N. W. coast, and somewhat nearer than the former Allas gives a name to one of the mountains on Timor, said to be 12,000 feet high.—*Journ. Ind. Arch.* See Semang.

ALLEKO-ZYE, a small Afghan tribe of the Durani section. See Afghan; Durani.

ALLEYERAH, a town in India, in Long. 75° 39′ E. and Lat. 26° 17′ N.

ALLI MALEAL. A rather scarce tree about twenty feet high, and from twelve to fifteen inches in diameter. It produces a sort of fig, which natives use medicinally.—*Edye. Mal. and Can.*

ALLI CHETTU, అల్లిచెట్టు Memecylon capitellatum, *L.*—M. edule, *R* ii. 260; *Cor.* 82 Br. 45 gives *Nymphœa* as the signification of this term but it is a Tamil use of the word only employed by Telingas near Madras also Memecylon tinctorium, Koen, Willd.

ALLIE KALUNGU. TAM. அல்லிக்கெளங்கு Nymphæa lotus.

ALLIGATOR. Dean French in his study of words (page 125) says "when the alligator, this ugly crocodile of the new world, was first seen by the Spanish discoverers, they called it, with a true insight into its species, "el ellagarto," or the lizard, as being the largest of the lizard species to which it belonged. The name is commonly but erroneously applied to the crocodiles of Asia, as the alligators are wholly confined to tropical and Southern America, where they are styled also Cayman, Jacaré. The alligator closely resembles the crocodile but has characters sufficiently distinct to have constituted a new genus. See Crocodile.

ALLIGATOR ISLAND, lies near Barn Island in the Straits of Singapore.—*Horsburgh.*

ALLIKI, (or Gitti-Gadda.) అల్లిక.(గిట్టిగడ్డ.) Scirpus dubius, R i. 215; Isoetes, sp? Rottl.

Garlic...	ENG.	Tallagadda ...	„

Largely cultivated in India and in all Asiatic countries, as a condiment for food. Garlic seed oil, called, తెల్లగడ్డనూన Tella gadda nuna, TEL: வெள்ளைப்பூண்டெண்ணை, Wulla poondoo yennai, TAM: is only medicinal. It is clear, colourless, limpid, and contains the full odour of the plant. It might be available in cookery for those who relish the flavour of garlic in their dishes, but this will evidently be the fullest extent of its application; hence it can scarcely be considered of any importance commercially.

ALLMANNIA NODIFLORA. *R. Br.*

Chamissoa nodiflora		*Mart.*
Celosia	„	*Linn.*
Achyranthes	„	*Linn.*

Common in Coromandel and Ceylon, and is esculent —*Roxb.* 1. 678.

ALLO NEREDU, అల్లొనేరెడు. (or Pedda neredu.) Eugenia Jambolana, *R.* ii. 485. A variety with large edible fruit.

ALLOOR, a town in India, in Long. 74° 50′ E. and Lat. 15° 29′ N.

ALLOOR, a town in India, in Long. 76° 28′ E. and Lat. 17° N.

ALLOTE, a town in India, in Long. 75° 42′ E. and Lat. 23° 46′ N.

ALLOTLA, a town in India, in Long. 79° 14′ E. and Lat. 16° 35′ N.

ALLOWA, a town in India, in Long. 84° 52′ E. and Lat. 27° 3′ N.

ALLOYS. The natives of India are acquainted with a variety of alloys for making utensils, bells and ornaments, as with copper and zinc, tin and lead, besides being great workers in copper and brass for the various utensils employed for domestic purposes, and of which a large variety was sent from different parts of India to the several exhibitions in Europe. In the Travancore State, the workmen have been very successful in their fabrication of alloys, but the ingredients they use are not known. In the district of Coimbatore, the metals employed in the formation of alloys are copper—zinc—tin—and lead, in the following proportions.

Copper 10 parts, *zinc* 6½.—Alloy valued at 4 annas per seer of 24 tolas weight and is used for all purposes.

Copper 10 parts, *zinc* 5—Alloy valued at 3½ annas per seer, somewhat darker than the other, but considered equally useful.

Copper 10—*zinc* 10—Alloy valued at 3 annas the seer considered inferior to the others, but is also in current use.

Copper 10—*tin* 2½—A beautiful bell metal alloy, valued at 6 annas the seer. Is used for the same purposes as the others.

Copper 10—*tin* 2—*lead* ½—An inferior looking alloy, but employed for similar purposes.

The metals are all imported and are procurable at the following prices in the bazar, copper per seer 5 annas—zinc 1 anna 4 pie—tin 4 annas, lead 1 anna 4 pie. A vessel of No was by far the finest of the series, and v . gently struck, gave out a fine bell sound.—*Royle Arts, &c. of India, page* 471.—*Juries' Reports, M. E.*

ALLSPICE; Allspice, Pimento, or Bay-berry tree, *Eugenia pimenta*. This large tree is supposed to be wholly of S. America. But Mr. Mason mentions that on the sides of some of the highest mountains in the province of Tavoy, he repeatedly met with a tree, but never saw it either in fruit or flower, which the Burmese call "wild clove tree." The young branches and the leaves of this tasted very strongly of all-spice, and he considers it a Eugenia, possibly E. pimenta. Allspice is rarely adulterated, owing, possibly to its low price.—*Hassall. Mason.*

ALLU, Hind. any pomaceous fruit. See Aloo. Alu.

ALLU, a. raw hide used by the Rajpoots, with which they cover themselves to assert their claim to a disputed property.—*Coleman.*

ALLU, (or Arikelu,) అల్లు-(అరికెలు.) Paspalum scrobiculatum, L. R. i. 278.

ALMACEGU. Port. Mastic.

ALMACIGA. Sp. Mastic.

ALMAGESTUM, a work whose author mentioned the Lar Des, from the tribe of Lar, hence the Larica or Larice of the Greeks. See Indus, Kerk. Lar. Med. *Elliot.*

ALMAH KOTE, a town in India, in Long. 68° 28' E. Lat. 24° 52' N.

ALMANACK. Engl. Jantri. Hind. This word is supposed to be derived from the Arabic. The natives of India have arranged their almanacks on the same principles as those of Europe.—*Sonnerat Voyage aux Indes Vol. I. Sec. III. Ch. XIII. Chatfield's Hindustan, p.* 180.

ALMANDINE, or Precious Garnet is that variety commonly employed in jewellery.

ALMARTAGA. Sp. Litharge.

ALMAS. Arab. Pers. Russ. الماس Diamond.

AL MASUDI, a patronymic surname given to Abu'l-Hasan Abi, a native of Bagdad a great traveller, acute observer and writer. He wandered to Morocco and Spain on the West and eastwards to China, through all the mahomedan and many other countries, and he wrote his travels which he styled Murdj-ul-Zahab or meadows of gold.—*Elliot, p.* 19.

ALMENDRA. Sp. Amygdalus communis.

ALMIDON. Sp. Starch.

ALMIRAH. An Anglo-Indian term from Port. Almarinho, a wardrobe.

ALMISCAR. Port. Musk.

ALMIZELE. Sp. Musk.

ALMOND.

Lauz	Ar.	Amande...	Fr.
Almond...	Eng.	Luz	Heb.
Mandel... ...	Dut. Dan. Ger. Swed.	Amygdala...	...Lat.

This term is applied to the common almond, Amygdalus communis: to the Indian almonds, the fruits of the Terminalia catappa and Canarium commune and the almonds of Gen. xliii. v. ii. have been thought to be Pistachio nuts.. See Amygdalus.

ALMOND OIL.

Badam-ka-tel ...	Hind.	Badamcottay-yennay. . ..	Tam.
Badam minak ...	Malay.	Badama vittulu nune.	Tel.
Roughan-i-Badam	Pers.		
Ingudi-tailam ...	Sans.		

This oil, from the fruit of the amygdalus communis, is not wholly an article of import, but chiefly so. The almond tree is a native of the Himalyas, and is abundant in Cashmere. The oil is colourless or very slightly yellow, and is congealed with difficulty. It is obtained for native use in India, but does not as yet form a recognized article of export. Both varieties of almond, bitter and sweet, are imported into the northern parts of India from Ghoorbund, and into the southern parts from the Persian Gulf. According to Simmonds, there are about 80 tons of this oil annually imported into Britain, the price being about 1s. per lb. But it is principally the produce of the Arzo tree, forests of which grow to the south of the Empire of Morocco, which produce an exceedingly hard species of almond. Its fruit consists of two almonds, rough and bitter In manufacturing the oil, they are well rubbed or shaken in a coarse bag, to separate a bitter powder which covers the epidermis; they are then pounded to a paste in marble mortars, and the paste subjected to a press. The almond is supposed to contain 46 p. c. of oil, but from 5¼ lbs. only 1 lb. 6 oz. can be extracted by the cold process and above 2 lbs. if heated iron plates be used. The oil of almonds is the basis of the great part of the liniments, ointments, and plasters, of the European pharmacists. It is however little used in Indian pharmacy, the oil of the Sesamum orientale answering perfectly as a substitute.—*Cat. Ex Cal.* 1862 —*Cat. Ex.* 62. *Simmonds. O'Shaughnessy.*

ALMORA in lat. 29.35. 2 N and L. 79-37. 9 E, a hill station and sanitarium in the north of India, and is built on the top of a ridge which runs east and west at elevations of 5,425° to 5,607 feet above the level of the sea. It is the capital of the British Himalayan province of Kamaon. It is 30 miles from Naini-thal. Government established a sanatarium at Lohooghut in the Almorah hills, a position unsurpassed in India for salubrity of climate and picturesque scenery and known to be highly beneficial to the European constitution. Major Drummond has written on its natural resources. A sulphur mine was discovered at a place called Aina, some 9 miles N. W of Almora, and the soil of the neighbourhood may yield quantities of saltpetre. It produces graphite, copper, and iron.—*Schl. Robt. Englishman. Dr. Buist's Catalogue.* See Kamaon; Sanatoria: Sorex cœculinus; Tea.

ALMS and Almsgiving have ever taken an important place in the religious systems of the world. So early as the time of Moses, the hebrews were commanded to give freely, and to throw their bread upon the waters with an assurance that after many days it would return to them again. In the buddhist, hindu and mahomedan religions, as also amongst the Romish Christians, it is not only good to give alms, but the giving bestows a merit on the individual and gifts are generally delivered with much openness, in such case differing from the injunction in Matthew vi. 2. when thou doest thine alms, do not sound a trumpet before thee. Hindu and mahomedan sovereigns bestow much to the shrines of their respective faiths, and, annually, on the Mahărram, the mahomedan kings entertain many Syeds on permanent pay. Some mendicants, alike hindus and buddhist, are not allowed to solicit or demand alms, but have to go with a quick step, and with or without a bell, through the streets,and without comment accept whatever is thrown into their wallet. And to describe a child as of an unknown father, a speaker will say, who can say, who threw the morsel into the beggar's wallet. Others solicit humbly as 1 Samuel xxv. 8 'Give, I pray thee, whatsoever cometh to thine hand, to thy servants, and to thy son David,' a mode of address not unfrequent among the hindus with whom a poor man often says to a rich man, 'Oh! father, fill the belly of thy son: he is in distress.' But the hindu pilgrims to sacred shrines are often exacting, even insolent, and, though rarely so to Europeans, will sit down at a door and refuse to stir until their day's food be given and the mahomedan fakirs of whom there are several sects, often continue to demand till alms be given. The buddhist mendicants are the least clamorous, but so completely is the act of offering to their shrines, the final individual merit, that costly gifts can be immediately removed, while outside the great temples at Rangoon and Prome such vast quantities of food offerings are daily thrown, as to be disgusting. All these classes have distinguishing costumes, the buddhist with his yellow robe; the hindu sanyasi or viragi smeared in ashes, and with ochre dyed clothes, and the mahomedan fakir may have a loin cloth, and taj or crown. Amongst them all, are many true ascetics, and recently in 1867, a hindu devotee was to be seen, who had, at that time sat for five years, in one of the Ellora caves; but there are amongst them also many impostors. *Ed*. See Buddhism. Fakir. Pinjrapole. Sanyasi. Viragi.

ALMS-HOUSE, for animals. See Pinjrapole.

ALMUG. The wood of Solomon's temple is called almug; this wood is also mentioned in the annals of Guzzerat, as that of which the temple to 'Adnath' was constructed. It has been supposed that the fleets of Tyre frequented the Indian coast: Sandalwood has been surmised to be intended.—*Tod's Rajasthan, Vol. I. p.* 282. *Harris' Nat. Hist.*

ALNUS NEPALENSIS, the Himalayan Alder, a tree of Kullu and Kangra, its bark is used in tanning, and its wood for gun-powder charcoal. The Hindi is Kunch, or Koish.

ALNUS NITIDA. *Hind.* This is a plant of Kaghan.

ALOE, The aloe belongs to a genus of plants belonging to the Liliaceæ, of which there are many species spread throughout India, 104 species having been introduced into the Calcutta Botanical Society's Garden, and Voigt enumerates 49. In Arabia says Burton the aloe, as in Egypt, is hung, like the dried crocodile, over houses as a talisman against evil spirits. Burckhardt assigns, as a motive for its being planted in grave-yards, that its Arabic name Saber (it is also called Siber), denotes the patience with which the believer awaits the last day. And Lane remarks, "the aloe thus hung over the door, without earth and water, will live for several years, and even blossom: hence it is called Saber, which signifies patience." In India it is hung up to attract eye-flies and mosquitos entering a room. Burton believes this practice to be a fragment of African fetishism and mentions that the Gallas, to the present day, plant aloes on graves, and suppose that when the plant sprouts the deceased has been admitted into the gardens of "Wak" the Creator.—*Burton's Pilgrimage to Mecca. Vol. III. p.* 350.

ALOE FIBRE. Pit Fibre of Madras.

Pita	TAM.	Nita	TAM.

Aloe Fibre; Pita Fibre or Pita,—are the commercial names given in Southern India to the fibres of the American Aloe, or *Agave Americana;* of the *A vivipera* or bastard aloe, the fibres of Fourcroya gigantea: those of the Adam's needles, the Yucca gloriosa, or common leaved, and Y. aloefolia, or Aloe-leaved Yucca, and Dr. Hunter also mentions the Y. angustifolia, Y. tenacissima; filimentosa and Y. regia as species yielding fibres, to all of which perhaps the same commercial term is applied. Two species of agave, the A. Americana, and A. vivipera, have become so naturalised in many countries and in India as to seem indigenous. They are however not yet sufficiently abundant in Southern India to be employed to any very great extent for the production of fibre, but as they take root and grow readily, there is nothing to hinder their very extensive application. Aloe fibre now forms an article of export from the Western Coast; The exports from all the provinces of the Madras Presidency of hemp, and aloes' hemp, during the three years 1852-53 to 1854-55 were as follows:

		Cwt.	Rs.
1852-53	Hemp	7,772	31,013
	Do. Aloes ...	2,682	27,095
1853-54	Hemp	6,112	27,113
	Do. Aloes, ...	3,658	21,506
1854-55	Hemp	9,263	37,770
	Do. Aloes ...	236	2,243
	Total Hemp	23,147	95,896
	Do. Aloes' Hemp...	6,576	50,844

The exports were chiefly to the United Kingdom, Bombay, Cutch, Guzerat, Sinde, Bengal and Indian French Ports. Aloe fibre was for several years employed in the Arsenal at Madras, as a substitute for English hemp, but its liability to rot led to its discontinuance, and the ease with which it is cut prevented its employment as a tow for packing shot. In Mexico, however, a highly prized thread is manufactured from the leaf fibre and made into the ropes used in their mines and for nets and rigging of ships. Also, the famous hammocks of Panama are made of Agave fibre, from the A. perfoliata (which Dr. Royle deemed identical with his A. Indica.) Dr. Hunter of Madras obtained a fibre two feet long, white and of fine quality, which readily took colours. He says that the A. Americana, or great American aloe, has a short cylindrical woody stem, terminated by fleshy, spiny, bluish green leaves and flowers once, on a tall flower stem, 20 to 40 feet. The roots as well as the leaves contain the ligneous fibres, "styled Nita" thread, useful for various purposes. The leaves are sometimes eight feet long, one foot broad, and five inches deep, and abound in these fibres of great length, and being tough and durable, their separation is effected by crushing or bruising, steeping in water, and afterwards beating. In applying them for the manufacture of fibres, it is very essential to have the sap removed as early as possible after the leaves are cut, and with this view a grooved cylinder press is found very effectual while frequent beating removes a thick viscid milky juice, which, if allowed to remain after cleaning, imparts a stiffness to the fibre. Several very fair samples were exhibited at the Madras Exhibition of 1857, soft, pliant and of good strength with some serviceable door-mats manufactured in patterns from colored fibres.—*M. E J. R. of* 1855 and 1857. *Drs. Royle. Riddell. Hunter. Balfour's Commercial Products. Simmonds. Faulkner.* See Aloe perfoliata, Agave Americana. Agave vivipera, Fourcroya gigantea: Yucca Aloefolia Y. gloriosa.

It has large reddish flowers, it is common in dry situations in the North-west of India, and is probably the source of some of the common aloes (musabhir) of the bazars. This Aloe is chiefly planted to form hedgerows, and makes an excellent fence. It flowers in the rains, and the stem grows to the height of ten or twelve feet. The leaves make a good common cordage, or rope, used for mats, &c.—The fibre is two feet long, white and of fine quality, and readily takes colours. The pulp is eaten by the natives, after having been carefully and repeatedly washed in cold water: they generally mix it with a little sugar and reckon it cooling. *Ainslie's Mat. There are many species of the Aloe from which Aloes is known to be obtained, but the best known are

A. abyssinica, *Lam.* Abyssinia.

A. arabica, *Lam.* Syn. of A. variegata. Forsk.

A. Barbadensis, Peninsula of India.

A. commelina.

A. indica, *Roxb.* N. W. India. Syn.? of A. perfoliata, *Roxb.*

A. linguæformis.

A. socotrina, *Lam.* Socotora.

A. spicata, *Thun.* Cape of Good Hope, and

Aloe vulgaris. *Lam.* Aloes is the bitter, resinous, inspissated juice of the leaves and is imported into England under the names of Socotorine, East Indian or Hepatic; Barbadoes, Cape and Caballine aloes; the average imports being about 8,539 tons in 1841 and 1842. In the four years 1852-53 to 1855-56, Madras exported 515 cwt. valued at Rs. 4,037, and imported in the last year to the value of Rs. 2,686. In the year 1853, Britain imported to the extent of 33,333 lbs. of aloes and re-exported 157,506 lbs. to the various countries of Europe. The quality of the product is apparently more dependent on soil, climate, and preparation, than on any specific difference in the plant. The best kind is obtained by making transverse incisions through the leaves, and allowing the juice to drop out. This is evaporated to dryness by a gentle heat. Dipping the leaves in hot water facilitates the flow of the juice.—*O'Shaughnessy,* 665. *Commercial Products. O'Shaughnessy, Beng. Pharmac.*

ALOE SOCOTORINA. Socotorine aloe. A native of the island of Socotra, leaves minutely serrated; flowers scarlet at the base, pale in the middle, green at the point. Yields Socotorine aloes, also the true *hepatic* and *Mocha* aloes.—*O'Shaughnessy, page* 664.

ALOE SPICATA. A native of the interior of the Cape of Good Hope, leaves distantly toothed, with a few white spots, the flowers filled with purplish honey.—*O'Shaughnessy, page* 665.

ALOES WOOD. Aloe: the Lign Aloes.

This natural product is repeatedly mentioned in the Old Testament, in Num. xxiv. 6: Prov. vii. 17: Ps. xlv. 8: Cant iv. 14: as a valued perfume. It is possible that the substance met with in commerce is obtained from more than one plant. See Agallochum; Aquilaria aloexylon; Calambeg, Eagle wood; Lign Aloes, Excœcaria.

ALOEXYLON AGALLOCHUM, a native of the Moluccas, Cochin-China. The wood is rather hard, in fragments of about one cubit in length, obtuse, furrowed, heavy, marbled ashy and brown, shining, brittle, very resinous; odour weak but agreeable, increased on friction, and very strong on burning the wood; flavour agreeable, balsamic and slightly bitter, and irritating to the throat. No analysis is on record of this substance; it is only known as a curiosity in Europe, but in the East it is deemed an invaluable tonic and stimulant remedy, a delicious perfume, and becoming offering for religious ceremonies.—*O'Sh. p.* 314 *Hog. p.* 286. See Aloes wood: Calambeg, Eagle-wood. Lign-aloes.

ALONSOA GRANDIFLORA, called the "maskflower," an ornamental plant, scarlet, easily cultivated in rich mould and multiplied by cuttings or seed.—*Riddell.*

ALOO BALOO. HIND. آلو بالو PERS. آلو بالو Cerasus caproniana.

ALOOBOA. A rather soft, coarse, open-grained, but not very light Ceylon wood.

Verbena triphylla. *L'Her.*

Much esteemed for the delightful fragrance of its leaves, and is much cultivated in gardens, generally thriving well.—*Voigt.* 471.

ALPAM. MALEAL. Bragantia Wallichii.—*Brown.*

ALPHABET, at present the Hindustani or Urdu, the Panjabi and the Persian are written and printed in the same character, but the Arabic, Bengali, Burmese, Canarese, Chinese, Guzerati, Hindi, Mahratta, Malayalam, Malay, Siamese, Singhalese, Tamul, and Telugu are all distinct tongues, each written and printed in a separate character. In the South of India, the Arabic numerals have been generally introduced into Government accounts. This was the recommendation of Sir Erskine Perry, and it has been supposed possible to use the Roman and Italian character for the other tongues and doubtless, it is quite possible to do so, but another generation will see the bulk of the people of India using English with very little knowledge of their respective mother tongues.

ALP ARSLAN, a hero famed in Persian story. He was a Seljuk Tartar. He was the son of Togrul Beg, and what Mahomed was to his Samanid suzerain, Togrul Beg was to his son, Togrul Beg achieved an independent kingdom in Persia. His son, Alp Arslan, extended it. He was a cotemporary of Baber. He ruled the Kirghis Kazzaks and could bring 300,000 men into the field. He overthrew the kalifat, and reigned from Bagdad. He followed the Euphrates into Georgia. In the beginning of the 5th Century of the Hijra, the Suljuk Tartar appeared in Khorassan, and in ten years, wrested it from the house of Ghazni. *It was ceded to Alp Arselan and formed a part of the Seljukide dominions until the extinction* of that race about 150 years posterior to Togrul Beg's having assumed the title of Emperor.—*Cyc. of India, Supp.* II. *p.* 494. *Latham's Nationalities of Europe* II. 73.

ALPHEUS, a prawn common in the Indian Ocean.

ALPHONSEA VENTRICOSA, *H. f. et. T.* Uvaria ventricosa—*Roxb*, ii 658.

A beautiful tree of Chittagong.—Hooker *fls. et. Thom.*

ALPHONSEA ZEYLANICA, *H. f. et. T.* Guatteria acutifolia, *Wall* Uvaria lutea.—*W. & A.* A branchy, leafy tree of Travancore and Courtallum.—*Hooker fls. et. Thom.*

ALPINIA, a genus of the Zingiberaceæ, all of them yielding aromatic fruits, and several of the plants being wholly aromatic. Voigt enumerates 11 and Roxburgh 12 species, and Wight in Icones figures A. allughas, calcarata, nutans and Rheedii, some of them have been removed to other species. A. angustifolium is said to be of Madagascar and the Mauritius, and A. aromatica is named as a plant of the eastern valleys of Bengal, the fruit of which is often sold as cardamoms. Alpinia porrecta, *Wall.* from China, and A. spicata, *Roxb.* from Sumatra, may also be noticed.

ALPINIA ALBA. See Galangal.

A. bracteata, Roscoe, not, *Roxb.*

A native of China.

ALPINIA SESSILIS. Kœn. Syn. of Kæmpferia galanga. *Linn.*

ALSANDA. Tel. అలసంద Dolichos Sinensis, *Linn.*

ALSATIA, for many years Okhamandel, Beyt, Dwarka, Umreyli, Korinar were quite an Alsatia, in India, but they have recently been put in order. See India 335 and Kattyawar in Cyc. of Ind. Supp. II.

ALSI. Hind. Linum usitatissimum.

ALSOPHILA, a genus of ferns, species of which occur in India and the islands of the Southern Ocean.

ALSOPHILA EXCELSA. The tree fern of Norfolk Island, measures forty feet in height, and has a magnificient crest of frondes. The black portion of the trunk is used for stringing by cabinet-makers.—*Keppel's Ind. Arch., Vol. II. p.* 184.

ALSOPHILA GIGANTEA, *Wall.* The *Tree-Fern* of Ceylon occurs at Darjeling, in Sikkim immediately below 6,500 feet, it is a widely distributed plant, common to the Himalaya, from Nepal eastward to the Malayan peninsula, Java, and Ceylon, and it ascends nearly to 7,000 feet in the outer Himalayas, of this Dr. Hooker saw but one species though another very similar or distinct species grows at the foot of the outer range. It is far more common than A. spinulosa from the level of the plains to 6,500 ft. elevation, and is found as far south as Java.—*Hooker, Vol.* I. *p.* 110 *and* 142. See Himalaya; Tree Fern.

ALSOPHILA SPINULOSA is the "Pugjik" of the Lepchas, who eat the soft watery pith: this tree fern grows in Sikkim, abundantly, in East Bengal and the Peninsula of India.—*Hooker's Him. Jour, Vol.* II, *p.* 13.

ALTAMGHA. Turkish, literally red stamp. A grant under the seal of the former princes of Hindustan recognised by the British as conferring a title to rent free land in perpetuity, hereditary and transferable from generation to generation. In reality, such were never so treated but invariably resumed as occasion demanded.—*Wilson. Ed.*

ALSTONIA, a genus of plants belonging to the Apocynaceæ, of A. macrophylla and A. spectabilis, Penang trees, of the former with large white flowers, nothing is known, and equally little of A. neriifolia, a Nepaul shrub and A. venenata of the Indian Peninsula, the last being Roxburgh's Echites venenata.

ALSTONIA OLEANDRIFOLIA. Syn. of Alstonia scholaris.

ALSTONIA SCHOLARIS, *R. Br. Don.*

A. Oleandrifolia, *Lodd.*
Echites scholaris, *Linn.*

This considerable looking tree grows in the Moluccas, Bengal, in the vale of Sawitri, Assam, in the hilly parts of the South Konkan, and to a very large size in Ceylon. In Ceylon it is common up to an elevation of 3,000 feet. In Canara and Sunda it is not very common; but found near the ghats above and below of great size. It is also found in the Travancore forests, in Burmah? and in Assam. It seems to be known to the Malay race, the excellent boards or thin planks it affords being used by their children and by children in Ceylon and in the Indian Peninsula to write their lessons on; hence its name. The whole plant abounds in a milky juice. Its wood is white and close grained but rather coarse, and in Assam is much prized for beams and light work such as boxes, trunks, scabbards, &c. It is valuable for the turning lathe and, in Ceylon, is used for coffins. It is as bitter as gentian, and is possessed, it is said, of similar virtues. The bark is a powerful tonic and a fine medicine in bowel complaints: Dr. Gibson of Bombay has found it useful as a febrifuge, he published an account of its qualities about two years ago in the Pharmaceutical Journal; he gave it in tincture.—*Ind. Ann. Med. Sci. for April* 1866, *p.* 397. *Dr. Mason, Hogg's Vegetable Kingdom. Useful Plants. Dr. Gibson. Voigt. p.* 526. *Thw. En. pl. Zeyl. p.* 193.

ALSTROMERIA, a genus of flowering plants of the Natural Order Amaryllaceæ, cultivated in Indian gardens for their beauty.—*Voigt.* 596.

ALTAI, a great mountain chain on the west of Asia, between which and the Himalaya is the vast tract of pasture lands on which from time immemorial the nomades of High Asia have fed their flocks, and multiplied into those hordes (Urdu, Turki, camp) which from time to time have swept into Europe and into southern and eastern Asia. The southern mountains of the Altai chain are rich in gold and silver mines. Indeed altai, in Mongol, signifies gold. And the same may be said of the chain of the Khigan, which separates Mongolia from Daouria.—*Timkowski's Journey to Peking, Vol.* II. *p.* 284. See also Cyc. of Ind. Supp. II. Arians. India p. p. 312, 314, 315. Kalkas.

ALTAR, a sacred place inside Jewish and christian churches, and probably kept formerly in the open air, and duly reverenced in the present eastern mode alluded to in Psalm xxvi. 6. 'So will I compass thine altar.' This is a mark of respect, common among hindoos, and buddhists, crowds of whom may be seen morning and evening circumambulating their temples, from right to left, with their right hands towards the temple. The hindus call this Pradachlni, and it is a reverential act, which they sometimes also perform to men. Mahomedans also circumambulate but only the Kaaba at Mecca, which encloses the Hajar us Siah, or Black Stone that is believed to have fallen with Adam from paradise (Paridesh, fairy land), but in their religious poetry they often allude to it, as in the words, from the Persian, Encompass thou, the kaaba of thy heart, if thou hast a heart.

ALTAMSH. This emperor succeeded to the Patan throne, in 1210. He completed the conquest of the greatest part of Hindoostan proper, and appears to have been the first mahomedan that made a conquest of Bengal, the government of which was from this time bestowed on one of the reigning emperor's sons. It was during his reign (1221) that Changiz Khan, among his extensive conquests (perhaps the greatest, of any conqueror in history) accomplished that of the empire of Ghizni, putting an end to the dynasty of Kharasm, which then occupied that throne and driving before him the unfortunate Jalali, son of the reigning emperor; who swam the Indus to avoid his fury. Changiz, however, left Hindoostan undisturbed.—*Rennell's Memoir, p.* xlviii.

ALTERNANTHERA SESSILIS, *R. Brown.*

Holly hock .. ... ENG. | Gul khyra. . ... HIND.

This plant, with very large rose coloured flowers, has produced about 20 varieties of splendid border flowers. Its leaves are said to yield a colouring matter resembling indigo.—*Voigt.* 112. See Dyes, Holyhock, Khatmi.

ALTI MARAM. TAM. Hardwickia binata.

ALTOON SOO, the river Caprus of antiquity is called the Lesser Zab by Abul Fazl. It joins the Tigris below Diarbakr but it is wrong to call the river Altoon, which is an epithet only belonging to the bridge, from what it cost, Altoon meaning gold or money.—*Rich's Residence in Koordistan, Vol. II. p.* 13. See Tigris, in Cyc. of India, Supp. II.

ALTINGIA EXCELSA.

Araucaria excelsa, *H. K.*

The Norfolk Island Pine is seen 100 feet above the other forest trees, and resembles the Norway spruce, but its tiers are more distant. Its timber soon rots when exposed to the weather, and the tiredo, or auger worm, makes fearful ravages in the fences made of its timber, which seldom stand three years. It is generally used for building purposes, flooring, partitions, &c., and when kept dry and not exposed to the weather, it is more durable.—*Keppell's Voyage of the Meander, p.* 282.

ALTUMBADO, a town in India in Long. 90° 30' E. and Lat. 22° 58' N.

ALU. Affghan, Hind. Persian, Tel. a term with affixes and suffixes, employed in Persian and Indian countries to designate several shrubs, pomaceous fruits, edible fruits and roots. The Alu, simple, of India generally, is the common potato, the Solanum tuberosum. The Allu-i-Bokhara is the prune; the Nathar Allu, Batatas edulis, the sweet potato. In Telugu, the Allu-bachchali, is the Basella alba. It is, in Bombay, a name of Vanguieria spinosa; in Persia, of several Rosaceous plants and in Persia also the Aloo-baloo is the Cerasus caproniania. Alu-cha is a variety of prune. See Alloo: Aloo.

ALU. آلو Hind. Pers. Syn. of Potato.

ALU BOKHARA. آلو بخارا Guz. Hind. Pers. Prunes, Prunus domestica; also dried plums and apricots.

ALU GADDALU. Tel. ఆలుగడ్డలు Solanum tuberosum, *L.* The Potato,—*Br.* 74.

The first alum works known to Europeans were those of Edessa (formerly called Roccha) in Syria, and this salt has not hitherto been produced to any very considerable extent in India. At Vera Ismael Khan it is manufactured from a black shale, principally at Kalabag on the Indus, where some 430 tons are annually sold at the rate of 78 rupees per ton. The process of manufacture is almost identical with that employed in European alum works. Alum, occurs native in Nepaul and at Chownsilla. There are alum works at Kutch and at Kotkee in the Punjab. It is found in the Tenasserim valley, about 40 miles below Matah in a reddish slate clay. In the process of manufacture, the shales are roasted, and after being reduced to powder the alum is obtained by washing. Red alum is brought to Ajmere from Lahore and used in medicine as an astringent, but chiefly employed in dyeing: one maund sells for ten Rupees. Alum, is a common natural production, of which the salajit of Behar and Nipal is an example:—but the salajit of Nipal is a mixture of sulphuret of aluminium, sulphate of alumina and sulphate of iron; its composition is very uncertain. The alum of commerce however is n[illegible] a natural product, being manufactured from [illegible]um shale, alum rock, bituminous shale, and [illegible]te clay; and though an earthy salt is found [illegible]ative in small quantities, it has long bee[illegible] produced artificially. The great importation [illegible] alum is from China. About eleven hundred tons of alum were exported from China within a short period, chiefly to India. During the four years 1852-53 to 1855-56, inclusive, Madras imported 4,859 cwt. valued at Rs. 26,103, chiefly from Penang, Singapore, Malacca and Bombay This mineral is largely employed by the Chinese in dyeing, and to some extent in paper-making as in Europe. Surgeons apply it variously after depriving it of its water of crystalization, and in domestic life it is used for precipitating vegetable substances suspended in potable water. When Chinese fishermen take one of those huge Rhizostoma which abound on the coast, they rub the animal with the pulverized styptic to give a degree of coherence to the gelatinous mass. Architects employ it as a cement in those airy bridges which span the water-courses. It is poured in a molten state into the interstices of stones, and in structures not exposed to constant moisture, the cohesion is perfect, but in damp situations it becomes a hydrate and crumbles, a fact of which the whole empire was officially informed by the Chinese government about A. D. 1810. It was discovered that water had percolated into the mausoleum of Kiaking, from having been built too near to the mountain side, the alum cement imbibed moisture, segregated and opened the way for water to enter the tomb. In those peaceful days such an event was of such importance as to call forth edicts and rescripts, memorials and reports in succession for several months. The son-in-law of the deceased monarch to whose care the construction of the edifice had been entrusted was fined and degraded, and a statesman from Fohkien acquainted with the properties of alum was appointed to remove it to a short distance from the mountain. Alum was first introduced into China from the West, and until a comparatively recent period the best kind, called sometimes Persian, at others Roman alum was brought from Western Asia. An inferior article is manufactured at Shan-tung, Shan-se, Kiang-su, Hukwang, Sz'chuen, also in the South-western frontier and in Tibet. That from Sz'chuen is represented as having the property of coating iron with copper, by placing the former metal in a solution of rice-liquor and alum. The most recent editions of works on Materia Medica contain no reference to the mines in this province, the product of which have surpassed in quality the foreign, and rendered its importation unnecessary. Its manufacture there has not been long in operation. These are in the Sungyan hills bordering on Fohkien in the district of Pingyang, Wanchan prefecture, and in close proximity to Peh-kwan harbour (27°9' 10" N. 120° 32' 6" E. Ten alum making establishments were in operation, which, with the exception of one on a hill opposite, occupied about a mile of the side of a lofty hill. The works are adjacent to the quarries from which the alum stone seemed to crop out of decomposed rock of the same lithological character. The stones were thrown into a fire of brushwood where they burnt with a slight lambent flame and as they cracked, the fragments were raked out broken into small pieces, and macerated in vats. Subsequently the disintegrated mineral was thrown with water into a vessel having an iron bottom and sides of wood and boiled for a short time. The lixivium was then poured into large reservoirs where it crystallized into a solid mass. Blocks of alum weighing about fifty catties each were hewn out of the reservoir and carried in this state in bamboo frames one on each end of a porter's pole to the place of shipment, where it is broken into fragments. When not designed for immediate exportation, the blocks are stored away for drying. On reaching the depôt the alum is found charged with a double quantity of moisture, the porters being obliged to deliver a certain weight, they dip their burdens in the mountain streams which they pass in the journey. Judging from the number of labourers engaged in transporting the mineral, the quantity brought from the works could not be less than eighteen tons. This was represented as less than an average day's work, as labour was in such demand just then for agricultural purposes that double pay was given;—and aged men, and women, with boys and girls were pressed into the service. Assuming that day's product as a basis for calculation and making an allowance for rainy days, we may safely estimate the annual supply as between five and six thousand tons. The quantity consumed by the dyers of Ningpo prefecture alone, being nearly twenty-two tons per annum is corroborative of this estimate. The supply is literally inexhaustible. Five dollars-and-a-quarter a ton at the landing would afford the manufacturer a fair profit. It often fetches much more, as there has been an increasing demand for the article owing to the greater facilities afforded for exportation from Ningpo in foreign vessels. The Wanchan Alum is equal to the best Roman, a roseate tint in some specimens indicates the presence of minute quantities of iron. "We have no means of ascertaining the precise geological position of the rock from which this alum is procured; some circumstances seem to indicate it to be a new mineral. It is stated that no potash nor any other material is employed in the works. Granitic and porphyritic rocks abound in the vicinity, and some parts of the district produce iron and silver. According to the Wan-chan Topography, the working of silver was discontinued in the reign of Wan-lih (1610) in consequence of imperial prohibition. This part of the coast has recently become the seat of extensive poppy cultivation for the bane of the Chinese race. As a contribution to the physical description of the alum district, we would add that the typhoon of September 1855 was preceded by a rising of water in wells and ponds many miles inland. When the cyclone reached the coast it submerged about a hundred square miles, occasioning a vast destruction of life and property. The waters of the sea were retained in the country by strong easterly winds for several days leaving a strip of land bordering on the sea quite dry.—The Wan-chan rock, is a grey felspar porphyry with minute brilliant white specks, which may be arsenical pyrites, silvery mica or sulphuret of nickel. When polished, it shews a very pretty surface and a small portion pulverised and calcined and then boiled gave sulphuric acid and alumina to the usual tests, so that it is probably an alum porphyry, i. e. a porphyry containing Alunite.—*H. Piddington, in Journal of the Asiatic Society of Bengal, p.* 366. *Calc. Cat. Exhib of* 1862. *Honorable Mr. Morrison's Foreign Commerce with China. AMANOA, a genus of small trees, of Ceylon, amongst which Thwaites enumerates A. collina which is Roxburgh's Cluytia collina, also A. ferruginea growing up to 3,000 feet and A. patula, (Wights A. Indica,) in the hotter parts of the island.—*Thwaites En. Pl. Zeylan. p.* 28.

AMANOUBANG, an independent territory situated towards the south-west end of Timor, immediately to the eastward of the Dutch territory of Coepang. Its limits are unknown, and probably vary as the power of the chief becomes increased or diminished. It is the best organized and most powerful of all the petty states of Timor, and is the only one that can give uneasiness to the Europeans whose establishments are scattered along the north-west coasts of the island. A few years ago, the chief of this territory took offence at some act of aggression on the part of the Resident of Coepang, the principal settlement of the Dutch on Timor, and kept that town in a constant state of alarm by incursions of horse-men armed with spears, and mounted on the small, but hardy horses of the country, cutting off the supplies, and killing or carrying away the inhabitants from the very skirts of the town, until means were found to appease his hostility. The Bay of Amanoubang, the "Bay of the Pearl Bank" of the charts, is a deep bight situated 45 miles to the eastward of Point Ousina, the S. W. extreme of Timor. It is bounded by Butu Puteh, a steep white rocky head-land, 800 feet high, on the west, and Point Oubelow on the east. The head of the bight consists of low-land, covered with the "tuak" or Lontar Palm. The chief trading port of the territory is Outouke, about 15 miles to the east of Point Oubelou.—*Jour. Ind. Arch.*

AMAR. Tel. Cable.

AMARA COSHA, by Amara Sinha also called Amara Deva, is the most esteemed of all the sanscrit vocabularies. The author was one of the nine poets who adorned the court of Vicramaditya. He seems to have been a buddhist. He is supposed to have lived about A. D. 948.—*Balfour Cyc. of Ind. Supp.* ii. *p.* 378.

AMARA DEVA, or Amara Sinha. See Author of the Amara Cosha. *Cyc. of Ind. Supp.* ii. *p.* 378.

AMARANTUS, a genus of plants of the natural order Amarantaceæ, several of which with their bright coloured leaves, are ornamental; Wight, in Icones, gives sixteen species and Voigt. 23 species, one of them A. oleraceus, furnishing four varieties all used as greens. A. anardana, A. frumentaceus and A. Lappica are named as producing seed in sufficient abundance to be gathered as grain crops. Their stems and leaves are used as greens, and spinach, and nearly all may be used in medicine, as emollients, enemata, cataplasms, diluent drinks, &c. A. Blitum, Linn. of Europe, A. campestris, Willde: have minute greenish flowers as also has A. polystachys, Willde. The Kupei-kiré of the Tamuls.—*Rox. iii.* 602 611. *O'Shaughnessy*, 528. *Voigt.* 315-6-7. *Ainslie* 253. *Jaffrey's Hints to Amateur Gardeners.* See Cyc. of Ind. Vegetables of Southern India

AMARA-PALA. An ancient hindu dynasty.

AMARAPURA. A former capital of Burmah, the name is derived from the Pali and means the immortal city. It was re-occupied when Ava was abandoned, and Ava has been nearly a wilderness for 20 years. Each Burmese king founds a new capital, and Amarapura was abandoned after the recent embassy.—*Yules' Embassy, p.* 130. See Burma. Marble. Ruby-mines. Shan.

AMARASINHA, a Sanskrit lexicon so called.—*Hyder's Eastern Monachism, p.* 433. See Amaracosha.

AMARAVATI, the captial of Indra: a name given to several towns in peninsular India, usually spelt Oomraoti or Amraoti. *Taylor.*—See Indra.

AMARAVATI, Lat. 20° 55; N. and L. 77° 46' E. a large town in Berar, built on a plain with hills to the west. It is now part of the Hyderabad Assigned Districts under a British Commissioner. It is 928 ft. above the sea.

AMARAVATI: A ruined town on the banks of the river Kistnah containing numerous antiquities in the form of sculptures, the majority of which seem to belong to a magnificent dehgopa or Buddhist shrine, built on a mound of 150 feet diameter, now converted into a tank. It is called Dipaldinna (translated by Colonel Mackenzie the "Mound of Lights") which resembles the name of a similar place of Buddhist celebrity in Ceylon (Dambadinna) It is in the vicinity of Masulipatam from which place many of the sculptured marbles were brought to Madras by Mr. Walter Elliot and thence sent from the Madras Museum to England Their inscriptions were translated by the Reverend W. Taylor. They are somewhere of the period A. D. 600 to A. D. 1000, are in sanscrit but neither pure ncr of correct orthography. The character used in the inscriptions is Ceylon, Seoni, and Andhra, passing to florid Southern Indian, and has much resemblance to that of some of the rock inscriptions at Mahabalipur. Buddhism is called the kingdom-preserving and the very excellent religion of the people which it is hoped will endure for ever. One of the inscriptions refers to the foundation and endowment of some Buddhist institution. It says, "place is not to be given to the disputer of Buddhism;" nevertheless praises those who relieve the guest and the brahman, and considers injuries to the gods and brahmans as great sins!! At the date of the inscription, therefore, there was not any hostility between buddhists and brahmans.—*Vol. VI. p.* 218. *Jo. B. As. Soc.* See Inscriptions 372.

Amber does not appear to have early become known to the Hebrews. It is mentioned in Ezekiel i 4 and 27 and viii. and 2. Thales noticed it B. C. 600 and Theophr astus B. C. 300. It has always been held in estimation by eastern nations and though less so latterly, it continues to be so to a considerable extent as a medicinal substance and for ornament. It is found on the shores of the Baltic and the Adriatic, on the eastern coast of England, and that of Sicily and in Prussia it was obtained by sinking shafts to the depth of 100 feet, to a stratum of fossil wood, in which the Amber is found in rounded pieces from a few grains to five pounds in weight. It is obtained along the coast of America, Africa and the Archipelago. The Burmese, perhaps more than any other natives, use it. But in every bazar of India, the medicine venders retail what they call Amber, though the bulk of this is a scorched gum or copal dried by artificial heat or fossil copal. Amber is of a yellow colour varying from a bright golden yellow to yellowish white, it is semi transparent, and shining with a resinous lustre. It is now generally believed to be the gum of some coniferous plants, and often has ants, flies or other insects imbedded in it, indicating its once softer condition It is electric when rubbed, hence its latin and greek names, and the Roman ladies highly prized it. The Japanese particularly valued the transparent yellow kinds. Dr. Hooker tells us (Journ. ii. 194) that the lumps of Amber forming the necklaces of the women of Sikkim (called Poshea) are procured in East Tibet, but he surmises that they are brought from Burmah, where Dr. Bayfield first and since his time Yule tells us (Embassy, p. 147) that it is found in Burmah, in the valley of Hookhong (which takes its Burmese name of Phyendwen from the Amber mines) near the sources of the Kyendwen in lat. 26° 20', and close to the Assam border. It is found with small masses of lignite (which furnish the indiction in seeking for it) in a dark carbonaceous earth covered with red clay. It is extracted from square pits, reaching sometimes to a depth of forty feet, and so narrow that the workmen ascend and descend by placing their feet in holes made on two sides of the pit, no sheeting being used. In 1837, only about a dozen people found employment at these mines. The Amber mines lie on the south side of the valley of Hook-hong on the Payendwen, which produces salt, gold and ivory in addition to Amber. Yule's account does not correspond with that of Mr. Walton who mentions that Amber is found in the Hu kong valley occupied by the Singpho, in the Payen toung or Amber Hills, a tract of small hillocks the highest not exceeding fifty feet: pits about three feet square are dug to a depth of six to fifteen feet, in a reddish and yellow clayey soil, which when first broken has a fine aromatic smell, but afterwards acquires that of coal tar,. The common mixed Amber is sold at Ava, at 2½ tikals a viss, or 4 rupees for 1½ seers, the price varies according to colour and transparency, but the best kind is expensive. Amber is frequently gathered in considerable lumps in the vicinity of Samar and the Bissayas islands. Ainslie mentions that it has been found in the Dekhan, of a fine quality, but very scarce; also occasionally in Travancore, but this is likely the copal of the Venkully Cliffs in Travancore also fonnd in lignite. It is found on several islands of the Indian Archipelago and in small quantities on the coast of China and Tunking, but large quantities of the fossil copal of India are exported to China and sold as Amber. Transparent pieces are the best. *Mason. Faulkner. Yules, Embassy, p.* 147. *Ainslie's Materia Medica. Hooker Him. Journ.* ii. 194. *Walton's Stat. p.* 38 9. *Bingley* i. 162. *Thunbe'g's Hist. of Japan* ii. 51. *Balfour, in Madras Museum Roecrds.*

AMBERBOA, a genus of flowering plants of the Natural Order Matricariaceæ, of which are known A. Indica, with largeish purplish rose colored flowers: A. odorata, with its variety ambracea, with bright scented sweet smelling flowers: and A. muschata the Shah-Pasand of India and Sweet Sultan of England. These species have also been allotted to the genera Serratula; Athanasia: Centaurea and Chryseis.—*Voigt, p.* 424.

This opaque solid substance is of a bright gray colour generally found in the intestines or stomach of the *Physeter macrocephalus*, the blunt headed cacholot or spermaceti whale, though every species of cacholot is subject to yield it. It occurs in lumps from three to twelve inches thick mixed with vegetable and animal remains. It is softened by heat, has a powerful smell, which to some persons is very disagreeable. Indeed when first taken from the intestines its fetid smell is disgusting. It is often found floating on the ocean south of Asia and the countries it surrounds export it largely to China where, also, a spurious substance is often sold. Some sorts met with in Japan resemble coarse bitumen, or asphalte, or black naphta dried, consequently more or less black and heavy, and all these differ in consistence. Other sorts are whiter in various degrees and some sorts are exceedingly light, and not unlike a mushroom, which induced Scaliger to concur with Serapion, that it might well be a sort of a Fungus marinus, or sea-mushroom. Ambergris, when fresh from the sea, is soft, and nearly resembles cow-dung and emits a burnt odour. Black shining shells, and fragments of other submarine substances, are often found in it. Garcias-ab-Orta tells *(A. H. l. i. c. i.)* of very large pieces, but when Thunberg was in Japan, a very good piece of a fine greyish ambergris was found upon the coasts of Kijnokuni which weighed upwards of an hundred cattis, Japanese, that is, 130 lbs. Dutch weight, and being by much too large to be purchased by one person, it was divided into four parts, in form of a cross and one of the four parts was tendered to him. In 1693, after he had left Japan, a tortoise shaped piece weighing lbs. 185 Dutch, was sold by the King of Tidori to the Dutch East India Company, for eleven thousand rixdollars, (or upwards of 2000l. Sterling.) It was sent to Amsterdam the year after, and was kept in the Company's Museum. It was of a greyish colour, and of a very good sort. It was bought on condition that if it should be discovered to have been in any ways adulterated, the money should be restored. The learned Dr. Valentine, Profsesor at Gissen, figured it in his Museum Museorum, Lib. 3. c. 28 as did alsoRumph in his Amboinsche Raritertkammer, T. LIII and LIV from whom, it seems, Valentine took it. The same author gave an accurate description of it, p. 267. Bingley, et seq. *Thunberg's History of Japan, Vol. II. p.* 48. *Tennants' Hindustan, Vol. I. p.* 148. *Low's Sarawak, p.* 90. *Tavernier's Travels, p.* 152.

AMBER, LIQUID. Liquid Amber.

Nan-tu-yok ...	BURM.	Liquid-Ambar ...	E G.
Rasa-Malay ...	MALAY.	Mia-Sailah.	ARAB.

A resinous fluid, obtained from trees that grow in N. America, Mexico, the Levant, in the Tenasserim Provinces, and Java, and used to mix with Balsam of Peru. The bark of Liquidamber altingia is bitter, hot and aromatic, and when wounded affords this balsam: a similar substance is obtained from

L. orientale of the Levant islands; and L. styraciflua of Mexico.—*Mason's Tenasserim. O'Shaughnessy, p.* 255-610-611. See Liquidamber altingia; orientale; styraciflua.

AMBHA, a goddess worshipped by the Kathis. See Rajpoot in Cyc. of Ind. Supp. ii.

AMBHASTA. Sans. A man born of a brahman father and vaisya mother, by profession a physician.—*Wilson.*

AMBATTAN. Tam. அம்பட்டன் Barber.

AMBICA, a deity of the hindu mythology.

AMBISACES, king of the Indian mountaineers, who sent ambassadors with presents to Alexander, on his crossing over to Taxilas. Rennell supposes his tribe to have been the ancestors of the Ghikars.—*Cyc. of Ind. Sup. ii. Kabul, p.* 434 *Khetri.*

AMBITTEYO the barber race of Uvah in Ceylon, who are regarded as more vile than the Rodiya.—*Tennant's Ceylon.*

AMBLAU. In the Moluccas, an island near the S. E. extreme of Buro, from which it is separated by a strait 6 miles wide, which is clear of danger, but rarely used. Lat. 3° 52′ S. Long. 127° 10′ E. There is a small government establishment on the north side of the island.—*Journ. Ind. Arch. Dumont D'Urville.*

AMBLYRHYNCHUS CRISTATUS, a sea lizard of the Galapagos from 3 to 4 feet long with a crest on its head, which is short and obtusely truncated, and broader than long. The mouth can be opened to a very small extent. It is common on all the islands of that archipelago, on rocky sea beaches, and is never found ten yards in shore. It is a hideous looking creature of a dirty black colour, stupid and sluggish in its movements.

AMBOLON, an island fronting the Mindoro Strait.—*Horsburgh.*

AMBONG, in Borneo a town in Lat. 6° 18′ 26″ N. Long. 116° 15′ 33″ E. (Sir E. Belcher) has a snug harbour on the coast of Borneo, which was examined by Sir E. Belcher, of H. M. S. Samarang, a few years ago. The town consists of a few huts inhabited by Malays, dependents of the Sultan of Borneo or his Pangerans. The famous mountain Kina Balu lies in an E. S. E. diraction from the head of the harbour, distant 27 miles, and adds much to the beauty of the neighbouring scenery. The trade is inconsiderable, but is likely to increase, The "Orang Dusun" or aborigines at this port of Borneo reside close to the coast. Bullocks of a good breed, and bees wax are obtainable, but water is scarce in the dry season of September to November.—*Journal of the Ind. Arch. Vol.* IV. *No.* 5 *and* VI. *May, June,* 1850.

AMBOYNA WOOD or LINGOA WOOD. A fragrant and very beautiful wood of various colours, used in cabinet work in England. The several varieties are probably all furnished by the same tree, which is supposed to be the Pterospermum Indicum, but this remains to be ascertained. It is beautifully mottled and curled, of various tints from light-red to dark-yellow, and is always in small lumps, evidently excrescences or burrs cut from trees. The several varieties of this wood are principally used for inlaying and by the makers of ornamental snuff boxes. It is brought from Ceram and Amboyna, and at the great Exhibition of 1851, it was sent from Singapore. See Lingoa wood; Kyaboca: Pterospermum Indicum.—*Archer, Faulkner, Lond. Ex. Juries' Reports.*

AMBOORESA. Tam. and Tel. Woman's coloured cotton cloths. See Cloths.

AMBOYNA, a high island of the Moluccas in the Eastern Archipelago, 33 to 36 miles long and the largest of the group. In this island in the year 1622-3, the Dutch disgraced themselves by the dark deed, known in English history under the name of "The Massacre of Amboyna" On that occasion they put eighteen Englishmen to the rack, and afterwards beheaded nine of them. One Portuguese and nine Japanese were put to death at the same time, as accomplices with the English. Amboyna was captured 16th February 1796. The Amboynese are middle sized, well made and better suited for military duties than the other Moluccan races. They are good-tempered, though impetuous; quarrelsome but easily ppeased, and generally very sober. Capital crimes are rare but occasional thefts occur. The island, like the other Spice Islands, is volcanic and with Banda, Ternate, Tidore, forms a sub-government of Java.—*Hogendorp, Coup d'œil sur Java quoted in John's Indian Archipelago. Crawfurd's Malay Grammar and Dictionary, Vol. I. p.* 131,32,33. *Horsburgh. MacFarlane, Geo. and His. of Japan, p.* 44. See India p. 357. in Cyc. of Ind. Supp. ii. Java. Kaya Boka; Melaleuca Cajaputi, Pulo Gasses. Pulo pisang.

AMBUJ. Hind. The lotus: Nelumbium speciosum.—*Willd.*

AMBUL-BEL. Beng. Pythomium bulbiferum.

AMBUPRASA-DANA. Singh. Water nut, for purifying water.

AMBUR in Lat. 12° 48, N. and Long. 78° 43 E. A town in the Carnatic, on the right bank of the Palar river, elevated above the sea, 1,053 ft. Schl.

AMBUR BATTI. Hind. A perfumed pastille, used in India, made of frankincense.

AMBUSI.

AMBYA PATA. Hind. Beng. Hibiscus cannabinus.

AMDHUKA. Beng. Hind. Vitis Indica.—*Linn.*

AMDA. Hind. Spondias mangifera.

AMDOAN. A Tibetan nomade race, who dwell in tents of linen, hexagonal and without frames.—*Latham.*

AMENDO. Port. Amygdalus communis.

AMERI. Maleal. അമരി Indigofera tinctoria.—*Linn.*

AMERICA, seems to have been peopled from Phœnicia, Asia, Africa and Iceland. There are physiological resemblances amongst the tribes, but differences in language, physiognomy, and modes of existence; the Abbe Domenech supposes their origin to have been from Scythians, Hebrews, Tartars, Scandinavians and Welsh. M. de Guignes in Recherches sur les navigations des Chinois, du Cote de' l'Amerique states that under the name Fu-Sang, America is accurately described in a Chinese work of the 5th century as a land in the far East. Mr. Logan, in the Journal of the Indian Archipelago mentions that the prevailing types of physical structure amongst the Chinese, have relation to the Mongolian and Tibetan and American forms, and that the American heads in plates 30—1, 5, 6 and 7 of Prichard's Natural History of Man are Chinese. —*Abbe Domenech*; *Prichard.* See Fusang. Jour. Ind. Arch. Dec. 1852, p. 663.

AMERICAN ALOE. Eng. Agave Americana.

AMERICAN or BELLEISLE CRESS. See Cress.

AMERICAN COLOMBO. Eng. Roots of Frasera Carolinensis and F. Walteri, fraudulently substituted for Cocculus palmatus.

AMERICAN SUMACH. Eng. Cæsalpinia coriaria.

AME-SA. Burm. Anona squamosa.

AMETASTINE. Vegetable Parchment.

AMETHYST. Eng.

Martis...	Ar.	Amethystus... ...	Lat,
Amethyst... ...	Eng.	Martas... ...	Malay.

αμεθυδτος	Gr.	Skuandi... ...	Singh.
Sang-i-Sulimani ...	Hind.	Ametisto...	Sp.
Amatista...	It.	Sugandi Kallu ..	Tam

The Amethyst is mentioned in Ex. xxviii. 19, and xxxix, 12, but under this term two different minerals are known, viz. occidental or the common amethyst, one of the inferior gems a quartzoze mineral, found in amygdaloid trap rocks in all countries, but in vast quantities amongst the volcanic rocks of the Dekhan: some beautiful specimens of amethyst crystals occur in dykes of quartz near Bowenpilly at Secunderabad. Its colour is of every shade of purple violet; some of these are valued, for it is almost the only stone that can be worn with mournings. When the colour of a specimen has to be equalized, it is placed in a mixture of sand and iron filings and exposed to a moderate heat. The Oriental Amethyst is also of a purple colour but is an extremely rare gem and belongs to the corundums. Its colour can be destroyed by heat and its purity then resembles that of the diamond.

AMFUK. A kind of cloth.—*Simmonds.*

AMGOOLEE. Hind. Syn. of Elæagnus conferta.

AMHARA, one of the Semitic races, in Africa. Their language, the Amharic, as also the Hebrew and Syriac, is derived from the Western Aramaic. See Iran: also Semitic races.

AMHERST, a small town and pilot station in a peninsula on the left bank at the mouth of the Moulmein river, in L. 16·4½ N. and L. 97·32 E. The inhabitants are 5484, and the people of the district are the Talieng or Mon. Amherst is built on tertiary strata, overlying transition limestone. In the roads, the greatest rise and fall occurs in 2 days after full and change is 21 to 23 feet. The velocity of tide at springs is 6½ knots per hour. It was proposed to be formed into a sanatarium for European soldiers of Burmah, but the ailments there are of a kind needing a cool or a dry climate. A dangerous reef of rocks runs across the mouth of the Moulmein river, from Amherst light-house. See Mon. Talien.

AMHERSTIA NOBILIS.—*Wall.*

This is the finest indigenous flowering tree in Chin-India. Its very large scarlet flowers, are variegated with white and yellow. It is of low stature, with slender pendulous branches and large pea blossom shaped flowers of brilliant red and yellow, which hang down in tassels more than a yard long. It was discovered by Dr. Wallich on the Salwen near Trockla, and named by him after Lady Amherst, the Noble Amherstia. There is a fine tree at the door of the Judicial Commissioner's house on Moulmein Hill. It has been introduced into England where every tree is said to be worth fifty pounds.

> "Nor all the rich flowers
> Of Albion's bowers
> Can vie with its purpling shade."

It flowers in March.—*Mason. Voigt.*

AMIANTHUS. Syn. of Asbestus.

AMIDAM. Ger. Starch.

AMIDON. Fr. and Sp. Starch.

AMIR. Ar: Hind. Pers: a noble: a title of nobility equivalent in some Asiatic countries to King as in the case of Amir Dost Mahomed Khan, king of Kabul. Also, an official designation as Amir-ul-Bahr Admiral or in some places, harbour master; Amir-us-Sooq chief of the markets, equivalent to the Indian Kotwal. Amirzadeh literally "born of a chief, or prince." This word reappears abbreviated as "Mirza," which is always suffixed to the name in designating a prince of the blood as Abbas Mirza, who was the king of Persia's son, but is a prefix when honorific, like the English Mr. as Mirza Abdul Baki Khan.

AMIRANTE ISLANDS, the south-western group of the Seychelles, consisting of several detached small islands, coral reefs and banks. —*Horsburgh.*

AMIR-UL-MOMANIN. Literally Prince of the faithful, is a title assumed by several Arabian princes, in addition to that of Imam. See Imâm. Fraser's Journey in Khorasan.

AMIR UZUN DELEMI, in the tenth century constructed the Band-amir over the Araxes, and from whence the river Kum Firoz, after its junction with the Murghab, derived its name. See *Bendameer.*

AMJURAH. See Sanatoria.

AMLOUKA. Beng. Vitis Indica.

AMMANI-AMMA. The hindu term for the image of the virgin. See Hindu.

AMMANNIA VESICATORIA.—*Roxb.*

Bān Mărăch...	.. Beng.	Dad Mari... ...	Hind.
Blistering Ammannia ...	Eng.	Agni Vendrapaku..	Tel.

An annual found in Bengal and the Indian peninsula in wet land during the rains, 6 to 36 inches high. It has a strong smell like muriatic acid; leaves exceedingly acrid, employed by the natives as blisters in rheumatism; Dr. O'Shaughnessy tried them in eight cases. The bruised leaves had been removed from all after half an hour; blisters were not produced in less than 12 hours in any, and in three individuals not for 24 hours, and the pain occasioned was agonizing until the blister rose. These leaves cause more pain than cantharides, and are far inferior to the plumbago (lal chitra) in celerity and certainty of action. The Telugu name indeed, means fire leaf. Wight also gives figures of A. pentandra and A. rotundifolia, and Voigt. A. Indica and A. multiflora.—*O'Shaughnessy, page* 331, *Voigt.* 130. *Roxb.* I. 427.

AMMAN, in the peninsula of India, an idol, worshipped in every village, and identical with Amma and Ammani Amma. It is one of the many village deities of which neither the Puranas nor Vedas make any mention. Every hamlet has its own, always supposed to be a goddess, and it is usually a stone turned black by oil offerings and time. The word is understood by the villagers to mean mother and does not seem to have any connection with the Semitic word Am'n and Ammon or Ammon-Ra of the Egyptians, their Sem-god and Ruler-god, who was represented in the human figure. The villagers style their deity by many affixed names, Ankal-Amman, Mang-Kali-Amma. Poni Amma or golden-mother; Kani-Amma, Mutial-Amma or pearl mother, Paleri Amma or great goddess and other local affixed names, the meanings of which are not apparent. The Mahratta villagers have the same female deity whom they name Ai, or mother. The villagers offer sacrifices and those of sheep, goats and fowls are made, also cocoanuts and fruits, frankincense, camphor and ghi are burned, palm-wine, dhal (cytisus cajan.) There seems no doubt that it is the remnant of a very ancient worship, the origin of which is now unknown. The villagers believe that these goddesses protect them from sicknesses and from losses, or mitigate these. A pujali or pujari, a worshipping priest of the Sudra caste is appointed for its daily worship. He anoints it with ashes on its head, or rather on the top of the stone, for it is no image, but a mere shapeless stone. In a small pot he cooks the rice, which he collects from the hamlet people in rotation, presents it to the idol, and then takes it to his own house. He breaks a cocoanut in front of the idol, and offers it also, but the one-half he keeps to himself and gives the other to the family from whom he obtained the fruit. The village offerings are in fulfilment of vows, or offerings of fowls and sheep, if the goddess will grant their desires, and once a year the villagers collect money by subscriptions, and celebrate a festival in honour of their deity, during which sheep and fowls are largely sacrificed. The Sudra hindus and the entire servile tribes in the south of India, have the fullest faith in their respective village goddesses. When they or their children are overtaken by sickness, they seek the idol and consult the pujari, who sings songs, affects to hear the Amman's voice, and then announces to the worshipper the offering that must be presented. If cholera break out it is not unusual for some neighbouring village deity suddenly to rise into great importance and the sacrificial rite is then almost unceasingly performed. The hindus have even personified that pestilence into a goddess whom they have named Maha-Kali and believe that if they neglect her worship she destroys them by the disease. Indeed gods are still in process of establishment and small-pox and cholera, have thus been personified, Maha-Kali of Ujjain being the goddess of cholera and Mari-Amman of the Tamils a small-pox deity. In South India, this deity is invariably female, Ai, Em, Amma, Ma, Mamma, being the natural term amongst all races, for mother, as in the 'Em of the Hebrews, the Ma of the Egyptians. The most high god, Eliun, or Helyun, the creator of man, seems early to have been forgotten, and to have come to be worshipped under various names, all meaning Lord, and then a wife was given to him also known under various names, Baaltis is, i. e. mistress queen; Hastoreth, i. e. in the Greek form Astarte, who as Baltes was worshipped at Byblus with her husband Adonis, But the secret worship of the mother of God, also called Amma, was especially celebrated in the shrine of Aphaka at Byblus, near the river of Adonis. *The Amman of the* southern hindus may therefore be a cosmogonic term, indicative of the great Creator, the Most High God's Will. See. Cyc. of India, Amman; Ammavaru: Hindoo: Sacrifice.—*Bunsen's Egypt*, I. *V*, *also Sharpe's Egypt*, I. 222. See Hindu.

AMMON, The Egyptian deity originally worshipped in the human figure, at Thebes in upper Egypt, and at Thebes, latterly with the head of a ram. He was displaced afterwards in favour of another idol, in the reign of Tuthmosis III. He is supposed to be the Zeus of the Greeks, and was styled Amn, or Ammon. Amn-ra or Ammonra. He originally corresponded with the Sun-god, was the highest of the first order of gods, and was the ruler deity. He was styled the son of Isis and his son was Khunsu, is the hidden god of the Thebaid and the Zeus of the Greeks. The origin of this worship is supposed to have been Semitic. It may have been identical with the Amman of the races in peninsular India, and amongst northern people directed to the warm sun and to the earth, in the sunny south. Bunsen. i, v. See Amman. Ammavaru; Hindoo; Sacrifice.—*Sharpe's Hist. of Egypt, Vol. I. p.* 222.

AMMON, an oasis in Egypt on which stood the temple of Amun-Ra, whose figure was that of a man having the head and horns of a ram.—*Sharpe's History of Egypt. Vol. I. p.* 222.

AMMAVARU, a cruel sacrificial rite, practised amongst the hindu Sudras and low-caste races of the southern part of Peninsular India, where on the occasions of a great cholera epidemic or other calamity, a bullock is impaled alive to appease the angry goddess Devi. See Hindoo: Sacrifice.

AMMONIA. Eng. Lat.

Liquid Ammonia...	Eng.	Ammoniaque? ...	Fr.
Volatile Alkali ...	„	Ammoniak? ...	Ger.
Spirits of Hartshorn.	„	Sal-volatile... ...	Lat.

This is a limpid colourless fluid, exceedingly volatile, has a pungent smell and a caustic taste, and in medicine is a useful stimulant. The name of this substance is derived from the oasis of Ammon in Upper Egypt where the muriate was gathered as the product of animal remains. It is now obtained in Europe from coal in the process of gas-making and converted into several compounds by other processes.—*Tomlinson.*

AMMONIA, CARBONATE of.

Smelling Salts ...	Eng.	Carbonate d'Ammoniaque... ...	Fr.

This, now wholly an imported article, was known to the hindus who obtained it by mixing one part of sal ammoniac with two parts of chalk. It is now obtained by a subsequent process after the manufacture of coal gas.

This is met with in great abundance in every bazaar of India. It is a volcanic product, but Dr. Royle obtained it from brick kilns in India. Its name is derived, from the oasis of Ammon where it was early known, for it is the Nashādar of Avicenna and Serapion. Indeed, it was first obtained in Egypt near the temple of Jupiter Ammon, whence its name, by sublimation from the soot of camel's dung. The Egyptian process has been described both by Pococke and Niebuhr. Pococke mentions that the dung of pigeons, cows, camels and other animals, is mixed with chopped straw and made into cakes as firewood; it is now manufactured largely in Europe, by combining hydrochloric acid, either directly, or indirectly, with ammonia obtained from the decomposition of animal matter. In France, by the distillation of bones, in iron retorts, but in Britain, from the ammoniacal salts contained in the liquor resulting from the distillation of coal in the gas works. During its solution in water, the temparature falls several degrees; it is used by tinmen to clean the surface of their metals and to facilitate the soldering of iron and copper and prevent the oxydation of the copper; it is also sometimes employed by dyers, to brighten their colours. Dissolved in nitric acid, it forms the *aqua regia* of commerce, used for dissolving gold, instead of nitro-hydrochloric acid. It is also used in small quantities in steam boilers, to prevent the formation of calcareous deposits. It is used for adulterating tobacco.—*Tomlinson. Ainslie. Beng. Pharma. p.* 259. *Bingley I.* 138. *Royle. Niebuhr's Travels, Vol. I. p.* 90. *Peacock's Description of the East, Vol. I. p.* 259.

The Dorema ammoniacum of Don (Linn Trans, XVI. 601), yields this product from its stem and fruits. According to Lindley the plant grows in Persia on the plains of Yezde Kaust, and Kumisha in the province of Irak, and near the town of Jezud Khast, in very dry plains, and gravelly soil exposed to the sun, and the gum resin is imported into India viâ Bombay from the Persian Gulf, and re-exported to different countries. It is obtained by incisions in the plant, and occurs in voluminous masses of yellowish colour, enclosing white almond-like tears. It is principally employed as an expectorant in the chronic catarrhs and asthmas of old persons. It is also applied externally as a warm and stimulating plaster.—*O'Shaughnessy*, 364.—*Faulkner, page* 365.

AMMONITE, a fossil genus of molluscs, which seem to have existed extensively in all parts of the world during the period that the chalk formations were being deposited, and the genera have been widely diffused. They occur in great abundance and of great size, some three feet across, in the supra cretaceous strata between Trichinopoly and Pondicherry, and were described by Mr. Brooke Cunliffe, Captain Newbold and Mr. Kayes. Dr. Gerard found in the Himalaya, at an elevation of 16,000 feet, what he described as A. Walcottii and A. Communis, which occur in the Lias at Lyme Regis, but in this he was mistaken. Most of those discovered have been named. Amongst them are Amm. Madrasianus: Kandi: Kalika Æmilianus: Bhima: Bhawani Planulatus, Denisonianus. Beudanti; Vaju; peramplus: Durga, very fine: Cala; revelatus: garuda. The Hindu names so frequently occurring are in consequence of the saiva hindus worshipping several species of ammonites under the name of Saligrama. See Saligramma.

AMMONITES, the children of Ben-Ammi, the son of Lot, by his younger daughter. They were dispossessed by the Hebrews, and afterwards for 18 years strove to reconquer their lands, greatly oppressing all the children of Israel who dwelt beyond the Jordan river. They were ultimately driven back by Jephthah, the Gileadite. See Judges x. 8, 9; xi. i, 4 & 27.

AMNA. BENG. Spondias mangifera.

AMODI. IT. Starch.

AMOGHVERSHA, King of Tonda Mundalam, in the South of India, in whose reign, in the 9th or 10th centuries, the Jain faith was introduced.

AMOK, also **AMUCK**, MALAY; a furious reckless onset, the muck or the "run-a-muck" of the English.

AMOMA MORINGA. LOUR. Moringa pterygosperma. Gærtn.

AMOMUM, a genus of plants of the natural order Zingiberaceæ, of which Voigt enumerates nine species as having been grown in the vicinity of Calcutta; viz., aculeatum, angustifolium, aromaticum, cardamomum, cornostrachyum, dealbatum, maximum, sericeum, and subulatum. *The Paradise grains, or*

Malaguetta pepper the A. grana paradisi, is not of India, but of the Guinea Coast, as is also the A. grandiflora.

AMOMUM ANGUSTIFOLIUM. *Roxb.* A native of Madagascar, cultivated in the Mauritius and India, the fruit is the greater cardamoms of the old writers. Its flowers are pretty lar ra blood-red, yellow, spicy and fragrant, a image, ry part of the plant when bruised mall maed diffuses a strong pleasant aromati smell.—*O'Shaughnessy, p.* 650. *Roxb. I.* 39. *Voigt.* 557.

AMOMUM ACULEATUM. *Roxb.* of the Malay Archipelago, with crimson spots on deep orange flowers.—*Roxb. I.* 40. *Voigt.* 567.

AMOMUM AROMATICUM. *Roxb.* Morung-ilachi. Hind, has middle sized flowers with lip tinged with red down the middle It is a native of Chittagong and the valleys of the Eastern frontiers of Bengal, the fruit has similar properties to those of the true cardamoms, for which they are often sold to the druggists of India. *O'Shaug. p.* 650. *Voigt.* 568.

AMOMUM CARDAMOMUM. *Linn.*

Cardamomum mumus. *Rumph.*

Ben	Burm.	Yelarsı... ...	Tam.

Much cultivated in India, Ceylon, Burmah and the Moluccas. It needs a very rich soil, and repeatedly ploughed. Its roots are used like yams, are nutritious, and wholesome, and sell in Bengal for a rupee a maund. The small tuberosities on the roots are set before the rains in very rich soil, after repeated ploughings, and are dug up after a year, when the roots weigh from lbs. 4 to 8, in Kaina Zillah, a bigah yielded 100 to 250 maunds. *Jaffrey. Voigt.* 686. See Vegetables of S. India, Amorphophallus bulbifer; margaritifer.

AMOUAH, a town in India in Long. 84° 20′ E. and Lat.

AMOUNAH, a town in India in Long. 82° 38′ E. and Lat. 27° 20′ N.

AMOY, called by the fisherman Haenun, is an island on the S. E. of China about 22 miles in circumference. The town of Amoy is situated on the S. W. part of the island, opposite the small island of Ku-lung-su, which affords protection to the town, anchorage or inner harbour. On the western side of the island is that of Woo-seu-shan, also that of Woo-an. Amoy was taken 9th June 1842, and delivered over to the British, after the first Chinese war of 1841-2, and forms one of the consulates there, Shanghai, and Hong-Kong being others.—*Horsburgh.*

AMPHIBIA, a term from the Greek, applied to reptiles and quadruped animals which live either in the water or on land.

AMPHIDONAX, a genus of plants belonging to the Panicaceæ, of which A. amphidonax; Bengalensis; and bifaria are known. The species have been brought from the genera, Aira, Arundo and Donax.

AMRITA. Sansc. In Hindu mythology, the beverage of immortality drank by the gods. It is fabled to have been produced by churning the ocean, along with other precious gifts to man. Chitra-Ratha, describes, in song, how,

> " Whilom from the troubled main,
> The sov'reign elephant Airavan sprang :
> The breathing shell, that peals of conquest rang ;
> The patient cow ; whom none implores in vain ;
> The milkwhite steed ; the bow with deaf'ning clang ;
> The goddesses of beauty, wealth, and wine ;
> Flow'rs, that unfading shine ;
> Narayan's gem ; the moonlight's tender languish ;
> Blue venom, source of anguish ;
> The solemn leech, slow, moving o'er the strand,
> A vase of long-sought Amrit in his hand.—
> To soften human ills dread Siva drank
> The pois'nous food that stain'd his azure neck ;
> The rest, thy mansions deck,
> High Swerga, stor'd in many a blazing rank.

The word Amrita, means immortal, and is derived from the initial privative and m'rit 'death.' The word has been carried into the Teutonic and the Immurt'hal, or 'vale of immortality,' at Neufchatel, is as good Sanscrit as German. According to legend, the Amrita, was the occasion of the war between the Suras and Asuras, in which the gods took a part. This indicates the occurrence of the first solar eclipse on Indian record. Modern European commentators conjecture that it fell on the 25th October in the year 945 before Christ. *Sir W. Jones, Hymn to Indra, Vol. XIII,* 273. *Tod's Rajasthan, I.* 71, *Captain Edward Warren's Kala Sanhita. Coleman's Hindu Mythology.* See Kurma : Lakshmi, in Balfour's Cyc. of India, Supp. ii.

AMRITSAR, AMRITASAR or AMRITASURA : A Sikh town, founded by Ramdasu, near the Ravi, the name, in Pali, literally the "Lake of Ambrosia," is from the piece of water in the midst of which stands the chief temple of the Sikhs. It is their principal place of worship and chief commercial emporium of northern India. The town, is strongly built and fortified, but as the situation is not a commanding one, it could not long stand a siege with guns of a large calibre.—*Thomas' Prinsep's Antiquities, p.* 130. *McGregor's History of the Sikhs. Vol.* I. *p.* 19. See Panjab : Sikhs ; Shawl ; Goa.

AMRU, Beng. Mango, Mangifera indica.

AMRU, a son of Saba or Abid Shamsh, and a grandson of Joktan. He first imposed the tax or khiraj on Egypt. See Joktan.

AMRU (also AMRITA?) a tree alluded to in the mythic tales of Krishna and Radha, whose dalliance was in groves where "the Amrita tree, with blooming tresses is embraced by the gay creeper atimukta :" again "delightful are the flowers of the Amru trees on the mountain tops, while the murmuring bees pursue their voluptuous toil. *Coleman, p.* 39. See Krishna.

AMU, the river Oxus. See Amoo.

AMUDAPU CHETTU. ఆముదపుచెట్టు. Ricinus communis, *L.*

AMUL LAR KHANA, 'to eat opium together,' is the most inviolable pledge, amongst the Rajputs, and an agreement ratified by this ceremony is stronger than any adjuration. If a Rajpoot pay a visit, the first question is, *umul kya ?* 'have you had your opiate ?—*umul kao,*' take your opiate ! On a birth-day, when all the chiefs convene to congratulate their brother on another 'knot to his years,' the large cup is brought forth, a lump of opiate put therein, upon which water is poured, and by the aid of a stick a solution is made, to which each helps his neighbour, not with a glass, but with the hollow of his hand held to his mouth.—*Tod's Rajasthan, Vol. i. p.* 644.

AMULETS are worn by almost all eastern nations. They are especially prized by mahomedans, of whom both young and old wear them. They are usually put on the young to ward off disease and to guard from the evil eye, and consist of figures with numbers on pieces of paper, or Arabic words engraved on potstone or silver or gold and worn from the neck,—often extracts from the Koran. They are also put over the door porch or on the house wall. Amongst the Malays of Java, *Mustika* means amulet, and is always some very scarce or supernatural production, which being worn about the person they suppose acts as a talisman, and wards off evil. The *Mustika Kerbo* or Buffalo Amulet, is quite white, and round like marble, nearly an inch in diameter, and semi-transparent ; it is stated to be found at Panggal. The *Mustika Waringin,* a calcareous concretion, found at Ngadi Rejo. It is quite black and a little smaller than the Mustika Kerbo. Waringin is the name of a tree, the Ficus Benjamina, which always adorns the open plain in front of the houses of Javanese chiefs. —*Journal of the Indian Archipelago, No. vi.—xii. June—December* 1853, *p.* 274.

AMUL KUCHI, Beng. Cæsalpinia digynia.

AMULTAS. Beng. Duk. املتاس Cathartocarpus fistula.

AMUMILLA. Singh. Berrya ammonilla.

AMUR or AMOUR or AMOOR is the name given by the Russians to the river in Mantshuria, which the Mantshures call the Sagalin also Sàgalinoula or Black Dragon River of Mantchu Tartars. The Russians in 1842 under treaty, annexed great tracts of little peopled country on the banks of this river and have arranged them into provinces thus :—

	Sqr. Miles.	Natives.
The Amur Province..	164,000	5,200
Usuri, Sofyovsk, and Nikoloyvesk.......	179,000	9,800
Russian Sakalin...............	18,000	8,500
	361,000	23,500

The river rises in Lat 50° N. and Long. 110 ° E. by two sources, one in a sharp bend of the Davurian Mountains near the small fort of Doroninsk, the other lower down near Nishni-ul-khonsk. After a winding course to the N. E. it also receives a small feeder from the S. E. extremity, which has its rise near ke Baikal. The two streams uniting, run e east to Nerchinsk, where it has attained a lth of 600 yards and is very deep. Passing sterly from Nerchinsk, it bends to the north, d again assumes an easterly direction, and ming from the south meets the Argun, a large butary, at Baklanova. The Argun, 900 iles in length, itself a splendid stream, passes through the rich pasture land of Mongolia. The Amoor continuing its easterly course, and receiving many tributaries, passes Yacca. It then runs to the south-east, passing through deep mountain valleys, and gains its most southerly limit in Lat. 47 ° 48′ N. & Long. 137 ° E. From this point it ascends in a north-easterly direction, receiving from the south-west, the Songari, a river which drains a great part of Manchuria : many smaller tributaries increase its volume, including the Usuri from the south. It also receives the river Zia, near Seghalien-ula, as it approaches the mouth or outlet, which is situated in Lat. 53 N. and Long. 142 E. and is three miles wide. Here, the stream being obstructed by the opposite coast of Seghalien and the many sand banks which beset the gulf, divides into two lesser streams of great force, one of which pursues a southerly direction to the sea of Okhotsk, the other towards the gulph of Tartary. The length of this river, including its many windings, is computed at 2,800 miles. Its basin contains a surface of 900,000 square miles. It is navigable for large vessels, as far as Nerchinsk, a distance of 1,600 miles, but the mouth is obstructed by a great bar over which there is not more than two fathoms of water at high tide and by numerous sand banks, which are yearly increasing in number and extent. The banks are lined with forests: the land on its banks rich and fertile. The Tungusian races of the lower Amur are the Yeniseisk; Nerchinsk; Manyarg; Manchu and Orochi, all small tribes, eitheir nomades or subsisting by fishing. In 1842, the territory between the Jablonnoi mountains and the northern bank of the Amoor was ceded to Russia by the Chinese. At its mouth members of the Aino family are settled: and due north of Pekin is a Mongol tract which nearly separates the true Tungus part of Mantshuria : from this description it will be seen that the Amoor, is second only to the Mississippi. It flows from the centre of Northern Asia into the Pacific Ocean not far north of Japan. Much of the country along the Amoor is susceptible of farming and grazing. Steamers can ascend from the sea to Chetah, a distance of 2,600 miles, which opens up Siberia to the Pacific through the Amoor, presenting a new field for commerce, the ultimate limits of which can hardly be grasped by the most comprehensive mind. Mongolia, Manchuria, Northern China, all the Tartaries, Thibet, and Siberia, with a population of twenty to thirty millions, are approached by this river, and a new route to the Indies opened. Irkoutsk, the capital of Eastern Siberia, can be approached with only about three hundred miles of land carriage. The country of the Amoor is divided into two provinces, the first of which preserves its actual name of maritime province of Eastern Siberia, and the other takes the name of Province of the Amoor. The Okhotsk district is detached from the province of Yakoutsk and united to the maritime province, which comprises six districts. The administration of the maritime province remains on the same footing as before, with the exception of a few changes prescribed by a special order of the Russian emperor. The province of the Amoor consists of all the territories situated on the left bank of the Amoor from the confluent of the rivers Schilka and Argun, or from the limits of the Trans-Baikalian provinces and of Yakoutsk, descending the Amoor to the confluent of the river Oussouri and to the new confine of the maritime province. The town of Blagoveatchensk will be the capital of the province of the Amoor. —*Staunton's Narrative, p.* 15. *Latham's*

The Almond tree is cultivated for its fruits, the common edible and bitter almonds in daily use, and for the oil expressed from it. Botanically, there is but one species though there are many varieties and sub-varieties, the most important of which are the sweet and the bitter almonds of commerce—the latter the "*Karwa badam*" of India. The sweet almond contains 24 per cent of albumen and 54 per cent. of fixed oil, the latter forming the principal product of the tree. *The bitter almond tree* fruit is smaller than that of the sweet almond, but in every other respect the structure and appearance of the trees and fruits seem to correspond The taste, composition, and properties are however totally different. It has been asserted, that the sweet and bitter fruits have been gathered from the same tree, and that culture will change the bitter to the sweet, as it has changed the sour crab to the sweet apple, and the bitter, half poisonous wild potato to its present state. Dr. O'Shaughnessy expresses his belief that no prussic acid has yet been traced in the sweet almond. The sweet and bitter kinds are imported into the northern parts of India from Ghoorbund, and into the southern parts from the Persian gulf.

The Oil,

Almond oil	ENG	Badam ka tel ...	HIND.
Bathama nuna ...	TEL.	Batham yeunai ...	TAM.

Is colourless, very slightly yellow, with difficulty congealed, taste sweet, smell light, agreeable and resembling that of the seeds. In all its properties and uses, it is nearly identical with olive oil. It is obtained for native use, in India, but does not form an article of export. The fruits are imported into England at from £2-10 to £6 the cwt and of the oil about 600 tons are imported.—*O'Shaughnessy, pages* 319-20. 222. *Hog.* 298. *Voigt.* 200. *Faulkner St. of Commerce. Khookh...	ARAB	Kalloo ...	PERS.
Peach tree	ENG.	Kardi aru... ...	,,
Shaft-Alu	PERS.	Moondla-aru ...	,,

A native of the Himalayas, abundant in Kashmir and the Hindu Kush, Persia, Taurus and Caucasus, also in Barbary whence it has spread into all the countries of the south of Europe. Several varieties are extensively cultivated in China and in several parts of India, as in Ahmednuggur, and Poonah in the Dekhan also in Mysore at Bangalore and all their neighbourhoods, twelve dozen of nectarines selling at Bangalore for a rupee. Dr. Riddell, who paid great attention to its culture tells us that three varieties of this fruit are met with in the Dekhan, a large round white sort, of a delicious flavour; the flat China; and a small thin-skinned description more resembling an apricot in appearance and much harder than the others. The peach is easily cultivated by seeds or layers. A seedling will throw out blossom in the second year, and be ten or twelve feet in height: it requires to be carefully pruned, wintered, and watered. No branches should be allowed to grow on the stem closer than three feet from the ground; all spurious and misplaced shoots should be rubbed off before gaining strength to exhaust unnecessarily the juices of the tree; and all distorted leaves, the work of insects, of parasitic plants, mildew, &c. should be picked off and destroyed. The kernels of the peach should be carefully removed from the shell, and in no ways injured, if required for planting: they should be sown in small beds at the commencement of the rains, about eighteen inches apart, and as soon as the trees are fit for removal, a good sized ball of earth must be taken up with the roots, to prevent the root fibres from receiving injury. All the buds around the stem had better be rubbed off by the hand, as far as requisite, and a proper shape be given to the tree, by cutting out all the superfluous spurs and their branches. The time for opening the roots of the peach is after the close of the rains: then remove the earth with care, so as not to injure the roots, for the space of three feet round the stem; pull off all the leaves, and cease to water the tree until the blossom buds appear; then cover up the roots with good loam mixed with old rotten manure; water freely every third or fourth day, until the fruit begins to ripen, after which be guided by circumstances. It is necessary sometimes to thin the fruit, and also to put the peaches in bags, as they begin to ripen, otherwise the birds destroy them. In the Dekhan, peaches first come in about February, and with care may be continued until the rains commence, after which the excess of moisture received by the leaves and roots causes the fruit to swell and burst. The flowers are purgative, but also narcotic. The leaves and kernels on distillation yield abundance of prussic acid. The fermented fruit gives an excellent brandy, chiefly manufactured in the United States of America. The bark gives a large quantity of gum during the hot season.—

AMYGDALUS PERSICA. *v.* NECTARINA *Ait.* PERSICA LŒVIS D. C. The nectarine, the downy peach, is a variety of the peach tree, and is much cultivated. It is the Shaft-alu, also Moondla Aroo of the Persians. *Voigt.* 200.

AMYRIS, a genus of plants of the natural order Amyridaceæ. Roxburgh described several species, but his A. acuminata, commiphora, gileadensis, heptaphylla, nana, pentaphylla, punctata, simplicifolia, suffruticosa and Sumatrana have been removed to Balsamadendron and other genera, and of the Amyridaceæ, only the genus Sabia remains as an Indian plant. کاجو کا تیل	

This small tree, sixteen feet high, is very ornamental, when in leaf. It was introduced from the West Indies, where, as also in Mexico and the two Americas, it grows: but it is now cultivated in Ceylon, all over India, Burmah, Pegu, and the Tenasserim Provinces eastwards to the Moluccas. It sometimes grows to a large size in Pegu, where it is much cultivated about Phoungye houses, and in groves near towns. The wood is dark brown, and is not, generally, deemed of value in carpentry, but, in Tavoy, Captain Dance says it is used in boat building, and it forms a charcoal, which the iron-smiths there consider the best for their trade. It bears sweet smelling flowers, succeeded by a pea-shaped fruit of a yellow or of a red color, very acrid and with an astringent juice. The Cashew-nut hangs at the end of the fruit, outside, and is about an inch long, of a kidney shape, edible and wholesome when roasted. It is found in every Indian bazaar in India, and is an article of trade and commerce. The nuts are used for imparting a flavour to

Madeira wine. Also, ground up and mixed with cocoa, they make a good chocolate and are said to yield a spirit by distillation, superior to rum or arrack, and described as possessing powerful diuretic properties. They are also said to yield by expression, an edible oil, equal to olive or almond oil. The Cashew-nut springs from one *end of the receptacle and has two shells between which there is a thick inflammable oil, called Cardole or Cashew apple oil. It is a powerful* vesicating agent, and owing to its caustic properties is sometimes applied to ringworm, warts, corns, cancerous ulcers, &c., and to floors or *wooden rafters of houses to prevent the attacks* of white ants. It is a very dangerous drug and ought never to be used. Exposure to the vapour of the oil, when under preparation, will produce violent swelling and inflammation. An astringent gum is exuded from the trunk of the tree to the extent of 5 to 12 lbs. weight annually, which should be collected when the sap is rising. It makes a fair substitute for gum arabic, forms a good varnish, and is particularly useful where the depredations of insects require to be guarded against. In S. America, book-binders wash books with a solution of it, in order to keep away moths and ants. The milky juice which flows from incisions in the trunk of the tree imparts an indelible stain to linen. The acrid nature of the plant should exclude its juices from medicine. Rheede, in his "Hortus Malabaricus" says, the slightly toasted nuts excite venery, strengthen the stomach, and afford relief in cases of vomiting and nausea—*Ainslie, p.* 228. *Roxb. ii.* 312. —*Voigt.* 270. *Mr. Jaffrey, Drs. McClelland, Riddell. Mason, Useful Plants, Hog's Vegetable Kingdom, M. E. Jur. Report. Captain Dance.* See Notices under Oil. Cashew Nut Oil; Cashew Apple Oil; Cashew Gum. Cardole. Casearia elliptica; Dolichos biflorus and resins.

ANAGALLIS. *Linn.* A genus of plants of the natural order Primulaceæ, of which A. arvensis, with small scarlet and A. cœrulea with small blue flowers are of Europe, Middle Asia and North America, and A. arvensis var. β cœrulea, described by Roxb. as A. arvensis, with light blue flowers, is a native of Kemaon, Nepaul and Khassya and is cultivated as a flowering plant, in India. *Riddell. Voigt.* 335. Wight gives a figure also of A. latifolia.

ANAGAMI PALI. In Buddhism the third of the four paths leading to nirwána.—*Hyder*, p. 438.

ANAH, a town of Mesopotamia.

ANAI. MALAY. Termites.

ANAI-KUTTALAY. ஆனைக்கத்தாளை TAM. Agave Americana.

ANAITIS an Assyrian deity introduced into Egypt. See Ken.

ANAK. ARAB. آنك Lead.

ANAKONDA, of Ceylon is the Python reticulatus of Gray. It is occasionally of great *size, but perhaps rarely exceeding twenty feet, though Mr. Sirr mentions that when full grown,* it is said to measure from 17 to 20 and even 25 feet long, with a circumference of two and a half feet.—*Sirr's Ceylon.*

ANAKALA CRITA. SANSC. *one of the fifteen* kinds of slaves in Hindoo Law, a man who has become a slave voluntarily for food during famine.

ANAKAN, MAL. A low person.

ANAL. BENG. A reed, the Amphidonax bifaria.

ANAKURU, TAM A tree of western India, of little value about thirty feet long, and eighteen inches in diameter; the natives make small canoes of it, and use it in house-building. —*Edye. M. and Can.*

ANAM. The Anamese or Anamitic group of peoples inhabit Cochin-China and Tonkin, and are a section of the division to which the Chinese belong. The Chinese form of Annam is Ngannam. The language is Monosyllabic. The Tonkinese call the Cochin Chinese, Kuang and Kekuang, names probably the same as Khyen and Kakhyen. The Cochin-Chinese, on the other hand, call the Tonkinese, Kepak. The Anamese are of low stature, the men with long arms and short stout legs. They are very light colored, well and warmly clothed in silk and cotton. The men are hardy and active. The women still fairer, are well formed and graceful. The higher classes are solemn and decorous like the Chinese. The lower lively and talkative. The dress of both sexes consists of loose trowsers and loose frock with large sleeves In their persons, their dress and their food, they are very unclean. They are arrogant as to their national importance. The religion is Buddhism but Shaman superstitions also prevail. A Cochin-Chinese marries when he has the means, and among the poorer classes the age of the female is from 15 to 20. The wife is purchased, polygamy is habitual. Abortion is often had recourse to; unmarried women are not all chaste. But adultery in the married woman is punished with death.—*Latham's Descriptive Ethnology. Crawfurd's Dictionary. pp.* 321 *to* 488. See Buddha. Chinese, Cochin-China. India, p. 319, 343 and 344.

ANA-MALLAI, TAM., or the elephant-hills, a considerable group in the south of the Indian Peninsula from which much valuable timber has been obtained, yielding an annual profit of about Rupees 50,000. There are but few inhabitants—a forest race scarcely civilized.

ANAMBA GROUP OF ISLANDS, in the China Seas, consists of two large groups and several smaller ones with numerous detached islets. The larger islands are inhabited and abound with tropical fruits and vegetables — *Horsburgh*. See Pulo Repon.

ANAMIRTA COCCULUS. *W and A.*

This is a strong climbing shrub, with the bark corky, ash-coloured, and deeply cracked into fissures; leaves roundish, hard, leathery. It is one of the Menispermaceæ. It grows in Ceylon, in Malabar, the Concans, the Circar Mountains, Orissa, Assam, Burmah, the Moluccas and Timor. The seeds are about the size of a cherry, the kernel is oily. They are devoid of smell, of extremely bitter taste, and poisonous in moderate doses. Tewlve grains of the seeds given to a dog killed it in five minutes. They are poisonous to all animals, and even to vegetables. A solution prepared from an extract made with the seeds killed a bean plant in twenty-four hours. Cocculus indicus is largely employed in Australia in destroying the parasitic animals which attack the skins of sheep. It is also used for stupifying fish; mixed with crumbs of bread and thrown into ponds, the fish which eat the crumbs become intoxicated, float on the surface, and are easily taken. Fish thus caught are exceedingly dangerous. It has been said that the seeds are often added to beer, to render it more intoxicating, but the truth of this accusation has not been confirmed. The only use of the Cocculus indicus in medicine is as an external application, as a powder or ointment, to destroy vermin in the hair, and in the treatment of some cutaneous diseases. Its imports into England have largely and rapidly increased, two hundred tons having been delivered in 1850, the price about 20 sh. the cwt.—*Ainslie Materia. Indica. The pine apple, is a West Indian plant which has been domesticated in all the warm parts of South Eastern Asia and in hot houses in the colder places of Europe, but in the moist warm localities of the Indian peninsula, of Bengal Ceylon, the Tenasserim Provinces, the Straits, Moluccas, Phillipines, and China, it grows in great abundance, is even wild, forming hedges, but the flavour of the fruit which is a general favourite, is greatly improved by cultivation in rich soil. The leaves yield a very valuable fibre from which in the Straits and in Java, a much prized delicate fabric, the "*pina* silk" of commerce is manufactured. The Juries Report in the Madras Exhibition of 1855 describe its fibre as fine, white and strong, of considerable length, very silky and susceptible of being split into the finest threads and very fine specimens of it were exhibited by the Madras School of Arts as tow, hackled flax, and refuse for making string: also as thread, string, and line and clean specimens of the fibre were contributed from Cocanada, South Arcot, Tanjore, Bolarum, and Tranquebar. The leaves are gathered in the same way as the aloe, and are placed on a piece of board and scraped with a blunt knife. The fibres that are loosened are drawn out, the leaves turned over, and from four to six inches of the stem end scraped as before, and as soon as the fibres are loosened by the removal of the pulp in that part of the leaf, the fibres are taken hold of by the fingers and drawn out. These fibres are again laid on the board, and any remaining portion of the pulp gently scraped out with the aid of water, when they are gathered and dried in the sun. By another mode of treatment, the leaves are laid in the sun, so as to dry up a portion of the sap, when, on being taken up and bruised by the hand, the fibres become loosened and may be taken hold of, and drawn out. But a great loss of fibre results, so that this method cannot be recommended.—*Ainslie,* 221. *Voigt.* 461. *Hog.* 764. *Mad. Ex. Jur. Report.*

ANANAS SATIVUS VAR. B. STRIATIFOLIA. RIBBON-LEAVED PINE APPLE. This is a very ornamental variety of the pine apple which has been introduced from Malacca, into the Tenasserim Provinces.—*Mason.*

ANANAS BRACTEATUS Schult. A species from Brazil, introduced into the Calcutta gardens.—*Voigt.* 615.

ANANDA. The nephew or cousin and favourite disciple of Gautama: he was a *thero* (Presbyter) or *Bhikshu* (mendicant) and did not attain the sanctity of the *Rahat-hood*, or qualification for final emancipation without birth, till the Synod held at Rajagriha, in Magahda, soon after the death of Buddha. He was Sakya Muni's personal attendant. At Ananda's intercession female devotees (Bikshunis) were admitted into the ranks of the Buddhist community and permitted to embrace an ascetic life, and those at Mathra paid their devotions chiefly to the stupa of Ananda because of this intercession.—*Yule's Embassy, p.* 26. *Hyder's Eastern Monachism, p.* 433. See Buddha.—Sakya Muni: Topes.

ANANDA, in Sanscrit means joy, and hence

ANANDA-NAT 'HA. Sans. the lord of joy, from ananda, joy, and nat 'ha, a lord.

ANANDA, a herd, husband of Yasuda, the couple who fostered the infant Krishna.

ANANDA GIRI. A hindu author of repute, who wrote the *Sankara Digvijaya*, on the modifications of religion.

ANANDRAVER, Maleal. In N. Malabar, amongst the polyandric races who follow the descent of Marumaka tayam, or *descensus ab utero*—this is a term for the more distant relatives of a Tarwada, or united family. See Polyandry.

ANA-NERINGI. Tam. ஆனை-நெரிஞ்சி. Pedalium murex.

ANANI Sans. Earth; amongst the Kols, under the designation Isani (Isa, goddess. Anani, earth) is the worship of the earth. See Kols. 537. Cy. of Ind. Sup. ii.

ANANTA. Sans. Infinity; Eternity; Time; Endless.

ANANTA, a name of Sesha the king of the serpents. Sesha means duration and Ananta endless, in hindu theogony, the serpent on which the deity reposes in the intervals of creation. See Calpa, Hindoo. Inscriptions, p. 380, p. 383. Kalpa. Lakshmi. Sesha. Vishnu.

ANANTA VARMA, a prince mentioned in the inscription on the buddha-gaya vaulted cavern or Naga-juni cave of about the 9th or 10th centuries. *Cyc. of Ind. Supp. ii.* See Inscriptions, p. 378, 382, 392.

ANASTATICA HIEROPUNTICA, the Rose of Jericho.

ANATA, See Anaitis.

ANATHERUM MURICATUM. Beauv. Syn. of Andropogon muricatum.

ANATIDÆ, a family of water birds several genera of which Phænicopterus ; Cygnus ; dendrocygna ; Anser ; Anas ; bernicla ; sarcidiornis ; nettapus ; Casarca, Tadorna ; Dafila ; Chaulelasmus ; Mareca : Querquerdula ; fuligula, Mergus, and podiceps, dwell in South Eastern Asia ; Sir J. D. Tennant, noticing the Ceylon birds mentions that there, are floating on the surface of the deeper water, fleets of the *Anatidæ*, the Coromandel teal, the Indian hooded gull, the Caspian tern, and a countless variety of ducks and smaller fowl, pintails, teal, red-crested pochards, shovellers, and terns. Pelicans in great numbers resort to the mouths of the rivers, taking up their position at sunrise on some projecting rock.—*Bengal As. Soc. Cat. Tennent's Sketches of the Natural History of Ceylon. p.* 262.

ANATINA SUBROSTRATA, one of the Myloridiæ, a moluse found in Australia and the Indian Ocean.—*Eng. Cyclop.*

ANAU ANANDAT, a name of Lake Manasarovara.

ANA-VINGA, Maleal. Casearia cauziala. *Vall.*

ANAXAGORAS, a Grecian whose two reputed followers were Damon and Pythias, supposed by Major Cunningham to be the words dharmma, Virtue or practical morality, and buddha, Wisdom ; See Damon and Pythias.

ANAYAN. Cowherd or Shepherd.

ANAY VAL MYRE. Tam. ஆனை வால் மயிரு Elephant's Tail.

ANAZI An Arab tribe of which in Skinner's time the estimated population was one million ; they were richer and more powerful than any, even to the shores of the Persian Gulf, the whole space between the Haman and the Euphrates nearly, belonged to them, and their boundary on the side of Arabia is close to Nedjid. They commanded the route of the Bagdad caravan to and from Damascus, and the Syrian line of pilgrimage to Mecca, from each of which they received tribute. This is the tribe classed by Niebuhr as having sprung from the Jews of Kheibar ; and in their name of Anazie, or Anaesse, he discovers the Hebrew, Hanassi.—*Skinner's Overland Journey. Vol. II, p.* 84-5.

ANBAR. Arabic. Malay. Ambergris.

This article of ships furniture of which there are many kinds, sheet, bower, stream, kedge and grapnel, for large vessels, is wholly imported into India. Those for smaller vessels are manufactured in this country, of wrought iron but many are of rude form. In 1847 and 1848, about 4600 tons of anchors were exported from England, and this has now perhaps doubled, their value being about £20 the ton.—*Poole.*

ANCHOVIES, Essence of: Dr. Hassall found the whole of the samples adulterated with the ferruginous oxide, bole Armenian —*Hassall.*

ANCHOVY. Eng. Engraulis encrasicholus.

Anchois	Fr.	Acciughe	It.

The anchovies met with in India are wholly imported. The true or common anchovy is the Engraulis encrasicholus of Cuvier, a small fish about four inches long with bluish brown back and silvery white on the belly. It is very abundant in the Mediterranean, where though occurring in other seas, they are chiefly caught at night, by nets, their heads immediately taken off, and their entrails removed. Another Mediterranean species E. Meletta, is largely substituted for and mixed with the true anchovy but they are from four to seven inches long ; and other fish, Dutch and Sicilian, are also employed to adulterate anchovy paste and sauce. Of species of Engraulis at Madras, three in number, the Netteli or Teran Goonie, *E. albus*, is caught in great nets, in immense numbers and by Europeans is highly esteemed for the breakfast table ; and one about 6 inches long is very delicate eating. The Tamil names of the others are *Pota Netteli* and *Maper-Netteli*. (See Engraulis.) *Jerdon.* The *gnaping-nai-say*, of the Burmese coast and Tenasserim provinces, is considered by Dr. Mason to be the *E. Meletta*, or common sardine ; but Mr. Mason, has no doubt it is an Engraulis.—*Faulkner, Mason. Hassall, Eng. Cyc. Poole p.* 9. *Bingley iii.* 221.

ANCHUSA, a genus of plants belonging to the Boraginaceæ. Voigt names A. officinalis, paniculata and undulata, but none of the species are indigenous or domesticated. Dr. O'Shaughnessy, p. 495 notices that *Anchusa italica* is mentioned by Nicander 5. 38, and is called Bugloss, from the supposed resemblance of its leaves to a cow's tongue, Bos glossa. In India the Greek synonyms *bugloozun* and *fooghulus* are assigned to *Onosma bracheatum* (Royle.) In the Bombay bazars the *Cacalia Kleinia* is similarly termed *Gao zuban*, or cow's tongue. He also describes p. 496, *A. Anchusa tinctoria.* (Alkanet) a native of Europe, for which root those of the *Onosma echioides*, and *O. tinctoria* have been substituted. The *Onosma emodi* (Wall.) of the Himalayas is closely allied to this, and is called *Maharunga* from the intensity of its colour. The alkanet of Constantinople is produced by a different order of plants altogether, being the root of the Alcanna vera. It is imported into England in very small quantities as a dye.—*St. of Com. Poole. Voigt. O'Shaughnessy p.* 495-6. *Hog.* 541.

ANCISTROCLADUS. WALL. A genus of plants belonging to the Malphigiaceæ of which A. Vahlii, and A. Heyneanus are known. The name of this plant is from *Ankistron*, a hook and *Kladus*,—a branch, in allusion to the hook-like tendrils on the branches.—*Gr. Cat. p.* 28

ANCISTROCLADUS VAHLII. ARN. Gona Wel. Singh. Gona pattan Wel. Singh, grows in the central and southern parts of Ceylon up to 200 feet.—*Thwaites p.* 188.

ANCISTROCLADUS HEYNEANUS. *Wall. Cat. Kurdal*, Mahratta. Modira valli Mal. Rheede. Valli Modigam, Mal. Rheede. Grows at the Parr Ghaut: ravines at Khandalla, but not common. The Modira valli usually quoted for Artabotrys odorotissima, has a great resemblance to this plant. This is a very pretty shrub, but hardly known yet to European botanists.—*Gr. Cat.*

ANCISTROCLADUS EXTENSUS. *Wall.* a climbing shrub of Amherst.

ANCISTROLOBUS CARNEUS, *Wall.*
Hypericum carneum, *Wall. Cat.*

Zeen-ga-lay- ...	TAVOY.	Zoung-ga lae...	BURM.
Zin-ga-lae. ...	„	Toung-ga-la	MARTABAN.

This tree attains a maximum height of 30 feet, it rarely exceeds 3 feet in girth and its maximum is 3 cubits. It is plentiful in the Pegu and Tounghoo forests, where the timber grows very tall, and it is found widely scattered, all over the Amherst, Tavoy and Mergui Provinces, but in none abundant. It is also a native of China. Its dark brown wood, when seasoned, floats in water. It has a long fibre, tenacity, durability, and sufficient lightness, and is very free from knots. It is used by the Burmese for building, for ploughs, and for utensils of all kinds, and is recommended for handles of chisels, hammers and tools generally.—*Captain Dance, Dr. McClelland. Dr. Mason. Voigt.* 89.

ANCISTROLOBUS MOLLIS.
Yin-bya. ... ... BURM.

This tree is described by Dr. McClelland along with A. Carneus, as plentiful in the Pegu and Tounghoo forests. The timber grows very tall, but seldom exceeds three feet in girth. Wood dark brown.—*c MClelland.*

ANCLA. SP. Anchor.

ANCORA. IT. Anchor.

ANCRE. FR. Anchor.

ANCUSA. IT. Alkanet.

ANDALUSITE, is said to occur in the slate strata near the granite East of Tavoy.

ANDA GOMESII. JUSS. A tree introduced from Brazil to the Calcutta gardens with small white sweet scented flowers.—*Voigt.*

ANDAMAN ARCHIPELAGO lies on the Eastern side of the Bay of Bengal. It consists of three principal islands, which give the name to the group together with smaller islands and rocks lying in and near the meridian of 98° E. and comprehended between the parallels of 10° 25' and 15° 0', N. Preparis Island is the most northern of the group. The Great Coco, 6 miles long and 2 miles broad, is 45 miles distant from Preparis Island, extending from lat. 14° to 14° 8' N. and is in long. 93° 25½' E. The Little Coco is 9 miles to the S. W. of the Great Coco and is 2½ miles long, and about half a mile broad. The Great Andaman, is in reality composed of three islands, which extend from Cape Price in lat. 13° 34' N., long. 93° 9' E. to the S. E. point in lat. 11° 30' N. long. 92° 56' E. in a S ½ W. direction. The Islands are separated from each other by two narrow straits. There are great coral reefs on the western side of the group rendering the coast dangerous. The North Andaman is about 44 miles in length from north to south and 14 in breadth, and Port Cornwallis is on the east side, in lat. 13° 18' N. It is an excellent bay or harbour, about 3 miles broad and extending about six miles into the land in a N. Westerly direction. The middle Andaman is about 50 miles in length from north to south and 15 or 16 in general width. While the south Andaman is about 43 miles in length north to south and from 9 to 15 in width.—These islands were surveyed in 1789 and 1790 by Lieutenant Archibald Blair R. N, who made a circuit of the entire archipelago, and embodied the result of his researches in general charts, plans, and a report containing useful information for mariners. The islands are indented by numerous bays and inlets. Some places may be distinguished afar off by white cliffs, which rise abruptly from the sea. The Islands form part of a volcanic chain which extends from Sumatra to Cape Negrais on the coast of Burmah. The coasts, and probably the inland parts also, are covered with dense jungles of lofty trees, the forests being rendered impervious by tangled brushwood and intertwining creepers and rattans, scarcely pervious, it would appear, even to the wild race by whom the islands are exclusively occupied. In the year 1791, a settlement was formed by the British Government at Port Chatham, near the southern extremity of the Great Island, which is about one hundred and forty miles long, and twenty miles broad. The chief object was the establishment of a naval station, at which ships of war on the Indian station might repair and refresh, the luxuriant growth of the timber trees, and the favourable position of the islands for communication with all parts of India, having led to the selection of the

Andamans for this purpose. The establishment consisted of a few companies of native troops from Bengal, and of a body of convicts from the same place. In 1793, the establishment was removed, at the suggestion of Admiral Cornwallis, to the port at the opposite end of the island, which now bears his name. The establishment was only maintained for a few years longer—the settlement proving so pre-eminently insalubrious that it had to be abandoned towards the close of 1796, but, in the interim, it had been visited by Colonel Symes, when on his voyage to Burmah, on a diplomatic mission, and the interesting description of the inhabitants, which is contained in the narrative of his embassy, is that by which the natives of these Islands were long best known. The Andaman Islands are inhabited by a race of men, the least civilized perhaps in the world; being nearer to a state of nature than any people we read of. Their colour is of the darkest hue, their stature in general small, and their aspect uncouth. Their limbs are ill-formed and slender, their bellies prominent; and like the Africans, they have woolly heads, thick lips, and flat noses. They go quite naked, the women wearing only at times a kind of tassel, or fringe round the middle, which is intended merely as ornament, as they do not betray any signs of bashfulness when seen without it. The men are little above 5 feet in height, 5 ft. 2 and 5 ft. 3 inches, are cunning, crafty, and revengeful; and frequently express their aversion to strangers in a loud and threatening voice, exhibiting various signs of defiance, and expressing their contempt by indecent gestures. At other times they appear quiet and docile. Latterly, they have become quite familiarized to Europeans, but before that they would affect to enter into a friendly conference, and after receiving, with a show of humility, articles presented to them, they set up a shout and discharged their arrows at the donors. On the appearance of a vessel or boat, they would frequently lie in ambush among the trees, and send the oldest one of their gang, to the water's edge, to endeavour by friendly signs to allure the strangers on shore. If the crew ventured to land without arms, they instantly rushed out of their lurking-places, and attacked them. In these skirmishes they displayed much resolution, and plunged into the water to seize the boat; and they have been known even to discharge their arrows while in the act of swimming. Their mode of life is like the brute, their whole time is spent in search of food. They have yet made no attempts to cultivate their lands, but live entirely upon what they can pick up, or kill. In the morning they rub their skins with mud, or wallow in it like buffaloes, to prevent the annoyance of insects, and daub their woolly heads with red ochre or cinnabar. Thus attired they walk forth to their different occupations. The women bear the greatest part of the drudgery in collecting food, repairing to the reef at the recess of the tide, to pick up shell-fish: while the men are hunting in the woods, or wading in the water to shoot fish with their bows and arrows. They are very dexterous at this extraordinary mode of fishing, which they practise also at night, by the light of a torch. In their excursions through the woods, a wild hog sometimes rewards their toil, and affords them a more ample repast. They broil their meat or fish over a kind of girdle made of bamboos; but use no salt or other seasoning. The Andamaners display much colloquial vivacity, and are fond of singing and dancing, in which amusements the women also participate. Their language has been said to be rather smooth than guttural, and their melodies are in the nature of recitation and chorus, not unpleasing. The Editor sat for several hours with two intelligent Andamaners, one said to have been their chief who slew a European and the other his near relative, and was witness to their meeting with others of their tribe, from whom they had suffered a prolonged separation. There has no doubt remained on his mind that their language is very limited as to the numbers of words; during his stay an officer visited them, who was under the impression that he knew words of their tongue. But, he was deceived by that marvellous power to imitate which these people possess, every vocal sound being repeated instantly, and with a wonderful precision. At the moment, this power to repeat accurately foreign words from a strange race, imparted the idea that they understood and could apply such words: But their enunciation of vocables could only be compared to the acts of the ape tribes where a new article is taken up and admired and allowed to drop and break, without the acquisition of any knowledge as to the result of so dropping a frangible material. The two chiefs alluded to had been for two months in the verandah of the guard room for European sailors, but, they had not acquired a single word of the English tongue. This part of their character is noticed by an anonymous writer who says every one, who saw the specimens of those people during their brief visit to Rangoon, found them the most determined imitators possible. Every sound uttered, no matter in what language, was repeated with a distinctness, and even an emphasis by the islanders, that quite surprised the listener. Of course, they could understand nothing that was said to them, but the moment a question was put to one of them, it was instantly repeated with a precision that no European could possibly imitate with respect to a language of which he had previously heard nothing. There was no study whatever in the case. The clear repetition of the words appeared to depend on the keenness of hearing in the islander, and of the readiness with which he could adopt his vocal organs to bring out foreign words. Like all animals, they seem disposed to do mischief on the spur of a moment, but they do not realize any fear of its after consequences. For instance, they will rob a plantation, or even knock over a convict, and half an hour after, they will look as innocent and indifferent of the crime they have committed, as if nothing had happened. In a civilized person, whose conscience is awake to "*good*" and "*evil*," fear instantly seizes the offender, and until he sees what will be the result of his rash act he is naturally apprehensive of its penal consequences.

Their numbers have been estimated at from 3,500 to 10,000 but, the editor estimated the entire tribe at about 1,000. As civilization advances they must gradually disappear or accommodate themselves to the new state of matters. The chances are that a few years hence but few of these poor creatures will remain in their aboriginal state. The Andamaners dance in a ring, each alternately kicking and slapping the lower part of his person ad libitum. Their salutation is performed by lifting up a leg, and smacking with their hand the lower part of the thigh. Their dwellings are the most wretched hovels imaginable. Three or four sticks are planted in the ground, and fastened together at the top in the form of a cone, over which a kind of thatch is formed with the branches and leaves of trees. An opening is left on one side, just large enough to creep into, and the ground beneath is strewed with dried leaves, upon which they lie. In these huts, are frequently found the skulls of wild hogs suspended to the roofs. Their canoes are hollowed out of the trunks of trees by means of fire and instruments of stone, having no iron in use among them, except such utensils as they may have procured from the Europeans and sailors who have lately visited these islands, or from the wrecks of vessels formerly stranded on their coasts. They use also rafts made of bamboos to transport themselves across their harbours, or from one island to another. Their bows are remarkably long and of an uncommon form; their arrows are headed with fishb-ones, or the tusks of wild hogs; sometimes merely with a sharp bit of wood hardened in the fire, but these are sufficiently destructive. They use also a kind of shield, and one or two other weapons have been seen amongst them. Colonel Symes adds, a spear of heavy wood sharply pointed. Of their implements for fishing and other purposes, little can be said. Handnets of different sizes are used in catching the small fry, and a kind of wicker-basket, which they carry on their backs, serves to deposit whatever articles of food they can pick up. A few specimens of pottery ware have been seen in these islands." The Andamaner has the appearance of the small sized Negro race about 5·3 inches high and would seem to be the descendants of the same wave from the West that has left its features in the South of the Peninsulas of India and Malacca, and the Semang and the Negrittos of New Guinea. The Andamans have a climate milder than that of the Tenasserim and Pegu coasts and more resembling that of Colombo or of the low lands of Penang. The range of the thermometer, during the past three years, gives a maximum of 90½° and a minimum of 70° in the shade. In the sun maximum 115° minimum 73°—at 4 P. M.—while the average annual fall of rain was 116 inches. This fall appears to have been distributed over 165 days. Like all insular positions the Andamans seem liable to be visited by hurricanes. The hills on the main land as seen from the clearings appear about 800 feet high, having rich valleys with considerable area of level land, and thence sloping gradually to the sea. After the mutinies of 1857, parts of these islands, Ross Island, Viper Island, and parts of the island opposite Ross, have been cleared and convict settlements formed for the mutineers at Port Blair, Haddo and Aberdeen, with a coast road from Haddo to Aberdeen and to Phœnix Bay, and another to Navy Bay. In these Bays and Coasts, the mangroves abound, and the smell around was malarious. The numbers of convicts have risen to about 3,000 to 4,000 but about 500 from them have endeavoured to escape to what they supposed a neighbouring mainland. These islands have been written up as suitable for colonists, but there is no outlet for produce. The immediate neighbourhood of "Aberdeen" is the spot recommended for intending settlers. Sugar cane of three years growth flourishes vigorously up the sides of the hill. Cotton also thrives as well as "jowarry"—"bajra" and "hemp." Vegetables in profusion are obtained all the year round—on the main land an extensive clearing has been made opposite Ross Island and dignified with the name of Aberdeen. It is elevated about 60 feet above the sea in the form of a table-land. A system of cultivation and nurseries is there carried out though on a more extensive scale. The cocoanut, areca palm, mango, mangosteen, dorian, nutmeg, orange, arrow-root, &c., all promise well, notwithstanding the formidable difficulties they have had to encounter. The general contour of the islands is that of abrupt elevations of 150 feet in height, with sides sloping to the sea beach.—*Horsburgh, Journ.*

The flower of this timber tree has not been seen, and its generic name remains undetermined, but it is supposed to be a species of Sapindus or Nephelium. It is found in the Canara and Sunda forests, above the ghat, chiefly at Nilcoond and in the southern jungles. The wood is serviceable in house building.—*Dr. Gibson.*

ANDHER, a little village 10½ miles S. W. of Bhilsa and 5 miles W. of Bhojpur. It contains remains of Buddhist topes.

ANDHRA. The Andhra or Vrispala dynasty of Andhra (Orissa?) or Telingana is first noticed in the Vishnu Purana which predicts that thirty Andhra Bhritya kings will reign 456 years. Professor Wilson adds in a note that the Vayu and Bhagavata state also 30 kings and 456 years and the Matsya has 29 kings and 460 years. The actual enumeration of the texts gives but 24 names; that of the Bhagavata, but 23: that of the Vayu, but 17. The Matsya has the whole 29 names, thus adding several to the list of 24, and the aggregate of the reigns amounts to 435 years and six months. The first was Sipraka, B. C. 21, a powerful servant of Suserman, and whom [illegible] killed and then founded the Andhra Bh[illegible] dynasty. The last was A. D. 428, Cha[illegible] (or Vijaya last Magadha king, 300 Jones, 546 Tod) Pulomarchish, (Poulomien of Chinese, Wd.) died 648 A. D. Salomdhi, Tod, contemporary of Boppo Rawal of Mewar, A. D. 720?) Professor Wilson arrives at the conclusion that the race of Andhra kings should not commence till about 20 years B. C. which would agree with Pliny's notice of them: but it is possible that they existed earlier in the South of India, although they established their authority in Magadha only in the first centuries of the Christian era and ended in A. D. 436. Chicacole and Rajahmundry were the capitals of the territory, which is now known as Telingana, and also the Northern Circars. Pliny speaks of the Rex Andrarum as a powerful Indian prince. The Andhra Brahmans regard themselves as a distinct race.—*Thomas' Prinsep's Indian Antiquities, p.* 241. *Wilson's Glossary.* See Chalukya: India.

ANDI. A religious mendicant of the Saiva sect in the South of India.

ANDI-PANDOO. అంటి - పండు. Tel. Banana.

ANDKHO. Across the Moorghab, and towards Balk, which city is in the territory of the king of Bokhara, lie the small states of Andkho, Maimuna, Shibbergam, Siripool and Akchee; a connection subsists between them and Herat, but since they are divided against each other, their aid is of small avail. All of them are engaged in the slave trade, and independent, though they send presents of horses both to Herat and Bokhara. *Maimuna* is the most important of the whole: the chief in 1840 was Mizrah Khan, an Uzbek of the tribe Wun, and his country extended from Maimuna to the Moorghab, and adjoins that of Sher Mahomed Khan Huzara. Maimuna itself is an open town, or rather village, of about 500 houses; but the strength of the chief consists in his "ils," or moving population, who frequent Ulmur, Jankira, Sorbagh, Kaffir Killa, Khyrabad, Kusar, Chuckaktoo, Tukht-i-Khatoon, and other sites, which can scarcely be called villages. He also numbers Arabs among his subjects, many of that tribe having been long settled here.

Andkho, or Andkhoee, in 1830, was ruled by Shah Wale Khan, an Afghan Toork, who settled here, with others of his tribe, in the time of Nadir. They were then shiahs, but are now soonees. The "ile" of the chiefs, besides his own race, are Arabs, and he can furnish 500 horse, and is on good terms with Maimuna. Andkho has a larger fixed population than Maimuna, being in one of the high roads to Bokhara, but there is a scarcity of water in this canton. It is here that the wheat is a triennial plant. Andkho is the place where Moorcroft perished.

Shibbergam, belongs to an Uzbek chief, in 1830 named Roostum Khan, who has a character for moderation; he can muster 500 or 600 horse, and is on good terms with both Maimuna and Koondooz. Shibbergam is considered to be a very ancient place, being given to the days of the Kaffirs (Greeks), and still the strongest fort in these parts. The "ark" or citadel is built of brick and mortar, and surrounded by other walls of mud. Kalick Ali Beg, the late chief of Balk, besieged it for seven years without success, but it must only be understood to be strong against Uzbeks, who are badly supplied with artillery. Water is conducted to it from the rivulet of Siripool.

Siripool. Zoolfkar Sher, an Uzbek of the tribe of Achumuelee, governed Siripool, in 1842 known as a brave and determined man. His "ils" are in Sungcharuk, Paogan, Goordewan, and Daghdrab. Siripool itself is as large as Maimuna.

Akhchar is a dependency of Balk, and held by a son of Eshan Khoja, governor of that once vast city.

All of these chiefships are situated in the plain country, which in general is well watered by rills or canals, and has abundance of forage for camels and horses, which are numerous. The soil is dry, but there are many gardens near the towns. The style of building, from a scarcity of wood, is that of the bee-hive shape. There is a good open caravan road from Meshid to Balk, which is a journey of 16 days; thus, from Meshid to Shurukhs, four; to the Monghul, three; to Maimuna, four; and to Balkh in five days. This is much the nearest route to Cabool from the west.—*Burne's Papers. East India, Kabul and Affghanistan, p.* 137. *Papers East India Cabul and Affghanistan, p.* 136.

This valuable plant grows in dry ground, under the shade of trees, and it flowers in the cold season. It is found wild in Ceylon, the peninsula of India, in Bengal, and Java, but it is now cultivated in Tinnevelly. The roots have long been a popular febrifuge and stomachic. It is the basis of the "Drogue amere," or a compound of mastic, frankincense, resin, myrrh, aloes, and creat root, steeped in brandy for a month, and the tincture strained and bottled. It is an annual and, according to Ainslie, was originally brought from the Isle of France. But it is cultivated in Tinnevelly and other districts; and is now found wild in Bengal and probably in the Peninsula. It is the true Chiretta. but it is only one of the plants from which the Chiretta of the bazars is obtained. See Chiretta.—*Voigt.* 493: *O'Shaughnessy, p.* 482 *and Beng. Pharmacopœia* 210. *Indian Annals, No.* 6.

ANDROMEDA FASTIGIATA; the Himalayan heather grows abundantly on Mon Lepcha, at 13,080 feet, and affords a good fuel. Another species A. ovalifolia is named as occurring along with an Ilex.—*Hooker Vol.* 1, *p.* 343.

ANDROPOGON, Eighteen species are given in *Voigt's* Calcutta plants brought together under this from other genera, Anatherum; Phalaris; Anthisteria: Cymbopogon: Calamus : Holcus and Saccharum. Of these 18 species, A. Arundinaceus : A. punctatus, *Roxb.* A. Bladhii, *Retz.* A. Trispicatus, *Roxb.* A. pertusus, *Willd.* A. glaber, *Roxb.* A. Roxburghianus, *Schult.* A. conjugatus, *Roxb.* and A. binatus, *Retz.* are of Bengal. A. Cymbarius, *Linn.* is of the Coromandel mountains, A. Prostratus, *Linn.* of the Indian Peninsula. A. scandens, *Roxb.* of the Indian Peninsula and Bengal and A. Miliformis *Schult* of Lucknow. Andropogon acicularis *Retz.* is now transferred to Chrysopogon. Much confusion however seems to prevail as to the classification of these grasses, which by some are arranged amongst the [illegible]minaceæ, and by others amongst the Panicaceæ. The A. contortus, as also A. aciculatus has been indicated [illegible]ar grass. The following merit separate notice,

ANDROPOGON BICOLOR. Black Joar-

Kala Joar, HIND.

Cultivated in some places near Ajmir. *Genl. Med. Top. p.* 176.

ANDROPOGON CALAMUS AROMATICUS. *Royle.* Its oil is the *Rooya-ka, tel,* Hind. Dr. Royle regards this andropogon as the plant which yields the oil of Nemaur, known in Southern India as the Roosa Grass oil, which differs but little either in appearance or quality from the Lemon grass oil, is used for the same purposes, forms a good substitute for the more expensive cajaput oil, and is sold in England under the name Oil of Rose-scented Geranium. This plant is supposed by Dr. Royle to be the calamus aromaticus of the ancients; yields a volatile oil, erroneously termed oil of spikenard; The true spikenard of the ancients is supposed to have been obtained from the Nardostachys Jatamansi, a plant of the Valerian family. *O'Shaughnessy. Royle. Jur. Rep. M. E.* 626.

ANDROPOGON ESCULENTUM. several species of andropogon, as the genus is described by Roxburgh, are among the most abundant of the grasses of Burmah, one of these Dr. McClelland describes under the name of Andropogon esculentum, or Lemon grass, (Tsablain, Burmese) cultivated in small quantity in every village throughout the country, and to be had in all the bazars. It is a valuable article, and in a dry state might be found profitable for export. Mr. Jaffrey mentions that A esculentum, (*Narthum-pilloo*, Tamil) is used in Madras to perfume water which the people drink, and that a proportionate quantity imparts a pleasant flavour to tea.—*McClelland. Jaffrey. Mason.* See Vegetables of Southern India.

Its oil.

Roosa oil, Roosa grass oil.

A native of the low hills along the base of the Himalayas, at Hardwar and the Kheeree pass and also found at Asseerguh and in Malwah, generally. The roots of this fragrant grass are used by the Natives in northern India in intermittent fevers. In habit and taste it comes remarkably near A. Schœnanthus. The oil is used as a stimulant internally and externally, much in the same manner as oil of cajeput.—Roosa oil, has long been supposed to be the celebrated grass oil of Nemaur, but Dr. Royle, does not recognise the correctness of this opinion and refers the Nemaur oil to the A. Calamus aromaticus It is probable, however, that the several species furnish oils of similar characters. *Roxb.* I. 275. *O'Shaughnessy.* 680. *Voigt.* 707. See Grass Oil of Nemaur.

ANDROPOGON MARTINI. *Roxb.* I. 277.

Syn.

Andropogon calamus aromaticus, *Royle.*

Grass oil of Nemaur		Kubell...	HIND.
Rousa grass Oil...	ENG.		

This plant grows in the Balaghat, in Central India, and northwards to Lucknow and Delhi. It has a strong aromatic and pungent taste, so that the milk and butter and flesh of animals who feed on it are impregnated with it. Grass oil is never taken internally by natives, but they have a great faith in it as a stimulant to the functions of the several organs, when rubbed on externally. They also use it as a liniment in chronic rheumatism and neuralgic pains, and though they place great reliance on its virtues, its expence prevents it being used generally. It has a fragrant aromatic smell, persistent, and very agreeable at first, but after a time the odour becomes unpleasant, and gives many people a feeling of sickness with headache. The natives use it for slight colds; also, to excite perspiration, by rubbing in a couple of drachms on the chest before the fire or in the heat of the sun. The pure unadulterated oil has been used with effect in rheumatism; A spurious article is prepared by distilling sesamum oil in which at Saugor twenty seers of oil, the grass, for which grows wild over the station and district, are mixed with two seers of sesamum oil, and then slowly distilled. The oil thus becomes highly impregnated with the peculiar roosa flavour, and is sold as such at 4 Rs. a seer. It is also known under the names of grass oil and ginger grass oil. It has an odour distinct from that of lemon grass and citronelle. For the 1862 Exhibition, every endeavour to obtain unadulterated oil failed. The best is said to be pressed at Ajmere. *Voigt.* 707. *Roxb.* i. 277. *Cal. Cat. for Ex. of* 1862. *Gen. Med. Topography. p.* 176.

Grows in many parts of India, in every part of the coast, in Bengal, in the south of the peninsula and in Burmah, is cultivated for its roots, which are used for making the fragrant fans and tatties in general use. The grass is used for thatch. It seeks a low rich moist soil, especially on the banks of water-courses. It covers large tracts of waste land in the province of Cuttack. Known generally by its aromatic perfume, it is also locally used as a medicine, for much the same purposes as sarsaparilla. Its roots and oil are used in native medicine for other purposes. Under the name of Khuskhus Attur an essential oil is extracted at Lucknow, from the roots and sells in the Bazaar at 2 Rupees per tola. It is probably merely a perfumed seasmum oil. But the plant grows spontaneously and plentifully in all the jungles of Oudh.—*Roxb. i.* 265. *Voigt.* 706. *Dr. Mason,* 501. *Ainsl. M. Exh.*

There seem to be grave doubts as to the right of this plant to be separated from A. iwarancusa, *Blane,* and A. nardioides of Riddell seems identical. Ainslie says that Wassanapilloo makes a very pleasant tasted tea and valuable diet drink. In infusion, it is a stomachic and it yields an essential oil.—*Ainslie Mat. Ind.* 258. *Voigt.* 707.

ANDROPOGON NIGER: *Kunth.* In 1859 seeds said to be of this plant were distributed throughout India. In 1853, this plant was introduced into France from China, and it became the subject of much discussion among European botanists to determine to which genus it belonged. Kunth named it Andropogonniger. It produces an abundant crop of grain. The husk or rind yields a superb dye of a violet red, a colour which, combined with acids and alkalies, gives a variety of tints, such as deep red, orange red, brown red, &c. This dye has been recently applied to cotton wool and to silk. A rich saccharine juice in the stalk, yields 14 per cent. of sweet extract, of which 10½ per cent. is fit for crystallised and 3½ per cent. for uncrystallised sugar, and all can be made, if wanted, into alcohol. Sugar can be extracted direct from it, in the European fashion; and jaggery can be made by the Natives, which can be refined either in India or in Europe. The Andropogon niger which, in temperate regions takes 4 or 5 months to arrive at its full perfection, will not, it is said, at the utmost take more than 2 or 3 months in the hot regions of India, and four crops a year can be gathered from it; but the plant requires irrigation; such as to be found in the delta of the Godavery, where it is derived from the anicut. Mr. Walter Elliot mentioned that this was known to farmers of the peninsula as the Sugar Sorghum. *Balfour, Madras Museum.*

The Oil.

Lemon Grass Oil. | Oil of Verbena. ?

This plant is a native of Arabia, but is now cultivated in the West Indies, Ceylon, on the North of India, all over Burmah and in the Moluccas, and used for domestic purposes and in the medicine. It grows to a height of three or four feet, its stems infused as tea, or in decoction, are considered aromatic and stimulant and given in colic. Its oil is largely exported from Ceylon where it grows abundantly on the Ambulawe mountain, which overhangs Gampula on the road to Nawera Elia. Almost annually in the dry season, the plant is burned down, but the roots are uninjured and after a few days rain, young shoots burst forth.—*Sirr's Ceylon. Roxb. i.* 274. *Voigt.* 706: *O'Shaugh.* 639. *Bog.* 832. *Ainslie. Dr. Mason. Useful Plants Bombay Products.* See Oil: Thatching.

ANEMONANTHEA. D. C. A genus of the Ranunculaceæ of which A. Falconeri and A. Griffithi occur in the Himalayas, Sikhim and Botan.—*H. f. and Th.*

ANEMONE, or the wind-flower, one of the Ranunculaceæ, contains acrid properties. Some species are cultivated in India as garden flowers, in rich loamy deep soil with much decayed manure. Anemone cernua, according to Siebold, is in high repute among the Chinese as a tonic bitter, under the name of Hak-too-woo—Mr. Fortune says that many species which he imported from China have found their way to the principal gardens in Europe, and when writing in 1846, he mentions that the Anemone Japonica was in full bloom in the garden of the Society at Chiswick, as luxuriant and beautiful as it ever grew on the graves of the Chinese, near the ramparts of Shanghae. Hooker and Thompson, name A. Albana of Central Asia: A biflora, of Baluchistan, Kashmir and Affghanistan A. rubicola of the inner Himmalayas, and Sikhim and A. vitifolia of the Himmalayas generally.—*Fortune's Wanderings, page* 405. *O'Shaughnessy, p.* 160. *Riddell. Hog. Vegetable Kingdom, p.* 14 *Hook. f. and Thom.*

ANEMONOSPERMOS. D. C. a genus of the Ranunculaceæ of which several species occur in Ceylon and the Himalayas. *H. f. and T. p.* 21.

This plant is cultivated in the cold season in Bengal, in the Peninsula, Burmah &c. Its seeds are aromatic and carminative and used by the natives in their curbies and medicinally to relieve flatulence. The best form for adults is probably that of a few drops of the essential oil on sugar, or dissolved in spirit. By distillation the fruits of this and the next species yield a pale yellow volatile oil, sp. gr. 881, soluble in alcohol, ether, and in 144 parts of water.—*O'Shaughnessy, page* 366. *Bombay Products: Vegetable Kingdom,* 377. *Roxb.* ii. 96.

ANETHUM FŒNICULUM. Fennel. See Fœniculum vulgare.

ANGARAVALLI—*S.* అంగారవల్లి. literally Fire climber: Pongamia? Butea? Clerodendron.

ANGDES, Ongdes or Ondes, adjoins Thibet. The inhabitants call themselves Hoongia, and appear to be the Hong-niu of the Chinese authors, the Hun (Hoon) of Europe and India, which prove this Tartar race to be Lunar, and of Boodha. *Tod's Rajasthan, Vol. p. 136.*

ANGELICA ARCHANGELICA, of the north of Europe is grown in India as a flowering plant.

ANGELY, OR ANGILICA, according to Edye, the Malayalam and Tamil name of a tree which grows to two and a half and three feet in diameter, and from fifty to sixty feet high. He describes it as used for large canoes and snake-boats, and, if kept oiled, as very durable. Also, as used for planks, for native vessels, in consequence of its being very tough, and well fitted to hold the yarns where the planks are sewed together, which is the case with all the flat bottomed boats on the coast, where there is a surf on the beach, as at Madras, for the massula boat; at Mangalore and Calicut, for the manchee boats, &c.; and many of the pattamahs are fastened by paddings of coir on the joints of the planks &c. Its Tamil synonim seems to be Assanpela maram. Dr. Wallich names the Angelly wood, the Artocarpus hirsuta, and it is described in Useful Plants as A. hirsutus. Lam. *Eyde, Malabar and Canara.*

ANGRIA, about the middle of the 17th century, Kanojee Angria, who had been a Mahratta soldier, was made governor of Severndroog. He soon assumed independence, obtained possession of nearly all the Mahratta leet, and conquered territory on the mainland. He even took vessels of war, belonging to the English, French and Dutch. Against his successors Tulji Angria, in 1754, the Bombay Government failed in an expedition, which hey sent out, but Severndroog was subsequently reduced by commodore James. Though up to his time, they had swept the Indian seas with impunity.

ANGULI TORANA TRIPUNDRA, a worshipper of Siva.

ANOLA. HIND. Myrobalan.

ANHILWARRA, the dynastic name of three races that ruled in Guzerat from A. D. 696 till A. D. 1309, when Guzerat was annexed to Delhi by Ala-ud-din Mahomed Shah. The name of these dynasties was taken from the town Anhilpoor, which rose to great distinction as a commercial site and with Cambay as its seaport, was the Tyre of India. At its height, Anhulpoor was twelve coss (or fifteen miles) in circuit, within which were many temples and colleges; eighty-four *chaoks*, or squares; eighty-four bazaars, or market-places, with a mint for gold and silver coin. Col. Tod thinks it not unlikely that the *Chaora*, the tribe of the first dynasty of Anhulwarra, is a mere corruption of *Saura*; as the *ch* and *s* are perpetually interchanging. The Mahrattas cannot pronounce the *ch*; with them *Cheeto* is *Seeto*, &c. The Saura princes of Deo and Somnath, he thinks, in all likelihood, gave their name to the peninsula of Guzzerat.—*Tod's Travels, p.* 147, 152, 156. *Tod's Rajasthan, Vol.* 1, *p.* 31. See Guzerat; Kalmuk; Kattywar:

ANIMAL CHARCOAL prepared from bones, is used to a considerable extent in India as a filtering material, for clarifying oils, and in the processes of sugar refining. When pur it should not effervesce on the addition of muriatic acid.

ANIMAL FOOD. Its use is not absolutely forbidden to the priests of Buddha and the followers of this faith use enormous quantities of fish, reptiles and crustacea. Even the more strict of them, though they may refuse to take life for food, eagerly use meat, when they can get animals killed for them or find them dead from accident or disease, and the cow, buffalo, tiger and horse, are all used in *Burmah, tiger flesh* selling for five annas a pound. The hindu brahman, rajput and vesya, as a rule, will not eat animal food, and no hindu can eat the cow without ceasing to be of the four hindu castes but all sudra hindus eat goats, fowls, mutton, and the servile pariah races eat nearly all quadrupeds.—*Hyder. Ed.*

ANIMAL OILS are in frequent use, as medicinal substances, amongst the people of India, for external application : such as that from the pea fowls fat, from the neuts foot, the crocodile and the iguana.

ANIME, a gum resin, imported to some extent into India and China. It is the product of the Hymenæa courbaril, the Courbaril locust tree, of South America, which has been introduced from South America, into the Tenasserim Provinces and is easily propagated. This gum resin is of a pale brownish colour, and is met with in commerce partly in translucent and somewhat unctuous grains or tears, and partly in large brittle masses. But the commercial article is doubtless the product also of the Vateria indica or Gum copal tree, and the V. Roxburghii, which yield almost a precisely similar resin. For ordinary purposes, these may be used indifferently; but where purity is demanded, copal is almost insoluble, while anime is wholly soluble in alcohol.—*Honble. Mr. Morrison's, Compendious Description, Drs. Mason : O'Shaughnessy, Faulkner. Vegetable Kingdom* 287. *Poole.* See Vateria, Gums and Resins.

ANIMISHA. SANSC. The hindu gods are supposed by the hindus to be exempt from the necessity of winking their eyes. Hence a deity is called *Animisha*, one whose eyes do not twinkle. There are other marks which distinguish divine from mortal b[illegible]. They cast no shadow, they are exempt from perspiration, they remain unsoiled by dust, they float on the earth without touching it, and the garlands they wear stand erect, the flowers remaining unwithered.—*William's Story of Nala, p.* 248.

ANIMUS, LATIN, the breath of life breathed into man's nostrils, is the Rauch of the Hebrews, the Ruh of Arabia, and among the Greeks, Animus, Anima and Spiritus being the terms amongst the Romans. In their designation of the various prophets, mahomedans style Moses the Kalam-Allah, the word of God. Abrahim the Kalil-al-Allah, friend of God, and Jesus Christ is the Ruh-Allah, the Spirit of God. In this view, it identifies the everlasting soul, with the Holy Spirit and the breath of life. The New Testament indicates three, soul, spirit, and life, but in English there is no settled mode of speaking of these three, for a man is said to die; in a shipwreck, every soul is said to perish, and a person ceasing to live is described as departing, the mahomedan passing away and departure.—*Ed.*

ANIMALLY, literally elephant hills, a mountain tract in the collectorate of Coimbatore, in the southern part of the peninsula of India. The mountains are covered by valuable forest trees, which at one time were worked with an annual profit of about Rs. 50,000, and there are many beautiful woods suited for turnery. The wild animals are the elephant, tiger, leopard, bear, hyena, wild dog, bison, sambur, spotted and barking and hog deer: also the wild goat. They are occupied by a race of hill-men the Karder, open, independent, straight-forward men, simple and obeying their Mopens or Chiefs implicitly. They are strong built, active, with woolly hair and something of the African features, and file their front teeth to a point. The women wear enormous circles of pith in the lobes of their ears, which they distend down to their shoulders. A black monkey is their greatest dainty.—*Lt. Col. Hamilton, in literis.*

The Star Anise is the fruit of the Illicium anisatum of Linnæus, a shrub or small tree, which grows in several places in the South Eastern parts of Asia, in China, Japan, the Philippines, and the countries extending from China to Japan from 23½° to 35 N. L. The name is given from the clustering star like form assumed by the capsules or pods, five to twelve in number, joined together at one end and diverging in rays, generally five. These are used all over the East, as a condiment. They are prized for the volatile oil obtained from them, and for their aromatic taste. The barks have a more aromatic flavour than the seeds, but they are not so sweet. In China, their most common use is to season sweet dishes: In Japan they are placed on the tombs of friends and presented as offerings in the temples. They are chiefly exported direct to India, England, and the north of Europe, at the average value of 8½ dollars per picul. In 1850, 695 piculs were exported from Canton, valued at 8,200 Spanish dollars. In India they are much used in seasoning curries and flavouring native dishes, and large quantities are used in Europe in the preparation of liqueurs. 3,000 piculs of anise are exported annually from Cambodia, and, in 1848, 81 piculs of oil of Aniseed, valued at 11,900 dollars were exported from Canton. In preparing a spirit of anise, the Star Anise, may be used instead of common anise. In England, it is from this fruit that the oil of anise is prepared, and it imparts the peculiar flavour of the Anisette de Bourdeaux.—*Morrison. Simmonds. Faulkner. O'Shaughnessy. Beng. Anklets of gold, silver, brass, copper, deer horn, the metals being solidly massive and as chains, are in use in all eastern countries, amongst hindus and mahomedans. Occasionally a grown man of the hindus may be seen with a small gold or silver ring but in general they are restricted to women and children. The custom has doubtless been through all ages, and they are alluded to in Josh. xiii, 16: Is. iii, 16 and 18. In some cases those of some of the hindus are inconveniently massive, and heavy rings, usually of silver set with a fringe of small bells, are often worn by hindu ladies. Allusion is made to a tinkling with the feet. Hindoo women wear loose ornaments one above another on their ankles, which, at every motion of the feet, produce a tinkling noise. *Toy Cart.*

ANNA PURNA DEVI, a goddess in hindu mythology. In the modern representations of this beneficent form of Parvati, she is described as of a deep yellow colour, standing, or sitting on the *lotus*, or water-lily. She has two arms, and in one hand holds a spoon, in the other a dish. In her dress she is decorated like the other modern images of Durga. Anna Purna is a household goddess, and is extensively worshipped by the hindus. Her name implies the goddess who fills with food, and they believe that a sincere worshipper of her will never want rice. She is possibly the Anna of Babylon and she has been considered as the prototype of the Anna Perenna of the Romans, whom Varro places in the same rank with Pallas and Ceres, and who was deified and held in high esteem by the Roman people, in consequence of having supplied them with food when they retired into Mount Aventine. Besides the great similarity of names, there is a singular coincidence in the times of their worship, the festivals of Anna Purna taking place in the early part of the increase of the moon in the month Choitru (partly in March,) and those of the Roman goddess on the Ides of March. In India, she is known simply as Anna, also as Anna Purna, or Anna Devati. In his hymn addressed to her by the Rishi Agastya, she is personified as Pitu or material food. ANNA PURNA is SANS. from ănnă, food, and pōōrna full. Another word is ănna, food, and prashana, feeding. See Cyc. of Ind. Supp. ii. Art. Hindu. p. 263: Inscriptions 376. Colem. Myth.

ANNASO. IT. Pine Apple.

ANNEE, a Tibetan nun.

ANNELIDA, of Cuvier, from annulus a ring, as an example of which the ringed form of the common earth worm may be indicated. The leeches, the Hirudinidæ, are numerous throughout the hot moist parts of Asia. The Planaria also occurs, near Madras.—*Eng. Cyc. Mad. Lit. Journ.*

Sheri manu... ... TEL.

This timber tree grows at Chillau Islamabad, in the Kennery jungles, the valleys of the Concan rivers near their sources, the inland Dekhan hills, and in the Dehra Dhoon. The timber, if kept dry, is good and durable. Near the Godavery, the wood is said to be one of the hardest in the forests. It grows to an enormous size. Axles of carts are generally made of this wood. *Roxb.* ii. 442. *Voigt.* 38. *Captain Beddome.*

ANOINTING, a form of installation, which is practised in England but seems to have been of Eastern origin, derived perhaps from the Assyrians. It is the "*masah*" مسح of the Arabs, hence the hebrew Messiah. In Rajputanah "*anointing*" appears to have been, in all ages, the mode of installation. The unguent on this occasion is of sandal-wood and *atr* of roses made into a paste, or very thick ointment, of which a little is placed upon the forehead with the middle finger of the right hand, and then the jewels, the aigrette and necklace are tied on. Amongst the earliest notices of this ceremonial is that in Genesis xxviii. when Jacob rose up early in the morning, and took the stone that he had put for his pillow, and set it up for a pillar, and poured oil upon the top of it. The bramhuns anoint thei[redacted]e images with oil before bathing, a nt them with sweet-scented oil. robably arises out of the customs os, and is not necessarily to be refe o their idolatry. Anointing *persons*, as an act of homage, has been transferred to their idols. There are resemblances betwixt the Jewish and hindoo methods of and times for anointing. Oil is applied to the crown of the head, till it reaches all the limbs, it is called abhyanga, which is noticed in *Psalm.* c. xxx. iii. 2. 'It is like the precious ointment upon the head, that went down to the skirts of his garment.' Again, we are told in *Mark* xiv. 3, that there came a woman, having an alabaster box of ointment of spikenard, very precious; and she brake the box, and poured it on his head; and pouring sweet-scented oil on the head is common amongst hindus. At the close of the festival in honour of Doorga, the hindoos worship the unmarried daughters of bramhans, and amongst other ceremonies pour sweet-scented oil on their heads. Amongst the hindus, the ceremonial is attended to after sickness, which *Psalm* xiv. 7, mentions thus: 'the God hath anointed thee with the oil of gladness.' And hindus, fasting, in sickness, or sorrow, abstain from the daily anointing of the body with oil, and again anoint on recovery as 2 *Samuel* xii. 20, where 'David arose from the earth, and washed, and anointed himself, and changed his apparel, and came into the house of the Lord, and worshipped.' Bathing, anointing the body with oil, and changing the apparel, are, among the Hindoos, the first outward signs of coming out of a state of mourning, or sickness.—*Tod's Rajasthan, Vol.* ii, *p.* 568.

ANOLA, HIND. آنولا Fruits of Emblica officinalis, the Emblic Myrobalan or Phyllanthus emblica. It is roundish, blackish, grey, very wrinkled, obscurely six-sided ; nut three-celled, each shell with two shining seeds—*O'Shaughnessy.*

ANOMADASSA, according to the Singhalese buddhists, a Budha previous to Gotama. —*Hyder's Eastern Monachism, p.* 433.

Hooker and Thomson describe 123 species. They are all trees or shrubs, with a powerful aromatic taste and smell, furnishing esteemed edible fruits, of which the custard apple, soursop, sweet sop, and bullock heart may be named.—*Voigt,* 13. *H and T.*

ANONA CHERIMOLIA. MILL. A tree of Peru, with a succulent fruit of a dark purple colour containing a soft sweet mucilage, and much esteemed by the Peruvians. It was introduced into India in 1820.—*Riddell. Voigt,* 14.

ANONA MURICATA, *Linn.* The Soursop tree of the West Indies is cultivated in India, and Tenasserim, and has large yellowish green flowers with a vinous smell. The fruit, resembles the custard-apple, ripens in March, and bears only once a year. It grows to about the same size as the bullock heart, is of a greenish colour when ripe, and has a rough thorny appearance : the flavour is very peculiar, differing from the other species of the Anonaceæ ; the scent resembles that of black currants ; the seeds are similar to those of the custard-apple. The wood is inferior.—*Riddell. M. E. Juries' Reports. Voigt,* 14. *Hook. f. et T. p.* 114. *Vegetable Kingdom,* 28.

ANONA RETICULATA. *Linn.*

This fruit tree derives its specific and English names from the appearance of its dark brownish and red fruit. It is to be met with in all parts of the tropics and grows to a large size. It ripens in the autumn, but it is soft sweetish and pulpy and is not much esteemed by Europeans.—*Ainslie,* 232. *Drs. Riddell and Mason. Bombay Products. M. E. J. Reports. This small tree with its delicious fruit, grows freely, even wild, in tropical parts of the south-east of Asia, though originally from tropical America. It grows wild near Hyderabad in the Dekhan. The fruit is wholesome and pleasant, and being perfectly free from acid may be given to such delicate people as dare not venture on others of a different nature. It is delicious to the taste, and on occasions of famine, has literally proved the staff of life to the natives. It was cultivated in Pegu in the Burmese time to a great extent, and with much success, on the slopes of the hills about Prome on both sides of the river. Since British occupation of the country, these plantations have fallen into neglect, and supplies of the fruit are furnished to a much more limited extent, as the plants now receive no care ; the fruit will soon become scarce. This and similar sub-acid fruits form a considerable article of food to the Burmese, to whom they serve as a substitute for flesh-meat, being eaten with rice as an ordinary article of their daily provisions. The tree when cultivated and pruned during the hot season, produces fruit afterwards of double the usual size. The leaves have a disagreeable odour, and the seeds contain an acrid principle fatal to insects, on which account the natives of India use them powdered and mixed with the flour of gram (Cicer arietinum) for washing the hair." A few leaves and some seeds put into a bed infested with bugs have been said to dispel these pests immediately.—*Royle. Gibson. &c. quoted in Useful Plants. McClelland. Riddell. Crawfurd.—Ainslie, p.* 232.—*Malcolm's Travels in South Eastern Asia, V.* 1. *p.* 180. *Voigt,* 14. *Hook. f. et Thomson* 115. *Cal. Cat. Ex.* 1862. *Bombay Products.*

ANORATHA, also called ANORATHA SAUMEN. He established buddhism at Pagau in Burmah, and built all the temples there.—*Fule p.* 9. See Pagan.

ANŒTOCHILUS SETACEUS. Wanna Raja, Singh, king of the forest. A Ceylon Orchid.

ANOU, SUMATRAN. Gomuto.

ANS. HIND. Terminalia tomentosa. *W and A.*

ANS, a tribe of Arabia in the time of Mahomed. See Aswad.

ANSA, SANSC. Portion.

ANSANA, SANS. Portion of a portion of Krishna, as Paramatma, or supreme spirit. See Chaitanya.

ANOSPORUM MONOCEPHALUM. *Nees,* one of the Cyperaceæ, is Roxburgh's Cyperus monocephalus and the Gothoobi of Bengal.

ANSER, the goose, the hans of India, of which species A. Cygnoides : A. Cinereus : and A. brachyrynchus are known in India and the Punjab. Dr. Hooker mentions that A. Indica occurs at Siligori. The domestic goose of India is a hybrid between A. Cygnoides and A. Cinereus.—*Hooker's Him. Journ : Vol.* i, *page* 399. *Catal. Cal. Museum.* See Cygninæ. Goose.

ANSER CYGNOIDES, see Pelicanus inflatifrons.

ANSTRUTHER, C. B., Major General Philip, of an old Scottish family, an officer of the Madras artillery from 1825 till his retirement from the service. His chief efforts in early life were directed to the introduction of iron gun carriages, to the reduction of the weight of guns. He joined the army engaged in the China war of 1841 and at Chusan was taken prisoner by the Chinese and detained for six months. Was at the taking of Amoy, re-capture of Chusan ; the battle of Chin-hæ, the attack on Woosung, at Chapoo, Ningpo, Tsekee, Shanghæ and Chinkiangfoo. He served as Lord Gough's aid-de-camp at the battles of Chillianwallah and Goozerat, and subsequently under Sir Harry Smith in Kaffirland. He subsequently served under Sir Scudamore Steel, K. C. B., in the second Burmese war.

ANSUS, [illegible] of [illegible] the Eastern Archipelago, [illegible] an island [illegible] Iaris, inhabited by Papuans. Their houses, built on posts, are placed entirely in the water. At very low water only is the beach partially uncovered. This beach consists of mud, in which the mangroves grow luxuriantly and completely obstruct a landing. The gardens from this cause, are situated on the surrounding islands, principally on an island with a high beach lying opposite to the kampong. The Ansus Papuans wear their hair in tufts. Their appearance is good natured, faces regular, eyes beautifully black, the mouth broad with beautiful regular teeth, and the forehead high but narrow. Many have thin lips and finely curved noses, which give them a more European physiognomy. The men are generally handsome and well formed, stout, without being too thick, strong and muscular ; the women very good looking ; and some children with very regular soft faces, and long pendant curling hair.—*Journal of the Ind. Arch. June* 1852, p. 330-1-2 and 3. See Abeta : Papuan.

ANT. ENG.

Ants have attracted attention from the earliest ages, on account of the singular economy and extraordinary industry, manifested by the different species. This has been more particularly the case in the colder countries of Europe, for of the numerous races of the South East of Asia, not one takes any interest in the field matters of natural history. It is probable that numerous ants will be discovered. Mr. Jerdon, a Madras Medical Officer, in a series of papers in the thirteenth volume of the Annals of Natural History described forty-seven species of ants in Southern India. But M. Nietner of Ceylon recently forwarded to the Berlin Museum upwards of seventy species taken by him in that island chiefly in the western province and the vicintty of Colombo. Mr. Jerdon in the Madras Lit. Soc. Journal gives the following species found in Southern India, he arranges them according to St. Fargeau, who, in the 1st volume on the Hymenopteres in the Suites a Buffon, divides ants into four tribes, viz :—1st Tribe, Les Myrmicites, females with a sting. 1st segment of abdomen of 2 knots. This includes the following genera, 1st Cryptocerus. 2nd Atta. 3rd Ocodoma, differing from Atta in its larger head, and the presence of spines. 4th Eciton. 5th Myrmica. 2nd Tribe, Ponerites, females with sting. 1st segment of the abdomen of one knot only. It includes the genera Odontomachus and Ponera. —3rd Tribe, Les Formicites, females without a sting. 1st segment of the abdomen of one knot only, and it contains the genera *Polyergus* and *Formica.*—Many Indian ants cannot be well referred to any of these genera, but as it is probable that some new genera have been formed by recent writers, Dr. Jerdon, in general, contents himself with referring [illegible] of his species to one or other of those here characterized, and remarks, that following the arrangement of St. Fargeau, we have first the tribe of *Myrmicides* and the first genus mentioned by him. Cryptocerus, being American exclusively, we come to the genus *Atta* of Lattreille, from which St. Fargeau has separated *Ocodoma,* the chief distinction being the spines which exist either on the head or thorax of the latter, which moreover is said to have the head of variable size, whilst in Atta it is said to be usually not of a large size. We have in India species apparently belonging to both groups which he describes.

TRIBE, MYRMICIDES. Gen. *Atta*. He possessed 6 species of ants, all of small size, which appear to belong to this genus, having a sting, two knots in the first segment of the abdomen, antennæ not concealed in a cleft, thorax without spines, and short palpi.

Atta minuta, new species. *Worker* barely 1-12th of an inch long, head oblong. This minute species makes a temporary nest in various situations, in an empty box, between the back of a book and its leaves even among the loose pages of a book, in an empty shell, &c., &c. Nothing is used in its construction, a shelter from the light merely being sought for. It is not perhaps very numerous in individuals, one wingless female is generally found in the nest. It is very common in the Carnatic and most of India, but not seen in Malabar. It appears to prefer dead animal matter to saccharine or vegetable products.

Atta destructor, new species. *Worker* about 1-10th of an inch long, head oblong, not so long in proportion as in the last; eyes small, colour rufous, abdomen glossy brown. They live in holes in the ground, or in walls, &c., and are very numerous in individuals. They prefer animal to vegetable substances, destroying dead insects, bird skins, &c., &c., but also feed greedily on sugar. They are common in all parts of India, and often prove very troublesome and [illegible]uctive to the Naturalist.

Atta domicola, new species. *Worker* about 1-6th of an inch long, head oblong; eyes moderate size, head, thorax, and legs, deep red brown, abdomen blackish. This species of ant does not seem to be common, only hitherto procured at Nellore in a hole in a house, and only one kind of individual seen.

Atta rufa, new species. *Worker* 1-8th to 1-6th of an inch long, head short, oblong; eyes rather small, medial; of an uniform glossy rufous colour, with the end of the abdomen somewhat darker. *Warrior* variable, about $\frac{1}{4}$th inch long, head large, very square. Female about 7-24th of an inch long. It is very common in Malabar, also found in the Carnatic: in holes under ground, about gravel walks, mud walls, and often appears in houses, coming through a hole or crevice in the floor, or wall. From a colony of them, every now and then, vast numbers of the winged females (and males) issue forth just before sunset attended as far as the window by swarms of the neuters of both kinds. Its favorite food is dead insects and other matter, but it also carries off seeds like the Ocodoma, chaff, &c., &c. It stings very severely, leaving a burning pain that lasts for several minutes.

Atta dissimilis, new species. About 1-10th of an inch long, head oblong, abdomen long, oval, colour blackish throughout. This Ant found in small numbers on trees in Malabar.

Atta floricola, new species. *Worker* not 1-17th inch long; thorax and legs dark rufous, head and abdomen glossy dark brown. This very small ant, in small numbers on flowers and leaves at Tellichery, and it appears to feed solely on vegetable secretions.

Gen. Ocodoma. Ants extremely numerous over all India, and comprising several species very nearly alike and probably confounded together by many. Almost all the species have two kinds of neuters, one of them of very large size compared with the ordinary Workers, and which are usually called Warriors. Some points in the history of the food economy of these ants have caused much interest among Naturalists at home. The chief distinction of *Ocodoma* from *Atta* consists in the former having some small spines on the thorax.

Ocodoma Malabarica, new species. *Worker* $\frac{1}{8}$th of an inch long, head oval, eyes moderate, head, thorax and legs, rufous, abdomen blackish; legs long. *Warrior* $\frac{1}{4}$th of an inch long; head enormous, rugose, striated, deeply notched behind; eyes minute, antennæ, legs, and abdominal pedicles rufous, the rest of the body blackish. This species of Ant appears to form a link between the two Genera *Atta* and *Ocodoma*, as shown by the rudimentary state of thoracic spines; found chiefly about houses, it runs rapidly, lives also on insects and other animal matter, and on sugar, bread, &c.

Ocodoma providens. (*Sykes*)? *Worker* about $\frac{7}{8}$th of an inch long; head somewhat *ovate*, *bulging* slightly at the sides, and narrowed behind. *Warrior* with jaws pointed and finely toothed; thorax very rough; length $\frac{1}{4}$ inch, head large, otherwise similar. They live under ground, making, for their size, a large series of excavations. Their common food animal matter, dead insects, &c., &c., which they take readily, but they also carry off large quantities of seeds of various kinds, especially small grass seeds, and more especially cabbage, celery, raddish, carrot and tomato seeds, but are particularly partial to the light lettuce seeds, and in some gardens, unless the pots in which they are sown be suspended, or otherwise protected, the whole of the seeds sown will be removed in one night. Packets of seeds (especially lettuce) in a room will be completely emptied before aware that the ants have discovered them. They bring the seeds outside their holes, at the close of the rainy season, but in some cases merely the husks, quite in heaps. Their galleries and subterranean passages are often very extensive, and it is no easy matter to dig down to their nest to see what becomes of the seeds.

Ocodoma diffusa, new species. *Worker* about $\frac{1}{8}$th of an inch long; head somewhat oval, head, thorax and legs rufous; abdomen brown. *Warrior* $\frac{1}{4}$th inch long, jaw strongly toothed. This species appears to be spread over most of India, and has similar habits to the last.

Ocodoma diversa, new species. *Worker* about 7-48th of an inch long, head oblong, head, thorax and legs dark marroon, abdomen blackish. *Warrior* nearly ½ inch long, head very large, procured in the Wynaad where it is not uncommon. The difference between the *worker and the Warrior is greater than in any other* Indian species.

Ocodoma affinis, new species. *Worker* ⅛th of an inch long; head nearly square, almost smooth, of head, legs and thorax rufous; abdomen dusky. *Warrior* nearly 7-16th of an inch long. This ant is very common in Malabar; is nearly allied to, but differs from, *Ocodoma diversa* in the toothed jaws of the Warrior,' &c., &c.

Ocodomo minor, new species. *Worker*, length about 5-48th of an inch, entirely rufous, head oblong. Female 5-8th of an inch long, head, nearly square. On one occasion, only, found a single individual presumed to be the female, which had lost her wings, under a stone in a garden at Tellicherry, surrounded by numerous workers, who were busy tending her, and removing some eggs or larvæ. The female of this genus, is well characterized by its large eyes, and ocelli.

Ocodoma quadrispinosa. new species. *Worker nearly* 1-8*th of an inch long, head smooth; eyes small; head, legs, and thorax dark rufous, abdomen blackish brown; found during the* monsoon forming a small temporary mud abode round the head of flowers abundant in Malabar. It appeared to be feeding on the vegetable secretions surrounding the seeds. Of these seven species of Ocodoma, the first and last are very distinct from all the others, the first by having only rudimentary spines, and the last by having four spines instead of two. *Ocodoma minor* is readily distinguished by its smaller size; and the other four are most readily distinguished *inter se*, by the jaws of the Warriors, which in No. 10 is entire; in 11, with two teeth at each angle, in 9 with moderately strong teeth throughout its extent; and in 8, with the jaw very finely toothed.

Gen. Eciton. The characters of this genus are thus given by St. Fargeau. "Antennæ " entirely free, head elongated, and the thorax " without spines; maxillary palpi long, of 6 " joints; jaws linear; wings unknown."

Eciton? rufonigrum, new species. *Worker*, length about 11-24th of an inch; head square; thorax, legs, abdominal pedicles and antennæ rufous, head and abdomen black. This ant is very common in the Carnatic, less so in Malabar. It makes its nests in holes of trees, old palings, bamboo rafters and such like; it does not care for sweets, is never seen on flowers, but devours dead animal matter. It stings very severely.

Eciton nigrum, new species. *Worker*, length 9-24th of an inch, head long, eyes large. Colour uniform black. Female, length 11-24th of an inch, differs from the Worker only in having wings. This ant like the last is rare in Malabar, but tolerably common in parts of the *Carnatic; it has the same habits as the last*, living in holes of trees, &c., and feeds in the same manner. On cutting open a dead branch on which they had formed their nest, many winged females, and larvæ and pupæ were found in different states of development.

Eciton rufipes, new species. *Worker*, length 11-48th of an inch; head oblong; eyes very large, slightly advanced; abdomen black, with rufous legs; found this species on one occasion under a stone in the Salem district, and know not if it has the dendrophilous habits of the two last.

Eciton minutum, new species. *Worker*, about 1-6th of an inch long, black throughout, very slender; found both in the Carnatic and in Malabar, almost always on trees, but not known if it has its nest in holes of the wood or otherwise. Though scarce in individuals, it is by no means rare.

Gen. Myrmica. Gen: Char: Antennæ sufficiently exposed; head triangular, without spines; *maxillary, palpi long, of six joints: jaws triangular; three cubital cells in the upper wings; the third incomplete, &c.*

Myrmica diffusa, new species. *Worker*, rather more than 1-9th inch long; head and body rufous; abdomen dark glossy brown. Female—length 5-12th of an inch; wings not so long as abdomen. Male—head very small, eyes large; length 1-7th of an inch. A well known and widely diffused species, being found throughout India. It makes its nest in holes in branches of trees, runs with its abdomen turned upwards almost over its head, especially when excited, and feeds on honey and other vegetable secretions. Occasionally they appear to form their nest among the roots of moss, orchideæ, and various epiphytic plants; at least this is the case in Malabar. It is very pugnacious, and bites very severely, not appearing to use its sting much.

Myrmica rufa. *Worker*, length 9-48th of an inch, entirely a rufous colour. This is a very closely allied species, and is found in the same localities as the last. Its habits are similar.

Myrmica Kirbyii. *Sykes*? head, thorax and legs dark maroon; abdomen, dark brown. Length 7-48th of an inch; found chiefly in the elevated forests of the Wynaad. It forms a considerable nest of some papyraceous materials, usually of an oval form, and placed on a small branch which supports it. It is numerous in individuals, countless swarms issuing from it on being disturbed and boldly attacking the assailant both with teeth and sting. It feeds on honey of flowers and other vegetable secretions.

Myrmica fodicus, new species. *Worker*, length 4-12th of an inch; head, thorax, legs and abdominal pedicles maroon colour, abdomen shining brown. *Female*, head rather smaller proportionally. *This is one of the most common* and abundant ants in Malabar, not seen in the Carnatic. It seldom enters houses, but otherwise appears to take the place of *Fomica indefessa* which is not found in Malabar. It feeds chiefly on honey and other vegetable secretions, but also will take dead animal matter. It also occasionally feeds on the secretions of the…… …and is also found in the train of caterpillars feeding on leaves. It makes large excavations under ground, generally having the entrance round the trunk of a tree, and it forms considerable heaps of fine earth round the mouth of the nest. It runs, unlike the last species, with its abdomen turned downwards under the abdominal pedicles. It appears to form the type of a very distinct group from the last.

Myrmica ? tarda, new species. *Worker*, length 1-6th of an inch ; head, thorax, legs, abdominal pedicles, brick-red ; abdomen dusky, dark blue. This is a very curious looking ant. It is found both in the Carnatic and Malabar, [illegible] in holes in the ground in small societies, and *feeds on vegetable secretions. It* moves very slowly.

Myrmica ? cæca, new species. Ocodoma ? *Worker*, length 1-5th of an inch ; head, thorax, and legs reddish brown ; abdomen glossy brown; found once under a stone in the Wynaad.

2nd Tribe. Ponerites.

Odontomachus rufus, new species. *Worker*, length 1-4th of an inch ; head, thorax and legs rufous ; abdomen, dark brown. Obtained under stones in a jungle in the Salem district, also in the Wynaad, which may be the warrior of this species—if the society consist of different individuals. It is 11-24th of an inch long.

Harpegnathos, new genus. Gen : Char : Jaws scythe shaped, pointed, and finely serrated ; head oblong.

Harpegnathos saltator, new species. *Worker*, 1-6th of an inch long ; head long, head and abdomen blackish brown, thorax and legs rufous.—Length 3-4th of an inch. Seen in Tellicherry and in other parts of Malabar. Also found in the Mysore country, the name *saltator* from its power of making most surprising jumps which it does when alarmed or disturbed. It is very pugnacious, and bites, and stings very severely. It makes its nest under ground, generally about the roots of some plant. Its society does not [illegible] of many individuals. It appears to feed [illegible]ts, which it often seizes alive.

Gen. Ponera, Lat. Its generic characters have been given above.

Ponera zculpta. *Workers*, length from 5-17th of an inch to nearly ½ an inch. The commonest ant in Malabar, from the level of the sea up to the top of the Neilgherries. It lives in the ground in small societies, often making its nest in a flower pot, occasionally under a large stone. It does not work in concert, being *generally seen solitary. It lives on animal substances, but apparently will also take vege*table matter, and fight for a ripe seed of the Lantana.

Ponera stenocheilos, new species. *Worker*, length 3-8th of an inch ; legs long ; colour dingy greenish brown, very rare in Malabar.

Ponera processionalis, new species. *Worker*, length 1-3rd of an inch ; colour shining black, met over most of India. It lives in the ground in very numerous societies, is most frequent in jungly districts. Occasionally a vast column of them, 3 or 4 deep, may be seen crossing a road, and I have traced the column for 40 and 50 yards. It stings very severely.

Ponera affinis, new species. *Worker*, length 1-3rd of an inch ; abdomen oval, colour dingy black, procured once in Malabar.

Ponera rufipes, new species. *Worker*, length 9-16th of an inch : antennæ, legs, and end of abdomen dark rufous ; rest of the body dull black, procured on one occasion in Malabar.

Ponera pumila, new species. *Worker*, length about 1-5th of an inch : dull black, with rufous legs and antennæ, in Malabar, where it is rare.

3rd Tribe Formicites. The last family containing those ants that have no sting, and the abdominal pedicle of one knot only. It comprises two genera, Polyergus and Formica.

Gen. Formica. This genus comprises two distinct forms, the one with spines on the thorax, the other unarmed, which certainly ought to form two genera, inasmuch as this distinction is made to separate Atta from Ocodoma.

1st, without spines on the thorax.

Formica compressa, Fabr. ? Syn. F. indefessa, Sykes. *Worker*, length 4-10th to ½ an inch : legs rufous, the rest of the body black. *Warrior*, 6-10th of an inch long : *Male*, length 4-10th of an inch ; wings do not reach to end of abdomen. *Female*, 5-8th of an inch long ; this species, well known in India as the black ant, is found throughout every part of this country except the Western Coast. It is most probably the species described by Fabricius. It lives in very numerous societies in the ground, the entrance to the nest being often round the trunk of a tree, or close to some building. The Warriors are very numerous. Their food is chiefly vegetable secretions, sugar, &c., and Colonel Sykes has given an [illegible] account of the devastations com[illegible] on preserves, sugar, &c, They bite rather severely, but the pain is quite momentary. At certain times great numbers of the winged males and females are seen at the mouth of the nest, and they remain there for several days. When they take wing, they do so in vast numbers, and always at night.

Formica angusticollis, new species. *Worker*, ½ an inch long; colour dull black, with antennæ and legs rufous. *Warrior*, 8-12th of an inch long; only found in forests in Malabar, and always singly.

Formica smaragdina. *Worker*, length about 4-10th of an inch; colour of a uniform pale rufous. *Male* 7-24th of an inch long; of a rufous colour. *Female* 7-8th of an inch long; entirely of a pale shining green colour. This ant is well known in Malabar, and the wooded parts of India, but is rare in the Carnatic, where only seen in one or two large mango groves. It forms a nest of living leaves which it draws together without detaching from the branch, and unites with a fine white web; sometimes this nest is above a foot in diameter but usually smaller. The society consists of a vast number of individuals, and in large nests we find many females and males, both with and without their wings at all times of the year. They are very bold and pugnacious, and bite very severely. They live chiefly on vegetable secretions, and are very partial to the flowers and buds of some of the Loranthi, which abound on the Western Coast. They often form a temporary web round the flowers or sometimes round the fruit of various trees, viz. the Eugenia malaccensis, Artabotrys odorotissima, &c. apparently only for the purpose of feeding undisturbed, they will however also sometimes feed on decaying animal matter. It is said that the web they form is occasionally used for writing on in the N. W. Provinces of India, and that the Ants are made use of to destroy a nest of wasps that may have established themselves in a house. In this case they are said to destroy all the wasps but become so infuriated, that their own indiscriminate attacks are nearly as bad as those of their foes. In gardens they are most partial to mango trees, and also to the large leaves of the Jamei Malae, (Eugenia malaccensis), but in the jungles they select a vast number of trees, or rather make no selection at all.

Formica longipes, new species. *Worker*, length 1-5th of an inch; in form exceedingly similar to the last; legs very long of a pale rufous colour throughout, tinged with dusky on the abdomen. This Ant is found in all the forests of India living in holes in the ground, in tolerably numerous societies, and feeding on vegetable secretions, not at any distance from the jungles. A little inland into the jungle you meet with it. It is often found about bungalows and out-houses.

Formica timida, new species. *Worker*, length 9-24th of an inch long; colour dingy rufous, darkest on the head, and tinged with dusky on the abdomen. All the body covered with long scattered hairs. *Warrior*, ¼ an inch long; *Female*, like Worker, but somewhat larger, with wings, and 3 ocelli. *Male*, 7-24th of an inch long; only found on the Malabar Coast where it is very common, living chiefly on vegetable secretions. It has its nest under ground. It is very different in habit from the other large red Ant (F. smaragdina) being most timid, and if approached or touched, dropping to the ground at once and hiding itself. It does not always confine itself to vegetable matter. On one occasion pigeons squabs placed in a room on the floor, were killed by these Ants, chiefly however the warriors.

Formica stricta, new species. *Worker*, length 7-20th of an inch; antennæ rufous, head and thorax dull greenish black, shagreened; abdomen shining glaucous green; legs shining black, found on flowers in Malabar; its nest not seen, not very common.

Formica cinerascens, *Fabr.*? *Worker*, length 3-8th of an inch; colour dull black, except the abdomen, which is glaucous green, and somewhat pubescent. *Female* ½ inch long nearly; *Male* 3-12th inch long; *Warrior*, 5-12th of an inch long; head large, antennæ short; eyes minute. This species lives in the ground in small societies. Only seen in the Carnatic. It is described as having the head fulvous, and a triangular spot on the abdomen, but as it is said by Fabricius to have been sent from Tranquebar, in the vicinity of which Dr. Jerdon has seen the present species, he thinks they are probably identical, and that the difference of colour is accidental, especially as there are only two species common in the Carnatic with glaucous abdomen, this and F. rufoglauca.

Formica velox, new species. *Worker*, length 5-24th inch to 6-24th; legs long, colour dull blackish, with the abdomen greenish pubescent. Very common in Malabar and also found in the Carnatic. It frequents flowers, especially delighting in those that have great quantities of pollen, such as the Cucurbitacæ, Hibisci, &c. It runs very speedily, and is very easily alarmed, dropping to the ground on being touched. Its nest not seen.

Formica rufo-glauca, new species. *Worker*, 7-24th inch long; abdomen fine silky glaucous green; head, thorax and legs bright rufous. *Warrior*, 9-24th inch long, head large; colour similar. Found only in the Carnatic in small societies living in holes in the ground. It is possibly Fabricius' species *cinerascens*.

Formica vagans, new species. *Worker*, 3-24th inch long, eyes large; *Female*, 3-24th inch long; this little Ant is exceedingly common in the Carnatic, but not seen on the Malabar Coast. It takes up its quarters in any sheltered spot in a house, under a box, a stone, a hole in the wall, or such like places, and when disturbed flits, with great speed to another suitable spot. Its society is very numerous in individuals and there are many females and males, sometimes with, at other times without, wings. It feeds both on vegetable and animal substances preferring the former like all the true Formicæ.

Formica assimilis, new species. *Worker*, exceedingly similar to the last; length, 3-24th of an inch, its colour chiefly of a shining reddish black, covered all over with scattered white hairs, found frequenting flowers in Malabar, but not abundant.

Formica phyllophila, new species. *Worker*, length 7-48th of an inch, eyes small; colour shining brown black. This little Ant forms a temporary nest between two leaves usually, or sometimes in a head of flowers; it lives in small societies, and feeds entirely on vegetable secretions.

Formica nana, new species. *Worker*, length not 1-12th inch; antennæ, legs and abdomen pale whity brown. This very minute species is found in all parts of India and is very abundant in Mysore; from its very small size it is noticed with difficulty. It feeds on flowers and vegetable secretions.

2ndly. With spines on the thorax.

Formica indificans, new species. *Worker*, 5-24th of an inch long; head and abdomen rufous, thorax dark glossy brown. *Female*, 1-3rd inch long, wingless. This Ant makes a small nest about ½ inch, or rather more, in diameter, of some papyraceous material, which it fixes on a leaf. Each contains one female and 8 or 10 workers. It is very rare, and only seen in Malabar.

Formica sylvicola, new species. *Worker*, 3-12th inch long; abdomen short, oval, colour dull black, abdomen shining glaucous green. *Female*, 9-24th inch long, wingless. This Ant has the same habits as the last, but is not found except in the jungles. It appears very closely allied to *F. hastata* of Latreille from India, and to several other species said to be from Southern Asia; and as some of these *may* be found in India, a brief description of them is taken from St. Fargeau's work on Hymenoptera, viz.

Formica sexspinosa, Latr. Body black, covered with a fine silky yellowish down, especially on the abdomen; length 7 2-3rd lines (French); from Southern Asia.

Formica hastata, Latr. Black, finely shagreened and slightly hairy, length 4 lines. Hab. India.

Formica relucens, Latr. Exceedingly like the last (*F. hastata.*), differs in the following points —body covered with silky, golden, shining down, with a few larger hairs; length 4 lines. From Southern Asia.

Formica Ammon, Latr. Very like the two last, body black, striated, with a few hairs; thorax ashy; abdomen covered with a silky golden down—length 2 1-5th lines. From Southern Asia.

Formica carinata, Fabr. Head rounded, black; thorax black, divided into three by two deep transverse lines; length? of medium size. Southern Asia.—*Dr. Jerdon in Madras Lit. Soc. Journ. Tennent's Sketches of the Nat. Hist. of Ceylon*, p. 420.

ANTAKA, in the hindu religion, an attribute of Yama or Dharma-rajah, in the character of the destroyer. See Cyc. of Ind. Sup. ii. Inscriptions 353. Yama.

ANTARA TAMARA. అంతరతామర. This name is applied to any floating, large-leaved water-plant, as the Villarsia Indica. *Vent.*—Menyanthes Ind. *L.—R.* i. 460.—*Rheede* xi. 28. Pictia stratiotes, L.

Manis ...	... „	Tarang-giling ...	„
Scaly Ant Eater ...	„	Pang-giling ...	„
Pangolin ...	„	Arialer	TEL.

The Pangolin of India belonging to the Edentata, gets its Indian name from its Malay designation. The genus is common to Africa and South Eastern Asia, and in India is not rare, though from their habit of appearing abroad after sunset they are not often seen. *Manis Javanica* of Desmarest inhabits the Malayan Peninsula, Penang, Borneo, Java, M. crassicaudata of Tickell (the M. pentadactyla of Linnæus, the M. Macroura of Demarest) is found in several parts of India, but also in the lower part of the Himalayas. This species has been known ever since the expedition of Alexander the Great and is mentioned by Ælian under the name φατταγη.—*Tickell, Elliot. Ogilvie, Cantor in Indian Journals of Science.*

ANTELOPE. This is alike a scientific and a popular term, the ordinary application of it, however, by the English in India, being to the Antelope cervicapra of Pallas. Mr. Blyth states that the little Antelopes from Abyssinia, are nearly allied to the Tragelaphi of Ham. Smith of Africa (or the Boschbok Guib or Harnessed

Antelope and their congeners) and the former bear exactly the same relation to the Nilghai of India which the latter do to the Kudus (Strepsiceros) of Africa. The ringed markings of the feet occur throughout the whole series more or less distinctly, and the posterior horns of Tetraceros resemble those of Portax or the Nilghai, and, as in the latter, frequently recline backward in captive-reared individuals instead of taking the normal curve upward. The females of all are hornless, and Mr. Blyth doubts if there be any good generic character to distinguish the females of Tetraceros from those of Tragelaphus, though the latter are somewhat heavier and more Hog-Deer-like in form, especially the Boschbok of the Cape. Both groups are monogamous, and they closely assimilate in habits, manners and gait.

The Antelopes belong to the Order Ungulata of Mammalia, Tribe Ruminantia, the family, Bovidæ, which includes antelopes, goats and cattle, and the sub-family antilopinæ or antelopes proper.

These may be briefly noticed thus :—

Family BOVIDÆ, Antelopes, goats and cattle.

Sub-family Antilopinæ, which has 7 genera and 10 species, viz : *Portaxpictus*, the Nilghai. This has received several generic and specific names from Naturalists, and each of the nations of India have a different name for it, but to the British it is known all over India, as the Nylghau or blue-cow. It is met with throughout India, though rare in the extreme north and south.

Tetraceros quadricornis, the four-horned Antelope, the Chikkara or jangli bahri, is found in many parts of India, but does not extend to Ceylon, nor to the valley of the Ganges nor Burmah.

Antilope bhezoarlica, the well-known Harn of all India is the Antilope Cervicapra of Pallas. It is known to every person who has travelled in India. Of these, in some parts of India, there were many thousands to be seen at times, on the open plains, but rail-roads and cultivation have given facilities for their destruction, and they have become greatly fewer. *GazellaBenettii*, the Ravine deer, or goat antelope of all India, is well known to sportsmen and naturalists : the *Gazella sub-gutturosa* is found in Baluchistan and to its west and north through the Panjab and Persia, but the *Gazella dorcas*, is confined to Arabia.

The Chiru of Thibet, the *Kemas Hodgsonii* is the Kemas of Æolian and is known to many from the remarkable appearance which its horns present both of them growing so close as often to unite and form but one horn.

The *Procapra picticandatus* and *P: gutturosa*, are both of Central Asia, China and Thibet, as also is the Saiga Antelope, the *Saiga Tartarica*. *Mr. Blyth's Reports* 1847. See Antilope. Bovidæ : Cervidæ : Moschidæ : Pantholops : Procapra : Gazella : Tragops : Tetracerus ; Capricornis : Nemorhedus : Alcephalus : and Portax.

ANTEN, a district in the island of Banka, containing the richest of the tin mines : See Tin.—Cyc. of India, Supp. ii. .

ANTERVED, the Do-ab, or Mesopotamia of the Jumna and Ganges. The town was burned by Jessraj.—*Tod's Rajasthan, Vol.* i.

ANTHELIA. This phenomenon is common in the Khasia Hills and in Ceylon. Sir J. E. Tennant mentions that at early morning, when the light is intense and the shadows proportionally dark—when the sun is near the horizon and the shadow of a person is thrown on the dewy grass—each particle furnishes a double reflection from its concave and convex surfaces, and the spectator sees the shadow of his own head surrounded by a halo as vivid as if radiated from diamonds.—*Sir J. E. Tennant's Ceylon. Hooker.*

This is a native of the South of France and Barbary, but its roots are largely imported into India where they are used in medicine and as an ingredient in certain snuffs. As a masticatory it is used largely in toothache and it effectually cured two cases of spontaneous salivation, but it is used as an external as well as an internal stimulant and sialogogue. Dose one to two ounces in infusion. Price 12 annas per lb.—*Vegetable Kingdom*, 455. *O'Shaughnessy*, 413-415. *Cat. Ex. p.* 2.

ANTHERICUM, a genus of the Liliaceæ, some of which, as the A. annuum, are cultivated as flowering plants. Voigt enumerates 15 species, A. canaliculatum, exuviatum : filifolium fragrans : graminifolium : glaucum : Liliago : Nepalense : Nimmonii ; physoides : ramosum, revolutum, tuberosum ; vespertinum : as growing or cultivated, principally brought from the genus Phalangium.

ANTHERŒA MYLITTA. *Drury.* The Tusseh silk moth of Ceylon, feeds on the Terminalia catappa and Palma Christi.

ANTHISTIRIA, a genus of grasses of the order Panicaceæ. Voigt names four species, ciliata, heteroclita : polystachia and scandens, A. ciliata grows abundantly in the Concans, where it is largely converted into hay for horses. Mr. Mason noticed in the Karen jungles a large grass of this genus, with lax panicles and very long awns.—*Mason. Voigt.*

ANTHISTIRIA ANATHERA.

Chooneria, HIND. | Jyotishmati, HIND.

Its roots are luminous in the rains.—*Hooker.*

ANTHOGONIUM GRACILE. *Wall.* One of the Orchiaceæ, growing in Nepal and the Khasya mountains, with largish blood coloured flowers.

ANTHOZOA, a natural order of polype found within the tropics. The Corallium rubrum of Lamarck, the red coral of commerce is obtained from this order, and the coral is the axis of the polypodium.

ANTHRACITE COAL occurs at Duntinnapillay. It is also called blind coal because it burns without flame ; and glance coal, from its lustre. See Coal.

ANTHRODACTYLIS SPINOSA, FORSK. Syn. of Pandanus odorotissimus.—*Linn.*

ANTHROPOPHAGI, the existence of such was known to ancient writers but latterly discredited. They are mentioned in *Mandeville's Travels,* 228, and as living in Sumatra, cannibals devouring human flesh, (*Anderson, Mission to Sumatra,* 224.) and their existence is no longer doubted. Their prototypes, the Issedones of Serica or the Altai, (*Herod. i.* 216, *iii.* 99. IV. 25.) and the Indian Padei, did not excel them in barbarity. The "Aghorduntior Aghori are a class of people who frequent the ghats at Benares, though they are occasionally to be found in other parts of India, and have been met with even in Assam. They are Ogres (indeed, the similitude of the word to Aghoree is noticeable), and affect a practical philosophy, which disbelieves in the existence of any difference between things, and asserts that all distinctions depend on the imagination. A cuff or a kick is as immaterial to them as a blessing. They go about in *puris naturalibus,* with a fresh human skull in their hands (of which they had previously eaten the putrid flesh, and afterwards scraped out the brain and eyes with their fingers), into which is poured whatsoever is given them to drink, and to this they pretend to be indifferent whether it be ardent spirits or milk or foul water. For food they take the first thing which offers, whether it be a putrid corpse, cooked food, or ordure. With matted hair, blood red eyes, and body covered with filth and vermin, the Aghori is an object of terror and disgust. He looks like a wolf, ready to destroy and then devour his prey, rather than a human being. Hindoos, however, look on these wretches with veneration, and none dare to drive them from their doors. They are among the worst of the many turbulent and troublesome inhabitants of Benares, and there is scarcely a crime or enormity which has not, on apparently good grounds, been laid to their charge. One of the ancient Hindoo dramatists, Bhava Bhutt, who flourished in the eighth century, in his drama of *Malati and Madhava,* has made powerful use of the Aghori in a scene in the Temple of Chamunda, where the heroine of the play is decoyed in order to be sacrificed to the dread goddess Chamunda or Kali. The disciple of 'Aghora Ghanti,' the high priest who is to perform the horrible rite, by name 'Kalapa Kundala,' is interrupted in his invocation to Chamunda by the hero Mahdava, who thus describes the scene :—*Act V., scene* 1, *H. H. Wilson's Translation.*

Now wake the terrors of the place, beset
With crowding and malignant fiends. The flames
From funeral pyres scarce lend their sullen light,
Clogged with their fleshly prey, to dissipate
The fearful gloom that hems them round.
Well, be it so. I seek, and must address them.

* * * * *

How the noise
High, shrill, and indistinct, of chattering sprites,
Communicative, fills the charnel ground :
Strange forms like foxes flit along the sky.
From the red hair of their lank bodies darts
The meteor blaze or from their mouths that stretch
From ear to ear, thickset with numerous fangs
Or eyes, or beards, or brows, the radiance streams.
And now I see the goblin host ; each stalks
On legs like palm-trees : a gaunt skeleton,
Whose fleshless bones are bound by starting sinews,
And scantly cased in black and shrivelled skin,
Like tall and withered trees by lightning scathed,
They move, and as amidst their sapless trunks
The mighty serpent curls—so in each mouth
Wide yawning, lolls the vast blood-dripping tongue.
They mark my coming, and the half-chewed morsel
Falls to the howling wolf—and now they fly.

The belief in the horrible practices of the Aghori priesthood is thus proved to have existed at a very remote period, and doubtless refers to those more ancient and revolting rites which belonged to the aboriginal superstitions of India antecedent to the Aryan-Hindoo invasion and conquest of the country. It might be supposed that any such indecent, flagrant, and disgusting customs as are now practiced by the Aghori might be summarily suppressed under the provisions of the new Penal Code of India.

of the Races and Tribes of Hindustan. Originally prepared under the Authority of the Government of India, and reproduced by Order of the Secretary of State in Council. Edited by J. Forbes Watson and John William Kaye. Vols. I. and II. (Allen.) Quoted in *Friend of India,* 1868. (*Leyden, Asiatic Researches,* IX. 202) *St. John's Indian Archipelago* i, 20. See Aghora, Akhora.

ANTIALCIDAS, one of the Greek successors to a part of Alexander's kingdom. Antialcidas succeeded Lysias in the Paramisidæ, about B. C. 150 also in Nysa. See Cyc. of India, Sup. ii ; Greeks of Asia.

ANTIARIS. Of this genus of trees, there are six or seven species recognized, (1) the A. toxicaria, Lesch., the genuine Upas tree of Java : (2) the A. innoxia, Bl. : and A. macrophylla, R. Br. A fourth species to which no name has been applied (ramis foliis-que utrinque velutinis) is cultivated in the Kew Gardens : the A. Saccidora, Dalz. of the Western Coast of Peninsular India is a fifth : the sixth is the A. Zeylanica, Thwaites, of Ceylon which like A. Saccidora, yields sacks ; but this author now refers it to A. innoxia, Blume, and a seventh is A. Bennetti, Seeman, the Ma-nui or Ma-vu-ni, Taga, of the Tonga Islands—all are trees of great height. The rice sack of the Cooroombar of the Wynaad forests is made from A. saccidora. He cuts a branch of the size needed ; beats the bark all round on the outside, until the reticulated fibres of the inner bark give way, and then the bark is drawn off entire, the outer bark rubbed away and if a piece of the wood have not been left the inner bark at the bottom is sewed with thread made of the Pimelia which completes the process. The tree is very common and of gigantic size, the wood is said to be good and the fibre which is strong and could be procured in any quantity and at a cheap rate may prove of some commercial value.—*No.* 53, *Vol.* 9, *Ann. Mag. Nat. Hist.* —*Hog's Vegetable Kingdom,* 68.—*O'Shaughnessy,* 282. *Thwaite's Enum. pl. Zeyl. p.* 263.

A stately forest tree not uncommon in the drier parts of Ceylon, indigenous on the west side of India, in the ravines at Kandalla and in the jungles near Coorg, and very common and the most gigantic of all the trees in the Wynaad jungles. The wood is not much used, but the cooramboor bags or sacks are made from the liber or inner bark by a very simple process. A branch is cut, corresponding to the length and diameter of the sack wanted. It is soaked a little, and then beaten with clubs until the inner bark separates from the wood. This done, the sack, formed of the bark, is turned inside out and pulled down until the wood is sawn off, with the exception of a small piece left to form the bottom of the sack, and which is carefully left untouched. These sacks are in general use among the villagers for carrying rice, and are sold for about 6 Annas each. The Singhalese sew up one end of the bark for a sack. *Royle's, Fib. Pl. page* 343, *Mr. McIvor, in M. E. J. R. Thwaite's En. Pl. Zeylanic, p.* 263.

ANTIARIS TOXICARIA. *Leschen.*

Ipo toxicaria, *Persoon.*

The upas tree of Java.	Eng.	Anchar...	Malay. Jav.
Bina	Borneo.	Antiar	„

A tree of Java often over 100 feet in height and its juice is one source of the half fabulous Upas poison. The poisonous sap flows freely from the bark when tapped. The *Upas antiar* poison is prepared from it in earthen vessel ; the juice is mixed with the seed of the Capsicum frutescens, and various aromatics. The poison at first acts as a ·urgative and emetic, then as a narcotic, cau death by violent fits of tetanic convulsions. virulence is less than the poison of t The people however are much impressed s power. The tree has a fine appearance. A specimen at Borneo was about sixty feet high, with a fine stem, and a bark of a very white colour : and the stem was supported at its base by buttresses, so common to the trees of tropical jungles. With this tree before them, which was surrounded by their graves, they nevertheless told Mr. Low that it was impossible to go under it without dying. *Horsfield Batavian transactions* (*Vol. vii.*)—*Low's Sarawak, p.* 53. *Vegetable Kingdom* 680. *O'Shaughnessy, p.* 579. *Crawfurd's Dictionary,* 442.

ANTICHRIST. The mahomedans believe in Antichrist whom they term Al-Dajjal.

ANTIDESMA, a genus of plants belonging to the natural order Stillaginaceæ, into which several species of stilago of Linnæus have been brought. A. lanceolaria, is a shrubby plant of Chittagong, and Ceylon, up to 1,500 feet : A. Montanum a middle sized tree from 3,000 to 6,000 feet in Ceylon.—*Roxb. iii.* 760. *Thw. En. pl. Zeyl. p.* 289. Wight, in *Icones,* gives figures of A. acuminata, 1991 ; Bunias, 819 ;

lanceolaris, 766; paniculata, 820; tomentosa, 767-8.

ANTIDESMA ACIDA. *Linn.*

Poolchi pullum, TAM.

This acid fruit is eaten by the common people. The tree grows in the woods.—*Ainslie, p.* 321.

ANTIDESMA ALEXITERIA. *Linn.*

Noli tali maram... ... TAM.

A small but very handsome tree, common enough in the jungle at Coimbatore, in the forests on the Bombay side of India; it affects rather the skirts of cultivated land, and never reaches a size fit for purposes of carpentry. Its leaves are used in decoction in snake bites.

The Bark.

Noolha talie puttay... ... TAM.

From the nar or tough stringy fibres of this bark, the inhabitants of Travancore make ropes.

The Fruit.

Noolha Tali pallum ..TAM. | Nuli Tali...HORT. MAL.

Is a pleasant tasted, reddish coloured fruit, said to be prized, on the Malabar coast for its cooling qualities.—*Ainslie, p.* 183 *&* 229. *Vegetable Kingdom*, 683. *Drs. Gibson and Wight. Roxb.* iii. 758.

ANTIDESMA ALEXITERIUM, *Spreng*, is Syn. of Antidesma bunias.

Ariya poriyam ...MALAY.	Kara-Willa gass...SINGH.
Noli Tali ... ...MALEAL.	Kabilla... „ „
Nolai Talai maram...TAM.	

A quick growing middle sized branchy tree common in Ceylon up to 3,000 feet above the sea, also on the Coromandel and Malabar sides of the Peninsula of India, and found in Assam and in Nepal. It attains rather a large size in Assam with a girth of twelve or fourteen inches, but the wood by immersion in water, becomes heavy and black as iron. The bark is used for making ropes. Its leaves are acid and diaphoretic, are used as decoction in snake bites, and when young are boiled with pot herbs like sorrel, and employed in syphilitic cachexia.—*Useful Plants. Vegetable Kingdom*, 683. *Roxb. iii.* 758. *Thw. En. pl. Zeyl. p.* 289.

ANTIDESMA DIANDRUM.

Stilago diandra, *Willde.*

Pella-gomoodoo...SINGH.

This tree grows on the Northern Circar mountains and in Travancore: its wood serves for various uses.—*Roxb. iii.* 759.

ANTIDESMA PANICULATA, *Roxb.* iii. 770.

Kyet-tha-hen ... BURM.	By-it-zin ... ...BURM.
Khoodi Jam ... BENG.	Boo-ambilla-gass..SINGH.

This is a low famous tree common in Ceylon, up to 2,000 feet above the sea. It has a light ash coloured bark. It is common in Bengal jungles and is found in the Rangoon, Pegu, Tonghoo and Tharawaddy forests. On the same plant are notched, round and pointed leaves and it flowers in April and in July and bears a red sour fruit, resembling the barberry. It furnishes a small crooked timber, of a close grain, with the wood of a red colour and adapted to cabinet making.—*Dr. Mason. Dr. McClelland.*

ANTIDESMA PUBESCENS, *Roxb. iii.* 770.

Jeriam Kottam.MALEAL.	Pollari ... ...TEL.
Jeram Kottam.. „	Pollai ... ... „
Jana palaseru... TEL.	

This small tree is a native of the Northern Circars, its bark is used for making ropes. The berries are eaten by the natives.

ANTIDESMA ZEYLANICUM, LAM.

A. Alexiteria, LINN. (partim); BURM.

Heen Ambilla gass...SINGH.

Common in the hotter parts of Ceylon, celebrated for its alexipharmic properties.—*Thw. En. pl. Zeyl. p.* 289. *Veg. Kingdom*, 683.

ANTIGONUS, B. C. 305 Seleucus Nicator gained a great victory over Niconor a lieutenant of Antigonus, Seleucus B. C. 303 crossed the Indus to make war on Chandragupta, but making a hasty peace he turned on Antigonus whom he drove into Phrygia, where he was defeated and slain B. C. 301. The name of Antigonus appears in the edicts of Asoka, on the rock temples. See Buddha. Inscriptions, p. 386. Kabul, p. 436.

ANTILOPE, a genus of mammals all of them in a wild state, some species gregarious and polygamic others purely monogamic, some of them live on great plains, and others in forests; they are objects of the chase, their flesh is used as food and their skins and horns are articles of trade and commerce and ornament. Their colours and the forms of their horns vary greatly with age and seasons of the year. Zoologists have referred the species to one genus or other of the Antilope family of ruminants, the Antilopeæ,—and Antelope is the popular name for many animals of a somewhat similar form, whom, however, zoologists class differently. The Japanese goat Antelope is the cervus crispa. The Antilope bubalus and A. ruficollis of northern and eastern Africa, are the Alcephalus bubalus and the Gazella ruficollis:

the Antilope dorcas is the Gazella dorcas—the A. gutturosa, is the Procapra gutturosa; the A. picta of Pallas is a Portax; The Sumatran Antelope is the Capricornis Sumatrensis, and the A. Subgntturosa is a Gazella. With such changes from one genus to another, the confusion of popular with scientific names is great, but the following are commonly recognised.

ANTILOPE ARABICA. HEMPRICH.

Bennettii; *Sykes.*

Budari	CAN.	Chikara	DEKH.
Tiska	„	Porsia of the Baori is the Buck.	
Mudari	„	Chari „ „ the Doe	
The Indian Gazelle	ENG.	Dabi of Yemen.	
The Arabian „	„		

The Gazelle of Arabia abounds in the islands of the Red Sea, particularly in Dhalak and on the western shore about Massowa and all along the Abyssinian coast. It abounds in the Indian peninsula, in the valleys of the sandstone formation and generally among the jungles of the red soil to the eastward of the southern Mahratta country, in small herds of 3, 5, 6 or more, but commonly a buck with two does. The Gazelle of Hauran and Syria are probably the same. The Dabi ضبي is the same as the Hebrew word in Deuteronomy XIV, 5, translated the Roe, and is the Gazelle of the Arabian poets who say احور من كل ألضبي " The eyes of the Dabi are the most beautiful of all." The ordinary height is about two feet and its horns 10 or 11 inches.—*Elliot in Madras Journ. of Lit. and Science.*

ANTILOPE CERVICAPRA. *Pallas.*

Chigri	CAN.	Common antelope.	ENG.
Harn	DEK. MAHR.	Phundayet(buck)	MAHR.
Harnin	„ „	M'riga	SANSC.
Kalwit	„ „	Alali of the Baora.	
Saison	HIND.	Gundoli „ „ „	

The common antilope frequents the plains on the cotton soil of India. When they move off to avoid some object of which they have doubts, they often bound to surprising heights. Their swiftness is such that dogs have never it is believed captured a healthy one, but they are often run down by wolves who drive and surround them, and the cheetahs kill great numbers of them, usually selecting the bucks. About 1838, herds of very many hundreds with many out-lying bucks were to be met with in the Dekhan, but the hunting leopard, the cheeta, and the sportsmen have so weeded out the bucks that only small patches of three to twelve are now to be seen and these all does,—who, without the males, easily fall a prey. The bucks are of a dark black colour and the younger bucks are driven off by the buck of the herd, so soon as they begin to turn black; but fierce combats ensue before the buck of the herd is selected. The horns are from 19 to 25 inches long with 4 or 5 flexures and up to 50 rings or annuli.—*Elliot.*

ANTILOPE GORAL. HARDWICKE. Of the Himalayas and Nepal, the Ghoral of the middle and northern region of the hill ranges living in herds.—*Ogilby.*

ANTILOPE HODGSONII, ABEL, the Chiru, Pantholops Hodgsonii, is a beautiful and stately antelope confined to the Bhot country, Thibet and neighbouring territories and appears to be wholly unknown on the southern face of the mountains.—*Ogilby.*

ANTILOPE QUADRICORNIS, BLAIN.

Petracerus quadricornis.

Chikara ... ... HINDI.

This one of the four horned antelopes, occupies the lower hills and forests of the Himalayas. It is of a uniform bright bay colour and is monogamous.—*Ogilby.*

ANTILOPE, Sub-4-Cornutus, *Elliot.*

Brown Antelope, *Sykes.*
Antelope Chikara, *Hardwicke.*

Chikara ? ... ... HIND.

Has four horns, but the spurious horns are so small, as rarely to be met with in adult individuals. They arise from bony swellings immediately in front of the true horns. They are about two feet high, and the colour is various shades of brown. It is monogamous and always found in pairs. It occupies the Mulnad. This seems to be the A. quadricornus of Blainville, now transferred to the genus Tragops, and the goat antelope of Europeans.—*Elliot.*

ANTILOPE THAR. HODGSON: is the Thar or thaar of the Himalayas, where also, in the more western parts of the mountains, the names Surow, Serow and Imoo are applied up through Nepal to the Sutlej, it is the Capricornis bubalina of authors.—*Ogilby. Rapports du Jury mixte international, p.* 54.

ANTIMACHUS. Of the Greek successors to the conquests of Alexander the Great, there were two of this name, viz., Antimachus Theos, B. C. 190 who ruled in Nysa, Gandharitis Peukelaotis and Taxila, the other, Antimachus Nicaphorus B. C. 173 who ruled over the same territories, and contemporarily with Eucratides, retaining the rest of his dominions.

The ter sulphide of antimony is the Stibium of the ancients. A substance *surmah* sold for it is to be found in every Eastern village, it being used by the Native medical practitioners, also the mahomedan men, who apply it to their eyelids to give brilliancy to the eye. But ores of iron, and manganese and galena are sold in the Indian bazaars, as Surmah, or Sulphuret of Antimony. Great Britain receives the larger portion of its supply of antimony from Singapore, to which place it is brought from Borneo. It is imported in the shape of ore, and commonly as ballast. Its other chief localities are Saxony, Cornwall, Spain, Mexico, Siberia, the Eastern lands, and Martaban? in Pegu. It is brought Bombay from Siam and the Persian Gulf. is ore is generally of a lead-gray colour, ssing considerable splendour, and is met th compact, and in rhombic prisms of consi[illegible]ble size, and variously modified. The [illegible]stances sold as Surmah are to be got in any quantity in the bazar at two very different *prices*—some being at one *rupee* per lb., and called Europe, and sometimes China Surmah—and other samples at 1½ *annas* a lb. Samples of this last have been found free from either Lead or Arsenic; and at the price might be advantageously exported; Tartar emetic has been made from it. At the Madras Exhibition of 1857, sulphuret of antimony of good quality was exhibited from Vizianagrum, but the substances sent as soorma from Kurnool and Hyderabad were galena or sulphuret of lead. Some of the purest samples come from Borneo, from the mines of Sarawak, but it is also imported from Moulmein, Pegu, Persia, Kabul, and the Panjab or from Candahar via Umritsur. Ter sulphide of antimony is said to be found in the Salt range near the Keura salt mine. Vast quantities of antimony have been found by Major Hay in the Himalayan range of Spiti and been found near Beyla by Major Boyd; it occurs massive in Baluchistan. The greater part of the mineral brought to India, however, comes from the Eastern Islands, Burmah and the Malay Peninsula, where it occurs in immense quantities. It is a very abundant mineral in Province Amherst, and is often met with on the mountains that bound the valley of Thoün-gyeen. Mr. O'Riley found it at the sources of the Ataran and large quantities of the ore have been dug up in the neighbourhood of Moulmein, but there was no demand for it in Calcutta whither it was sent, and operations have been suspended. Antimony, iron, arsenic, and sulphur with bismuth, and in one instance a trace of molybdena was discovered in them. The metal was found for the first time in Borneo, in 1823, on the North Western coast of that island. It exists in several places there, but mines of it have been worked only in Sarawak. The ore is, as usual, a sulphuret in a matrix of quartz, and at present furnishes the chief supply of Europe, being exported from the emporium of Singapore, to the yearly amount of about 1,500 tons.—Perhaps the most valuable of all the samples of this ore, received by the Madras Museum, was that from the mines of Sir James Brooke in Sarawak. Butter of antimony, a substance sometimes used with sulphate of copper for bron zing gun barrels, the iron decomposing the chloride and depositing a thin film of antimony on its surface. The chief alloys of antimony are *type metal*, consisting of 4 lead and 1 of antimony; Stereotype metal, 6 lead and 1 antimony, music-plates consisting of lead, tin and antimony; Britannia metal, consisting of 100 parts of tin, 8 antimony, 2 of copper, and 2 bismuth. Pewter is sometimes formed of 12 parts of tin and 1 part antimony. Antimony is also used in the preparation of some enamels and other vitreous articles and much employed in modern medicine as antimonial powder and tartrate of antimony. James's powder is said to consist of 43 parts of phosphate of lime, and 57 of oxide of antimony.—*Madras Museum. O'Shaughnessy. Dr. Mason's Tenasserim. Faulkner. Tomlinson. ANTIOCH, an ancient town of celebrity, of which the modern village of Antaki is the humble representative. Previous to the Macedonian conquest, its name was Riblath; but being chosen by Seleucus Nicator, one of Alexander's generals, to be the seat of his future government, and being greatly embellished by him, it received the name of Antioch, from respect to his father, Antiochus. For several centuries it was the residence of the Syro-Macedonian kings, and afterwards of the Roman governors of this province. Vespasian, Titus, and other emperors, granted to it very great privileges. There were several cities in the east which bore the same name, but only two of them are mentioned in scripture; viz., Antiochia Pisidia, a town of Asia Minor, and the one now under notice: the latter is frequently mentioned in the Acts of the Apostles, and here the disciples of Christ were, by divine appointment, first called by the name of their Master and Lord. In later times, it was styled the "Eye of the Eastern Church." Being repaired by the Emperor Justinian, A. D. 529, it was called Theopolis, or "the City of God," on account, it is said, of the inhabitants being mostly christians, attracted hither, no doubt, by the peculiar liberty they enjoyed in the exercise of their religion. This liberty, it appears, was a remnant of the *jus civitatum*, or "right of citizenship," which Seleucus had given to the Jews (of whom the former were considered as a sect), in common with the Greeks. Their church was long governed by illustrious prelates. *Robinson's Travels, Vol. ii. p.* 288.

ANTINTALU, Tel. Desmodium diffusum, *D. C.* Other species are called by the same name as *D. quinqueangulatum W. Icelongatum*, Wall, under the name of *D. diffusum. Roxb. iii.* 355-7.

ANTIOCHUS. The names of thirteen rulers over parts of Alexander the Great's conquests. Alexander born B. C. 356, died 323, and the following are the ordinarily recognized dates of his successors, bearing the names of Antiochus.

B. C.		Surname.			
280	I	Soter.	125	VIII	Grypus.
261	II	Theos.	112	IX	Cyzicenus.
223	III	Magnus	95	X	Eusebes.
		(Achæus.)		XI	Epiphenes.
175	IV	Epiphanes.	88	XII	Dyonisius
164	V	Eupator.			of Josephus
144	VI	Theos.			and
137	VII	Sedetes.	69	XIII	Asiaticus.

After the last of whom Syria became a Roman Province. Most of the Antiochi merit separate notices, from the influence which they exercised over N. W. India. Antiochus 1st surnamed. Antiochus Soter, was a Syrian King. In B. C. 280, Seleucus Nicator was assassinated by Ptolemy Ceraunus, from which date, the whole of Asia, from the Indus to the Jaxartes was under Antiochus Soter, who from B. C. 280 to 261 reigned undisturbed over the same territory and left it to his son, the second Antiochus surnamed Theos. In his reign Antiochus Theos, a Scythian, named Arsaces, came from the north of the sea of Azoff induced the Persians to throw off the Greek yoke and founded the Parthian empire, making Rhages his capital. Antiochus iii, was surnamed Magnus (Achæus) he was assassinated. B. C. 223. Antiochus the great, according to the Greek and Roman historians, invaded India B. C. 206, and formed an alliance with Sophagasenes, the sovereign of that country. It is now ascertained, from the evidence before referred to, that this sovereign was Asoka, or Piyadasi, king of Magadha (grandson of Chandragupta), who ascended the throne B. C. 247. He was a zealous buddhist, and in one of his edicts still extant, engraved on stone, he expressly mentions by name Antiochus, the Greek King (Antiyako Yona Raja), who, it seems, had favoured, if not adopted, the buddhistic opinion. Antiochus the Great, in his march towards India, defeated Euthydemus, near Merv, in a battle in which Antiochus led the united Syrian and Parthian armies. Euthydemus was then taken into alliance and he led Antiochus and his Syrian army through Bactria, *i. e.*, by the route north of the mountains, to the Kabul valley and across the Indus in B. C. 206. There Antiochus the Great made peace with Sophagasenes the Asoka of India and Asoka recorded this, by edicts engraved on rocks and pillars, in various parts of India in characters exactly resembling those on the coins of Agathocles. That on the Girnar rock names Antiochia-Yona-Rajah. In B. C. 205 Antiochus returned by way of Arachotia.

The discovery of his name, in two of the edicts of Asoka, was made by James Prinsep.—*Bl. As. Trans.* 1838, Vol. p. 156. *History of the Panjab. Vol. i. p.* 57. See Cyc. of India, Supp. ii. Greeks of Asia. Kabul, p. 435-43[illegible], Vindusara.

ANTIRRHINUM MAJUS, *Linn.*

Snap Dragon... Eng.

Several species of this genus are gro[illegible]n India as flowering plants, A. molle, A. siculum, A. orontum, and A. majus. A. orontum has a variety known as A. Indicum, but the better known is small Majus, the Snap-dragon, cultivated for its beauty, a native of England, but in India, succeeds well during the cold months, the seed should be sown during the rains, it grows best in soil, not too rich.—*Jaffrey. Voigt*, 499.

ANT-LION, the larvæ of this are well known in India. Their form, at the lower part, resembles that of a spider, but the head is armed with a sharp strong pair of claws. They excavate, in fields, gardens and roadways, small cup shaped cavities, with exquisitely smooth edges and sides, at the bottom of which they lurk so that any insect approaching near, immediately falls below to the ambush and is seized and destroyed. Their excavations are usually carried on at night, but in the process, though they throw up the sand and gravel to a considerable height, the soil around their cups is very level. They often throw up a particle of sand towards any adhering insect, which by moving the mass, brings down the insect with it. On one occasion, a large black ant was seen to fall into one of the cups, and was seized by the ant lion, but its comrades adhered to the captive to release it. In Ceylon are four of the tribe Palparius contrarius, *Walker*, Myrmelon gravis, *Walker*, M. dirus, *Walker* and M. barbatus. *Walker. Sir J. E. Tennant's Sketches, Nat. Hist. Ceylon, p. 4, 2d. Ed.*

ANTS, WHITE.

Dewak ...	... HIND.	Rayap ...	MALAY.
Termites...	... LAT.	Rayah ...	„
Ani-ani ...	...MALAY.	Shellu ...	TAM.
Anai-anai...	... „	Cheddulu ...	TEL.

The term White-Ants, is applied by the English in India to species of Termites. They are interesting, from the great mounds of earth which they erect. Those in India rarely exceed seven or eight feet, but some Ant hills in S. Africa are of great size. On the banks of the Chobe, Livingstone, mentions them 30 feet high and of a base so broad that trees grow on them. In the open fields, the injury to produce which they can occasion, is trifling, but in gardens, where, as with sugar cane the crops are long in the ground, much loss is sustained from their attacks. They usually work under cover, and erect galleries of earth cemented, as they progress. In towns, with substantial houses of mortar and beams of wood, the loss which they occasion is often very great, for they pierce the walls and tunnel the beams in every direction. In St. Helena in 1860 to 1866, it was discovered that they had ruined many public buildings. The chief remedy is to destroy their cells and dig up their queen. Their mounds are tunnelled in every direction and their queen, a large shapeless white mass lies in the centre. By removing the whole the remedy is effectual and permanent. A composition of lime, tar, and soap, in equal parts, boiled together and smeared over places where the white ants appear, is a very effectual bar to their further progress. To protect the beams, the ends are now usually laid on the wall, and the sides left unclosed, so that the first approach of these insects can be detected, and this opening also prevents dry rot. Wood may be preserved by using a solution prepared with 8 gallons of fresh water, 1 lb. of pounded Croton tiglium, 1 lb. Margosa tree, and 1 lb. of blue vitriol; when dissolved, soaking the timber well, and afterwards drying in a breeze, but Cochin and Moulmein Teak, and Ebony are but seldom attacked by white ants. The wood oils are thought useful, but the earth or mud oils, so abundantly produced in Burmah are thought to be effectual preventives to their encroaches;. *earth* or *mud* oil, has been used most effectually lately on premises at Bangalore; this oil is one rupee a quart in the bazar, is impervious to white ants, always remains *thick* and they cannot work in it? Ordinary coal tar is without the slightest effect, as it hardens in a very short time.

Sets of sugar-cane and other substances can be protected by steeping them for half an hour in a mixture of assafœtida 8 chittacks; mustard seed, 8 seers; putrid fish, 4 seers; bruised butch root or maddar 2 seers, with sufficient to mix them into the thickness of curds, but the poisonous influence of the butch on vegetable life is known and cannot be recommended where the product is to be eaten: small quantity of arsenic with a few ounces of burned bread, pulverized flour or oatmeal, moistened with molasses, made into a dough and placed near their tumuli, is said to insure their destruction. The wood oils, from the various species of Dipterocarpi, applied to wood, prevents, it is said, the dry rot, as also the attacks of White Ants; and the addition of catechu to the oil greatly increases its preservative powers—(*Simmonds*) *Mendis.*

ANTIPATRIS, of the Greeks, is the modern Kafir Saba.

ANTISA. అంటిశ Achyranthus aspera, *L.*

ANTI-TAURUS, from the southern slopes of this range, there spring the two sources of the Tigris, in central Armenia, both near those of the Araxes and Euphrates, and not very distant from that of the Halys.—*Colonel Chesney's Euphrates and Tigris.*

ANTUMORA. BENG. Isora corylifolia: Schou and End.

ANU, in hindu legend, one of the sons of Yagati, one of the old fathers of mankind. Anu was the founder of one of the five great Turanian tribes, the Yadu, Turvasa, Druhyu and Anu. See India p. 315. Cyc. of Ind. Sup. ii.

ANUGA KAYA, అనుగకాయ TEL. Lagenaria vulgaris, *Ser.*

ANUGAMANA, in brahmanism, the performance of suttee by a woman alone, whose husband has died in a distant country: a sandal, or any article of his clothes may then represent him.

ANUVAKA, a Sub-division of a mandala of the Rig Veda. See Veda.

ANUMULU. అనుములు. TEL. Lablab vulgaris, *Savi.*

ANUN KARRA. TEL. Anun wood.

ANEVAL-GATTI. HIND. Emblic Myrobolan.

ANZARUT. ARAB. PERS. آنزروت Sarcocolla.

ANZARI, a tribe in Lebanon, idolaters, in number 20,000, one of their sections, called the Shamsi are said to worship the sun (Shams) Pers. A spacious plain, open to the sea on the west, extends north as far as Tortosa, and is bounded on the east by the Anzari mountains. This chain is a lower branch of the Libanus, but is less known than most parts of this celebrated mountain, being inhabited by this lawless tribe, who have never been brought into actual subjection by any of the Pashas. The origin of this people and their religion, if they have any, are still unknown. Like the Druses, they may possibly be a Mahomedan sect. Burckhardt mentions the Anzari sects, calling them Kelbye, Shamsye, and Mokladjye; but adds, "nothing is known of them except the names".—*Robinson's Travels, Vol. ii. p.* 68, 69.

AOD. Ar. Hind. Pers. عود is used generally in India, to designate the frankincense of the Boswellia, the Olibanum of the ancients: but throughout the east, with Arabic and Persian suffixes, it is employed to name varieties of Eaglewood.

ADOH, a district in Hindustan. See Oudh.

AODI, Hin. A tribe of Jats in the Delhi divisions of Soneput and Paniput.—*Wilson's Glossary.*

AOD-I-BAKHOOR. Ar. عودِ بُخُوْر Eagle-wood.

AOD-I-CHINI. Ar. عودِ چيني Chinese Eagle-wood.

AOD-I-HINDI. Ar. عودِ هندي Indian Eagle-wood.

AOD-I-KAMARI. Ar. عودِ قمري. Mountain Eagle-wood.

AODIYA. Hind. A thief of a tribe of thieves inhabiting villages in the Cawnpore and Fattehpur districts. They make remote excursions at particular seasons, in different disguises.—*Wilson's Glossary.*

AONTAGUNJE, a town in India, in Long. 79° 13′ E. and Lat. 28° 17′ N.

AOONLA, or ANOLA. Duk. Hind. Mar. آنوله is the Phyllanthus emblica.

AOO-PALU Tel. ఆవుపాలు. Milk.

AOOWLIA, a town in India, in Long. 82° 14′ E. and Lat. 26° 10′ N.

AORNIS, a place fixed on by the Greek dynasties for a military garrison. There were military colonies of Macedonians established at Alexandria ad Caucasum, Arigæum, and Bazira, and garrisons at Nysa, Ora, Massaga, Penceleotis and at Aornis, a mountain range, supposed to be the mountains of Mahaban in the Pir Panjal or Mid Himalayan range.—See Cyc. of Ind. Supp. ii. Kafir.

APAMARGAMU. అపామార్గము. S. or *Uttareni*, Achyranthes aspera, *L.*

APAMA SILIQUOSA. Syn. of Bragantia Wallichii.—*Brown.*

APAMEA, daughter of Artabazus, the Persian who married Seleucus. He gave her name to three towns. Koornâh, one of the three *Apameus* built by Seleucus in honour of his first wife, is situated at the point of a triangle, formed by the confluence of the rivers Euphrates and Tigris, and although now dwindled into a petty town, it was formerly a place of consequence. Koornah is situated on a low flat, with apparently a rich soil, and along the river are low banks to prevent the country being flooded. At this spot some oriental traditions have fixed the Garden of Eden.—*Malcolm's History of Persia, Vol. ii, p.* 141.—See Koornah.

APANA. See Hindoo.

APANDA or ASTYAGES, son of Isfendiar, one of the Kaianian dynasty of Persian kings.

APANG, Beng. Achyranthes aspera.

APARAJITA, Beng. Clitorea ternatea.

APARAJITA, in hinduism, a form of the goddess Bhawani. The name is probably derived from the flower of the plant Clitoria.—See Sacti. Aphrodite.

APAVARA, a king of Telingana, about A. D. 1141. See Inscriptions, p. 386.

APCHHARA. See Apsara.

APE. Eng.

Ceph	Ethiop.	Keibi	Pers.
Kephos	Gr.	Kubbi	Pers.
Kepos	Gr.	Kaki	Singh.
Koph	Heb.	Korangu	Tam.
Band'r...	Hind	Kothi	Tel.

Apes, form the sub-family Simianæ, of the family Semiadæ or Monkeys, of the natural order Primates. Apes are represented in India by two species of Simia. The ancient Egyptians are said to have worshipped monkeys, and some of them in India are still worshipped.

The various kinds of ape seem to have been made known to the Hebrews, Greeks and Romans, by specimens brought from Africa and India; those of the Hebrews probably from India, the Hebrew name Koph being almost the same as the Sanscrit Kapi. *Harris.*

APENDRA, an old name of Vishnu.

APHELANDRA CRISTATA. This shrub is grown in India, but is a native of the West Indies, with orange coloured flowers, easily propagated from cuttings.—*Mr. Jaffrey.*

APHIS, a tribe of insects, one of which of China is supposed to produce oak-galls.

APHODIUS, a genus of Coleoptera, found in Hong-Kong.

APHORISMS or SUTRA, these were the usual mode of instruction followed in the hindu liturgical books—the Vedas,—whose sacred character hindus still acknowledge. They were adopted in the fourth period of the hindu progress, about B. C. 1000, and in the Sutra, the ceremonial prescriptions were reduced to a more compact form and to a more precise and scientific system. The Aphorisms of the

Nyaya Philosophy, of the Mimansa and Yoga were re-printed in Sanscrit and English about the middle of the nineteenth century, by Professor James Ballantyne of the Benares College.—*Max Muller.*

APHRODITE of the Greeks supposed by Mr. Paterson, to be the Aparajita of the hindus. See Aparajita.

APHU? Hind. Opium.

APIACEÆ. Kyet-khyæ-ban, Burm. one of the Celery tribe, the Apiaceæ.

APICILLATED HORSE-SHOE-BAT, one of the Cheiroptera.

APIOS TUBEROSA of Canada, one of the Leguminosæ, might be introduced into India, for its edible pods.

APIS. The sacred bull of Egypt, was chosen by the priests of Memphis, for its black and white spots, and Mnevis, the sacred bull of Heliopolis, had nearly the same marks; but the Jews, in preparing their water of purification, were ordered in Numbers, ch. xix. 2, to kill a red heifer without a spot. Amongst the Egyptians, the solemnities at the burial of Apis were entirely Bacchic. The priests did not wear the nebris or deer skin, but they wore the panther skin, and carried Thyrsus staves. The sacred bull of the hindus, Nandi, the Vahan of Siva, is in black stone looking at the lingum.—*Bunsen, i.* 432. See Sacrifice.

APIS MELLIFICA, the Honey bee.

APIUM. Jav. Opium.

APIUM GRAVEOLENS. *Linn.*

Kurufs... ...	... Arab.	Common Celery...	Eng.
Kerafs	...Egypt.		

This temperate climate plant, acrid and poisonous when wild, is much cultivated wherever Europeans settle, and is grown in India, in the cold weather. Its seeds are sold as medicine in every bazaar. Its essential oil, dissolved in strong spirit, gives an essence, a drop of which suffices to flavour a tureen of soup.—*Voigt*, 20, *O'Shaughnessy*, 357.

APIUM INVOLUCRATUM, *Rox.*

Chanoo... ...	...Beng.	Ajmood... ..	...Hind
Rhadooni... ...	,,	Ajmud...	,,

Dr. Irvine (*General Med. Top, of Ajmere, p.* 124,) describes Ajmod or Ajmot, as very hot and carminative, good in dyspepsia, much used in all mesalihs, and as brought to Ajmeer from Harrowtee and Mewar: and sold at four seers for one rupee: the same author mentions Khorasani Ajmot, as very hot and carminative. Roxburgh had only seen it cultivated in gardens, in Bengal, for the seed, which they use in diet and medicine.—*Rox*, 1, 97, *Dr. Irvine. O'Shaughnessy, p.* 357.

APJOOLA, a mixed fabric of cotton and silk, made at Dacca.—See Cotton Manufactures.

APLOME GARNET.—A kind of garnet.

APLOTAXIS CANDICANS. Batula, Hind. A plant of Kaghan.

APOCYNACEÆ, a natural order of trees or shrubs including nearly one hundred genera with about four hundred species, about half of which are found in the South and East of Asia, Arabia and Ceylon in the Peninsulas of India and Malacca, Bengal, Nepaul and Java. The genera abound in plants with a milky juice and possessing acrid and other hurtful properties. One of the order furnishes the Lance-Wood of Moulmein, a tree found all over the Provinces. The Karens make bows of it, but prefer *Cassia fistula.* Mr. Mason had never met with the tree in flower, but thinks it a species of dalbergia, though it may possibly be a cassia. At another place he says, the tree which produces a timber possessing the properties of lance-wood is not uncommon in the Provinces, but it belongs to the dog-bane tribe, and is not at all related to *Guatteria virgata,* the lance-wood of commerce.—*Mason. Voigt.* See Cassia. Caoutchouc, Cerbera, Chonemorpha macrophylla, Dog-banes, Holarrhena codago, Plumieria acuminata, Wrightia tinctoria.

APOCYNEA VIMINEA. *Wall.* Syn. of Orthanthera viminea. *Wight.*

APOCYNUM FŒTIDUM. Burm. Syn. of Pæderia fetida.—*Linn.*

APOCYNUM FRUTESCENS *Linn.* Syn. of Ichnocarpus frutescens.—*R Brown.*

APODYTES GARDNERIANA, *Miers.* A small forest tree of the Central Province of Ceylon, found at an elevation of from 5,000 to 7,000 feet; not uncommon.—*Thw. Enum. Pl. Zeyl. i. p.* 42.

APOLLO of the Greeks, is supposed to be the hindu Krishna, whose favourite place of resort is described as a tract of country around Agra, and principally the plains of Muttra, where Krishna and the nine Gopia, evidently the nine muses, usually spent the night in dancing. Krishna was no doubt the Shepherd Apollo of the Hindus, and the Apollo of the Greeks was surnamed Nomios or the pastoral, and Opifer in Italy, who fed the herds of Admetus and slew the serpent Python. The Apollo of Edessa was called Monimos. He was identical at Babylon, with the Phœicnian god Esmun.—*Coleman.* See Cyc. of Ind. Sup. ii. p. 548. Kama Saraswati.

APOLLODOTUS, one of the Greek successors to Eucratides. Apollodotus and Menander alone are mentioned by classical authorities. Apollodotu sruled in Patalene, Syrastrene and Larice, about B. C. 165.

According to Colonel Tod, the Yavan, or Greek princes, who apparently continued to rule within the Indus, after the Christian era, were either the remains of the Bactrian dynasty, or the independent kingdom of Demetrius or Apollodotus, who ruled in the Punjab, having as their capital Sagala, changed by Demetrius to Euthymedia. Bayer says, in his Hist. Reg. Bact. p. 84, that according to Claudius Ptolemy, there was a town within the Hydaspes, yet nearer the Indus, called Sagala, also Euthymedia; but he scarcely doubts that Demetrius called it Euthydemia, from his father, after his death and that of Menander. Demetrius was deprived of his patrimony. A. U. C. 562. Sagala, is conjectured by Colonel Tod, to be the Salbhanpoora of the Yadus when driven from Zabulisthan, and that of the Yuchi or Yuti, who were fixed there from Central Asia in the fifth century, and, if so early as the second century, when Ptolemy wrote, may have originated the change to Yuti-media, the 'Central Yuti.' Numerous medals chiefly found within the probable limits of the Greek kingdom of Sagala, either belong to these princes or the Parthian kings of Minagara on the Indus. The legends are in Greek on one side, and in the Sassanian character on the reverse. The names of Apollodotus and Menander have been deciphered, but the titles of 'Great King,' 'Saviour,' and other epithets adopted by the Arsacidæ, are perfectly legible. The devices, however, resemble the Parthian. These Greeks and Parthians must have gradually merged into the Hindu population.—*Tod's Rajasthan, Vol.* i. *p.* 233. See Cyc. of Ind. Sup. ii. Greeks of Asia. Kabul, p. 438.

APOLLONIAS ZEYLANICA, *Thw.* A tree of the Central Province of Ceylon growing 50 to 60 feet high at an elevation of 3,000 to 4,000 feet.—*Thw. En. Pl. Zeyl. p* 253.

APONOGETON MONOSTACHYON, *Willde.*

Gheehu	...HIN.

APPAS. SINGH. TAM. Cakes made of rice flour, called by the English, Hoppers.

APPA SAHIB, once the ruler of the Mahratta State of Nagpore, who surrendered to Sir John Malcolm, in 1818. He succeeded to the office of Peshwa, by strangling Parsaji, an idiot. His real name was not Appah Sahib, but Mudaji. He afterwards, on the 12th of May 1818, fled from the place allotted to him, to the Sikh territories; but he ultimately died, in 1840, almost forgotten, at Judhpur.—See Bhonsla Rajas of Nagpur; Mahratta Governments in India.

APPEL. MALEAL. ആപല. Premna integrifolia.—*Roxb.*

APPLE, the common apple.

Tuffah...	ARAB.	Malus	LAT.
Melea	GR.	Seba...	PERS.
Seb...	HIND. PERS.	Seba...	SANSC.
Seo...	HIND.		

This is the fruit of the Pyrus malus, which is naturalized in several parts of India. The term apple, is applied in India to the fruits of several plants, and we have the Cashew apple; Custard apple; Love apple; Pine apple; Rose apple; Greater wood apple and Lesser wood apple, and the apple proper, Pyrus malus of England, cultivated in the higher table lands of India. The apples of Solomon's song are the quinces or the Cydonia vulgaris.

APPLE SEED OIL. Oil of seed of Pyrus malus.

APPLE-BLOSSOMED CAMELIA.—See Camellia.

APPLICARUM. TAM. Barilla.

APPRETOTTE, a town in India, in Long. 81° 55′ E. and Lat. 6° 51′ N.

APPROVERS in India are Thugs or Dacoits who have been tried and convicted as having belonged to a band of Thug murderers or dacoits, but who, having made a full confession of their crimes (in some individual cases amounting to the murders of as many as eighty persons) and having denounced their associates, have received a conditional pardon.

APPS. TAM. Hopper. See Appas.

APRACUM. TAM. TEL. Mica.

APRANG, also Rangbharat, Damlakwaypi, Hira-dakhan. A gum resin, a beautiful kind of kino, brought to Ajmere from Bombay; considered very astringent. It is given in intestinal hemorrhages and is also used in enamelling on gold; four tolahs are sold for one rupee.—*Irvine. General Med. Top. of Ajmere, p.* 126.

APRICOT, the common Apricot.

This fruit of the Prunus Armeniaca, is well known in India, where the tree has been naturalized. It is the Melea Armeniake of Dioscorides and the Precocia minora and Malus Armeniaca of Pliny. In China an oil is extracted from the stones. Moorcroft mentions that ten varieties are grown in Ladakh, all of them raised from seed, except one which is budded. *Dr. Royle. Birdwood, p.* 154. *Moorcroft. Darwin, Charles, M. A. F. R. S. Variation of Animals and Plants under Domestication,* 2 *Vols. Lond.* 1868

APSARA, Sansc. in hindu mythology, nymphs of Swerga, the celestial Court of Indra, celestial dancers, celebrated for their beauty. Amongst them is Rembha, the popular Venus of the hindus and some others are described to be of inconceivable loveliness. They answer to the Pari of the ancient Persians, and the damsels called in the Koran, Hur-ul-ayun, the Antelope-eyed-Huri. These hindu nymphs were produced at the Churning of the Ocean, as related in the Ramayana. Sir William Jones thus describes them in Swerga,

Now while each ardent Cinnara persuades
The soft ey'd Apsara to break the dance,
And leads her loth, yet with love-beaming glance,
To banks' of marjoram and champac shades,
Celestial genii tow'rd their king advance,
So call'd by men, in heav'n Gandharva's nam'd.

According to hindu Kshatrya belief, Kshatriya warriors slain in battle are transported to Indra's heaven by these Apsarasas or nymphs of Swerga. Thus in Manu vii. 89, it is said, 'Those rulers of the earth who, desirous of defending each other, exert their utmost strength in battle, without ever averting their faces, ascend after death directly to heaven.' And in book ii. 19 of the Nala, Indra says, ' why are no warriors slain now-a-days, that I see none arriving in heaven to honour as my guests ?'—*Coleman Hind. Myth. Sir William Jones. Hymn to India, vol. xiii. p.* 270 *and* 273. *William's Story of Nala, page* 140. See Indra. Kurma. Maha-deva ; Meru.

APSERHA, a river of Pillibeet.

APTHORPE, a general officer of the Madras Army, who saw much war service, first with the British Auxiliary Legion in Spain, under General de Lacy Evans, for which he received the order of St. Ferdinand. Served in the first China war of 1841-42, and second Burmese war of 1854, for which he received medals.

APTA. Mar. Bauhinia parviflora.

APTIMUN, also *Amr-bel*, the yellow coloured parasite creeper, so often seen on babul trees, all over India, and very common at Ajmere. The entire plant is used in native medicine, in "munj," or muzil, a diluent form of medicine, employed preparatory to giving a purge. The Aptimun Wilayti is an extract of the Aptimun plant from Bombay, and used in the same way as the plant : one tola is sold for eight annas.—*Irvine, General Med. Top. of Ajmere, page* 125.

APYLLANTHEÆ. See Liliaceæ.

AQUA FORTE.—Port. Nitric Acid.

AQUAIL, a town in India, in Long. 93° 30′ E and Lat. 24° 43′ N.

AQUALPURA, a town in India, in Long. 91° 49′ E. and Lat 24° 31′ N.

AQUA MARINE. Seing. Burm. Zamarrud. Pers. At the Madras Exhibition, a good specimen of aquamarine, or beryl, was contributed by Lieut. Puckle from Mysore : other samples of long reed like crystals were forwarded by the Nellore Local Committee ; small pieces of Amethyst, Tourmaline, Rock crystal, Agate and Cornelian were exhibited from Masulipatam. Perhaps the Aquamarine of the South of India may become more valued. Prismatic corundum or Chrysoberyl, is found among the Tora Hills near Rajmahal on the Bunas in irregular rolled pieces, small and of a light green colour. These stones are sold as emeralds by the natives, under the name of "punna," but the native dealers are aware that they are softer than the real emerald of India, which is generally green coloured sapphire. It is this green sapphire, the oriental emerald, which is so often seen in Burmah, but beryls (Seing, Burm) and emeralds are brought from the north of Ava, though the localities in which they are found are not known.

AQUAR, a town in India, in Long. 86° 41′ E. and Lat. 26° 11′ N.

AQUARZENTE, It. Brandy.

AQUATIC BIRDS are largely brought to the markets of the principal towns of India, at certain seasons of the year, ducks, teal, &c., and may be procured in abundance.—See Water Fowl. C. of I.

AQUEDUCTS in South Eastern Asia, are known only as those underground tunnellings, designated throughout Persia, Beluchistan and India, as the Karez. See Karez.

This is described by Roxburgh as an immense tree, a native of the mountainous tracts E. and S. E. from Sylhet, in Lat. 24° 25′ N. It is supposed to be one of the trees that furnish the eagle-wood of commerce. Roxburgh says there is no doubt that the real Calambac or Agallochum of the ancients is furnished from this tree, and in his time small quantities of the fragrant resinous wood were imported from the Eastward, but the imported articles were always considered inferior to that from Sylhet. He was then inclined to consider the Garo de Malacca as this Aquilaria but A. ovata Willde as a distinct species. Agallochum verum India mittit praestantissimum." Dr. Buchanan Hamilton, in his investigation of the Eastern Frontier of Bengal, met with this plant at Goalpara, (v. Wall. Cat. 7,250.) and considered it to be the Agallochum officinarum, as this name is affixed both to his specimens and drawing. Dr. Wallich also obtained specimens of the same tree from Silhet, by means of his plant collectors, (v. Cat. 7,250. v.); and Dr. Royle. was informed by Dr. Lindley, that he also was decidedly of opinion, that it produces the eagle or aloe-wood of commerce, an opinion of the more value, as Dr. Wallich, had opportunities of visiting the countries Eastward of Bengal. (Royle. Ill. Him. Bot. p. 172.) Dr. Royle, thus coincides, and adduces much valuable evidence in support of Roxburgh's opinion : at the same time that he admits that a wood of similar properties may be afforded by other trees, especially the Aloexylum agallochum of Lourciro, referred by DeCandolle to the Leguminosæ. A kind of aloe wood was moreover said to be produced by the Excoecaria agallochum, of the natural order of Euphorbiaceæ, but this is not now concurred in. A third kind is imported from Malacca and Siam. In Persian works, three kinds of aloe wood are described under the names of *Aood i-samudree, Aood-i-Hindee, Aood-i-kimaree*, probably the Al-cemericum of Aboo Hanifa, (*Royle.*) Dr. Roxburgh mentions his having received plants from Malacca of the supposed eagle tree, and that they were in a flourishing condition : Dr. Roxburgh obtained it from Sylhet. Dr. Mason also is of opinion that the A. agallocha or Aloexylon agallochum produces the fragrant substance called lign-aloes, or wood-aloes, which is offered for sale in all the bazaars on the Tenasserim Coast, and is the produce of a tree that grows on the Mergui Islands. It is imported into Mergui by the Selungs, who, as they profit from the trade, endeavour to keep all in ignorance of the tree from which they obtain it. Gesenius says the Hebrew and Greek names are " derived from the Indian name of the tree, agil, Sanscrit agaru and aguru." Besides agaru, the Sanscrit word, we have agalu and aggalu, which come near the " Indian name agil," and the Greek aggollochun. There is, however, another Sanscrit and Pali word with which Gesenius does not appear to have met, lauhat, and this is manifestly the parent of aloe, and by transposition, not uncommon in Hebrew, of the Hebrew name also. The chief consumption of aloe wood is in Siam and China, where it is burned in the temples. Merat and DeLens inform us it was used in Napoleon's imperial palaces as incense. The wood is heavy, yellowish white, shaded with green ; fibrous, spongy, and resinous, its taste aromatic, its odour in combustion very agreeable.—*O'Shaughnessy, pages* 274-75. *Dr. Mason's Tenasserim.—Malcolm's Travels in the East, vol. i. p.* 191. *Royle's Ill. Ind. Bot.* 172. *Roxb. ii.* 423. *Voigt.* 305. *Vegetable Kingdom,* 629-30. *Mad. Ex. Jur. Reports.*

AQUILARIA MALACCENSIS, *Lam.*

A. ovata of Botanists.
Bois-d'Aigle of Malacca.

This tree has a whitish timber. It is a native of Malacca, China ? and Ceylon ? Roxburgh seems inclined to regard this as identical with A. aggalochum of Sylhet, but Voigt and the Vegetable Kingdom recognise it as a separate species, *Voigt* 306, *Veg. Kingdom,* 629. *Roxb. ii.* 422.

AQUILARIA OVATA, Syn. of A. Malaccensis.

AQUILARIA SECUNDARIA.

This tree has a white and inodorous timber, but, when diseased, it secretes a resinous matter said to be the true Eagle-wood

AQUILARIA SINENSIS, Spreng. is named as a tree of China.—*Voigt. p.* 306.

AQUILEGIA VULGARIS. *Linn.* Varieties are cultivated in India, as ornamental flowering plants. The plant belongs to the Ranunculaceæ, and is very common in all the alpine and temperate parts of the Himalayas, and all through Europe and Persia. It is a very variable plant and has about twenty synonims. A canadensis and A. parviflora being alone distinct. *H. f. et T. p* 44. *Hog. Veg. King.* 18. *Voigt.*

AR. ஆறு. Tam. A river ; a common postfix in Tamulian countries, as Pal-ar, Adyar, Pennár, &c., Milk river, &c.

AR. An ancient word entering very extensively into the language of the Indo Germanic races. It seems to be connected with the original term for one of the first of avocations, namely, ploughing and the plough. It is, therefore, an old root, and as, amongst that branch of the Aryan race, husbandry was held in high estimation, we find it, according to Pictet, connected with the words Erin, Elam, Arionistus, Arminius, Oriri. Up to the present day the Emperors of China mark the commencement of the annual cultivation, by personally ploughing a field, and, in the western hemisphere, the answer will be remembered which was paid by the Delphic Oracle to Myson, when Anacharsis inquired who was the wisest man in Greece, " He who is now ploughing his fields." Into the Indo Germanic languages, the word has been adopted, in various ways, connected with the earth, the fields, ploughing and field implements. Thus we have

Ploughing.		*Earth.*		*A plough.*

Arvum ...	...Lat.	Harvest	...Eng.	Arable	... "
Oracz ...	...Pol.			Harrow	... "
				Aromatic	... "
				Arya...	...Sans. Agriculturist.

Professor Max Muller, to whose learned researches so much is due, mentions all this when he tells us that this root AR, means *to plough*, to open the soil. From it we have the Latin *ar-are*, the Greek *ar-oun*, the Irish ar, the Lithuanian *ar-ti*, the Russian *ora-ti*, the Gothic *ar-jan*, the Anglo-Saxon *er-jan*, the modern English *to ear.* Shakespeare says (Richard II. III. 2),. " to ear the land that has some hope to grow." From this we have the name of the plough, or the instrument of earing: in Latin, *ara-trum ;* in Greek, *aro-tron* ; in Bohemian, *oradto* in Lithuanian, arklas in Cornish, *aradar* ; in Welsh, *arad* in Old Norse, *ardhr.* In Old Norse, however, *ardhr*, meaning originally the plough, came to mean earnings or wealth, the plough being, in early times, the most essential possession of the peasant. In the same manner the Latin name for money. The act of ploughing is called *aratio* in Latin ; *arosis* in Greek: and he believes that *arôma*, in the sense of perfume, had the same origin, for what is sweeter or more aromatic than the smell of a ploughed field? A more primitive formation of the root *ar* seems to be the Greek *era*, earth, the Sanskrit *irâ*, the Old High-German *ero*, the Irish *ire*, *irionn*. It meant originally the ploughed land. Besides, the simple *ar* in Old Norse means ploughing and labour, and the Old High-German *art* has likewise the sense of ploughing.

Αρουρα and *arvum*, a field, would certainly have to be referred to the root *ar*, to plough.

The English word *plough*, the Slavonic *ploug*, has been identified with the Sanskrit *plava* ship, and with the Greek *ploion*, ship. *Muller's Lectures, p.* 242. *Taylor's Words and Places. Mullers Chips.* 1864.

ARA, Scythic, a mountain, occurs in Aravalli, Arabudha, Aravidha: it is not to be found in any Sanscrit Dictionary with this signification; yet it appears to be a primitive root possessing such meaning as we have Ar-boodha, ' hill of Boodha ' Aravalli, ' hill of strength. Ar is Hebrew for ' mountain,' (qu. Ararat ?) Oros in Greek ? The common word for a mountain in Sanscrit, gir, is equally Hebrew.

ARAB. The people known by this name are spread from Syria to the Indian Ocean, They are chiefly in tribes and those who occupy the country around Jerusalem, are the Anezi, Shammar, Mowali and Salhan. But the country of Arabia, in which they chiefly dwell is in the S. W. of the continent of Asia and is about 1,430 miles long and 1,200 miles broad. It is recognised in Europe as having three divisions, A. petrea, A. deserta, and A. felix. Its general aspect is that of an elevated land, with considerable ranges of hills. Its mountains, Horeb and Sinai, are part of Jab'l-ul-Tur range, with Hor or Seir, now called Jab'l Harun or Aaron's mountain. The population, vaguely estimated at ten millions, are chiefly engaged in pastoral pursuits, and consist of many independent tribes. In this respect it is in the same state now as in ancient times, when the Cushite and Joktanite occupied A. felix, when the Ammonite and Ishmaelite dwelt in A. deserta, and the Moabite, Edomite, Nabathœan, Midianite and Amalekite in A. petrea. The population of Mecca, its chief town, is about 18,000. Arab-ul-Mostaraba, or mixed Arabs, the lineal descendants of Ishmael, occupied the Hijaz and amongst their descendants was the tribe of Koresh. From the impulse and unity given by Mahomed the world saw them issue from their naked deserts. At all times impetuous, their energies were then concentrated to enforce belief at the point of the sword, and the prophecies of Daniel ch. viii. 24 and 25, were fulfilled, and within twenty years they mastered Syria, Palestine, Egypt and Persia, the conquest of Persia being merely a prelude to further extension in the east. Abu Bakr was Khalif from A. D. 632 to 634. Umar from A. D. 634-643 (A. H. 13-23). Under the khalifat of Umar A. H. 15 or 16 but without his knowledge a military expedition set out from Oman (Umant) to pillage the coasts of India. It appears to have proceeded as far as Tana in Bombay. But Umar expressed great displeasure. About the same time, Hakam, brother of Usman, sent an expedition against Baroach and against Debal, under his brother who failed disastrously. Umar disliked and forbad naval expeditions, a prohibition which was only relaxed in the time of Muawiya. In A. H. 22 Abdullah, son of Amar, invaded Kerman and took Kuwashir, the Capital. Mahomed Kasim by arms and policy conquered the entire valley of the Indus, he handed his conquests to Temim, who governed for 36 years till the downfall of the Ummiade Khalifs, on which event the Arabs were expelled by the Sumra race in A. D. 750 and all the Arab conquests in India were restored to the Hindus. Sind, from Bhakkar to the sea, was ruled by the Sumra Rajputs till the end of the 12th Century. At an early date after the Hejira they established a factory at Canton, and their numbers were so great by the middle of the 8th Century that in 758, they attacked and pillaged and fired the city and fled to their ships. They and their descendants from mixed blood occupy a very prominent position in the western parts of Peninsular India and numbers of them are spread throughout the Eastern Archipelago : but in their own country, the towns on the sea coast have a large admixture of other Asiatic races, and as Arab bedouin life is ever changeable, quarrels and wars have greatly modified the tribes, dispersed some, and amalgamated others, so that at the present day, the Mozeina and Suleim alone maintain their individuality from the time of Mahomed.—*Elliot's India.* See Arabia. Islam. Mahomed.

ARABA, WADI, a deep valley running betwixt the top of. the gulph of Akaba, and the Dead Sea, 105 miles in length, and about 10 in width, summit level above the sea 495 feet. *Wilson's Lands of the Bible, Vol. i. Lond. Geo. Trans.*

ARAB DOW. See Boat.

ARABIA. This Peninsula, with the Indian ocean on its South, the Persian Gulf on its East and the Red Sea on its West, has numerous fertile valleys amidst mountains, and great sandy desert tracts. The ancient Greek and Roman geographers divided Arabia into A. Felix, A. Petræa and A. deserta. The first nearly corresponds to the modern Yemen, but including Mahra and Hadramaut : the second, the modern Hejaz :—the third extending N. E. from A. Felix as far as the Euphrates. Some oriental authors have included the whole Peninsula, under Yemen and Hejaz : others into Yemen, Hejaz, Nejd, the Tehama and Yemann. Hadramaut, Mahra, Shehr and Oman have also been reckoned independent provinces by some, while others include them in the two great divisions, Yemen and Hejaz. "The present Arabians, according to their own historians, are sprung from two stocks : Kahtan, the same with *Joktan* or *Yoktan*, the son of Eber, and Adnan descended in a direct line from Ishmael, the son of Abraham and Hagar." —(Sale's Koran, Preliminary Discourse, p. ii.) But Yoktan, according to Ch. Bunsen, was one of the two sons of Nimrod and was the chief of the first Arabian emigration that proceeded Southwards. Tradition, he says, points to the mountains of Armenia as the birth place of the Arab and Canaanitish races. It is supposed that they travelled along the banks of the Tigris into Mesopotamia, from which a portion of them commenced a great migration Southwards, the result of which was the foundation of the primeval kingdoms of Southern Arabia, the kingdoms of the Adites in Yemen, who believe that they came from the sacred North, and once lived in a glorious garden of the earth which they are to restore. In the matter of their present location, Dr. Latham, in his Ethnology, mentions that Hejaz, is peopled by the descendants of Ishmael, but the inhabitants of Mekkah and Jedda, consist of pilgrims and their descendants of African, Persian. and Turk-blood. In Southern Arabia, Yemen, Hadramaut and Oman, the people are more or less Himyarite in blood, history and civilization. Those of the towns of Mokah, Sanai, Rodda and Loheia, are the more civilized and the desert and hill Arabs are rude and ignorant, one of them so rude in speech as to be named the Ben-i-Kalb, children of dogs—and the Berekede a branch of the Asir are said to prostitute their wives like the Jakuri Hazara. At Hasek is the tomb of the prophet Hud, the fourth in descent from Shem. At the entrance of the Persian Gulf, the pirate coast begins and extends 300 miles northwards. The southern tribes of the Peninsula of Senai, are more or less fishermen. The early Arab religion was Sabæanism, a worship of the heavenly bodies, mixed with idolatry, but with Mahomed commenced the Arab conquests, their creed, science and literature. At present, the Arabic alphabet is in use amongst the Turks, Persians, Malays, some of the people of India and Africa. It was however of Syrian origin. The Arab family is mahomedan, except the christian Arabs of Malta. The Arabs of the south are descendants of Kahtan the Yoktan of the Bible, and those of the North, of Adnan of the blood of Ishmael. Nejd or Central Arabia, is Syrian and arranged into divisions called "*Suks.*"—(*Latham's Ethnology.*") The people occupying that Peninsula, are however regarded by Captain Burton as of three distinct races : viz., the aborigines of the country, who have been driven, like the Bheels and other autochthonic Indians, into the eastern and south-eastern wilds bordering upon the ocean : second, a Syrian or Mesopotamian stock, typified by Shem and Joktan, that drove the indigenæ from the choicest tracts of country; these invaders still enjoy their conquests, representing the great Arabian people. And thirdly, an impure Egypto Arab clan-well personified by Ishmael, his son Nebajoth and Edom (Esau, the son of Isaac)—that populated and still populates the Sinaitic Peninsula. (*Burton's Pilgrimage to Mecca*, 41-45.)

The indigens or autochthones, he says, are those sub-Caucasian tribes which may still be met with in the province of Mahrah, and generally along the coast between Muscat and Hadramaut. The Mahrah, the Jenabah, and the Gara especially show a low developement, for which hardship and privation only will not satisfactorily account. These are "Arab el Aribah," for whose inferiority oriental fable accounts as usual by thaumaturgy. Dr. Carter has remarked the similarity between the lowest type of Bedouin and the indigens of India, as represented by the Bheels and other Jungle races.—(*Burton's Pilgrimage to Mecca, Vol. iii. p. 29.*) The principal immigrant race, he says, are the Noachians, a great Chaldæan or Mesopotamian clan which entered Arabia about B. C. 2,200, and by slow and gradual encroachments drove before them the ancient race and seized the happier lands of the Peninsula. This race would correspond with the Arab el Muta-Arrabah or Arabicised Arabs of the eastern historians. The third family, an ancient and a noble stock, dating from B. C. 1,900, and typified in history by Ishmæl, still occupies the Sinaitic Peninsula. These Arabs, however, do not, and never did, extend beyond the limits of the mountains, where they are still dwelling in the presence of their brethren. Captain Burton, (iii. 31) considers it highly probable that the Copts, or ancient Egyptians, were "half-caste Arabs;" a mixed people like the Abyssinians, the Gallas, the Somali, and the Kafirs, an Arab graft upon an African stock. Hence the old Nilitic race has been represented as woolly-headed and of negro feature.—*Burton's Pilgrimage to Meccah, Vol. iii. p* 31.

The people of Arabia have been alternately aggressive conquerors and conquered, and Sharpe in his history of Egypt is of opinion that the troglodytic Arabs held a strip of country of about four hundred miles in length on the African coast of the Red Sea, separated from Ethiopia by mountains and deserts. They were a wandering unsettled race of people, described by their neighbours as savages, (*Diod Sic. lib. iii.* 33,) whose wars arose for right of pasture rather than for ambition or property. They fought with slings and darts, and out-ran horses in their speed; they lived in caves, and killed the aged, the lame and the sick. Other tribes, however, more civilised (*Pliny, lib. xii.* 42) afterwards traded with the Sabaeans of the opposite coast and supplied the Egyptians with the myrrh, balsam, olives, topaz and metals which their country or their trade produced. Like their neighbours the Egyptians, the Troglodytæ worshipped images and animals, particularly the turtles peculiar to their shores, while the more civilised tribes were worshippers of one God. During the earlier centuries, all these Arabs were easily conquered by the Egyptians; but some of them inhabited Ethiopia, under a settled form of government, and then conquering Nubia and harrassing the Thebaid.—(*Sharpe's History of Egypt, Vol. i. p.* 104-105.)

In the time of Abraham there occurred a contest between five chiefs of South Canaan and Arabia Petræa and four princes of Southern Babylonia, but these five Canaanitish chiefs were merely a portion of peoples in revolt from Elam, to which, also, Arabia Petræa, Petra (Gen. xiv. 15-7) and the adjacent cities was subject There seems no doubt that at another period the Pharoahs had Egyptian colonies in Arabia, for many centuries, Nubia and the Peninsula of Arabia were the hereditary dominions of the Pharoahs It would thus seem that they have been alternately aggressive and conquered. An Arab dynasty in Babylon seems to have lasted about 215 years, and to have been intermediate between the dynasties of the Chaldees and of the Assyrians and Ninyads. The Hyksos or Shepherd kings who ruled in Egypt, are described by Manetho as united Arabian tribes and Palestinian tribes, and they appear to have reigned from B. C. 2554 to about B. C. 1535. The kingdom of Yemen, says Gibbon, has been successively subdued by the Abyssinians, the Persians, the Sultans of Egypt, and the Turks; the holy cities of Mecca and Medina have repeatedly bowed under a Scythian tyrant; and the Roman provinces of Arabia embraced the peculiar wilderness in which Ishmael and his sons must have pitched their tent in the faces of their brethren. Yet these exceptions were temporary or local; the body of the people have escaped the yoke of the most powerful monarchies; the arms of Sesostris and Cyrus, of Pompey and Trajan, could never achieve the conquest of Arabia; the present sovereign of the Turks may exercise a shadow of jurisdiction, but his pride is reduced to solicit the friendship of a people, whom it is dangerous to provoke, and fruitless to attack. (*Gibbon's Roman Empire, Vol. ix. p.* 2291.) To Europe however, the races of Arabia seem to have been but little known beyond its boundary. They are supposed to be the Hagarenes, alluded to in Scripture, the descendants of Ishmael, also known as Ishmaelites or Sarracenes—the Arraceni of Pliny, but the Ishmaelites never penetrated beyond the northern parts of the Peninsula. *It was not until after* the *Hijra* of *Mahomed, that the races* in Arabia poured forth their warriors. They began their later conquests in A. D 622 and spreading into Egypt and Susiana and Persia. In 706 the Arab conquerors first crossed the Oxus, under the command of Katiba, who introduced Islamism into the countries of Bokhara, Samarcand, and Ferghana. (*Markham's Embassy, p.* xii.) and though their empire was so early broken up and divided as A. D. 936, their arms and the arms of those who embraced mahomedanism, have penetrated to China in the East and to Tartary, France and Morocco on the North and West. The peoples who adopt this faith have their natures changed and become in various degrees fanatics, for the revolution caused by Mahomed and his new faith was great. Many of the people of Arabia still continue to practise ancient rites, and Captain Burton mentions that in most places, even in the heart of Meccah, he met with debris of heathenry, prescribed by Mahomed, yet still popular,—(*Burton's Pilgrimage to Meccah, Vol. i. p.* 5.) Colonel Pelly, in writing of the Arabs of the Chaab tribes, says that it is necessary, when considering the Arabs, to distinguish between a series of grades towards civilization, in which they may, at present, be found. The Bedouin, is wandering, pastoral, tent-loving, disdaining to trade, yet avaricious, and willing to sell his ghee, his mutton, or his horse, and always found in wide and open wastes, unpressed upon by adequate exterior power. Yet, even the Bedouin bends to circumstances. He accepts the region allotted for his pasture grounds. Plunder has its laws; and vengeance its chivalry. If he will not trade, he still has wants; and suffers the presence of a Jew or Saleebah as the Affghan suffers that of the hindoo. A little higher in the scale, as with the Chaabs, is the original wandering pastoral Arab, in a district where he is pressed upon from without, and where boundless plunder and roaming are restrained by exterior force. The Arab there partly turns to agriculture, and for this he must in some degree settle. Society harmonizes to this level. Trade is possible. Corn is sold. Abbas are woven and exported. Dates are planted. The appetite for trade grows by what it feeds on. Huts of reeds replace tents; and one sees in their feeble efforts at reed ornamentation, and in their rough twisting of thick reed rope for their bunds, the possible germ of some architectural efforts. Yet higher in the scale the Arab is flourishing as an experienced and wealthy merchant in a town, or administering a well-ordered and comfortable rural district. Passing among these people, society is seen in its transitional state towards civilization." The Beni Szakhr are a tribe of free Arabs. According to Burckhardt, they rove in the plains from the fourth to the fifth station of the Hadj, and thence westward towards the mountains of Belkaa. They were employed by the Pasha of Damascus for the defence of the caravan against the other tribes. They live by the breeding of camels, for the use of the pilgrim caravan, of which they have a very considerable number. Though smaller than the *Anadolian*, Turkman, or Kurdy camels, they are better able to bear heat and thirst than the latter, are chiefly of a light or reddish gray colour, with very little wool about their necks. (*Robinson's Travels, Vol. ii. p.* 169 *and p.* 183.) The *Aenezi*, according to Burchhardt, are the most powerful *Arab* nation in the vicinity of Syria, and if we add to them their brethren in Nedjd, they may be reckoned one of the most considerable bodies of Bedouins in the Arabian deserts. They are nomades, in the strictest acceptation of the word, for they continue during the whole year in almost constant motion. In spring, they approach the fountains of Syria, and form a line of encampment extending from near Aleppo to eight days' journey to the south of Damascus. Their principal residence, however, during that time is the Haouran, and its neighbourhood, when they encamp near and among the villages, while in the more northern country, towards Homs and Hamah, they mostly keep at a certain distance from the inhabited grounds. In these parts, they spend the whole summer seeking pasture and water, purchase in autumn, their winter provision of wheat and barley, and return after the first rains into the interior of the desert. They are the only true Bedouin nation of Syria, the other tribes in the neighbourhood of this country having more or less degenerated in manners, and several being reduced to subjection; while the free-born Aenezi is still governed by the same laws that spread over the desert at the beginning of the mahommedan era.—(*Robinson's Travels, Vol.* ii. *p.* 238.) The greatest part of the western Arabia shore is in the possession of the Joasmi Arabs, a licentious band of pirates, who until recently continued to obstruct by their depredations the commerce of the Persian Gulf. Their principal rendezvous was *Ras-ul-Khyma*, a town about seven miles South-West of *Rums.* The Arabs of the sea-coast are doubtless becoming more alive to the power of the many European nations whose vessels now traverse their seas, but they are in their nature, the same as their brethren of the inland plains. The ocean is their desert, and they fancy they have a similar privilege over it, unlike the tribes of the desert, however, they add cruelty to their love of plunder.—*Overland Journey, Vol. ii. p.* 283.

The Beni Khaled, in Niebuhr's time, were one of the most powerful tribes of Arabia: they conquered the country of Lachsa and advanced to the sea.

The Kiab tribe of Susistan in Persia rarely encamp, but in Susistan near the principality of Havisa were five different considerable tribes of the independent Bedouins Beni Lam were a great tribe between Korne and Baghdad, on the banks of the Tigris. The Montesidsi or Monfik tribe, north of the desert, occupied all the country from Korne to Ardje, on both sides of the Euphrates, and they migrate to summer and winter quarters.

Beni Hakim, a tribe eastward from the Euphrates, are given to husbandry.

The Khas-aal, are a powerful tribe of husbandmen on the east of the Euphrates.

In Oman, are the Beni Hasan, Beni Abu-Ali, Beni Geneba, bedouins, also the Beni Gafari; the Yemani and El-Arabi; the most powerful and illustrious of the tribes of Oman. Robinson, writing of those on the north, says that the dress of the women is a wide cotton gown of a dark colour—blue, brown or black, fastened by a leathern girdle. Over their heads they wear a kerchief, called *shauber* or *mekroune*, the young females having it of a red colour, the old, black. All the women puncture their lips and dye them blue; this kind of tattooing they call *bestoum.* Round their wrists they wear glass bracelets of various colours; and silver rings both in the ears and nose. Both in summer and winter they go barefooted. The Bedouin men and women are very tawny; their children, however, at their birth and for some time afterwards, are fair, but of a livid whiteness. (*Robinson's Travel's, Vol. ii. p.* 184.) *Lieutenant Wellsted*, writing in Oman mentions that in their persons the females are tall and well made, with a roundness and fulness of figure, not, however, approaching to corpulency. Their complexion is not darker than that of a Spanish brunette, and we may infer that this is their natural colour, since, excepting in the morning and evening, those who reside in the oases rarely leave their date groves, and in the towns they preserve their complexions with the same care. On the other hand, the Bedouin women, who are constantly exposed to the rays of the sun, are very swarthy; and the same is observed of the men, although the children are equally fair at their birth.—*Wellsted's Travels, Vol. i. p.* 353.

There is, indeed, but little doubt that the mohammedan ladies in Oman enjoy more liberty, and at the same time are more respected, than in any other eastern country. During civil commotions, they often take a part in public affairs, and in some instances have displayed the utmost heroism.

Amidst the most striking features in the condition of this interesting and singular race stands their Sheikh government, which, in its constitution and operative effects, is a political phenomenon in the history of nations.—*Wellsted's Travels, Vol. i. p.* 354.

Burton tells us that Sherifs and other great men sometimes bind a white turban or a Cashmere shawl round the kerchief, to keep it in its place. The Aakal varies in every part of the country. Here it is a twist of dyed wool, there a bit of common rope, three or four feet long. Some of the *Arab* tribes use a circlet of wood, composed of little round pieces, the size of a shilling, joined side by side, and inlaid with mother-of-pearl. The Eastern Arabs wear a large circle of brown wool, almost a turban in itself. In Barbary, they twist bright-coloured cloth round a rope, and adorn it with thick golden thread. As a rule, the Sheikhs and their subjects, are born to the life of shepherds or soldiers. The greater tribes rear many camels, which they either sell to their neighbours, or employ them in the carriage of goods, or in military expeditions. The petty tribes keep flocks of sheep.

It is the difference in their modes of life that constitutes the great distinction between the different tribes. The genuine Arabs disdain husbandry, as an employment by which they would be degraded. They maintain no domestic animals but sheep and camels, except perhaps horses. Those tribes which are of a pure Arab race live on the flesh of their buffaloes, cows, and horses, and on the produce of some little ploughing. The former tribes, distinguished as noble by their possession of camels, are denominated Aleu-el-Aleaær; and the second Moædan. The latter are esteemed a middle class, between genuine Arabs and peasants. Niebuhr heard some tribes mentioned contemptuously, because they kept buffaloes and cows. The Moædan transport their dwellings from one country to another, according as pasturage fails them, so that a village often arises suddenly in a situation where, on the day before, not a hut was to be seen.—*Niebuhr's Travels, Vol. ii. p.* 159-160.

In all parts of the South of Europe, Western Africa, Western and Southern Asia, are descendants of the Arab conquerors. Their first emigration from Arabia is supposed to have taken place about 700 years before the time of Solomon, and the Abyssinians appear to be of Arab descent. They were converted to christianity in the fourth century of the christian era, and in the sixth they re-crossed over to Arabia, to avenge the persecution of christians by a Jewish ruler, conquered Yemen and marched to the gates of Mecca, where they were overthrown two years before Mahomed was born. Such partial immigrations and conquests have left tribal bodies from other races in the land. Amongst these may be named the Salibah (Salib, Ar. cross). Lieut. Col. Pelly saw some men of this tribe at Koweit and elsewhere. They worship the cross (Saleb) and perform many ceremonies, more nearly allied to the corruptions of Asian Christianity than to Islamism. Men and women dance round a sort of maypole. They wear a carter's smock, coming down to the feet, and which, like a boy's pinafore, ties behind. They possess a beautiful breed of donkies, which they ride, without girths, upon a saddle made like a cottage wooden chair bottom. They squat on this seat, and twist their legs over a pummel peak, crossing them over the donkey's neck. They seem to prise their saddles, as an Arab does his mare; and would not sell them. They seemed a merry quick witted, disreputable lot, with retrouse noses, and Irish features. They stood, with eyes twinkling (legs and hands always on the fidget) and pelted him with the peelings of their fun. He tells us, also that this strange people live on the flesh of the gazelle, which they shoot, and dress themselves in its skin. They wander about amongst, and are friends with, all the Arab tribes, and yet remain entirely distinct. What their religion is, he cannot tell. They adopt some of the forms of the Mahomedan faith, but at feasts and marriages they raise the cross as a sign of rejoicing. They are the best guides for the desert, knowing where water is to be found, and the position of the various tribes. Those of them he saw seemed much more intelligent than the Arabs, and they have more of a European than an Asiatic cast of countenance. They come mounted on large white donkeys, bearing much the same things as the Bedouins for sale. The saddle is peculiar. There is first a pad in front and behind an upright piece of wood. To those two pieces of wood hollowed out are attached side by side so as to form a hollow seat. They sit in this hollow seat, cross their legs like tailors with an anterior upright between their thighs, and their feet on either side of the donkey's neck. They use no bridle.

The cities are none of them large. According to Captain Burton, the population of El Medinah is from 16,000 to 18,000, and the Nizam troops in garrison 400. Mecca contains about 45,000 inhabitants, Yambu from 6,000 to 7,000, Jeddah about 2,500, and Taif 8,000.

Koweit is a compact town of about 15,000 inhabitants, built on a promontory of loose sand-stone covered with sand, and to illustrate the commercial habits and treatment of the bedouins, it may be mentioned that vessels of 50 or 60 tons bear the produce of countries at the northern end of the Persian Gulf from Bizea, Dillum, Ghonawah, Bunder Reegh, and the smaller seaport towns round to Koweit, for trans-shipment to bugalows, for conveyance to Bombay. In the same way goods from India are brought here in large bugalows and distributed amongst smaller ones for conveyance to the smaller ports.

Teak is imported and used for ship building, and a large number of horses, the best exported from Arabia, are sent from there to Bombay.

The inhabitants of the desert are allowed to enter Koweit, on depositing their arms at the gate; and it has been the custom from the time of the present Sheik's grandfather to feed, not only all who enter, but the poor of the place besides.

The Bedouins assemble daily in a place outside the gate, and with them there is a good sprinkling of the Slubba. The Arabs come, generally, mounted on camels, bringing ghee and truffles with donkeys bearing brushwood and camel's dung. Sometimes when hard up, the Arab will bring in his horse for sale, but good ones are seldom got in that way. The expedient of constructing reservoirs in which to store rain-water has prevailed in Arabia from a very early date. These are generally found in localities devoid of springs, and dependent on the winter rains for a supply of water during the summer months. The most remarkable instance on record is the great dam of Mareb, built about 1,700 years before the Christian era: this doubtless suggested similar reservoirs in other parts of Arabia, and the neighbouring coasts of Africa, which have usually been subject to it. All the travellers who have penetrated Yemen describe many such in the mountainous districts, and others exist in the islands of Saad-ed-din, near Zeilah, in Kutto, in the Bay of Amphila, and in Dhalak, near Massowah.

It was this which made Yemen, many centuries before the time of Moses, for a long period the paradise of Arabia, and which laid the foundation of that mighty and civilized empire, which like the glory of the Fayoom, disappeared from off the face of the earth when the dams were broken through. The Pharoahs had established Egyptian colonies in the country, for many centuries but the reports of travellers, during the past 70 years establish the fact that a few thousand years of neglect and devastation have brought the country into its present state of desolation. There is no want of either brooks or springs or cultivable soil, but the former are wasted in morasses or lost in the sand, and the soil is washed away by the violence of the torrents. Southern Oman is but thinly peopled, for the whole number, including women and children, does not exceed fifty thousand; but the northern districts are far more populous.—*Wellsted's Travels, Vol. i. p.* 383.

The Bedouins, who occupy the Great Western desert of Oman have neither houses nor tents, but live under the shade of trees.—*Wellsted's Travels, Vol. i. p.* 365.

Of precious stones, Arabia has the topaz, the onyx, and a stone which seems to be cornelian, and is called Yemani or akik. The agate is found near Mocha, emeralds in the Hijaz, beryls and cornelians near San 'a' and Aden; malachite in the cavern of Beni Salem; also jasper, amethysts, and turquoises, in the environs of the village of Salwa about three days journey from Medina. Diamonds, the sardonyx, and the topaz, were obtained from this country in former times. Of metals, silver, iron, lead, aud copper, are met with in different parts of Arabia, and the last, recently in Oman. Gold is mentioned by the ancient writers, and in all probability it will be found when the country is better explored, but it is not known to exist in Arabia at present. Bitumen is obtained in Arabia Petræa, and in Arabia deserta, lignite coal.

Lieut. Wellsted, Vol. i. p. p. 112, 113.)

It is understood that a gray coal is found a little way inwards from the river, in the line between Deir and Damascus. Colonel Chesney did not, however, actually find it; but a letter was received on the subject from Ibrahim Pasha, and the Arabs described it particularly. (Euphrates and Tigris, Col. Chesney, Vol. i. p. 567.) Stones of a kind, are laid on fires made of Camels dung, to increase the heat.

Another particular kind of stone, called tafal by the Arabs, is found near Mount Sinai; it is brittle, with the appearance of pipe clay, and it serves the poor instead of soap, it is also useful in taking stains out of cloth, and in refreshing the skins of asses, being rubbed over them for this purpose in summer time —*Burckhardt's Travels, in Syria, p.* 394, 488.

(*Euphrates and Tigris, Colonel Chesney, Vol. i. p.* 368.) The Arabs are not so scrupulous as the Turks and Persians about their women; and though they have the harem, or women's part of the tent, yet such as they are acquainted with come into it.—*Mignan's Travels, p.* 16.

The dances of the Arabs, the Debki, as it is called, resembles in some respects that of the Albanians, and such as perform in it are scarcely less vehement in their gestures, or less extravagant in their excitement, than those wild mountaineers. They form a circle, holding one another by the hand, and moving slowly round at first, go through a shuffling step with their feet, twisting their bodies into various attitudes. As the music quickens, their movements are more active; they stamp with their feet, yell their war-cry, and jump as they hurry round the musicians. The motions of the women are not without grace; but as they insist on wrapping themselves in their coarse cloaks before they join in the dance, their forms, which the simple Arab shirt so well displays, are entirely concealed. *Layard Nineveh, p.* 119, 120. *Baron de Bode's Travels in Luristan, and Arabistan,* 11, 198. *Skinner's Overland Journey, ii.* 283. *Burton's Pilgrimage to Mecca. ARABIAN GULF, is a term often applied to the Red Sea.—See Kulzum: Musiris.

ARABIAN HORSES, are latterly but little seen in India. The demands of India have become greater, and a larger horse with greater power has been more needed, to meet the wants of Government for its heavier ordnance and the requirements of the community for the conveyances which are now so commonly in use, by all Europeans and the wealthier natives: Also, the prices demanded for the Arab horse are beyond the means of the people, and it never was in great request except as a riding horse.

ARABIAN SEA, that part of the Indo-Afric ocean on the south of Arabia, ARABIAN SEA, including Red Sea, and Persian Gulf, has 6,000 miles of Sea Coast. The evaporation averages ¼ of an inch only or about 39 cubic inches of water annually raised —*Maury.*

ARABIC LANGUAGE, as written in the koran, is the most developed and richest of the semitic tongues. It is not now spoken in any part of Arabia, as there written. Probably it never was so, any more than the Latin, the English, the German or Italian have ever been spoken as written in their respective bounds, and Burton quotes Clodius, in his "Arabic Grammar: as saying that the dialectus Arabum vulgaris tantum differt ab eruditâ, quantum Socrates dictio ab hodiernâ linguâ Græca." But it must be remembered that the Arabs divide their spoken and even written language into two orders, the "Kalam Wati," or vulgar tongue, sometimes employed in epistolary correspondence, and the "Nahwi," a grammatical and classical language. Every man of education uses the former, and can use the latter. And the koran is no more a model of Arabic (as it is often assumed to be) than "Paradise Lost" is of English. Inimitable, no man imitates them. *Burton's Pilgrimage to Meccah, Vol. iii. p.* 330.

Niebuhr, also, tells us that the invention of the modern characters which are very different from the Kufic, is ascribed to a vizier. The Arabians, Persians and Turks, write *Arabic* in sets of characters differing in several particulars from one another. They have also different modes of writing for different forms of business, each of which has its particular name. (*Niebuhr's Travels, Vol. ii. p.* 261.) Neither the Arabic nor the Persian letters are sufficiently numerous to compose the pronunciations of many foreign tongues, and they are ill suited to record proper names as in geograply. Much of the value of Abul Fazil's records is lost from this cause. *Burton's Pilgrimage to Meccah, iii.* 330:—*Niebuhr's Travels, ii.* 261, *Tod's Travels,* 360-1.—See Kashmir. Kirkook. The Arachis genus of plants belong to Leguminosæ.

This species, indigenous to South Amer is extensively cultivated in the Peninsul India for the sake of the oil yielded by seeds. It is found in abundance in the ba of the Tenasserim Provinces, where it is sumed in large quantities by the natives, and with the exception of the cocoa-palm, it is, of all the oil-yielding plants, the most extensively cultivated in the Malay Archipelago. It is said that there are two varieties of this plant grown in Malacca, also in Java, one with white, the other with brown seeds. It is there known as the Katjang oil. The Arachis hypogea is particularly remarkable from the manner in which its fruit is produced. The young fruit, instead of being placed at the bottom of the calyx, as in other kinds of pulse, is found at the bottom and in the inside of a long slender tube, which looks like a flower stalk. When the flower has withered and the young fruit is fertilised, nothing but the bottom of this tube with its contents remains. At this period a small point projects from the summit of the young fruit, and gradually elongates, curving downwards towards the earth. At the same time the stalk of the fruit lengthens, until the point strikes the earth, into which the now half grown fruit is speedily forced, and where it finally ripens in what would seem a most unnatural position. When mature, it is a pale-yellow wrinkled oblong pod, often contracted in the middle, and containing two or three seeds the size of a hazel-nut. The fruit is generally toasted before it is eaten, is extremely palatable and is considered a valuable article of food in Africa and the tropical parts of Asia and America, and sold in the streets and bazars of every town in India. In flavour the nuts are as sweet as an almond.

The Oil.

Vayr-cuddala-yennai.	Tam.	Willayeti-mung-phulli-ka tel	Hind.
Manilla noona	...Tel.	Bhoysing ka-tel	„

It is, however its oil which is the most valuable in commerce, and in the neighbourhood of Calcutta, it is used for pharmaceutical purposes, and especially for lamps and machinery. A great quantity of the oil is annually exported from the Madras territories, as will appear from the following account of this valuable product extracted from the Juries' Reports :—"In the year 1848-49, 37,000 gallons were shipped, but in the two following years the exports exceeded 100,000 gallons. It had however fallen to 57,207 gallons in 1852-53. It is said to be used for adulterating gingely oil in North Arcot, where it costs from Rs. 1-8 to 2-12 per maund. In the Nellore District, the seeds are procured at Rs. 1-8 per maund, and in Tanjore about 200 acres are cultivated, producing annually 75 candies of oil, at Rs. 2-6 per maund. Its value in London, in January 1855, was £47-10 per ton." Simmonds has remarked upon this useful product :—" This oil is good for every purpose for which olive or almond oil is used. The value of ground-nut kernels in London is about £61, 10s. per ton and of the oil £42 to £43 per ton. For ordinary purposes it is quite equal to olive oil.—Roxb. iii. 286. *Riddell Manual of Gardens: Voigt*, 243. *Hog. Veg. King*. 276. *Crawfurd Dic. p.* 13. *O'Shaughnessy* 304. *Simmonds Veg. Prod. Broadwood's Bombay Prod. Ainslie*, 234. *M. E. Reports Cat. Ex.* 1862 *Mason's Tenasserim*.—See Ground Nuts, Manilla Nut, Moong Phallee, Earth Nut, Ground Nut Oil ; Oil.

ARACHOSIA of the classics is the country of the Rachos, with whom the immigrant Arians came in conflict, and have been turned to the fearful Rakshasas, of popular hindu belief. According to General Ferrier, Arachosia can be distinctly shown, by the Greek measurements, to have been at the ruins of Shahr-Zohauk or Olan Robat, between Kilat-i-Ghil-jie and Mokoor.—*Ferrier, p.* 323. According to Ch. Bunsen, however, to the South of Kabul, is Haraquaiti, denominated the fortunate, the Harauwatis of the cuneiform inscriptions, the Arachosia of the classics. It was the tenth people whom the Arians conquered. It was here that the Arians commenced to inter their dead, which the Zend-avesta strictly prohibits as being the greatest desecration of the sacred earth.—*Bunsen, iii. p.* 464-485. *Ed. Ferrier's Journ. p.* 323. See Arians. Greeks of Asia. Kabul, p. 434, 437. Sudra.

ARACHOTIA, mentioned on the coins of the Indo-Greek rulers, was Candahar. See Kabul, p. 436, 7 and 8.

ARAD. Guz. Phaseolus mungo.

ARADHYA, a class of brahmins who profess the Jangam creed but adhere to their caste views. In other sects of hindus, the brahmin uniformly takes precedence of other castes. But among the Vira Saiva, he is degraded beneath all others. Hence there is a perpetual feud between the Aradhya Brahmin and the Jangam who (unless at funerals where all are bound to assist), treat these bramins with contempt —*Brown on the Creed and Customs and Literature of the Jangams, p.* 8. See Jangams. See also Wilson's Glossary.

ARADOONDA. Tel. Capparis horrida.

ARAFAT, anciently called Jabel Ilal, الال the Mount of Wrestling in Prayer, and now Jabal ur-Rahmat the "Mount of Mercy," is a low pointed hillock, of coarse granite split into large blocks, with a thin coat of withered thorns, about one mile in circumference and rising abruptly from the low gravelly plain—a dwarf wall at the southern base forming the line of demarcation—to the height of 180 or 200 feet. It is about a six hour's march, or twelve miles, on the Taif road, due east of Meccah. Near the summit, is a white-washed mosque with a minaret, looking like a small obelisk : below this is the whitened platform, from which the preacher, mounted on a dromedary, delivers the sermon, to be present at which is an essential part of the mahomedan pilgrimage to Meccah.—*Hamilton's Sinai, Hejaz, and Soudan, p.* 131. *Burton's Pilgrimage to Meccah, Vol. iii. p.* 252, 257.

ARAFURAS See Alfoeren.

ARAKA. See Hindu or Hindoo.

ARA-KADU. TAM. *Lit.* the jungle on the river; the modern Arcot. See Kurumbar.

ARAKI. AR. The arrack of Egypt and Turkey. The word means any spirit; عرق. In Egypt asking for a "syrup of gum," one obtains a "a dram" of Araki. The favourite way of drinking it, is to swallow it neat, and to wash it down with a mouthful of cold water. Taken in this way it acts like the "petit verre d'absinthe." Egyptian women delight in it, and Eastern topers of all classes and sexes prefer it to brandy and cognac, the smell of which, being strange, is offensive to them.—*Burton's Pilgrimage to Meccah, vol. i. p.* 196. —See Arrack.

ARA KOORA. TEL. Marsilea quadrifolia.

ARAK SOOS. ? ARAB. ? Liquorice Juice.

ARAK TREE, according to Wellsted, quoting Leon de la Borde and Forskal, two trees are known in Arabia by this name, one, in the interior of Oman, the Salvadora Persica, the Cissus arborea of Forskal, the other shorter and smaller is the Avicennia nitida. —*Delille*; *Voy. en Arabie de Leon la Borde. Wellsted's Travels, Vol. i. p* 416.

ARAL. The height of the plateau, above the sea of *Aral*, nowhere exceeds six hundred feet.—*Vigne's A personal Narrative, p.* 425.

ARALI. TAM. Nerium odorum. Ait.

ARALIACEÆ, the Ivy family, a natural order of plants, generally trees or shrubs, several genera of which, Panax; Dimorphanthus; Aralia and Hedera, occur in India. Yoksun, in Sikkim, occupies a very warm sheltered flat and about it many tropical general occur, such as tall bamboos of two kinds, grasses allied to the sugar-cane, scarlet *Erythrina*, and various *Araliaceæ*, amongst which was one species whose pith was of so curious a structure, that Dr. Hooker had no hesitation in considering the then unknown Chinese substance called rice-paper to belong to a closely allied plant. The Chinese rice-paper, had long been known to be cut from cylinders of pith which has always a central hollow chamber, divided into compartments by septa or excessively thin plates. It was only within the last few years that the above supposition has been confirmed, by Sir William Hooker receiving from China, specimens of the rice-paper plant itself, which very closely resembles, in botanical characters as well as in outward appearance of size and habit, the Aralia Sikkim plant. The natives of Sikkim collect the leaves of many Aralias as fodder for cattle, for which purpose they are of the greatest service in a country where grass for pasture is so scarce: this is the more remarkable since they belong to the natural family of ivy, which is usually poisonous. The use of this food however gives a peculiar taste to the butter. In other parts of Sikkim, fig leaves are used for the same purpose, and branches of bird-cherry, a plant also of a poisonous family, abounding in prussic acid. The only Aralia occurring in S. E. Asia, is A. papyrifera. Others of this genus are well known in America: and the young shoots and roots of Dimorphanthus edulis are used as food in China and Japan.—*Hooker Him. Jour. Vol. i. p.* 359. *Hog's Vegetable Kingdom*, 390.

ARALIA EDULIS, Syn. of Dimorphanthus edulis.

ARALIA PAPYRIFERA.

Rice Paper Plant..... ENG.—Tung-tsau.........CHIN.

The source of the Rice Paper of commerce continued long a matter of doubt, but it is now equally certain that it is produced from the Aralia papyrifera and it has since been described by several authors, amongst others Dr. Bennet, and Sir John Bowring. The plant is cultivated in China and Formosa, for the commercial product, known as the rice paper of commerce, which is largely consumed in the provinces of Canton and Fokian, and it is estimated that 30,000 dollars worth of it are annually made use of in Fu-chu-fu alone, where every lady wears artificial flowers made out of it: one hundred sheets, each about 3 inches square can be bought for three half pence. The pith is sometimes 1½ inch in diameter. It is not grown from seed, but from young shoots; when these appear above ground early in spring and are a few inches high, they are carefully separated from the parent roots and transplanted into pots in which they remain until about a foot high, when they are removed to land prepared for them. They are said to attain their full growth of 10 or 12 feet at their tenth month, they are cut down, the twigs and leaves removed, and the stems left to soak for some days in water, to loosen the bark and wood and facilitate the removal of the pith. This last after being cleaned and made into a cylindrical shape, is cut into convenient lengths and is now ready for the hand of the paper cutter, who, with a sharp broad bladed knife, makes a slight longitudinal incision in the cylinder of pith, which is then turned round gently and regularly on the edge of the knife until the whole available material is planed off in thin even slices. Much care and dexterity are requisite to produce sheets of even thickness.—*Bennet, p. p.* 299, to 304: See Paper-Rice and Rice Paper, C. of I.

ARALIE, Malayal, a tree about forty feet in height, and two feet in diameter; used by native carpenters of Malabar for planks in vessels, and said by them to be a valuable wood. —*Edye. Mal. Can.*

ARALI-VAYR. TAM. Root of Nerium odoratum.

ARALOO. CING. Terminalia chebula; Myrobalan.

ARAM, the original Highland, south west of Armenia (Arminn); the country between the sources of the Euphrates and Tigris, and Mesopotamia proper is Aram Nahrain. The Aramæans, were a Semitic race of highlanders who first settled on the upper part of the Euphrates and Tigris districts, and then passed through Mesopotamia proper (Aram of the two rivers), the low land (where is Mash-Mons Masius) which falls gradually towards Syria, afterwards called Aram. The name of Uz, in Nejd, proves that its off-sets extended as far as North Arabia. The Aramaic tribes, according to Ch. Bunsen, are the historical nations of Syria; Aram, Mesopotamia and Babylonia, speaking Syrian in the west and the so-called Chaldaic in the East. In the gradual diffusion of mankind, the Western Provinces of Iran seem to have fallen to the share of the Aramæans and Elamites—and the Shemitic people and language displaced the Cushite. From their primitive language two distinct branches sprung, the original Arabic, with the Musnud, Koreish and other dialects of that tongue, being one, and the Aramaic, the other. The latter had two grand sub-divisions, from one of which, known as the Western Aramaic, were derived the Amharic, Syriac, Hebrew, &c. &c., and from the other or Eastern Aramaic, came the Syrian, Babylonian and Chaldean tongues. From its monosyllabic construction the Eastern seems to be more ancient than the Western Aramaic, and it appears likewise to be the root of the Zend, Pehlevi, Sanscrit and other dialects in use throughout a portion of the territory along which it had spread Eastwards. Aram is the latest name of Syria.—*Bunsen, Vols. iii. and iv.* See India, p. 314. Iran; Babel, Mareb; Semitic Race.

ARAM-NAHRAIN, is the Syria between the rivers, of Gen. xxiv, 10 and Deut. xxiii, 4. The greater part of what was called Mesopotamia, in latter times, constituted the territory of ancient Babel, and was the Aram Nahrain. The same territory in Gen. xxviii, 2, is called Podan-Aram, or Champagne Syria, both of which designations agreed with the description of the country given by Strabo.—*Colonel Chesney's Euphrates and Tigris, p.* 118. *Bunsen, Vols.* iii. and iv. See Aramæans. Babel.

ARAMANDA. అరమంద. TEL. Eugenia bracteata, *R.* ii 409.

ARAMBURE, M. d' a French Officer of note under Law, during the Carnatic wars.

ARAMBA, in Kattywar, held by the Badhail race, who, along with the Waghers of Dwarica, were long the terror of the neighbouring seas. It is probably the Aramraw of the maps, in Long. 69° 15′ E. and Lat. 22° 27′ N.

ARANA-TANAH. Coal.

ARAND. SANS. ARANDI. SANS. Ricinus communis. Castor oil.

ARANELLAH, a dark brown coloured wood of Travancore, specific gravity 0·645 used for building common houses.—*Frith.*

ARANELLI. TAM. அரெநெல்லி. Cicca disticha.

ARANG. MAL. Charcoal.

ARANGO. GUZ. Chussaee. HIND., large rough cornelian beads, of various sizes and shapes, made in Cambay, and formerly extensively used in the African slave trade.—*Faulkner.*

ARANGOLE PASS, it leads from Tinnevelly to Travancore.

ARANKOWAL, 'the lotus of the desert,' from *aranya* (Sanscrit), 'a waste,' and *comala* (pronounced *kowal*), 'a lotos:' correctly it should be written *arancomala*; but the pronunciation is as above.

ARANY, a town in India, in Long. 83° 13′ E and Lat. 18° 29′ N.

ARARAH, a town in India, in Long. 77° 20′ E. and Lat. 23° 58′ N.

ARARAT. Aghri Dagh or Mount Ararat is in height about 16,200 feet. In the last volume of his 'Cosmos' Humboldt records the height of Demavend at 9,715 feet, which is above 1,785 feet under the height attributed to it. According to Humboldt, Ararat is only 17,112 feet high. General Monteith, F. R. G. S., who passed three years at the foot of Mount Ararat, used many means to ascertain its elevation, and made it 16,000 feet above the level of the Araxes—This is the Ararat of modern Geographers, in the province of Erivan. At a distance, it has a resemblance to a ship. It is called by the Armenians Mountain of the Ark, and by the Persians Mountain of Noah; Aghridagh being the name given to it by the Turks; and the Armenians call it *Macis*: but all unite in revering it as the haven of the great ship which preserved the father of mankind from the waters of the deluge.—It is called by the Arabs also Jabl-ul-Judi and by the Armenians Massissar, or Mountain of the Ark. Berosus and Alexander both declare that in their time it was reported that some planks of the Ark remained on this hill, at the date of the accession of the Abbasside Caliphs, A. D. 749.—*Porter's Travels, i.* 183. *General Monteith's Report.* See Iran.

ARAS, the modern name of the ancient Araxes, the Awerma of the Purans. This ancient river is now called Kum Feroz. It laves the foot of the rock Istakhr. The snowy Ardekan mountains are the same with those which presented so formidable a barrier to Alexander's progress, and by whose slopes he descended into Persia, in his advance on Persepolis. Towards the north of Armenia, runs the Araxes, with its numerous tributaries. This river which at its commencement, owing to its many affluents, bears the Persian appellation of Hazara, springs from the side of the Bin Gol, or mountain of thousand Lakes, about 30 miles south of Erzerum, and nearly in the centre of the space between the eastern and western branches of the Euphrates. Its course, from its first spring near Jebel Seihan, is almost N. E. for about 145 miles through Armenia; when it turns eastward, being then near the frontier of Kars: this proximity continues for 110 miles. The sources of the Aras and those of the north branch of the Euphrates are about 10 miles from one another. According to Pliny (lib. VI. c. 9) those sources are in the same mountain and 600 paces asunder. In modern times, the north-eastern districts, along the banks of the *Araxes*, intervening between Aderbijan and Georgia, have been in general subject to the sovereigns of Persia.—*Malcolm's History of Persia, Vol. ii. p.* 212. *Journal of the Royal Geo. Society, Vol.* vi. *Part ii., p.* 200. See Aras also Bend Amir. Fars. Iran. Tigris.

ARASA-MAR'M. TAM. Ficus religiosa.

ARASA-NAR. TAM. A fibre obtained from the Ficus religiosa.

ARASHAM. See Hindoo.

ARASHTRA. SANS. or the kingless, the republican defenders of Sangala or Sakala. They are the Adraistæ of Arrian, who places them on the Ravi. They were known by the several names of Bahika, Jartikka and Takka, from which last is the name of their old capital of Taxila or Takka-sila as known to the Greeks. The people still exist in considerable numbers in the Panjab Hills, and their alphabetical characters under the name of Takri or Takni are now used by all the hindus of Kashmir and the northern mountains from Simla and Sabathoo to Kabul and Bamiau.—*Elliot.* See Chandra Gupta.

ARASINA-GURGI. CAN. Garcinia pictoria. See Gamboge Butter also Oil.

ARATI. TAM. A hindu ceremony for warding off the evil eye. See Curcuma longa.

ARATNI. SANS. The short ell measure.

ARATTAS. See Arasee. Chandragupta.

ARATY, a town in India, in Long. 73° 18' E. and Lat. 13° 7' N.

ARAUCARIA EXCELSA. R. Brown. Dombeya-excelsa. Lamb. Colymbea excelsa. Spreng. The Norfolk Island Pine grows also in New Holland, New Caledonia, Botany Island and Isle of Pines. It is a majestic tree attaining to a height of from 60 to 228 feet, with a circumference of 30 feet. Its wood is useful for carpenters in door work, but is too heavy for naval purposes, as spars. Admiral Keppell says that this tree is not so lofty as the Altingia excelsa, but is of the same quality and is used for the same purposes: the two trees are supposed however by botanists to be identical. —*Voigt, Keppell's Ind. Arch. Vol. ii. p.* 282.

ARAUCARIA CUNNINGHAMII. G. A. shrub of New Holland.

ARAVA The Dravida people commonly called Tamil who speak the Arava or Tamil language. See Dravida. India. Tamul.

ARAVALLI. A chain of hills connected by lower ranges with the western extremity of the Vindya mountains on the borders of Guzerat, and stretching from S. W. to N. E up to a considerable distance beyond Ajmir, in the direction of Delhi. The range divides Rajputanah into two nearly equal parts forming the division between the desert on the west and the central table land. It would be more correct to say the level of the desert, for the south-eastern portion, including Jodpur, is a fertile country. Except this tract, all between the Aravalli mountains and the Indus, from the Sutlej or Hysudrus on the north to near the sea on the south, is a waste of sand, in which are oases of different size and fertility, the greatest of which is a round Jessalmir. The narrow tract of Cutch intervenes between the desert and the sea, and makes a sort of bridge from Guzerat to Sind. Central India is the smallest of the four natural divisions. It is a table land of uneven surface, from 1,500 to 2,500 feet above the sea, bounded by the Aravalli mountains on the west, and those of the Vindya on the south, supported on the east by a lower range in Bundelcund, and sloping gradually on the north-east into the basin of the Ganges It is a diversified but fertile tract. The *Patar*, or plateau of Central India, is distinct from the Vindhya to the south and the Aravalli to the west, and its underlying rock is trap. Aravalli means the hill of strength, and these hills have afforded protection to the most ancient sovereign race in the east or west—the ancient stock of the Suryavansa, the Heliadæ of India, or children of the sun, the Princes of Mewar, who when pressed retired to its fastnesses, only to issue again when occasion offered. The people who occupy the Aravalli, are the Meena, mountaineers, a robber predatory race. The hills are rich, also, in mineral products, and, enabled the Mewar family long to struggle against superior power and to raise those magnificent structures which ornament their kingdom. The mines are royalties; and a monopoly. "An-Dan-Kan" is an expression, which comprehends the sum of sovereign rights in Rajasthan, being allegiance, commercial duties, mines. The tin-mines of Mewar were once very productive, and yielded, it is asserted, no inconsiderable portion of silver: but the caste of miners is extinct, and political reasons, during the Mogul domination led to the concealment of such sources of wealth. Copper of a very fine description is likewise abundant, and supplies the currency; Surma, or the oxide of antimony, is found on the western frontier. The garnet, amethystine quartz, rock crystal, the chrysolite, and inferior kinds of the emerald family are all to be found within Mewar.—*Elphinstone's Hist. of India, Vol. i. p. 2. Tod's Rajasthan, Vol. i, p.* 1012-13. See Hindoo. Inscriptions. Lat.

ARAXES. See Aras.

ARAYA-ANJELI. MALEAL. അരെടയ അഞ്ഞിലി. Antiaris saccidora.

ARAY KEERAY. TAM. அரை கீரை. Byttneria hervacea.

ARBA, a town of Ganjam where much sugar is made.

AR-BAND. HIND. SANS. The waist-cloth or dhoti of the hindus, passed between the thighs.

ARBELLA, an ancient city, now called Erbil.—*Vignan's Travels, p.* 334.

ARBOL DE LECHE. PORT. Cow-Tree.

ARBOR ALBA. The leaves of this tree, furnish a portion of the cajeput oil of Commerce. Arbor Alba, is merely a translation of the two Malay words, Kaya-putih. See Cajaputi.

ARBOR EXCŒCANS. RUMPH. Syn. of Excœcaria agallocha. *Linn.*

ARBOR RADULIFERA. See Flindersia Amboinensis.

ARBREA, a city of ancient Persia. See Fars.

ARBUDA, is supposed to be Mount Aboo on the Aravalli, the races occupying it were subdued by the conquering Arians. See Hindoo, p. 260.

ARBUTHNOT, WILLIAM URQUHART, fifth son of Sir William Arbuthnot, who was created a baronet, whilst holding the Lord Provostship of Edinburgh, on the occasion of George IV.'s visit to the city in 1821. He was born in 1807, went to Madras in the Civil Service, from which he retired and went into business, as a merchant at Madras. He returned to England in 1858, and was nominated a member of the India Council.

ARCA. SANS. one of the names of the sun.

ARCA ANTIQUATA. A shell of the Indian seas, of the tribe Polyodonta.

ARCABA HU PHALA. Sanscara. In some MSS. this is written Arcabhagabala, Arca Bahoota and Arcabaghabala. It is, in hindu astronomy, the arc which a planet describes during that part of the equation of time, which arises from the inequality of the Sun's motion in his orbit: being an equation to which all the planets are subject, but the motion of which it differently affects. —*Edward Warren's Kala Sanhita.*

ARCANETA. SP. Alkanet.

ARCARPUS WOOD. See Calico Printing.

ARCA TORTUOSA. A shell of the tribe Polyodonta.

ARC ENDU SANGAMA. SANSC. The instant of true conjunction of the Sun and Moon.—*Warren's Kala Sankita.*

ARCH. In India, flat arches of stone and brick are not uncommon. In Burmah, Captain Yule discerned two of brick, in windows in the Dhamayangyee temple at Pagan, where no suggestion of European or Indian aid could have helped. There is one flat stone arch in the northern gate of the fort and another in a tomb, at Kurnool. There is one in the mediæval building of Roslin Castle, and in the magnificent Saracen gateway of Cairo, called Bab-el-Fitoor.—*Yule's Embassy, p.* 48.

ARCH of CHOSROES, is the modern Tak-i-Keera, which marks the site of the ancient Ctesiphon. See Tigris.

ARCHA, in Hinduism, objects of worship, as images, &c. See Sri Sampradaya.

ARCHEBIUS, one of the successors of Alexander, about B C. 155, who succeeded Antialcidas in the kingdom of Lysias, in the Paropamisidæ. See Greeks of Asia.

ARCHEOOLE, a town in India, in Long. 76° 0′ E. and Lat. 27° 12′ N.

ARCHER FISHES. The Chelmon rostratus. *Linn.* (Chætodon rostratus Shaw), is, according to Sir E. Tennant, the Archer fish of the fresh waters of India, on seeing a fly settle over head, on a leaf, it propels a drop of water and brings it down. See Chætodon toxotes.

ARCHERY, in Sanscrit, dhanuroidya, is always put for Military Science in general. Archery was the predominant branch of the Military art among the hindus, as is evident from this use of the term, and from all descriptive accounts of heroic education. Rama, his sons, the Pandavas, Ayus, and all other princes, are represented in the Ramayana, Mahabharat, and all poems and plays, as making archery a principal part of their education, furnishing a remarkable analogy, in this respect, to the practice of the ancient Persians and Scythians. Throughout South Eastern Asia, the bow has almost disappeared, the only people using it constantly in war and for the hunt, being the Andamaners—but at the annual "langar" of the Nizam of Hyderabad, there are still to be seen a few soldiers in the procession, armed with bows.

ARCHIPELAGO, in South Eastern Asia, are three great groups of Islands to which this term is applied, the Mergui Archipelago, the Johore Archipelago and the Eastern Archipelago.

The Eastern Archipelago extends over a space of more than 8000 miles, and consists of an immense labyrinth of Islands, among which are at least twenty countries of considerable size, and one which nearly equals Europe in extent. The cluster of islands and islets, scattered in irregular profusion over the Southern Ocean, commencing at the further extremity of the Bay of Bengal, forming this wonderful Archipelago, stretches eastward far into the Pacific, through 50 degrees of longitude, while in breadth it extends through 31 degrees of latitude. It comprises islands, and groups of islands, inhabited by races differing widely in character. It is not exposed to the extremes of heat. The air is cooled by constant currents; and the monsoons, regularly recur, blowing over the ocean and over forests and swamps which remain in a state of primitive nature. Abundant rains fertilize the soils, and produce a magnificence of vegetation which no country but Brazil can rival. It has been, and still to some extent continues, the theatre of prodigious volcanic action, to which it owes much of its unequalled beauty and fertility; for ashes and scoria, if they blast and destroy for a time the luxuriant tropical flora, are afterwards the basis, and become the cause, of a most exuberant vegetation. In Java there are forty-six volcanic peaks, twenty of which still occasionally emit vapour and flame. A great part of the archipelago, indeed, forms part of a vast volcanic area extending into the very centre of Asia. These eruptive forces must have operated in remote ages with inconceivable violence, and even in modern times, the great eruption of Tomboro, in the Island of Sumbawa, about 200 miles from the eastern extremity of Java, is a notable example. This volcano had been for some time in a state of smouldering activity but in April 1815, it burst forth with tremendous violence and did not cease to eject lava until July. The sound of the incessant explosions was heard in Sumatra, distant 970 geographical miles, in a direct line; and at Ternate, in the opposite direction, at a distance of 720 miles. Out of a population of 12,000 in the province of Tomboro, only twenty-six individuals survived. On the side of Java, the ashes were carried to a distance of 800 miles, and 217 towards Celebes; and the floating cinders to the westward of Sumatra formed a mass two feet thick, and several miles in extent, through which ships with difficulty forced their way. The finest particles were transported to the Islands of Amboyna and Banda, 800 miles east from the site of the volcano; and the area over which the volcanic effects extended was 1000 English miles in circumference, including the whole of the Molucca Islands, Java, and a considerable portion of Celebes, Sumatra, and Borneo. But if the disruptive forces in these regions have been formerly predominant, the creative and constructive power is now the most active. The zoophyte is adding silently and incessantly to the number of these island-groups; coral-reefs are constantly emerging from the waters; seeds, deposited by birds, or wafted by winds, quickly vegetate; verdure speads over the waste; and palm-trees rise in tufted groves, as if by enchantment, from the ocean. The hidden but ever active energy of the coral-insect makes the navigation of this Archipelago exceedingly difficult, for charts and soundings do not long form safe guides where an unseen power is always at work, reducing the depth of seas, and converting water into dry land.—*Quarterly Review, No.* 222 *p.* 486.

The limits of the volcanic band which crosses the Archipelago are distinctly defined by the active volcanoes with which it is studded. There appears a great volcanic stream in the neighbourhood of Kamtschatka from which it can be traced in a south-west direction through the Kurile Islands, Japan, and Loo Choo, skirting the Coast of Asia, to Formosa, where it meets another coming from the south and south-west through the Philippines and Mindanao to the Moluccas, embracing the eastern extreme of Celebes and the western Peninsula of New Guinea, and then another curved from the westward along the Trans-Javan Chain to the Straits of Sunda, when it meets one from a northwesterly direction though Sumatra and the Andamans to Cheduba island, in the northern part of the Bay of Bengal. From the western extreme of New Guinea, however, along the north coast of that island to New Britain, although its volcanic character has been decided by recent French navigators, there remains a tract including thirteen degrees of longitude in which no active volcano has been seen. Indeed it is by no means improbable that the band which takes a southerly direction from Japan through Fatzima, the Bonin and Mariana Islands, may prove to be continued to New Ireland; in which case the chain of active volcanoes which extends through the Solomon Islands and the New Hebrides to New Zealand, and perhaps further to the south, may indicate the course of an independent stream.

With such violent subterranean forces in operation, even at the present day, it is easy to apprehend how numerous must have been the up-risings and subsidings of the solid matter of the earth, during byegone ages. According to the views which have been adopted from Sir Charles Lyell's prolonged investigations, it is little probable that all these changes occurred at one time, but that they have resulted from a series of great up-pourings from the interior during bye-gone ages, indentical with those still in operation, through perhaps all in the lines which we observe in the direction of the existing mountain ranges. One of these, prolonged through Arakan, halts at point Negrais, to reappear through the Andamans and Nicobars ; and this Eastern Asiatic range, after extending along the S. W. coast of Sumatra, terminates at its S. E. point. Another runs along the Malay Peninsula, is lost for a time, but appears again in the high peak of Lingin, and terminates in Banca and Billiton, and a branch from this seperates at Pulo Timoan, on the east coast of the Peninsula, and ends at Carimata, in the strait between Billiton and Borneo. Two ranges traverse Cambodia and Cochin-China in the same direction, and these will be found to extend to, and, perhaps, to traverse, Borneo. Between the Cambodian range and the mountains at Sarawak, on the north-west extremity of Borneo, the Natunas islands and Pulo Condor form the connecting link ; and as the Sarawak hills run to the south-east, the range is probably continued, either by a connected line, or by isolated mounts, until it terminates in the Gunung Ratos, near Cape Selatan. More recent data shew that this range, after traversing the western part of Borneo, terminates on the south coast, a little to the eastward of Kotaringin. The Gunung Ratos would therefore appear to have been formerly connected with the primary range which shews at Bintulu, on the north-west coast of Borneo, and which may be a continuation of one of the Indo Chinese ranges. The Anam or Cochin-Chinese Range is that which can be traced most distinctly across the Archipelago to Australia at the present day. There seems no doubt that the multitude of islands which are now to be seen are merely plutonic masses upraised by subsequent volcanic action : or the tops of great volcanic outbursts which have appeared above the ocean. There are innumerable coral reefs and coral islands but Mr. Darwin's essay on the " Structure and Distribution of Coral reefs," has satisfactorily shewn that " Atolls" or annular reefs were originally fringing reefs constructed around islands that have since subsided. The depth of water on these banks averages about 30 fathoms, deepening rapidly as the edge is approached, and shoaling gradually towards the land. And, where the earth has not risen above the waters surface, great submarine banks are to be traced from one island to another. One of these is termed the Great Asiatic Bank, and the countries lying on it, may be noticed first. The mountain ranges in the south-eastern part of Asia invariably run in a direction nearly N. N W. and S. S. E., and are all of the primary formation. The chain which extends along the Malay Peninsula is the most conspicious of these ranges, and is continued at intervals to Banca and Billiton, and perhaps may be traced as far as the north coast of Java. It is this range that most abounds in metals, or, at all events, in which mining operations are pursued with greatest sucess, probably from the strata, owing to its central position, having been little disturbed by the convulsions which have shaken the countries on either hand. The productiveness of the gold mines of the Malay Peninsula and of the tin mines of Banca is well known. This range may be considered as the back bone of the Great Asatic Bank which extends into the Archipelago from the south-eastern extreme of Asia to a distance of nearly 1000 miles, in fact to within 50 miles of Celebes, perhaps to the south-west extremity of that Island also ; but there is a space of nearly 30 miles across which no soundings have been carried. Sumatra, which lies on its western verge, has been subjected to volcanic action, but not to so great an extent as to disturb the direction of its mountain range, which runs paralled to that of the Malay Peninsula. The third and last range that can be traced into the Indian Archipelgo is the one that traverses Laos and Camboja, at the southern extremity of which it disappears for a time, showing itself only at Pulo Condor and Natunas, until it emerges under the northwest extreme of Borneo, and is continued along the entire west coast of that island. Here it again disappears, and only shows itself again on the north coast of Java, where it ceases entirely : the remaining portion of this Island, with perhaps, a part of the northwest extremity, being either of volcanic formation or of alluvial deposit. It is rather singular that the celebrated teak-tree, which abounds on the Cambojan part of this range, but is not found in Borneo, is again met with here, the projecting part of the north side of Java, between Samarang and Surabaya, being a vast teak forest from the timber of which the greater portion of the shipping employed in the Archipelago is constructed. Java is the only Island in the eastern seas in which the teak-tree is indigenous, nor will it thrive in the volcanic parts of the Island where its cultivation has been attempted. This, which may be called the Cambojan Range, is also rich in minerals, especially the Bornean part, of it, where large quantities of gold and many diamonds are obtained by the miners. The volcanic Islands of the Archipelago also contain metals, gold-dust being found at the bottoms of many of the mountain streams, but it does not exist in veins, as in the Malayan Peninsula and the west coast of Borneo. these having apparently been broken up by the violent convulsions to which these Islands have been subjected. The metal is therefore only obtained from the bottom of the mountain streams, where it has been deposited when the earth in which it had been contained was washed away.

European enterprise has done much to develope the resources of Borneo, Java and Sumatra, and their adjacent Islands.

In Sumbawa, the mahomedans take a high place, and they are largely proselytising the mountaineers, who, however, secretly trust in their idols. In Grobagan at the centre on the limestone district is a mud volcano, 16 feet in diameter. The black mud every two to five seconds bubbles up and subsides, it rises to a height of 20 to 30 feet, then explodes with a dull noise scattering a shower of warm black mud in every direction; round about are warm brine springs from which salt is extracted. Its eruptions are most frequent in the rainy season. It is called Kuwu, "the place of abode," and an old legend is that it is the residence of a monster snake whose writhings cause the eruptions. The Javanese give picturesque names to the various places in the Island such as Prosperity; Country of ghosts; Unlucky; Heroic difficulty: the Javanese are skilful workers in metals, gold, iron, brass cutlery, and carpentry. Their kris has a hundred forms. Javanese and Sumatrans are both of Malay race, but the amok is almost unknown in Java. Sumatra has the elephant and tapir and ourang outang and argus pheasant, dragons blood; all wanting in Java. The Sunda ox, peafowl, rhinocerous and sloth and teak occur in Java, not in Sumatra; Dragons blood, from the Calamus draco, a forest plant of Sumatra is a granular matter adherent to the ripe fruits, and obtained by beating or threshing the fruit in little baskets. The chief place of production is Jambi on the N. E. side of Sumatra. The principal collectors are the Kubu, a wild race who sell it to the Malays at a shilling a pound, about 48 tons are said to be collected in Jambi, but this seems an excessive estimate. The stems of the male plant form walking sticks and are supposed to be the Jambee so fashionable in the reign of Queen Anne.—(*Crawfurd's Dictionary.*)

Mahomedanism has made large progress in the Archipelago, but Bali is still hindu. Mahomedan Malays inter without coffin or shroud. Kayan Dayak are idol worshippers; keep their dead for some days and inter in a coffin made of the hollowed trunk of a tree. The Balinese burn their dead, and the widows and some slaves of rajahs burn with their husbands' corpse, but other widows burn or are dispatched with a kris. Dayak is the name given to all the wild tribes of Sumatra and Celebes; but is particularly applied to those of Borneo, where they are most numerous. Some are wild forest residents, but others have fixed habitations, large barrack-like huts containing many families. They are ignorant of any written character. In their wars they clothe in prepared skins. Their arms are the sword and spear and blow pipe.

In the Archipelago there seem to be five races of man, the Malays proper: the Semang or dwarf negroes of the Malay peninsula; the Negrito or Asta of the Philippines; the larger Negro race or Papua of New Guinea, and a race whom Crawfurd styles the Negro Malay, intermediate between the Papuan and Malay. The Malays are superior to all the others in intellect and civilization. They occupy the whole of the Malay peninsula, half of Sumatra, and all the Sea Coast of Borneo. Their numbers are estimated at 1,500,000 in Borneo: 1,250,000 in the Malay peninsula; and 1,000,000 in Sumatra. The Malay is short, squat with round face, wide mouth, large high cheek bones; short small nose; black small deep seated eyes: Their hair is lank, black and harsh, and the men have little or no beard. The Saman or Semang, are a small Negro race.

The Negrito are short, but well made, active, with soft frizzled hair, nose slightly flattened, features more regular and skin less dark than the African Negro.

The Papua of New Guinea are true Negroes, and have made some advances in civilization. The Negro Malay are fairer than the Negro, darker than the Malay but intermediate between Malay and Papua.

The lines of volcanic action to which these Islands have been subjected can be traced with tolerable distinctness. One of these extends along the W. coast of Sumatra and the S. coast of Java; whence it is continued by a chain of Islands, separated by narrow but deep channels, to New Guinea, and can be traced through that Island to the Louisiade Archipelago, and is probably continued by New Caledonia, and Norfolk Island to New Zealand, thus forming a curved line resembling the letter S. The other line commences in Kamtschatka and extends through the Kurile Islands, Japan and Loochoo, to the Philippines, where it separates into two branches, one traversing Palawan and the N. W. part of Borneo, where it terminates near the limits of the Great Asiatic Bank, and the other continuing in a southerly direction until it comes in contact with the Sumatran line. It is near this point of contact that the volcanic action has been strongest, throwing the islands into fantastic forms, of which Celebes and Gillolo furnish striking examples. These islands all rise abruptly from an unfathomable sea, a circumstance unfavourable to their productiveness, since a large portion of the rich soil created by the decomposition of the volcanic rock is washed away into the ocean. Java, however, is in a great measure exempt from this disadvantage, owing to the Great Asiatic Bank extending to its northern coast, from which the soil is deposited in vast plains lying between the mountain range and the sea. These plains are so surpassingly rich that they not only yield a sufficiency of grain for the consumption of a large portion of the population of the Archipelago, but at the same time afford such abundance of sugar and other tropical produce as to furnish cargoes for many thousand tons of shipping. The remark that has been made with regard to the ranges in the south-eastern part of Asia is equally applicable to Australia, since one of the most marked features in the geography of this continent is the uniformity that exists in the direction followed by all the continuous mountain ranges that have yet been discovered. *The Great Australian Bank* which fronts the N. and N. W. coasts of Australia commences near the N. W. Cape, and extends in a N E. direction to New Guinea, where it terminates at the base of the high but narrow mountain range that unites the eastern and western parts of that Island, and separates the Banda Sea from the Great Pacific. It is at this point that the edge of the bank is most remote from Australia, the distance to the nearest point of the N. coast being 400 miles. It appears again on the S. coast of New Guinea, near Torres Straits, and extends along the N. E. coast of Australia, the Great Barrier Reefs being on its outer edge. The Arru Islands and New Guinea are thus united to the continent of Australia, and the kangaroo, long supposed to be peculiar to Australia, is found both in the Arru Islands and on the southern part of New Guinea.

New Guinea.—The northern part of this Island, lying to the N. W. of the mountain range, partakes of the rugged and broken character of the volcanic Islands of the Indian Archipelago, but the south-western part is low and undulating, and we may conclude that it bears considerable resemblance to the northern coasts of Australia, since the several Dutch navigators who explored the Gulf of Carpentaria, and who are in the habit of coasting this part of New Guinea on their way to Australia, considered them as being portions of the same continent, and they were so delineated in maps until Cook passed through Torres Strait and decided the question as to their insularity. A very interesting account of the S. W. coast of New Guinea, is given in Modera's " Narrative of the voyage of the Dutch Corvette 'Triton' in the year 1828," when this coast was explored with a view to forming a settlement.

The Arru group of Islands—are situated on the northern verge of the Great Australian Bank, and extends from N. to S. about 100 miles; but as the eastern side of the group has not been explored, its limits in that direction are uncertain. Some of the southern islands are of considerable extent, but those to the N., lying close to the edge of the bank, are rarely more than 5 or 6 miles in circumference. The land is low, being only a few feet above the level of the sea, except in spots where patches of rock rise to the height of 20 feet, but the lofty trees which cover the face of the country give to it the appearance of being much more elevated. Coral reefs extend from the shores of all the islands, and in the eastern parts of the group these are often of great extent. The islands are divided from each other by narrow channels some of which are of great depth, and in one of these there is said to be a whirlpool of so formidable a description that the natives will not venture to approach it even in their larger vessels. This group has not been left quite untouched by the convulsion which has shaken its neighbours, a circumstance that might naturally be expected from its position on the very edge of the bank, and in the close vicinity of the volcanic chain, the Great Ki Island being only 60 miles distant.

The primary mountain ranges both in south-eastern Asia and in Australia, pursue a precisely similar direction, and the western most Asiatic ranges, if continued, would strike about the N. W. Cape where the western Australian range commences, while banks extending from both these continents actually approach to within 450 miles of each other.

Five-sixths of the whole Archipelago are claimed by the Dutch as their own possession, (*Moniteur des Indes.*) Sumatra, Babi, Nias, Mintao, the Pora Isles, Poggi, and the Enganos: Java, Madura, Baweean, the Kangeang, Banka, Biliton, Bintang, Linga, the Natunas, Anambas,, and Tambelan, the kingdom of Sambas in Borneo, with the great Pontianak and Banjarmassim residencies, and the Karimata isles—Celebes Sumbawa, Bouton, Saleyer, Amboyna, Ceram, Buru, Siam, Sangir, Talaut, the Xulla and Bangaai groups, Halmahera, Obie, Batchian, Ternate, Tidor, Waigin, Battanta, Salawatte, Mysole, the Bandas, the Ki, Arru, and Tenimber, a part of Timor, Rotti, Savu, Sumba, Ende, Adenaar, Solor, Lombate, Putare, Ombai, Bali and Lombok—with the western part of New Guinea—all these are claimed by the Netherlands, and if her political supremacy were not in many of them a simple fiction, they would truly form a magnificent colonial empire. The political geography of the further East, however, is not yet accurately mapped out; nor, indeed, is the region in any respect perfectly known. The recent magnetic survey has added much to science: but still more remains to be determined.—(*Elliot's Magnetic Survey, Phil. Trans.* 1851, *cxli.* 287. *John's Indian Archipelago, Vol.* II. p. 1357.)

The opening of this Archipelago to Europe was gradual. Entering the utmost eastern confines of the Archipelago, Magellan discovered the Ladrones, or Isles of Thieves. They have since been named the Marianes, but still deserve their original appellation, as the people of the surrounding groups stand in dread of their predatory inhabitants. On one of the Meiaco-shimah isles walls have been raised and pierced with loopholes, as a defence against these roving banditti of the sea. (*Sir E. Belcher*, *i.* 85). The Ladrones lie about four hundred leagues east of the Philippines. Only one of them is now tenanted, and that by a small and savage tribe. Plantations of caper trees are in perpetual bloom,

On the festival of St. Lazarus, Magellan discovered that group of more than forty islands; (*Walton, Preliminary Discourse*, 67), the most northern in the Archipelago, to which he gave the name of the saint, but which were afterwards named in honour of king Philip. Thirteen only of them are remarkable. They occupy the only part of the Archipelago liable to hurricanes, and derive many of their characteristics from this circumstance,—a soil of superior fertility, and adapted for peculiar kinds of cultivation, as well as for wheat and rice, without fragrant spices, or fruits of very delicate flavour. (*Crawfurd, Indian Archipelago*, *i.* 11.) Their appearance is singular. In many parts covered with basalt, lava-ashes, traces of volcanic eruptions, and other ruins of nature, they possess a rich alluvial soil. Beneath the surface, the internal fires of the earth are in continual activity.—*John's Indian Archipelago, Vol.* I. p. 103.

The Archipelago contains three islands, New Guinea, Borneo and Sumatra, of the first class, inferior in size only to Australia; Java takes a second place: three of third size, Celebes, Luzon, and Mindanao, each as large as the most considerable of the West Indian group; and of a fourth size at least sixteen,—Bali, Lombok, Sumbawa, Chandana, Flores or Mangarai, Timor, Ceram, Bouru, Gilolo, Palawan, Negros, Samar, Mindoro, Panay, Leyte, and Zebu—most of them with spacious alluvial tracts, navigable rivers, and much natural riches. The groups and chains in which they are distributed are dispersed over narrow seas with the greater islands intervening. Innumerable channels and passages, therefore, open in every direction to the mariner,—tortuous, intricate, full of rocks, reefs, and shoals, which render them in some parts difficult of navigation. (*Groot, Moniteur*, *i.* 53.) They are made less dangerous, however, by the prevailing serenity of the waters, the regularity of the currents, and the steadiness of the winds. Tremendous storms, indeed, called typhoons, occasionally visit the Straits of Malacca, (*Berncastle's Voyage*, *i.* 274.) over the China Sea; but they are rare, and the islands of the interior region may be said to lie amid perpetual calms. The groups known as the islands of the Arafura sea consist of the Tenimber, the Ki, and the Arru groups, with others of inferior significance. They are scattered over a considerable space of sea, and vary in size from seventy miles in length to mere tufts of verdure floating in the sea, like baskets of grass and flowers, crowned by tall clumps of palm, and dispersing through the atmosphere a fragrance like that of the cinnamon gardens in Ceylon.

The Tenimber group consists of many islands, inhabited by a curious race of people, half savage in manner, whose villages, built on limestone hills, near the shore, combine with the varying outlines of the surface, the fresh and green aspect of the interior slopes, and the blue water in the channels between, to present a graceful prospect to the navigator's eye, rarely equalled. Equal in brilliance.—*John's Indian Archipelago, Vol. ii. p.* 87, 88.

The contrast which the volcanic Islands of the Archipelago afford when compared with the continent of Australia is very strikingly presented to the view of a voyager from Port Essington, crossing for the first time the sea that separates the continents of Asia and Australia. Even before he has lost soundings on the great bank which extends from the northern shores of the latter continent, the lofty mountains of Timor rise up before him. As he nears the land the colour of the water suddenly changes from green to deep blue; he has now passed the steep edge of the bank, and is floating on the unfathomable seas which bound the volcanic Islands of the Archipelago. On closer examination he finds that the land of Timor rises abruptly from the depths of the ocean, so much so, that from many of the precipices which overhang the sea, a line of great length will not reach the bottom, while the very few spots on which anchorage is to be found are so close to the shore as to be available only when the wind blows from the land. And to complete the contrast, if the weather is clear we perceive that one of the mountains near the east end of Timor is an active volcano. The chain of Islands which extends from Java to Timor is of the same character; lofty volcanic peaks, some in a state of activity; while the Islands are separated from each other by narrow channels of unfathomable depth, through which the current from the Pacific, caused by the prevalence of easterly winds, rushes with great force; but on passing these the voyager again perceives a change in the colour of the sea from deep blue to green, and, on sounding he finds a bottom of stiff clayey mud, resembling exactly that of the bank which fronts the northern coasts of Australia. He is now on the great bank which extends from the south-eastern extremity of Asia far into the seas of the Indian Archipelago. The Islands now lose their volcanic character, and on arriving at Singapore, near the extremity of the Malay Peninsula, the general resemblance of the country to that in the neighbourhood of Port Essington is sufficient to strike the most careless observer. The land low and undulating; the shore with red cliffs alternating with sandy beaches; even the rocks of the red iron-stone known to Indian geologists by the name of laterite, are perfectly in character with the country of the Coburg Peninsula, and even on closer examination little difference can be discovered except in the vegetation.

Timor is a word which means the east, and was probably imposed on this island by the Malays, to whose language it belongs, because this was the extreme limit of their ordinary commercial voyages to the south-east. Timor is about three times the extent of Jamaica. Its principal inhabitants are of the Malayan race, but it contains also Papuans or Negroes, and tribes of the intermediate race. The two languages of Timor are the Manatoto and the Timuri, the first spoken at the north-east end of the island, and the last used by many of the tribes as a common medium of intercourse. No alphabet has ever been invented in Timur; but judging by the specimens of its languages, the vowels are the same as those of the Malay and Javanese.

From Timor to New Guinea, there runs a long chain of islets, forming, as it were, a wall or barrier to the south-eastern portion of the Archipelago. In these islets the inhabitants are of the same race with the Malays, and speak many languages. By far the most ample and authentic account of them has been given by Mr. Windsor Earl, who, after a longer experience of the countries in which they are spoken than any other European, makes the following observations: "In the south-eastern parts of the Indian Archipelago, where opportunities of social intercourse between the various petty tribes are of rare occurrence, every island, every detached group of villages, has its own peculiar dialect which is often unintelligible even to the tribes in its immediate neighbourhood. In some of the larger islands, Timor, for example, these tribes are so numerous, and the country occupied by many of them so extensive, that it becomes impossible to form even an approximate estimate of their number." Of one language, the prevailing one, among several languages of the island of Kisa, one of the Sarawati group, in the chain of islets already mentioned, Mr. Earl furnished a curious and instructive vocabulary of 330 words. The Kisa is an unwritten tongue, but its vowels are the same as those of the Malay and Javanese.

The Spice Islands, in the Molucca and Banda seas, consist of many islands and numerous languages. Next to Java of which they form a sub-government, the Moluccas are the most important of the Dutch possessions in India. The islands to which this term is applied are Amboyna, Banda, Ternate, Tidore and smaller islands in their neighbourhood. The islands are small, volcanic, unproductive in grain, but fertile in fine spices. But the monstrous policy of the Dutch nation in their greed to secure a monopoly of this classs of products, led them for years, to root up and destory, at a great cost, often by force of arms, every nutmeg or clove tree not required for the production of that quantity of spices which they calculated they could dispose of. Rosingain, near Banda, was almost abandoned after the extirpation of its spice trees, its people emigrating to the neighbouring islands in search of livelihood. The people are of the Malayan race, short, squat and darker in complexion than the Malays or Javanese. The Amboinese are of a middling height and well formed. They are gentle, very sober, brave, easily managed, and make good mounted and foot soldiers and a considerable number of them have embraced christianity. Banda is very unhealthy, and is subject to frightful earthquakes. When first discovered by Europeans, the inhabitants had made considerable advance in civilization; although still much inferior to that of the Malays and Javanese. Sir Stamford Raffles has furnished specimens of three of the languages of this furthest east portion, viz: those of Ceram, correctly Serang, of Ternate, correctly Tarnate, and of Saparuwa, one of the Banda isles. Of 28 words of the language of Ceram, nine of the words are Malay, two Javanese, and 17 are common to these two languages. Ceram Laut is the great place to which the Bugis carry the Papuan slaves whom they steal from New Guinea.

The great group of the Philippines, although contiguous to the proper Indian Archipelago, differs materially in climate and the manners of its inhabitants. It extends over fifteen degrees, from near latitude 5° to 20° N., and consists of many islands of which only Lucon and Mindanao are of great size. The bulk of the people are of the same tawny complexioned, lank haired, short and squab race, as the principal inhabitants of the western portion of the Indian Archipelago. The focus of the aboriginal civilization of the Philippines, as might be expected, has been the main island of the group, Lucon. This is a corruption of the Malay and Javanese word "lasung," meaning a rice-mortar. The Spaniards are said to have asked the name of the island, and the natives, who certainly had none, thinking they meant a rice-mortar, which was before the speakers at the time, answered accordingly. In the Philippines are many separate nations or tribes speaking distinct languages, unintelligible to each other. The principal languages of Lucon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250;000, while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people. Mr. Crawfurd tells us that it does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala, with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language or languages sprung from a common parent, and only diversified by the effects of time and distance, and an examination of the Bisaya Dictionary gives similar results.

The great islands of Mindanao, Palawang, and the Sulu group of islets, forming the southern limits of the Philippine Archipelago, contain many nations and tribes speaking many languages of which little has been published. Mr. Crawfurd, on the information from Mr. Dalrymple, informs us that even in the little group of the Sulu islands, a great many different languages are spoken, and he gives a short specimen of 88 words of one of those most current.

Sulu has for many years been the market where the Lanun and other pirates disposed of much of their plunder, and in former times itself was decidedly piratical. The mahomedan religion has made much progress in Mindanao and the Suloo islands, as has the Malay language, the usual channel through which it has at all times been propagated over the islands of the Indian Archipelago. Mr. Crawfurd remarks that whether the principal languages of the Philippines be separate and distinct tongues or mere dialects of a common language is a question not easy to determine. Certainly, the phonetic character of the Tagala, the Bisaya, the Pampangan, and Iloco are, sound for sound or letter for letter, the same. Words of the Malayan languages are to be found in the language of the aboriginal inhabitants of Formosa or Taiwan, and as this large island, about half as big as Ireland, stretches as far north as the 25° of latitude this is the extreme limit in a northerly direction to which they have reached. The aborigines of Formosa are short in stature, of tawny complexion and lank hair. Although inhabiting a great and fertile island, affording to all appearance a fair opportunity of development, they never made any progress in civilization, and at present seem to live in a state of barbarism. They are thought by Mr. Crawfurd to belong to, or much to resemble, the brown complexioned race of the Archipelago, of whom the Malays are the type. According to Latham, the western coast of Formosa is occupied to a great extent by recent settlers from China; but the interior is occupied by several rude tribes whose language differs from the known Formosa. The archipelago of coral islands on the north side of the Straits of Sunda is remarkable. A similar group of islands is found between the Straits of Macassar and Bali.—(*Jansen. Maury's Physical Geography p.* 80.)

The south-eastern extreme of Java, the south point of Bali, and the Banditti Islands in the Straits of Lombok, are all upheaved table lands, bounded by precipitous limestone cliffs, several hundred feet in elevation. Areas of simple upheaval are found on the north side of the volcanic band at Flat island, Rusa Rangi and Lingit, and at the Iron Cape of Flores, when on the south coast of Java. It is thus described in Dr. Horsfield's "Mineralogical Sketch of the Island of Java" which is inserted in the general map of that island by Sir Stamford Raffles, in his "History of Java." "Extensive district of secondary volcanoes mixed with hills of limestone, especially near the sea, where the limestone rocks are piled up to great heights—basis basalt and wacken, breccia in the beds of rivers;—also porphyry, jasper, cornelian, agate, obsidian. In some places quartz appearing in the well known mineral forms of rock-crystals, prase or amethyst. The intercourse between continental Asia and the islands of the archipelago dates from a very remote period. Their rare products were in request in China and India long before they were heard of in Europe. Camphor and spices, two of the most esteemed productions of these islands, were used by the Chinese two thousand years ago, the one for diffusing an aromatic fragrance through their temples, the other as indispensable condiments in their feasts. A hindoo empire long flourished in Java, where many magnificent ruins still attest its duration and greatness. The Arabs subsequently gained a footing there, as well as in the other islands of the archipelago, and gradually supplanted the religion and governments of India. The Malays are now the dominant race, and they have reduced, where it was possible, the aboriginal population to slavery. The Malay kingdoms have generally perished; but the Malay people remain, and constitute the most energetic portion of the inhabitants, possessing virtues which, developed by a firm and beneficent government, might raise them high in the scale of civilization. (*Quarterly Review, No.* 222, *p.* 486.)

The islands of the Pacific extend from the east of New Guinea and the Philippines, to within two thousand five hundred miles of the western coast of America, and from about the 22° of north, to the 47° of south latitude. The languages spoken over this vast area are, probably, nearly as numerous as the islands themselves. A language, with variations is spoken by the same race of men from the Fiji group west to Easter Island eastward, and from the Sandwich islands north to the New Zealand island south. It has been called the Polynesian. The whole number of Malayan words in the Maori dialect of the Polynesian, as they are exhibited in William's Dictionary, only amount to 85.—(*Crawfurd Malay Gram. and Dic. Vol. I p. 1 to cxli. Mr. Logan in Journal Indian Archipelago ~~Nos. from 1848 to 1858.~~)*

Notwithstanding the numerous languages in the Archipelago, the written characters are only eight or at most nine in number. The Javanese alphabet like all others in the Archipelago is written from left to right, each letter is distinct and unconnected, and the writing is perpendicular and not slanting. It is the character used for the Javanese proper, the Sunda, the Bali, and it is believed the Lombok; and including Palembang in Sumatra, it is current among twelve millions of population. But, in prior times, other characters to the extent of twelve in number, have prevailed in Java.

In Sumatra, beginning from the west, the first evidence of a native written character is among the Bataks, and it is singular that a nation of cannibals should possess the knowledge of letters. There was assuredly nothing of the kind in Europe or continental Asia until long after men had ceased to eat each other. The form of the Batak letter is horizontal.

The Korinchi alphabet, among the people of this name in Sumatra, who border on Menangkabau, has 29 characters and consists of horizontal or slightly raised scratching.

The Rejang, is the alphabet of Lemba and Pasummah on the western side of Sumatra. It consists of 23 substantive characters, formed of upright scratches or strokes, and on the whole it is more complete than either the Batak or Korinchi.

The Lampung nation, which occupies that portion of the southwestern side of Sumatra which lies opposite to Java, divided from it only by the Straits of Sunda, has its own peculiar alphabet, which consists of substantive letters with double or treble consonants making them up to 44. It has a great deal of that angular linear and meagre form which characterizes the other Sumatra alphabets.

The Achin and Malay of Sumatra are written in the Arabic character.

The Bima alphabet, formerly in use amongst the Bima people in the island of Sumbawa, east of Sumatra and Java, has now given way to the alphabets of the Celebes.

In Celebes, are two distinct alphabets, one of them the Bugis, at present in use over the whole island which extends to Boutou and Sumbawa and wherever the Bugis nation have settled or colonized. The modern Bugis has 23 substantive characters consisting mostly of small segments of circles, running horizontally. The Bugis letters have no resemblance to those of Sumatra, or Java, or even to the obsolete alphabet of Sumbawa. The other alphabet of Celebes, is now obsolete.

The ninth and last alphabet of the Archipelago is the Philippines, that of the Tagala nation of the great island of Lucon or Luconia, it consists of 13 characters. It is the only existing in the whole of this group, and seems at one time to have been used among the civilized tribes of the neighbouring islands having spread even to Magindanau and Sulu. The forms of the letters are rather bold and more complex than that of Sumatran alphabets.

In the Archipelago, thus, are nine distinct alphabets, every one of which appears to be a separate and a native invention. But they are not only distinct from each other; they differ equally from all foreign alphabets.

These nine alphabets of the Archipelago are the produce of five large islands only, out of the innumerable ones which compose it. The most fertile and civilized island, Java, has produced the most perfect alphabet, and that which has acquired the widest diffusion. The entire great group of the Philippines has produced, and that in its greatest and most fertile island, only a single alphabet.

The distribution of the existing forms of mammals throughout the Indian Archipelago may thus be indicated: commencing with the species common in Asia at the present day, and excluding those which may have been introduced in a domesticated state, such as the horse, dog, kine, and deer, the common brown monkey has penetrated farthest from the continent of Asia, as it extends through Sumatra and the Trans-Javan chain to the eastern extremity of Timor; but the thirty miles of strait which separates this island from Letti seems to have stopped its further progress, for it is not found in a wild state in the Serwatty Group. To the north, it extends through Borneo and Celebes, and is found in a single island of the Molucca seas, Batchian. This animal, from its habit of frequenting the banks of rivers, is very liable to be carried out to sea in the masses of drift which are sometimes detached from the banks by the current, and its extensive distribution may be attributed to this cause. In Borneo the elephant co-exists with the black bear, (Ursus Malayanus); the Felis macrocelis, or Sumatra gigantic Tiger Cat, and so many varieties of the quadrumanes that their introduction can scarcely have been accidental. In Java, the Rhinoceros, the Royal Tiger, the Wild Ox of the Malayan Peninsula and severa varieties of the smaller quadrumanes, still exis in the jungles. Sumatra and the Peninsula contain every form of mammal found in Java and Borneo, with the addition of the Tapir. These facts would go to prove that Java, Borneo, and Sumatra continued attached to the continent of Asia, at a comparatively recent epoch. The common brown monkey is the only member o the family of quadrumanes that has reached Celebes and Bali, although the strait which separates the latter island from Java is only two miles wide.

The marsupialia range from Australia towards the continent of Asia. A variety of the Kangaroo (macropus), two varietes of the Opossum (didelphis), one of which closely resembles the Ring Tailed Opossum(of New South Wales (Phalankista Cookii), one variety of the Dasyurus, the Native Cat of the colonists of New South Wales and Port Essington : and one variety of the small Flying Opossum, have been found in the southwest part of New Guinea; and singularly enough the Kangaroo has adapted himself to the half drowned nature of the country by inhabiting the trees. A variety of the Kangaroo still exists at Arru Island, which seems to be identical with the small Grey or "Brush" Kangaroo, found in the thickets throughout Australia. This is the "Filander" of Valentyn. The name by which it is known in the Moluccas is "Pilandook." In Ceram, the Ring-tailed Opossum, the Native Cat, the Flying Opossum, and the little Flying Squirrel, all marsupials, and identical in appearance and habits with those which extend throughout Australia, hold undisputed possession of the forest trees. The Ring-tailed Opossum, which is the most numerous, as in New South Wales, is a common pet throughout the Moluccas. The opossum, more especially the Ring-tailed variety which inhabits trees, is the most hardy of marsupials, that is to say its geographical range is farther extended than that of any other pouched animal. The tree Opossum and the native cat (Dasyurus macrourus) are the only varieties of this ancient form of mammals that have not retreated before the European quadrupeds that have been introduced into the southern districts of Australia; the mere presence of a flock of sheep, without their usual attendant, the dog, being sufficient to drive the Kangaroos from the "runs." The tree Opossums are not liable to be disturbed by any animals less agile than the monkey, as they are never seen on the ground except when thrown out of the trees while fighting, and then they scramble up again as fast as they can. The consequence is that the tree Opossums now abound in the settled districts of Australia to an extent that could not have happened previous to the arrival of Europeans, when the aborigines kept down their numbers by dragging them out of their nests in the hollows of trees to serve as food. Even the presence of the monkey is not fatal to the tree-Opossums, as is evident from their coexisting in Timor and in part of South America. The Musang or Mungoose of the Western parts of the Archipelago, will prove fatal both to the tree-Opossum and to the Native cat, whenever it comes to be introduced to Australia, as it can enter the hollows of the trees and destroy them in their nests. The tree-Opossums of Australia feed on the leaves and tender shoots of the Eucalyptus. In the Moluccas, where the Eucalyptus is rare, if found at all, the tree opossums feed on the leaves of the Warringin and Lingoa trees, and on the outer bark of the Kanari. As the two first exist in the Malay Peninsula, the latter under the name of Angsannah, the absence of the tree Opossum from this part of the Archipelago cannot be attributed to want of suitable food. An examination of the limestone caverns in the northern part of the Malay Peninsula, with a view to the discovery of fossil remains of mammals, might be attended with very interesting results, for although the rock has been of subaqueous formation, as evidenced by the existence of fossil shells, still the remains f mammals may be found there, as well as in he caverns of the same formation in Australia. Such an examination is not necessary to shew hat marsupials once existed on the continent f Asia, that point having been decided by their ppearance in the secondary beds of Europe; till it would be a matter of great interest to science were their remains discovered in the Southern parts of Asia.

The Malayan name is "kusu" which has been latinized by the old Dutch naturalists into "Cuscas," and adopted by modern zoologists. n Timor the Ring-tailed Opossum is common n the Southern parts of the island. The only marsupial that has yet been traced in Celebes s the Flying Opossum, but the zoology of this sland still remains to be explored. The Zoological connection of Java, Sumatra, and Borneo, with the continent of Asia, is as distinct as that f Timor, Ceram, and New Guinea, with the ontinent of Australia. Probably Celebes will e added to the Australian group. The infernces to be drawn from these facts must be elf-evident. The distinct character of the mammalian forms exisiting in the countries lying on the Great Asiatic Bank, shew that Borneo, Java, and Sumatra, were attached to he continent of Asia by an unsubmerged range t a period long subsequent to the separation f Australia; which would imply that the curved and that passes from Formosa through the

Philippines, the Moluccas, Java and Sumatra, is the most recent line of volcanic action.

Productive Character.—The primary ranges in South-eastern Asia and the Indian Archipelago are all more or less metalliferous, but the labour of working under ground, and extracting the metals from the matrix, is so unsuited to the habits of the natives, that mining operations are only carried on in those countries which are subjected to despotic governments. Lead mines are worked in that part of the Malayan Range which traverses the kingdom of Ava; and copper mines have been opened in the Anam or Cochin Chinese range, the produce of which is equal in quality to South American copper, but inferior to that of Japan. The produce of these mines has been imported into Singapore, that of Anam in considerable quantities, but the cessation of commercial intercourse has put a stop to the importation. Iron is also smelted from the native ores on the western side of the Anam range, and it is likewise said that silver mines are worked, but the correctness of the report cannot be vouched for. Elsewhere, in this region, mining operations are confined to the collection of metals that have been projected from the original site by subterranean heat, which can be traced distinctly to recent volcanic action The tin of the Malay Peninsula, Banka, and Billiton, and the gold of the Peninsula, Borneo and Celebes, are all collected from the detritus in which the projected metal has been deposited. Lead and antimony ores are found in the Cambodian Range to the north of Kampot, but no mines have been opened.

The excessive fertility of soil which characterises the narrow band in which the volcanic stream is still active, does not extend to the areas in which the circulation has ceased. Nevertheless the fertilizing qualities of decomposed limestone have aided in forming a soil better adapted for the growth of produce necessary for the sustenance of man than the rich, fat, soils of the volcanic bands. Maize, upland rice, yams, and other esculent roots here attain perfection, and the nourishing qualities of the produce are apparent in the superior vigour of the inhabitants of areas of up-heaval. The wheat grown in the uplands of Timor is remarkably rich in gluten, although the small size of the grain gives it an unfavourable appearance in European eyes. The cultivation of produce adapted for commerce is still in its infancy, owing to the lands of this formation having hitherto been neglected in favour of volcanic tracts, but its propects are by no means disheartening. The coffee, cotton, cacao, and hemp (Musa textilis), growing on the upheaved areas, are the best produced in the Archipelago; although the soil is not calculated to produce sugar, or spice equal to that of the volcanic band. The mineral wealth of these areas is, however, more calculated to attract European enterprise. Coal has been found whenever it has been sought for with diligence in spots favourable for its deposit:—iron ore of excellent quality is abundant where the line of upheaval has crossed primary ranges;—and limestone, so necessary as a flux in smelting the metals, is found everywhere, so that the large areas possess those elements, that have mainly contributed to the prosperity of Great Britain. Fortunately, the gold deposits in the western parts of the Archipelago are now pretty well exhausted, and in the more remote regions, Timor, and possibly Sumba, are the only spots in which the steady course of industry is likely to be interrupted by the search for precious metals. The native chiefs of the former island, terrified by the rapacity of the early European navigators, are said to have combined in establishing a law which made searching for gold a capital crime, except on occasions in which it was thought proper to propitiate the deities by the dedication of a Bulan Mas or golden moon, when a human being was sacrificed to the spirits of the mines before the gold could be collected.

This ceremony is probably alluded to in the Account of Timor," published in Mr. Moor's Notice of the Indian Archipelago, Appendix, p. 6. The name of its author is not given, but after diligent enquiry, [illegible] [illegible] the tenor of his remarks he must have resided some time at Coupang, and collected his information concerning the more remote island from parties employed in the commerce of its dependencies; otherwise he could not have described Sumba as a low island, not much higher than Madura. Nevertheless the general correctness of his observations, is ascertained.

The productive character of the volcanic area is totally distinct from that of the primary formations. With the exception of gold, which is found scattered in minute particles in the beds of the mountain streams, no single production of the primary areas repays the labour of collection This deficiency is amply compensated by the surpassing richness of the soil produced from the volcanic rock, which decomposes rapidly before the influence of the atmosphere. The natural productions are unimportant, the nutmeg, which is scattered over that portion of the band which approaches the continent of Australia, being almost the sole exception. But the docility of the native inhabitants proved to be such that they were easily coerced to labour, and the curved volcanic band which traverses the Archipelago became studded with European settlements throughout its length and breadth, which now yield the great bulk of the produce exported from the Indian Archipelago. In the northern part of the Philippines, the famed Manilla tobacco is the chief production; sugar plantations, which supply the Australian colonies, occupy the centre; and the Musa textilis which yields the Manilla Hemp is the chief product of the south. Spices are almost the sole production of the Dutch settlements of the Moluccas, inferior articles being neglected, as is the case in countries which produce gold. Some islands east of Java are still independent of European control, and these yield productions suited to the wants of the natives to such an extent as to give rise to an export trade with all parts of the Archipelago. In Java, coffee, sugar, rice, and tobacco, are the most important articles, the two first being exported to Holland in immense quantities. Coffee and pepper are the chief products of Sumatra, where the soil is less fertile than in some of the other islands of the band. The volcanic agency here becomes comparatively weak, and is confined to the outer coast of the island; where, being backed by an area of upheaval, the greater portion of the alluvium descends into the sea and is lost. Sufficient data do not exist to define the area of upheaval which intervenes between the volcanic band and the north-eastern coast from the neighbourhood of Palembang northward, but its existence is distinctly shewn in the detritus brought down by the rivers. It is probably owing to this circumstance that the alluvial plains of Sumatra which abut on the Great Asiatic Bank are less fertile than those of Java, where the alluvium almost exclusively consists of decomposed volcanic rock.

An overland journey was made with a large party to Filarang in the island of Coopang and abundance of copper was found, but the strata had been so broken up, that mining operations could not have been prosecuted with advantage (See Journal I. A. Vol. IV. p. 495.) The reputed gold deposits, which lie on the south side of the island, were not examined. Quicksilver in a pure state is sometimes brought to Coupang by natives from the interior, and as the collection from the hollows of the rocks in which it is deposited does not entail heavy labour, it might become an article of commerce were its value known.

The edible nest which is constructed by the Hirundo esculenta in the caverns of the limestone cliffs, is found throughout the areas of simple upheaval, but not elsewhere; so that this singular production, which from its value is well known to those engaged in the commerce of the Archipelago, furnishes one of the best tests for deciding the character of the regions in which it is found.

Up to a very recent period the submerged banks which extend from Asia and Australia furnished the principal articles of commerce supplied by the primary region. Agaragar, a marine lichen extensively used in China, trepang or sea slug, and mother of pearl shell, are common to both banks, but the Australian bank is by far the most productive, probably from its not having yet been so extensively worked as the Asiatic.—(*Walton's State, p.* 116.)

There are five different seas recognised by European Geography within the limits of the Indian Archipelago; viz.: the wide expanse between Borneo and the Malay Penisnla; another between Borneo and Java, called the Java Sea; another between Celebes and Timor; the Sea of Celebes between that island, Sulu and Mindanao; and the fifth, a basin of considerable extent between the Philippines, Palawan and Borneo. Around all these flow, on the west, the Bay of Bengal and the Indian Ocean (*St. John's Indian Archipelago, Vol.* I. p. 4, 5.) Banks of soundings extend from the continents of Asia and Australia, and form very remarkable features in the geography of this part of the world; and, as such, are deserving of more attention than has hitherto been bestowed upon them, since it will be found that all the countries lying upon these banks partake of the character of the continents to which they are attached; while those which are situated on the deep sea which separates them are all of comparatively recent volcanic formation with the exception of a few small coral Islands, which, in all probability, are constructed upon the summits of submerged volcanoes. Water spouts, in many parts are very frequent. But the wind often prevents their formation. In their stead the wind-spout shoots up like an arrow, and the sea seems to try in vain to keep it back. The sea, lashed into fury, marks with foam the path along which the conflict rages, and roars with the noise of its water-spouts, and woe to the rash mariner who ventures therein. The height of the spouts is usually somewhat less than 200 yards, and their diameter not more than 20 feet, but they are often taller and thicker; when the opportunity of correctly measuring them has been favourable, however, as it generally was when they passed between the islands, so that the distance of their basis could be accurately determined, they have never been found higher than 700 yards nor thicker than 50 yards. In October, in the Archipelago of Rhio, they travel from south-west to north-east. They seldom last longer than five minutes; generally they are dissipated in less time. As they are going away, the bulbous tube, which is as palpable as that of a thermometer, becomes broader at the base, and little clouds, like steam from the pipe of a locomotive, are continually thrown off from the circumference of the spout, and gradually the water is released. Jansen never saw more water-spouts than in the Archipelago of Bioun Singon, during the changing. Almost daily were seen one or more. In the north-east part of the Archipelago the east monsoon is the rainy monsoon. The phenomena in the north-east part are thus wholly different from those in the Java Sea. In the Archipelago there is generally high water but once a day, and, with the equinoxes, the tides also turn. The places which have high water by day in one monsoon get it at night in the other.—(*Jansen. Maury's Physical Geography, p.* 247 to 250.)

The transparency of the atmosphere is so great that sometimes Venus can be discovered in the sky in the middle of the day.

Especially in the rainy season the land looms very greatly; then we see mountains which are from 5,000 to 6,000 feet high at a distance of 80 or 100 English miles.—*Jonsen.*

According to Dr. Latham, the islanders of both the Indian Ocean and the Pacific are Indians, Japanese or Malay. The Singhalese are Indians; the Luchu are Japanese; and the natives of Sumatra and Borneo are Malay: Hainan, is Chinese. But in the Archipelago, we can never free our researches from continental elements. The history of the Natives along the southern borders of Asia, has in every era, exercised some influence on the Archipelago, and the importance of the international influences of the Archipelago itself, may be supposed from the circumstance that while some writers have derived Malayan civilization from an original source in Menangkabau, others have referred it to Java, and others to Celebes,—whilst two of the ablest,—Mr. Marsden and Mr. Crawfurd have busied themselves in endeavouring to exhume a great nation whose civilization preceded the Javanese, the Malayan and the Bugis, and impressed itself more or less not only in the Archipelago but over all Polynesia. Mr. Crawfurd, in an essay "on the races and languages of the Archipelago and Pacific Island," which was read to the British Association at its meeting at Oxford remarks that, "The theory of Marsden adopted by Humboldt and others of one original language prevailing from Madagascar to Easter Island among all the nations not negro, and the identity in race of the brown-complexioned men within the limits in question, is wholly groundless. In a dictionary of the Madagascar tongue, of 8,000 words, the number of Malay and Javanese words is only 140;—in one of the New Zealand, of 4,560 words, 103;—in a French one of the Marquesas and Omaii of 3,000 words, about 70;—and in a Spanish Dictionary of the Tagala of the Philippines of 900 words, about 300. These facts are of themselves almost refutation sufficient to say nothing of the different phonetic and grammatical structure of all the languages. Over the whole vast field under examination there are but two wide-spread languages that can be said to have dialects—the Malay and the Polynesian, the latter being essentially the same tongue in New Zealand, the Friendly, the Society, the Navigators and the Sandwich Islands, but in no others.—(*Journal of the Indian Archipelago, p.* 178.)

Johore Archipelago.—An extensive Archipelago is formed by the prolongation of the plutonic zone of elevation of the Malay Peninsula from Singapore to Billiton. It is so closely connected geographically with Johore as to appear a continuation of it, partially submerged by the sea. These islands (with the exception of a few of the most southerly) formed the insular part of the kingdom of Johore from the thirteenth century to the British occupation of Singapore, in 1818.

The *Johore Archipelago* embraces several hundreds of islets, besides the considerable islands of Battam, Bintang, Krimun, Gampang, Gallat, Linga and Sinkep, and Banka and Billiton may also be considered as included in it. They are geologically and ethnologically, although not geographically the same, thinly inhabited by several interesting tribes. Some of these have already been slightly noticed by Dutch writers, but the greater part still remain, undescribed. The more important tribes are those termed collectively Orang Persukuan, literally the people divided into tribes. They are all vassals of the King. Those of the highest rank, to whom distinct services are appropriated when the King goes to sea or engage in war, are the Oraing Bentan under an Ulubas lang; the Orang Singgera, under a Batin; the Orong Kopet under a Jinnang, the Orang Bulo and the Orang Linga. The other tribes, some of the land and some of the creeks or sea, are the Orang Gilám, Orang Bekaká, Orang Sugi, Orang Muro, Orang Tambus, Orang Mantang, Orang Kilong, Orang Timiang, Orang Tambus, Orang Mantang, Orang Kilong, Orang Timiang, Orang Mnau, Orang Pulo Boya and Orang Silat. Besides these, there are some wild tribes in the interior of the larger islands. (*Supplement to No.* 5 *Journal of Indian Archipelago, Dec.* 1847, *page* 336).

The future intercourse of Australia with the islands of the Eastern Archipelago will doubtless be very great, and a highly profitable commerce cannot fail to spring up between them. The rich produce of New Guinea, of Ceram, and the islands to the north and north-east of Timor, is now collected in the Arru Islands, and vessels belonging to British and Chinese merchants annually resort to them to obtain the commodities which they require in exchange for the manufactures of Europe and continental India.

The *Mergui Archipelago* is more or less Malay. The number of the Silong or wandering fishermen of the Malay Archipelago amounts to about 1,000 souls.

The *Archipelagos* of the Maldives, Chagos and Laccadives are of Madreporic origin. The Eastern Coast of Australia, between 9° and 25° S. L. has a coral reef or barrier.—*Hist. of Java, vol. i. p.* 62-3, (*2d. ed.*) *Ed. J. I. A. ARCHITECTURE, the recent advent of the British nation into India, the efforts needed to obtain a standing place and the duty devolving on them of introducing public works, have all hitherto prevented them from engaging in works of ornamental architecture. The Cupola of the Scotch Church at Madras, built by Colonel de Haviland is good, and there are a few ornamental buildings in Calcutta and Bombay. But, useful public works, as the Ganges Canal, the Southern Coast Canal, already extending almost from the Brahmaputra and the Ganges to the Western Coast, the great dams across the Godavery, and the Kistnah, the tunnelling of the Ganges and Indus, the roads, every where, from Cape Comorin to Thibet, the rail roads, with their stupendous bridges, and the irrigation canals, already in vastness and in public usefulness, surpass all that Aryan Hindu, Buddhist, Moghul or Arab had done during their previous 3,000 years of occupation. The Moghul dynasties of India, beyond palaces and tombs, porticos and temples have left little Architecture worthy of emulation. There are a few useful sarai and bridges, but of these many were erected by private persons. Canals are said to have been excavated by Firoz Shah, and by Ali Mardan Khan, but the historians of Timur, do not mention them, and Baber states that in the Hindustan province there were none.—(*Elliot's History of India.*

Captain Cunningham's in his *Essay on Aryan Architecture* mentions the Cashmerian sacred buildings as having a grace and beauty quite peculiar to themselves. They are not, like the hindoo temples, "a sort of architectural pasty, a huge collection of ornamental fritters, huddled together with or without keeping." Nor are they, like the temples of the Jain religion —the intermediate eclectic system between Brahminism and Buddhism—"a vast forest of pillars, made to look as unlike one another as possible by some paltry differences in petty details." They are, on the contrary, distinguished by great elegance of outline, massive boldness in the parts, and good taste in decoration. Lofty pyramidal roofs, trefoiled doorways covered by pyramidal pediments, and great width of intercolumniation, are among the principal features of the Cashmerian temple. The material generally found to have been used is a blue limestone, capable of taking the highest polish, to which circumstance Captain Cunningham refers the beautiful state of preservation in which some of the buildings exist. The great wonder of Cashmere is the temple of Marttand, or Matan, about three miles from Islamabad. Its exact age cannot be determined, but it is somewhere between the years 370 and 500 A. D. and Captain Cunningham thus enthusiastically describes its majestic position; I can almost fancy, he says, that the erection of this sun-temple was suggested by the magnificent sunny prospect which its position commands. It overlooks the finest view in Kashmir, and perhaps in the known world. Beneath it lies the paradise of the East, with its sacred streams and cedar glens, its brown orchards and green fields, surrounded on all sides by vast snowy mountains, whose lofty peaks seem to smile upon the beautiful valley below. The vast extent of the scene makes it sublime; for this magnificent view of Kashmir is no petty peep into a half-mile glen, but the full display of a valley sixty miles in breadth and upwards of a hundred miles in length, the whole of which lies beneath "the ken of the wonderful Marttand."

The sculptures on every ancient Hindu temple in India, however, throw some light on the subject of old costume. These temples are of no very great antiquity, are probably considerably within the christian era, but they furnish specimens of the local costumes of a thousand years ago; and many temples in the south and west of India, as also in Guzerat and Orissa, &c., are known to belong to periods as early as A. D. 500. But although groups of figures are numerous beyond description, their attire seems to be entirely conventional. Men, for the most part, wear head-dresses in the form of conical crowns richly covered with ornaments; their bodies are naked, and their breasts and arms shew necklaces and armlets of very ornate patterns. From the loins to the knee, or middle of the thigh, they have in most instances kilts, as it were, also composed of ornaments; and many are altogether naked, both male and female, with a girdle of ornamental pattern round the loins. These figures abound among the sculptures of Ellora and to the thirteenth century; also upon the 'Cholla' temples at Conjeveram, and elsewhere, probably of the same era. In the Jain sculpture the male and female figures are invariably naked; but ornamented in general with necklaces, bracelets, armlets, and zones, of exceedingly intricate and beautiful patterns, in imitation probably, of the chased goldwork of the period The best representations of ancient costume in India were the celebrated fresco paintings in the caves of Ajunta, many of which continued until lately very perfect. In the buddhist caves of Ellora some paintings in a similar style had been executed; but they were destroyed by the mahomedans when they invaded the Deccan early in the fourteenth century, and it is extraordinary that those of Ajunta escaped their iconoclastic and fanatic zeal. They did escape however, and for many years Major Gill, of the Madras Army, was engaged by Government in copying them on their original scale. The architecture and ornamentation of the temples of Southern India have lately been rendered accessable by the publication by Mr. James Fergusson and Colonel Meadows Taylor of the magnificent photographic representations of Beejapoor, Dharwar, Ahmedabad, and other cities. They are by far the most interesting and complete memorials of the sacerdotal and regal grandeur of Southern India which are in existence; and no work gives so striking an impression of the former splendour of those empires. For the study of native constume they afford materials of indisputable correctness and authenticity. It is difficult to decide the date of the Ajunta paintings, which represent scenes in buddhist history; and the series may extend from the first or second century before Christ, to the fourth and sixth century of our era. In either case they are upwards of a thousand years old. One very large picture, covered with figures, represents the coronation of Sinhala, a Buddhist king. He is seated on a stool or chair, crowned with a tiara of the usual conventional form; corn, as an emblem of plenty and fertility, is being poured over his shoulder by girls. He is naked from the throat to the waist. All the women are naked to the waist; some of them have the end of the cloth, or saree, thrown across the bosom, and passing over the left shoulder. Spearmen on foot and on horseback have short waist cloths only. In another large picture, full of figures, representing the introduction of buddhism into Ceylon and its establishment there, all the figures, male and female, are naked to the waist. Some have waist-cloths or kilts only, others have scarfs, or probably the ends of the dhotees thrown over their shoulders. Female figures in different attitudes around, are all naked; but have necklaces, earrings, and bracelets: and one, a girdle of jewels round her loins. The older buddhist, hindoo-buddhist, and hindoo, excavations near Prome, those at Ellora, at Ajunta, at Karli, and at Elephanta are works of great labour, and perhaps those of Ellora are the finest. But the more modern hindoo and Jain temples are disfigured by statues illustrative of the grossest parts of their belief. The buddhists of Burmah, at Prome and Rangoon have erected magnificent temples for their worship, with much detail, but with a grandeur of dimensions that prevents the thought of puerility. The great collossal figures of the pagodas at Rangoon and Prome are huge structures. The pagoda at Rangoon, built on the most elevated part of a great laterite ridge, towers majestically above all surrounding objects. The Chinese Joss Houses are simple structures, but ornamental from their pleasingly contrasted colouring. In the drier parts of China, alum is employed as a cement in those airy bridges which span the water-courses. It is poured in a molten state into the interstices of stones, and in structures not exposed to constant moisture, the cohesion is perfect, but in damp situations it becomes a hydrate and crumbles, a fact of which the whole empire was officially informed by the government in the early part of the nineteenth Century. It was discovered that water had percolated to the mausoleum of Kiaking: from having been built too near to the mountain side, the alum cement imbibed moisture, segregated and opened the way for water to enter the tomb. In those peaceful days such an event was of sufficient importance to call forth edicts and rescripts, memorials and reports in succession for several months. The son-in-law of the deceased monarch to whose care the construction of the edifice had been entrusted was fined and degraded, and a statesman from Fohkien acquainted with the properties of alum was appointed to renew it. The mahomedans in India, have little architectural to show except in their mosques and tombs. Some of the mosques, as the Jamma Masjid of Hyderabad, and the mosques at Bejapore are grand imposing structures, but one of the prettiest to be met with, is the little Damri masjid at Ahmednaggur, built from the farthing or "damri" deductions made from the wages of those workmen who erected the fort at that place. Of the tombs of mahomedans, the usual shape is, a vast cupola on a square pedestal. These, commonly called Gumbaz, are to be seen wherever mahomedans have ruled: but those at the fortress of Golcondah, of the former dynasty of Hyderabad in the Deccan are only surpassed in magnificence by the tombs of the Adal Shahi family of Bejapoor. Some of the Adal Shahi kings of Bejapore are buried at Gogi south of Kulburgah, and there is a Langar Khanah near with arabesques surpassing anything to be seen in the South of India. The tombs of Kulburgah are of little merit. The tomb of Aurungzeb's daughter at Aurungabad is said to have been in imitation of that at Agra over his relative the Mumtaz mahal.—*Local Newspapers Ed. Rev. No.* 257, *July* 1857. *Pers. Observ.*

ARCOT, a small town about 65 miles W. from Madras, taking its name from two Tamil words Arakada the jungle on the river Palar. It is in Lat. 12·54 N. and Long. 79° 19′ E. and 599 feet above the sea. It is the Arkatou Basileon of the Greeks, and the capital of the nomade Sorai (Σωραι) the whole of the neighbouring territory for several centuries after the christian era, having been occupied by wandering Kurumbars, and then formed the centre of the Chola Kingdom. Rennel says that in his time, Arcot was reckoned the capital of the Carnatic, and must have been a place of great antiquity, by its being taken notice of by Ptolemy as the capital of the Soræ, or Sora-mandalum from whence corruptly Choramandel. It was then a pretty large city, and its citadel was esteemed a place of some strength, for an Indian fortress. The defence of it, by Clive, in 1751, established the military fame of that illustrious nobleman. Its latest dynasty (after repeated assassinations and petty wars in which the original disputants disappeared) was the family of Mahomed Ali, who took the title of Wallajah, nabob of Arcot, and with whom the war lasted till the treaty of Paris, in 1754, fixed Mahomed Ali, second son of Anwar ud Din, in the Government of Arcot; and Salabut Jung, son of the late Nizam-all-Mulk, in the Soubahship of the Deccan. The town gives its name to two revenue districts of India, North and South Arcot, both of them on the eastern side of the peninsula of India, North Arcot has the towns of Arcot, and Vellore and the western railroad leads through it. Arcot, South district has a population estimated at 1,060,000. It has the Coleroun and Pennar rivers and Cuddalore is its chief town, Chellembrum is also a large place; land has trebled in value, in the past 20 years and wheeled carriages ten fold.—Rennell Memoir, P. xxi, 265 p. 328. See India. Kurumbars.

ARCOTE, COUPAM, in the south India, in Long. 79° 48′ E. and Lat. 13° 14′ N.

ARCTONIX COLLARIS. Sand-Hog.

ARCULGODE, a town in the south of India, in Long. 76° 7′ E. and Lat. 12° 46′ N.

ARDABERY, a town in India, in Long. 85° 15′ E. and Lat. 23° 3′ N.

ARDASHIR, There were several Persian sovereigns of this name, viz., Ardashir Babegan bin Sasan, Artaxerxes, the first of the Sassanian Kings A. D. 226.

Ardashir (Artaxerxes ii. (the 10th) A. D. 81.

And Ardashir iii, (the 25) Sassanian) in A. D. 629 under whom anarchy prevailed.

Ardashir-daraz-dast, or of the long arm, was Kai Bahman, the Artaxerxes Longimanus of the Romans. See Fars. Persian Kings. Sassanian.

ARDASHIR, one of the five divisions of the Province of Fars.

ARDAWA a mixture of gram and barley, either in equal proportions, or two to one, as the buyer prefers, used in Thibet for feeding horses. Both grains are parched and ground before being mixed together. Ardawa is thought very fattening food for horses, but owing to the loss of weight and substance in the parching process, and the extra labour required, it is more expensive than plain gram.—*Mrs. Harvey's Adventures of a Lady in Tartary, Vol.* i, *p.* 38.

ARDEA, a genus of birds of the family Ardeadæ, and sub-family Ardeinæ. Four of the Ardeæ are known in Southern Asia, A. Goliath, Sumatrana, cinerea and purpurea; four species of Herodias; and one each of the genera Butorides, Ardeola, Nycticorax, Tigrosoma, Botaurus and Ardetta, in all fourteen.

ARDEA, a town in Fars near the mountainous regions of Ardekan, one of the chief towns of the ancient Persians. See *Ardi*.

ARDEKAN, a mountainous region N. of ancient Fars. The hills form a snowy range and proved a formidable barrier to Alexander's progress. By their slopes, he descended into Persia in his advance on Persepolis. See Istakhr. Aras.

ARDELAN, one of the four divisions of Kurdistan. Wooded mountains, separated by narrow valleys and occasional plains, producing excellent pasture, cover its northern portion which is a nominal dependency of Persia. The Wali of this district, who is also the principal Kurdish chieftain, maintains feudal state in the palace at Sehnah, which is considered as the capital of Kurdistan. A serai occupies the summit of a hill, round which is the town, containing about 4,000 Sunni, 200 Jewish, and 50 Nestorian Catholic families. The Kurdish districts of Ardelan and Kirmanshah, occupy the western limits of Persia, in the space between Azerjiban and Luristan and the space between the Elwand and Zagros ranges.—*Rich's Kurdistan Vol.* 1, *p.* 209. *Euphrates and Tigris*, *Col. Chesney*, *p.* 215.

ARDENT SPIRITS, are Alcoholic liquids See Alcohol. Arrack.

ARDHA. Sansc. The half ;—Dina ardha ; half the day ; Ratri ardha ; half the night.

ARDI OR ARTÆI, the name which Herodotus gives to the Ancient Persians. Baron De Bode supposes the town of Ardea in Fars near the mountainous region of Ardekan, to have been one of the chief towns of the ancient Persians. See Ardea.

ARDIBEHEST AMSASPUND. See Ardibehest-Jasan.

ARDIBEHEST-JASAN. A festival of the Parsees or Zoroastrians maintained in honour of Ardibehest Amsaspund, the controlling angel, according to their theology, over their sacred fire ; on this day the Parsees crowd their fire-temples to offer up prayers to the Supreme Being.—The *Parsees* 61.

ARDINGA, a town in India, in Long. 80° 4′ E. and Lat. 15° 40′ N.

ARDISIA, a genus of plants of the natural order Myrsinaceæ : many species of which occur in India, and several are cultivated as flowering plants. A. humilis is the Badulam of the Singhalese. Ardisia Amherstiana, *Wallichis*· Kyet-ma-oke. *Burm* Læ-kho-mau-thoo. *Burm.* Læ-kho-mau-ghat. *Burm.* Læ-kho-mau wa. *Burm.* Læ-kho-mau-phado. *Burm*, are species of Ardisia.

ARDISIA AMHERSTIANA, grows on the coasts of the Tenasserim provinces.—*Mason, Riddell.* Wight in Icones figures *A. Doma*, humilis, *litoralis, oleracea, paniculata, pauciflora, pentagona*, rhomboidea, *solanacea, and umbellata.*

ARDISIA HUMILIS, is a common shrub at Tavoy, growing down to the plains ; but its habitat, in the Indian Peninsula, is "the eastern slopes of the Neilgherries, in sub-alpine jungle."

ARDRUK. BENG. Ginger, Zingiber officinale.

ARECA, a genus of plants of the Natural Order Cocoaceæ, of which several species, A Catechu : A. Dicksonii : A gracilis and A. triandra, occur in Southern Asia.

Poka ; Poka chettu; Oka. Vakha ; Kunda-poka ; Kola-poka	TEL.

The variety Kola-poka has long nuts.

A slender graceful palm of remarkably erect growth attaining a height of 30 to 60 feet, with a tuft of feathery leaves at the extreme top. Its cylindrical stem is only a few inches in diameter. It is an object of extensive culture, in many parts of tropical Asia, in Malabar, north Bengal, Nepaul, and the S. W. Coast of Ceylon, with the Burmese and to a smaller extent by the Karens and in all the islands from Sumatra to the Philippines, in which it seems to have as many distinct names as there are languages. In appearance, the Areca is perhaps the most elegant of all the palms, and on the Burmese coast, where it thrives luxuriantly, a grove of betel palms, with their slender cylindrical stems peering fifty or sixty feet upwards, waving their green plumes, and fragrant flowers, presents a scene of sylvan beauty rarely to be excelled under that tropical sky. In the arid climate of the central Dekhan, it flowers at all seasons, but it requires to be protected from the dry winds, either by matting or straw tied round it, to prevent it splitting, when this happens, it immediately decays. In gardens, when mixed alternately with the cypress, it presents a very striking appearance. The structure of the wood is like that of palms generally. It is hard and peculiarly streaked and might be used in turnery for small ornamental work. In Travancore, it is employed for spear handles and bows, for which it is well suited, being very elastic. This palm yields the betel-nut of commerce, which, mixed with lime and the leaf of the Piper betel, in all the countries of South-Eastern Asia, is in frequent use as a masticatory. The nut is hard and peculiarly streaked and in request in turnery for small ornamental work. A strong decoction of the nut is used in dyeing. Roasted and powdered they make an excellent dentifrice. Young nuts are prescribed in decoction, in dyspepsia and costiveness ; and they are considered to possess astringent and tonic properties. Their use, with betel leaf and lime discolours the teeth, but the people imagine that it fastens them and cleans the gums.

The nuts yield two astringent preparations which are known as Catechu, but of a very inferior quality. These two preparations are respectively called, in Tamil, Katha Kambu and Kash Kathi, in Telugu Kansi, and in the Dekhan Khrab Katha and Acha Katha. The former, Katha Kambu is chewed with the betel leaf, the latter, Kash Kathi is used medicinally.

The tree will produce fruit at five years, and continue to bear for twenty-five years. Unlike the Cocoa Palm, it will thrive at high regions, and at a distance from the sea. In the Eastern Islands, the produce of the tree varies from 200 to 1,000 nuts annually. The nuts form a considerable article of commerce with the Eastern Islands and China, and are also one of the staple products of Travancore. They are gathered in July and August, though not fully ripe till October. In Travancore, " those that are used by families of rank are collected while the fruit is tender; the husks or the outer pod is removed; the kernel, a round fleshy mass is boiled in water; in the first boiling of the nut, when properly done, the water becomes red, thick and starch-like, and this is afterwards evaporated into a substance like catechu; the boiled nuts being now removed, sliced and dried, the catechu-like substance is rubbed on them, and dried again in the sun, when they become of a shining black, ready for use. Whole nuts, without being sliced, are also prepared in the same form for use amongst the higher classes, while ripe nuts, as well as young nuts in a raw state, are used by all classes of people generally, and ripe nuts preserved in water with the pod are also used." For export to other districts the nuts are sliced and coloured with red catechu, or sent whole in the pods. The average amount of exports of the prepared nuts from Travancore is from 2 to 3,000 candies annually, exclusive of the nuts in their ordinary state, great quantities of which are shipped to Bombay and other ports. According to the last survey there were upwards of a million trees in Travancore. Heyne, in his Tracts gives the following as the mode of extracting the catechu from the nuts in Mysore.—"The nuts are taken as they come from the tree, and boiled for some hours in an iron vessel. They are then taken out, and the remaining water is inspissated by continual boiling. This process furnishes Kassu, or most astringent terra japonica, which is black and mixed with paddy husks and other impurities. After the nuts are dried, they are put into a fresh quantity of water and boiled again; and this water being inspissated, like the former, yields the best or dearest kind of catechu called Coony. It is yellowish-brown, has an earthy fracture, and is free from the admixture of foreign bodies." The nuts are seldom imported into England. The catechu has of late years superseded madder in the calico works of Europe for dyeing a golden coffee brown, 1 lb. of this being equal to 6 lbs. of madder. In 1852, the value of Areca nuts exported from Ceylon alone to British Colonies and Foreign States, amounted to £2,230. The spathe which stretches over the blossoms of this tree, and which is called Paak-muttay, is a fibrous substance with which the hindoos make into vessels for holding arrack, water, &c.: also into cups, dishes and small umbrellas. It is so fine that it can be written on with ink. The trunk is only a few inches in diameter and is used in Ceylon for pins and Pengo stricks,—in Travancore for spear handles and bow.—*Roxburgh*, iii. 615. Low's (*Sarawak* (*p.* 41) mentions that this beautiful tree is much prized by the natives of Borneo on account of the delightful fragrance of its flowers, which, taken just before opening from the sheath or spathe, in which the inflorescence is enveloped, and called myang, is requisite in all their medicines and conjurations for the purpose of healing the sick: it is also used with other sweet-scented flowers at bridals and all occasions of festivity. The Malay name Pinang, gives that of the the island of Penang. There are various kinds in use, and the mode of preparation also differs. The three ingredients of the betel nut, as commonly used, are, the sliced nut, the leaf of the betel pepper in which the nut is rolled, and chunam or powdered lime, which is smeared over the leaf.

Prof. Johnston calculated that they are chewed by at least fifty millions of the human race, but like smoking or snuff-taking, all do not use it. The tree requires a low moist situation with rather a sandy soil, either under the bund of a tank or in a position otherwise favorable for irrigation. The seeds are put into holes 6 feet apart.

Areca nut or Betel nut, when in bulk as a cargo generates an excessive heat.—*Roxb. Fl. Ind. iii*, 615. *Voigt.* 637. *Mr. Mendis. Dr. Cleghorn. Major Drury, Useful Plants. Col. A handsome tree of the Indian Archipelago, but growing now near Madras, in Bangalore, at Secunderabad and largely in the Nugger Division of Mysore. It occurs in abundance, in a wild state, throughout the islands of the Indian Archipelago, and yields its horse-hair-like substance, Javanese Duk, Malay, Iju or Eju or Gomuti, the last of which has given the name to the tree. The Gomuti is the only one of this genus of any commercial importance. It attains a height of 30 or 40 feet. Its commercial products are its palm wine, Barum or Baru, and its horse-hair like Iju orEju or Gomuti. Five species of this genus inhabit the islands of the Indian Archipelago. They are handsome trees, their favorite localities in the Archipelago, being dense shady forests and in the neighbourhood of rivers and rivulets; it comes into bearing about the seventh year, and continues to flower from 2 to 5 years. In general appearance the gomuti-palm very much resembles the sago, but the pinnæ of the leaves, which are erect in the latter, droop in the former like those of the nibong and many other palms. The palm wine is extracted from the plant by cutting off the large lateral bunches of fruit. When these are about half-grown, they are severed close to the division of the peduncle or stem, and bamboos are hung to them, a good tree with two incisions will produce about a gallon daily for two months; a fresh surface being constantly kept on the severed part by a thin slice being daily cut off the stem or peduncle, so that at the end of the above-named period it has altogether disappeared. The toddy is taken from the bamboo twice a day, and when fresh, has a very agreeable taste, and is a refreshing drink, with a very agreeable taste; however, the Dyaks always impart a flavour to it by placing a piece of a bitter kind of plant into the bamboos in which it is collected. In the Nuggur division of Mysore, a very sweet toddy is drawn from it. The cordage made from the hairy like filaments which are interwoven around the stem and about the axels of the leaves, is of excellent quality and is of great service to the Dyaks in their house building on account of its durability. This substance is also plaited into ornaments for the arms, legs, and necks, and its deep black and neat appearance renders it to the eye of a European, a much more agreeable ornament than either the brass or beads with which they abundantly adorn their persons.—(*Low's Sarawak, p.* 41). The tree was so highly thought of by Dr. Roxburgh that he introduced it largely into India, where the natives, took kindly to them. The fibre is almost imperishable, and is considered superior to all others yet made use of for the manufacture of artificial bristles for brushes, imitation horse-hair for stuffing, and such like purposes. A tree cut down in the Calcutta gardens yielded 150 lbs. of good sago meal. The black horse hair-like fibres surrounding the petioles of the leaves, form very good cordage and cables. In Java and Baleyn the sap is boiled down to syrup and allowed to concrete, but it always retains some degree of moisture. The best is of a yellowish colour but the inferior kinds, called saccharum nigrum, are blackish colored and are commonly mixed with the muscavadas of the cane. Its leaves, when very young, are eaten like the American Cabbage palm Oreodoxa oleracca, Endl. The fleshy outer covering of the fruit of the Gomuti, when macerated, affords a fiery liquor, appropriately denominated " hell-water," by the Dutch, and the seed, or rather the albumen when freed from its noxious covering, is made into sweetmeat by the Chinese. It therefore yields Sago, Palm wine, Gomuti Sugar and Baru.—*Roxb. iii.* 626. *Crawfurd's Dictionary. Archipelago : Seeman on Palms, Dr. Royle's Fibrous Plants. Voigt.* 637. *Veg. Oil of Prickly Poppy, or Jamaica yellow thistle...	.. ENG.

is, pale yellow, clear and limpid and may be obtained in large quantities from the round corrugated seeds. It is sometimes expressed by the natives and used in lamps, but is doubtless adapted to other and more important uses. The seeds yield a large quantity of oil, nearly as much as the common mustard seed. The oil is mild, resembling that of the poppy, and may be taken in one ounce doses without producing purgative effects. It is readily procurable, and so cheap that a considerable saving has been effected from its introduction by Dr. Thompson into the Malda jail for burning in place of mustard oil. *O'Shaughnessy. Hog. ARGHA, or the Yoni, in hindu mythology, is Parvati's especial emblem; properly, the *Argha*, is the cup or circle from which the *Linga* rises, its outer edge or rim being the Yoni: Argha Patra is a boat shaped vessel used in the religious ceremonies of the hindus to contain the Argha, or offering made of Tila or Sesamum indicum, cusa-grass, perfumes, flowers, durva-grass and water. These vessels called Argha, or Patra, as also Argha-patra: the first, meaning a boat, or vessel; the latter, a cup, or goblet; remind us strongly of the Patera of the Romans. Patra is also a leaf, especially when formed into a cup or drinking vessel, as is very commonly done in India: the plantain leaf, of which it has been supposed the aprons of Adam and Eve were made, is easily formed into a convenient cup, and it is retained in that shape by a skewer. The Argha of the hindus is supposed to be identical with the Argo of the Greeks, but the subject of the Argha has given rise amongst the hindus to so many wildly speculative theories that reference may be made to Lustral ceremonies: Narayana: Yavana. Much of the ceremonial of the hindu religion, as in this instance, has had a physiological origin, and as many of their fasts, festival days and observances are also astronomical.

ARGHANATHA, or lord of the boat shaped vessel, is a title of Iswara or Siva. Arghanatha Iswara appears to have been literally translated by Plutarch, as Iris and Osiris, when he asserts that Osiris was commander of the Argo. This, as a name of Siva, is in allusion to the Argha's connexion with the Linga.—*Cole. Myth. Hind. p.* 374.

ARGHA, a town in India, in Long. 82° 46′ E. and Lat. 28° 16′ N.

ARGHAND-AB, a river near Candahar, in the hills. On its left bank is the famous grotto, the Ghar-i-Jamshid, sixteen miles S. W. of Candahar. The hills, the Panj Bai, overlook the river, the whole of the roof of the Grotto has the appearance of having been beautifully carved.

ARGHA-PATRA. See Argha.

ARGHANI-MAIDAN, is in the Southern slope of the Anti-Taurus: about 20 miles to its West rises the Western branch of the Tigris. See Tigris.

ARGHAWAN. HIND. PERS. Baber mentions, two Arghawans, quite different plants, the red and the yellow. The yellow is common on all the plains of Central Asia, also on those of Beluchistan, and Persia. In the latter region it is named Mahak. It is a shrubby plant, bearing clusters of yellow pea-like flowers, with compound alternate leaves. It is one of the very numerous natural objects whose beauty is not prized, because it is not rare. The red arghawan is a small tree.—*Masson's Journey, Vol.* iii. p. 10.

ARGHEL, EGYPT. The leaves of Solenostemma argel, a native of Syria. They are purgative and are employed in Egypt to adulterate senna.—*Hog. Veg. King. p.* ii. 5, *Simmonds.* See Cassia.

ARG'HIAM. See Hindoo.

ARGHUN, a Sind dynasty who held a brief sway from A. D. 1521 to 1554-5, a period of 34 years, during which Shuja Beg and his son Mirza Shah Hussain reigned. Arghun Khan Tar Khan, was grandson of Hulaku, grandson of Changiz Khan.—*Elliot, p.* 498.

ARGHUN KHAN of PERSIA, Kablai Khan's great nephew. His wife was *Zibellina*, theKhatun Bulugan, a lady of great beauty and ability. She had been married to Abaka, but on his demise, according to the marriage customs of the Mongols, she passed to the Urda of her stepson, Arghun. On her death, Arghun sent Marco Polo for another wife, out of the Mongol tribe of Bayaut, but Arghun died before the lady Kuka-Chin was brought and she passed to Ghazan, the nephew of Arghun, for Arghun had been succeeded by Khi-Kafu, his brother.—*Quart. Rev. July* 1868.

ARGHYA, SANS. A present, or gift indicative of respect to a superior. It matters not of what it consists, and is often of flowers.—*Hind. Th. Vol. i. p.* 312.

ARGILA, also **HARGILA**. HIND. The Adjutant bird, Leptoptilus Argila.

ARGOL. Potassæ bi-tartras : Tartar.

ARGON OR **ARGOND**. A mixed race resident at Lé, half Kashmiri and half Boti. The same term, in Yarkand, also, is applied to half bloods.

ARGON. See Argha : Lustral Ceremonies. Narayana. Yavana.

ARGONAUTA, the Argonaut or paper sailor, a genus of molluscs of the class cephalopoda order dibranchiata. Sec. Octopoda and family Argonautidæ. Several species occur in the seas on the South and East of Asia, viz., A. Argo; cornu ; cymbium ; gondola ; hians : thaustrum : tuberculata : and vitrea. See Carinaria : Mollusca, Octopoda.

ARGOWLI, a town in India in Long. 81° 15' E. and Lat. 24° 17' N.

ARGUS. Like the Argus of the Greeks, Indra is dipicted with a thousand eyes, and is hence called the thousand eyed god.

ARGUS COWRIE, Cypræa Argus, some have been sold at four guineas a pair..

ARGUS PHEASANT LUNGI.HIND. SeeAves.

ARGYLE of Damascus, is the common hookah of India, and the word is a corruption of the Persian Nargyle. The common hookah consists of a cocoa-nut shell containing water, in which an upright reed, or wooden pipe ornamented or otherwise and about eighteen inches long is fixed, to support the tobacco holder and lighted charcoal (chillam.) This perpendicular tube is grasped by the person who smokes; who draws the tobacco smoke through the water, by means of a similar reed, or pipe curved or straight reaching from the globe to the mouth. These tubes are sometimes made of silver, as well as the vase itself, and richly sculptured. This is the ordinary hookah of India, and termed by Europeans the bubble bubble from the noise created in the water. *Robinson's Travels. Vol.* ii. *p.* 226.

ARGYREIA, a genus of plants, belonging to the Convolvulaceæ, of which Voigt and Wight enumerate about seventy species as growing in India, *viz.* A. Acuta ; aggregata argentea : capitata : cuneata cymosa, elliptica ; festiva ; fulgens : hirsuta : floribunda : laurifolia ; Malabarica ; multiflora, pomacea ; setosa, speciosa ; tilifolia ; splendens : Wallichii ; Zeylanica. These have been principally brought from the genera Convolvulus, Ipomæa andLettsomia. The flowers of many are showy and ornamental. The leaves of A. bracteata of Choisy, Samudrapatta, Sanscrit ? are mentioned in Useful Plants as used for fomenting and poulticing scrophulous joints. The Nway-nee of the Burm. is the A. capitata.

ARGYREIA MALABARICA. (*Choisy*)

Kattu Kalangu,	MAL.	Paymoostey,	TAM.

Grows in Mysore, Malabar, common on the ghauts. Root cathartic. Considered by farriers a good horse medicine.—*Ainslie.*

ARGYREIA SPECIOSA.—*Swt.*

Convolvulus speciosus. *Linn.*
„ nervosus. *Burm.*
Lettsomia nervosa *Roxb.* ; 488.
Lettsomia speciosa. *Roxb.*
Ipomæa speciosa. *Pers.*

Bich-taruka ...	BENG.	Samudra-cheddi...	TAM.
Elephant creeper..	ENG.	Samudra-patra ...	TEL.
Samudra Shoka	HIND.	„ pala ...	„
Guli ..	„	Chandra-poda ...	„
Samudra-stogam	MALAY.	Kakkita, kokkita or kokkiti, Pala-samudra	TEL.
Samudra palacca...	SANS.		

Grows all over India : it has large deep rose coloured flowers. The leaves, applied with the green or upper side, are deemed discutient : The lower or white side is a maturant. *Voigt.* 351.

ARH. A river at Oodypoor.

ARHAR. SANS. Cajanus Indicus. Pigeon Pea or Hill-dhal Pea.

ARHATA, religious Buddhist counsellors who assembled at Pataliputra with Asoka. After 9 months consultation they sent out nine teachers, viz., one to Cashmir and Peshawar, a second to the country of the Nerbadah : a third to Meiwar and Bundi. A fourth to Northern Sind. A fifth,to the Mahratta country. A sixth to the Greek Province of Kabul, Arachosia. A seventh to the country of Himalayas,and the eighth toAva or Siam, that is, "the golden land," the aurea regis or the aurea chersonesus and the ninth to Lanka or Ceylon. Some circumstances of which we are uninformed must have prepared these regions for the reception of the ascetic doctrines of Sakya muni, which still prevail throughout Ceylon, Burmah, Siam, Thibet, and China, amongst about one-fourth of the human race. See Buddha, Lama. Sakya Muni.

ARIA, Herat,—also called *Heri*, and the river which it stands is called *Heri-rud.* This river of *Heri* is called by Ptolemy Αρειαρ by other writers *Arius*; and *Aria* is the name given to the country between Parthia (Parthuwa) in the west, Margiana (Marghush) in the north, Bactria (Bakhtrish) and Arachosia (Harauwatish) in the east. It is supposed to be the same as the *Hariava* (Hariva) of the cuneiform inscriptions, though this is doubtful. *Prof. Max Muller's Lectures, p. p.* 234-235.

ARIA, a country of Central Asia, known to the Greeks. It formed the sixth territory occupied by the Arian race in their migrations from the table land of Pamir to the south west part of it. It was known to the Arians as Haroyu, which Bunsen (iii. 463) considers to be Herat, the Harwa or Hariva of the cuneiform inscriptions, from the river Heri, or Heri-rud, but the Greek district of Aria, comprised the larger part of Segestan and part of Southern Khorasan. See Arian.

ARIA BEPON. MALEAL. അരിയവെപ്പു Azadirachta Indica.

ARIA DESA. See Hindoo, also Sakya Muni.

ARIAHA. See Arian: Hindoo.

ARI-ALU. MALEAL. അരയാലു Syn. of Ficus religiosa.—*Linn.*

ARIALU. See Arian: Hindoo.

ARIAN, also written Aryan; this intellectual race, originally argicultural, have been uninterruptedly masters of the world since the date of the Persian dominion and been the mightiest engine of civilization. In recent years, the researches of Chevalier Bunsen, of Professors Wilson and Max Muller and Mr. Wheeler seem to prove that much of the earlier history of two branches of this race are embodied in the Vendidad of the ancient Persians and present Parsees and in the Vedas of the Hindoos. According to Dr. Haug, the opening to the Vendidad or Code of the Fire-worshippers of Iran, dates from the most ancient times, and its contents are the reminiscences of the passage of the old Arians into India, on the south, and into Persia on the south west. Major Cunningham, also, in his learned work on the Bhilsa Topes (p. 15,) uses the term Arian in allusion to the race of Aryya, whose emigrations are recorded in the Zendavesta, who, starting from Ericene Vijo, gradually spread to the south-east, over Aryya vart'ha or Aryyadesa, the northern plains of India, and to the south-west, over Iran or Persia: he adds that the Medes are called Arioi by Herodotus. The original meaning of their name is said to have been equivalent to upper noble. It has also, however, been suggested that as the Arians were originally and essentially an agricultural and therefore a peasant race, they may have derived their name from their plough, and words relating to agriculture are found in several tongues. In Latin, it is aratrum, from aro, I plough. In Egyptian (in Nefruari) Ar is said to mean a plough. In Tamil it is Er ஏர், in Telugu, Araka అరక, in Sanscrit, along with Nangala or Nangara, it is also called Hala or Hara హరా and possibly the Arian race may have obtained their name from this implement of husbandry. According to Ch. Bunsen, the Arian emigration from Sogd to Bactria, took place prior to B. C. 5000, consequently before the time of Menes; their immigration into the Indus country, about B. C. 4000 and he thinks the opening to the Vendidad describes the succession of the foundation of the fourteen kingdoms, the last and most southern of which was the land of the five rivers (the Punjab). According to Chevalier Bunsen, in the same way that political tradition represents that of the Western aborigines (the Hamites and Shemites) so does the Arian one represent that of the Eastern tribe in the primeval land. The vast climatic change which took place in the northern countries is attributed in the Bible to the action of water. In the other, the sudden freezing up of rivers is the cause assigned. Both may have resulted from the same cause, the upheaving of the land by volcanic action, elevating portions and depressing into basins, such as the Caspian sea. Ten months of winter is now the climate of Western Thibet, Pamer and Belur, at the present day, and corresponds with that of the Altai country, and the district east of the Kuen Lung, the paradise of the Chinese. The country at the sources of the Oxus and Jaxartes, therefore, is supposed to be the most eastern and most northern point whence the Arians came. Wherever the Indians may have fixed the dwelling places of their northern ancestors, the Uttaru Kuru, we cannot he thinks, venture to place the primeval seats of the Arians anywhere but on the slopes of the Belur Tagh, in the highland of Pamer, between the 40th and 37th degrees of N. latitude, and 86° and 90° of longitude. On this western slope of the Belur Tag and the Mustagh (the Tian-Shang or Celestial Mountains of the Chinese) the Haro-berezaiti (Albordsh) is likewise to be looked for, which is invoked in the Zendavista, as the principal mountain and the primeval source of the waters. At the present day, the old indigenous inhabitants of that district, and generally those of Khasgar, Yarkand, Khoten, Turfan, and the adjacent highlands, are Tajiks who speak Persian, and who are all agriculturists. The Turkomans either came after them and settled at a later period, or else they are aborigines whom the Arians found there. On this point, Chevalier Bunsen likewise, remarks that the opening of that sacred code of the Vendidad, as certainly contains a historical tradition of the Arians, as does the 14th chapter of Genesis a historical account of the eldest recorded war between Mesopotamia and Canaan. The Fargard is divided into two great parts, one comprising the immigration from the eastern and north eastern primeval countries to Bactria, in consequence of a natural catastrophe and climatic changes, the other the subsequent extension of the Arian dominions through Eastern Central Asia, which terminated in the Punjab. The following passage contains a genuine description of the climate of the primeval land of the Arians, Iran Proper. There Ingromaniyus (Ahriman), the deadly, created a mighty serpent, and snow, the work of Deva—ten months of winter are there, two of summer. The following passage, which is omitted in the Huzuresh or Pehlevi translation—and which Lassen considers an interpolation, is irreconcileable with the above. The warm weather lasts seven months and winter five. The fathers of the Arians, therefore, originally inhabited Iran Proper, the land of Pleasantness and they left it only in consequence of a convulsion of nature, by which a great alteration in the climate was caused. When the climate was altered by some vast disturbance of nature, the Arians emigrated. They did not however follow the course of the Oxus, or they would have come in the first instance to Bactria, and not to Sogd. Their course, therefore was more northerly. Its present climate is precisely what the record describes it to have been when the changes produced by the above commotion took place. It has only two months of warm weather. In the course of the Arians after their expulsion from the primeval country, between Sogdiana and the Sutlej, they formed, by the conquest of fourteen countries, as many kingdoms, in the whole of the Eastern part of Central Asia and India Proper, in the country of the Indus and its confluents. In the intervening countries, they passed amongst the Turanians (Scythians and Turcomans) and there is evidence that the inhabitants whom they found in India, were likewise Turanians. The main direction of these travellers, was southerly, and on the southern bank of the *Caspian* is a group, the nucleus of the Arian *Media*. *Professor* Max-Muller gives, as follows, the successive Arian settlements :

Sogdiana in Samarcand, formed the first settlement of the Arians : Sughda, afterwards spelled Sugdia and commonly Sugdiana, is pre-eminently the country,—as being the home of the Fire-worshippers. It is in the 38th degree of latitude, where Mara Kanda (Samarcand) is situated, a paradisiacal land, fertilised by the river Sogd, so that Sogd and Paradise are used synonimously by the later writers. The Vendidad (ii. verse 5) says it was created as the second best of the regions and countries.

The second settlement was in Mouru, (Merv, Margiana.) This is Margiana (from the river Margus,) now Marghab (Margus-water,) Margush in the cuneiform inscriptions : a fruitful province of Khorassan surrounded by deserts. In the Record, (iii. verse 6) it is described as "the third best land, the mighty and pious Mouru, Marw,) . . . . Ahriman created there wars and marauding expeditions."

The third settlement was in Bokhdi (Bactria.) It (iv. v. 7,) is stated that the *fourth* best land was the fortunate Bokhdi, with the lofty banner : here Ahriman created buzzing insects and poisonous plants." Bokhdi is certainly Bactria (though Burnouf had doubts about it,) the land of the Bactrians. The "tall plumes" indicate the imperial banner (mentioned also by Firdousi,) and refer, consequently, to the time when Bactria was the seat of empire. Up to this time nothing is said about Media, though she conquered Babylon B. C. 1234.

"*Their fourth settlement was in Nisaya* (Northern Parthia.) It (v. verse 8, says "the *fifth* best land is Nisaya ; there Ahriman created unbelief." This is the Nisaia of Ptolemy, famous for its breed of horses, commonly called Nisa, the renowned district of Northern Parthia, bordering on Hyrkania and Margiana. 'The city of Nisæ is situated on the Upper Oxus. The term "unbelief" in the record, signifies the apostacy from pure fire worship. Here, therefore, the first schism takes place.

"*The fifth settlement in Haroyu* (Aria.) Haroyu is Herat, of which frequent mention is made subsequently, and the Hariva of the cuneiform inscriptions. Its name has no connexion with the Arians, but comes from the river now called "Heri," abounding in water. The Greek district Aria comprises the larger portion of Segestan, and forms part of Southern Khorassan. In the Record (vi. verse 9,) it is mentioned that the fifth best land was Haroyu, the pourer out of water, here Ahriman created hail and poverty."

"*The sixth settlement in Vekereta* (Segestan.) This country is the home of Rustum. Dushak is the capital of Segestan. To the south east *of it is the land of the Parikani known to* the ancients as a part of the Saken country (Sakastene.) The greater part of it is now a desert, but it was once cultivated. Here again in the words of the Record, there may be allusion to a schism, which, in that case, would be the *second historical* one. The Record runs (vii, verse 10.) "Vekereta, in which Duzhaka is situate ; there Ahriman created the Pairi-ka Khnathaiti." (*Herod*, *iii*. 94 *Comp Ritter*, *viii*. 59.) Recent travellers have also found nomadic tribes between Media and Gedrosia, who worshipped the Peri (Fairies,) but were fire-worshippers also.

"*The seventh settlement in Urva* (Cabul.) The Record alludes to (in viii. verse 11.) Urva, proved by Haug to be Cabul, the identity of which was previously unknown.

"*The eighth settlement in Khnenta* (Candahar) (ix. verse 12.) "Khnenta, where Vehrkana is situated." According to Haug, by this country, Candahar is to be understood: Vehrkana cannot be Hyrcania, as is generally supposed, but is the city now called Urghandab, situated in Candahar. The curse of Ahriman was pœderastism, a vice known historically to be un-Arian and Turanian.

"*The ninth settlement in Haraquaita* (Arachosia,) (x. verse 13. (Haraquaita, denominated the fortunate; the Harauwatis of the cuneiform inscriptions; the Arachosia of the classics. The work of Ahriman here was the burying of the dead. Another apostacy therefore from the true faith.

"*The tenth settlement in Hetumat* (district of Helmund,) (xi. verse 14.) "Hetumat, the wealthy, the splendid," is the valley of the present Helmund, the Etymander of the classics. The mischief inflicted here by Ahriman was the sin of sorcery.

"*The eleventh settlement in Ragha* (Northern Media.) (xii. verse 16) "Ragha with the three races is doubtless the *Rhagæ* of Strabo and Ptolemy, the greatest city in Media," south of Teheran. This north-eastern portion of Media includes the passes of the Caspian. The possession of these passes was a protection to the other Arians, and at the same time the key to the whole of Media, and therefore Persia. The district is called also Choana (Qwan.) Ahriman established here unbelief in the spiritual supremacy of Zarathustra—another schism. At all events another portion of ancient Arian history.

"*The twelfth settlement in Kakhra* (Khorassan.) (xiii. verse 17.) Kakhra is held by Spiegel and Lassen to be the district of Kihrem mentioned in Firdousi. Haug identifies it with the cities of Karkh in Khorassan. The evils done by Ahriman here was the burning of the dead. This was therefore an illegal practice, like the sin of the Arachosians, who were so profane as to bury their dead. All this implies the organization of a hierarchical power in Sogd and Bactria, although not a sacerdotal caste.

"*The thirteenth settlement in Varena* (Ghilan.) (xiv. verse 18.) "Varena with the four corners," Haug has shown to be Ghilan. The curse of Ahriman was irregular menstruation.

"*The fourteenth settlement was in Haptu Hindu* (Punjab). (vi. verse 19.) The Land of the Seven Hindus, that is, the country between the Indus and Sutlej. In the Vedas the country of the Five Rivers is also called the Land of the Seven rivers. The traditional Greek names also are seven. The Indus and the Sutlej are each formed by the junction of two arms, which, in their earlier course were independent. According to this view it stands thus:

1. Kophen (Kubhá)	I. Indus.
2. Indus, Upper	
3. Hydaspes (Bidaspes)	II. Hydaspes.
4. Akesines (Asikni)	III. Akesines.
5. Hyarotis (Hydraotis, Iravati-Parusni	IV. Hydraotes.
6. Hyphasis (Vipasa)	V. Hyphasis.
7. Saranges (Upper Satadru, Sutlej, Ghara)	

"But it is not, he says, only unnecessary to suppose, as Ritter does, that the country extended as far as the Sarasvati, but such a supposition would be at variance with history. It is now ascertained from the Vedas that the Arians passed the Sutlej, at a very late period, and settled in what is now India. It was not till their fourteenth settlement after the emigration from the primitive country in the north, that they passed the Hindu-Kush and the Indus. The previous resting places form an unbroken chain of the primitive abodes of the Arians (the Free or the Land owners). The last link in those earlier settlements is the land of the Afghans, on the western slope of the Hindu-Kush. Lower down to the westward there is but one settlement necessary to secure their previous possessions, namely, the two districts of Ghilan and Masandaran, with the passes of the Caspian. This settlement more to the north-west (Ghilan and Masandaran) forms therefore also a connected group. Putting these two groups together, we shall find that there is no one single fertile district in the whole of Eastern Central Asia of which the Arian races did not possess themselves except Southern Media and all Farsistan of Persia. Now as history exhibits the Arian race spread throughout the whole of Media, but as dominant only in Persia, it follows that Ghilan and Masandaran formed the nucleus of these ancient possessions which afterwards became so important and celebrated. There cannot therefore be a more unfortunate the— than the one which makes Persia the original seat of Zoroaster and his doctrine. History as well as personal observations at the present time, supply unequivocal evidence of the Iranian having been the popular language in all these districts. The names in the Vendidad moreover, when compared with Sanskrit, turn out to be regular ancient formations, although like the old Bactrian formations, as preserved in India, they have been gradually weakened down. We know, lastly, from the inscriptions of the Achæmenidæ, several of them, which have become historical and geographical designations at a later period. It is impossible under these circumstances, to consider the Vendidad as a modern fiction, or as a fragment of some geographical compendium. The fact of their having suddenly retraced their steps from the south-west, and formed a connected north-eastern group about the Caspian Sea, would be inexplicable, supposing it to be a fiction. (*Bunsen's Egypt's Place in Universal History* : *from p.* 462 to 467)

In India the term Aria, as a national name, fell into oblivion in later times, and was preserved only in the term Aryavarta, the abode of the Aryans. But it was more faithfully preserved by the Zoroastrians who migrated from India to the north-west, and whose religion has been preserved to us in the Zendavesta, though in fragments only. Now Airya in zend means venerable, and is at the same time the name of the people. In the first chapter of the Vendidad, where Ahuramazda explains to Zarathustra the order in which he created the earth, sixteen countries are mentioned, each when created by Ahuramazda, being pure and perfect ; but each being tainted in turn by Angro-mainyus or Ahri-man. Now the first of these countries is called *Airyanem vaejo,—Arianum semen,* the Aryan seed, and its position must have been as far east as the western slopes of the Belur Tag and Mustag, near the sources of the Oxus and Yaxartes the highest elevation of Central Asia. From this country, which is called their seed, the Arians advanced towards the south and west, and in the Zendavesta the whole extent of country occupied by the Aryans is likewise called Airya. A line drawn from India along the Paropamisus and Caucasus Indicus in the east, following in the north the direction between the Oxus and Yaxartes, then running along the Caspian Sea, so as to include Hyrcania and Ragha, then turning south-east on borders of Nisaea, Aria (i e. Haria), and the countries washed by the Etymandrus and Arachotus, would indicate the general horizon of the Zoroastrian world. It would be what is called in the fourth cardé of the yasht of Mithra, " the whole space of Aria," *vispem airyôsayanem* (totum Ariæ situm.) Opposed to the Arian we find in the zendavesta the non-Arian countries (anairyao dain-havo,) and traces of this name are found in the Αναριαχαι a people and town on the frontiers of Hyrcania. Greek geographers use the name of Ariana in a wider sense even than the zendavesta. All the country between the Indian Ocean in the south and the Indus in the east, the Hindu-kush and Paropamisus in the north, the Caspian gates, Karamania, and the mouth of the Persian gulf in the west, is included by Strabo (XV. 2) under the name of Ariane, and Bactria is thus called by him " the ornament of the whole of Ariana." As the Zoroastrian religion spread westward, Persia, Elymais, and Media all claimed for themselves the Arian title. Hellanicus, who wrote before Herodotus, knows of Aria as a name of Persia. Herodotus (VII. 62) attests that the Medians called themselves Arii ; and even for Atropatene, the northernmost part of Media, the name of Ariania (not Aria) has been preserved by Stephanus Byzantinus. Manu speaking of the Palava tribe of Kshatrya, who had neglected to reverence brahmans, styles them Dasya, whether they speak the language of the Mlech-cha or that of the Arya, and the people to whom he there alludes seem to have been Medes occupying the valley of the Indus. As to Elymais its name had been derived from *Ailama,* a supposed corruption of *Airyama.* The Persians, Medians, Bactrians, and Sogdians all spoke, as late as the time of Strabo. nearly the same language, and we may well understand, therefore, that they should have claimed for themselves one common name, in opposition to the hostile tribes of Turan. (*Muller's. Lectures, p. from* 226 *to* 228.) And when, after years of foreign invasion and occupation, Persia rose again under the sceptre of the Sassanians to be a national kingdom, we find the new national kings, the worshippers of Masdanès, calling themselves, in the inscriptions deciphered by De Sacy, " Kings of the Aryan and un-Aryan races," in Pehlevi, *Iran va Aniran* : in Greek, Αριανων Και Αναριανων—.(*Muller's Lectures, p.* 229.)

West of Armenia, on the borders of the Caspian Sea, we find the ancient name of *Albania.* The Armenians call the Albanians *Aghovan*, and as *gh* in Armenian stands for r, or or l, it has been conjectured by Bori, that in *Aghovan* also the name of Aria is contained. This seems doubtful. But in the valleys of the Caucasus we meet with an Arian race speaking an Aryan language, the *Os* of *Ossethi*, and they call themselves *Iron.* (*Muller's Lectures, p.* 230.) Briefly, to recapituate, the Arians according to *Bunsen* (iv. 487) emigrated out of the country of the sources of the Oxus *Gihon*) and Jaxartes, B. C. 11,000 to 10,000, (and (iv, 491,) about B. C. 7,250 to 5,000, the Arians separated into Kelts, Armenians, Irenians, Greeks, Slaves and Germans. According to Bunsen (iii. 584) the separation of the Arians was prior to their leaving Sogd. The emigration from Sogd to Bactria, after the separation, took place B. C. 5,000, consequently before the time of Menes. The immigration into the Indus country about B. C. 4,000 and Zoroasters reform in Bactria about the time of Menes or half a century later. Bunsen (iii, 584) and he is of opinion that B. C. 5,000 to 4,000 the Arians formed their kingdoms in Central Asia, as far as Northern

Media, Cabul and Candahar. B. C. 4,000 they migrated into the Indus country.

Of their history while residing in the Punjab, we must search the Vedas which furnish much information regarding the origin and early state of the races who are now called Hindus. The people among whom the Vedas were composed, had evidently passed the nomade stage. They had no money, and their wealth consisted of cattle, horses, sheep, goats and buffaloes, and the cow was the medium of barter. By the Rig-Veda (vol. 1, p. 165 : vol. 2, pp. 127 and 225 ; and vol, 3, pp. 163, 276, 416 and 453,) it is evident that the cow was then not reverenced and that the race who composed these hymns, were a cow-killing and beef eating, spirit-drinking people. Cow-stealing was a great crime. We find mention in their hymns of cities of commerce, merchants, sailors, of weapons of wood and iron, of chariots, of heralds, travellers and inns for their accommodation, and even of the vices of a primitive civilization. They had roads and ferries; bullock carts and waggons ; they had carriages and war chariots drawn by horses, and the carriage was made of wood with brass wheels and iron rims and pillars. It had seats and awnings, was easy going and sometimes inlaid with gold. (Professor Muller, Vol. 1, pages 94 and 175 : Vol. 2, pp. 37 and 256.) Iron and steel were in use, for there is mention of iron armour, of arrows tipped with steel, and Porus gave thirty pounds of steel to Alexander. They had a knowledge of the sea ; had halls of justice and halls and chambers of sacrifice, but apparently no temples or images. Women held a high social position. The Rishi and his wife, converse on equal terms, go together to the sacrifice, and practice austerities together. Lovely maidens go in a procession, and grown up daughters remain without reproach in their father's house. But we read of drunkenness, polygamy, (Vol. 2, p, 12) cheating, gambling, abandoning of children, thieves, courtezans and eunuchs. Kakshivat, an illustrious Rishi marries ten sisters at once (Vol. 2, p, 17), and polyandry seems to have prevailed for in an allegory, Kakshivat says, " Aswins, your admirable (horses) bore the car, which you had harnessed, (first) to the goal, for the sake of honour, and the damsel, who was the prize, came through affection to you and acknowledged your (husbandship) saying, you are my lords (Vol. 1, p. 322).—*Calcutta Review*, 1859.

Mr. Wheeler says that the worship of the Aryans, in the times of their approaching the Punjab, seems to have been simple, patriarchal, and conducted by the father of the family : to have been a worship of fire, and subsequently they personified the earth, sky, food, wine, months, seasons, day, night, and dawn.—*Hist. of India.*

Amongst the Arian hindus, the sacrifice of a horse, the Aswamed'ha, seems to have been practised in their religious rites. There are two hymns in the Rig Veda, describing the rite, and which leave no doubt, that in the early religion of the race, this sacrifice, as a burnt offering to the gods, was had recourse to. It was even then, however, falling into disuse, and was existing as a relic of an antevedic period, imported from some foreign region, possibly from Scythia, where animal victims, and especially horses, were commonly sacrificed. And in still later times, the Aswamed'ha consisted in certain ceremonies ending in the liberation of the horse, as throughout Southern India is still practised with a bull or cow, many of which are met with in every village, freed or let loose in the name of Siva or Vishnu.

At present, in India, the native Arian races hold to the three great religions, buddhism, bramanism, and zoroastrianism, and the followers of the Jain belief are all of this race, many of whom also, in Cashmere, Affghanistan and Rajputana have become mahomedans. Amongst the Arian races who went to the north-west, there are no grounds for the belief that the Saxons continued to offer human sacrifices after their settlement in Great Britain, but in their own land the immolation of captives in honour of their gods was by no means uncommon. The great temple at Upsal, in Sweden, appears to have been especially dedicated to Odin, Thor and Frea. Its periodical festivals were accompanied by different degrees of conviviality and licence, in which human sacrifices were rarely wanting, varied in their number and value by the supposed exigency. In some cases even royal blood was selected that the imagined anger of the gods might be appeased. In *Scandinavia*, the anthority of the priest was much greater than it would appear to have been among the *Anglo-Saxons.* It was his word often, which determined where the needed victims should be found, It was his hand that inflicted the wound, and his voice which said, " I send thee to Odin," declaring the object of the sacrifice to be that the gods might be propitiated, that there might be a fruitful season or a successful war. The tendency of the Arian race is to form national and political communities, marry one wife; and worship one supreme and spiritual deity. The Turanian tendency is to have little natural or political cohesion—marry one or more wives, without much sentiment, to worship gods and heroes without much idea of a spiritual existence, beyond that implied in the notion of ghosts and devils.—*Wheeler's Hist. of India*, *p* 7. *Bunsen's Egypt, Vol. iii. pp.* 499 *to* 601 *and Vol. iv. pp.* 40 *to* 561. *Prof. Max Muller's Lectures, pp* 69 108 ; 201. *Calcutta Review* 1859, *Edinburgh Review,* See Arin, Andhra, Aborigines, Greeks of Asia :

ARIANA, (Iran) the general name for the country east of Persia and Media, as far as the Indus. See Aria. Greeks of Asia. Iran :—Kabul, p. 433, 437.

ARIAN ABAKHAFASA, supposed to be an Arian territory near Kabul and the Paropamisus. See *Kabul, p.* 439.

ARIAN COOPANG, a town in the south of peninsular India, in long. 79° 54′ E. and lat. 11° 56′ N.

ARIAN HINDUS, See Hindoo. India, p. 312. Sacrifice. Iran.

ARIAN LANGUAGES, See Aria. India, p. 311.

ARIAN MIGRATION, See India, p. 309.

ARIAN PALI, the Arian language in a transitive state from the old Arian tongue.

ARIA PALUS, of the ancients, is a lake formed by the accumulation of the waters of the Helmund at the southern extremity of its course and called the lake of Zarrah by Europeans. This is a contraction of Zarrenj, the ancient capital, and this again represents the Zarangi or Drangi of the Greeks. In old Persian books it is called "Daria-Reza or little Sea," the present inhabitants of Seistan call it Meshila-i-Rustum, also Meshila-i-Seistan. Meshila merely means, in Arabic, a muddy swamp. The ordinary name of the lake is Hamûn or the expanse.—*Ed. Ferrier's Journ.* See Helmund, p. 428-9.

ARIARATHES OF CAPPIDOCIA, is supposed to have killed Arsaces I, B. C. 254-250, the first of the Arsacidan kings.

ARIARIUS, a satrap of Phrygia, whose son Erythras was banished by Darius to Kishm Island. Nearchus was told that Erythras gave his name to the adjoining sea.

ARIA VARTA, the land of the Arians in India. See Hindoo. India, pp. 308-9.

ARIA VELA. Maleal. അരിയവിള Cleome viscosa : also Polanesia felina, D. C.

ARIDÆUS, brother of Alexander the Great. He did not succeed to Alexander's kingdom.

ARIDURUM, YELLIKOOD-PASHA-NUM. Tam. Arsenic.

ARIETI PANDOO. Tel. Vella Käi. Tam. Plantains.

ARIK-I-GOWGIRD. عرق گوگرد Pers. Sulphuric Acid. See Ark.

ARIKE or ARIKELU. అరికె-అరికెలు. Paspalum scrobiculatum, *L.*

ARIKELU. అరికెలు. Tel. Paspalum frumentaceum.

ARIKOTA, అరికోట. Tel. Poivrea Roxburghii, *D. C.*—Combretum decandrum, *R.* ii. 232.

ARIMEDAMU—S. అరిమెదము. Vachellia farnesiana, *W.* 66.

ARIES. The Tauric and Hydra foes, with which Jason had to contend before he obtained the fleece of *Aries*, are the symbols of the sun-god, both of the Ganges and the Nile; this fable has occupied almost every pen of antiquity, but is clearly astronomical, as the names alone of the *Argha-Nat'h*, sons of *Apollo, Mars, Mercury, Sol, Arcus* or *Argus, Jupiter, Bacchus, &c.* sufficiently testify, whose voyage is entirely celestial. *Tod's Rajasthan, Vol.* I. p 601.

ARIGÆUM, a town near the territory of the Siah Posh Kaffirs, at which the Greeks in their advance on India established a military colony. See Kaffir.

ARIL, or AHRE NUDDY, runs near Sikri in Budaon.

ARIL RAMGANGA, a small river near Bareilly.

ARIM, a town in India in long. 82° 31′ E. and Lat. 20° 39′ N.

ARIMATHEA : between Ramleh and the hill-country, a distance of about eight miles, is the rolling plain of Arimathea. This and the greater part of the plain of Sharon, is one of the richest districts in the world. The soil is a dark brown loam, and, without manure, produces annually superb crops of wheat and barley —*Taylor's Saracen, p.* 52.

ARINEE, a river near Jeypore.

ARINGHE. It. Herrings.

ARIPO, a town in Ceylon in long. 80° 8′ E. and lat. 8° 30′ N. Pearl oysters are fished up on the banks near it. See Pearls.

ARISHTA NEMI was the near kinsman of Krishna, they being the sons of Basdeo and Samudra, the eldest and youngest of ten brothers, of the Yadu race. These were of Indu or Chandu, origin, and supposed to have been buddhist polyandrists.

ARISHTA PHENILA. Sans. Sapindus emarginatus. Soap nuts.

ARISHTA ? Beng ? Azadirachta Indica.

ARISI. Tam. அரிசி husked grain of Oryza sativa.—*Linn. Rice.*

ARISÆMA, a genus of the Araceæ or Arum tribe of plants, A. gracile is mentioned by Dr. Honigberger (p. 234) as occurring abundantly in the Himalayas, on the south side of the Pir Panjal from the top to the bottom. Its juice very acrid, the roots are considered by the Hakeems to be an excellent remedy against every description of animal poison. A. Dracontium and A.

triphyllum are introduced plants.—*Honig. p.* 234. *Voigt, p.* 688.

ARISTIDA SETACEA. *Linn.* Broom grass.

ARISTOLOCHIA, a genus of the birthwort tribe, of which Roxburgh mentions four species, but Voigt names eleven as growing in India. A. acuminata growing in many places is cultivated as a flowering plant, for its large, dark greenish purple flowers. A. Anguicida : odoratissima : labiosa; cymbifera, clematitis : fœtens : and braziliensis are introduced plants.

Aristolochia Longa and A. Rotunda natives of the south of Europe, and Kashmir are found in the medicine bazars of India, under the names of *Zurawund tuweel* (Pers. *duruz*, long) and *Zurawund mooderuj* (Pers. *gird*, round,) with *Aristolochia* as the Greek name. The roots of A. Longa are given by the Hakeems, in diseases of the womb, ulcers and affections of the gums : the latter in itch, leprosy, for drying up sores, destroying lice and intestinal worms; also for promoting the renal and menstrual secretions. —A. Longa, Zurawand-tuweel, Ar. Pers. occurs in whitish, twisted pieces, the size of a finger, and nearly tasteless.—*O'Shaughnessy, p.* 568.

ARISTOLOCHIA SACCATA. In Sikkim, in the valley of the Teesta, are many fine plants, but Dr. Hooker especially noticed the Aristolochia saccata, which climbs the loftiest trees, bearing its curious pitcher-shaped flowers near the ground only : its leaves are said to be good food for cattle.—*Hooker, Vol.* II. *p.* 7.

ARISTOLOCHIA BRACTEATA. *Retz. Roxb. iii.* 490.

A perennial twining plant, growing every where in the copses and jungles of India and Ceylon, flowering in the wet season, the root is like that of sarsaparilla, perennial. The root is nauseously bitter, and is given as an emenagogue, and in paroxysms of gout. It is also considered by the native practitioners to be a valuable remedy in the diarrhœa of children proceeding from dentition. The dose given in India, to an adult, of the decoction of the root, is an ounce to an ounce and a half twice daily. Also in native medical practice employed in lues, as an emenagogue, also to procure abortion and as an antidote to snake bites.—*Roxb. iii.* 490-1. *Voigt,* 313. *Cal. Cat. Ex.* 1862. *O'Shaughnessy, p.* 568.

ARIUS, a genus of fishes, of the Ganges, and of the Malay and Javanese seas, from which isinglass is obtained.

ARIUS ARIUS. *Buch. Ham.*

Pimelodus arius, B. H.
Ikan Saladu, MALAY.
„ Surdudu. „

This fish inhabits the Gangetic estuaries ; near Pondicherry, and the estuaries near Penang, the Malay Peninsula and Singapore. It is 1ft. 10 in. long ; forms an article of food, and more than any other of the Siluridæ contributes to the isinglass of commerce.—*Cantor.*

ARIUS MILITARIS. *Linn.*

Silurus militaris, *Linn.*
Osteo-geneious, *Bleeker.*

This is a foot and a half long, inhabits the Coromandel and Malabar coasts, the Ganges, Irawadi, and the seas and estuaries of the Malay Peninsula. Its air-vessel is preserved as isinglass.—*Cantor.*

ARIUS TRUNCATUS, Cuv. and Val. This is under a foot in length. It occurs in the seas of

Penang and the Malay Peninsula, but is so rare that it furnishes little of the isinglass of Commerce.—*Cantor.*

ARIVITA, Tel. అరివిట Eugenia bracteata, *R.*

ARIYAPORIYAN. Mal. Antidesma bunias.

ARJA. Hind A class of women mendicants in Central India respected for their knowledge, not their conduct. Women, who have adopted the vagrant life which this class pursue are never allowed any intimate intercourse with families.—*Malcolm's Central India, Vol. ii. p.* 193.

ARJAKAM. అర్జకం Ocimum viscosum.—*R. iii.* 3.

ARJAN, Pers. آرجن also Arzhan and Arzhanah: according to Ouselev, this tree is a species of the *Badam-i Kohi* the mountain almond, or *Badam-i-Talkh,* the bitter almond. Its fruit is used medicinally, the wood for walking-sticks or bludgeons; and the bark or skin is twisted or wrapped about bows.—*Ouseley's Travels, Vol. I, p.* 306.

ARJANNA. H. A tribe of kunbees or cultivators in W. India.—*Wilson.*

ARJUK. Ben. Ocimum sanctum.

ARJUN. Ben. Pentaptera arjuna. P. terminalia. P. alata. T. glabra.—*Roxb.*

ARJUN MAL, the fifth Guru of the Sikhs, born A. D. 1553, died 1606. In 1581, he compiled the Adi-Granth, the first sacred book of the Sikhs.

ARJUNA, a hero of Central India. He was the son of Pandu who was the son of Vichitra-Viria, the second son of Santana. From him descended this hero Arjuna as did his brave rival Duryo-dhana, from his elder brother Dhrita-rashtra. Arjuna means white in distinction to Krishna, black. Arjuna was the friend and favorite of Krishna. Arjuna's mother was Konti, one of Pandu's wives, and there were five sons born to Pandu, of his two wives, of whom Arjuna was the most distinguished. The descendants of Krishna and Arjuna carried down the Lunar line of Indian chieftains, as the Cushites and Lavites, from Cush and Lava, sons of Rama, carried down that of the Sun. He was expert in arms, and excelled in archery. He appeared at the exhibition of arms held at Hastinapur and subsequently, disguised as a brahman, at the Swayamvara of Draupadi where he gained the day, and won Draupadi, who then became the joint wife of himself and four brothers. Arjuna is currently said to have been married to Subhadra, sister of Krishna, but the story is not authentic. He fought bravely at Kurukshetra, and killed Bhishma, Jayadratha and Karna. Much of his latter history is mythical, but he and his four brothers seem to have died on the Himalayas, and his grandson Parikshit succeeded to the kingdom of Hastinapur. Arjuna on one occasion followed the horse let loose on the Aswamedha ceremony, into the country of the Amazons, and was there defeated by their queen Paramita.—*Bunsen, p.* 553. *Wheeler's History of India, Vol. i* See Indbra. Inscriptions, pp. 376, 389 and 391. Kasambi. Krishna, pp. 545. Mahabarata: Malwa; Pandu: Polyandry: Rama: Sikhs.

ARK. See Cocoa-nut Palm.

ARK Sans. ARKA, also AKUND. Sans. Calotropis gigantea.

ARK. Arab. Hind. Pers. A citadel, or smaller inner castle constructed within a larger fortress. It is an Arabic term and sometimes pronounced Arak, but more generally Ark. It literally signifies the citadel, and is never used to describe any other fortification. But, as princes in the East generally lived in the Ark the word from thence often came to be applied to a palace, as the Latin *arx,* comprising the palace, (*Dewan-Khanah*): and, that the ancient kings placed their habitation in the *arx* or citadel for safety, we learn from Servius (in Virg. Æn. IV. 410.) "Regium enim fuit habitare in arcibus propter tutelam."—*Malcolm's History of Persia. Ouseley's Travels, Vol. II p.* 18. *Fraser's Journey into Khorasan, p.* 85

ARKA. A town in Kanarah, where brahmans say Sri Yeo the holy spirit is worshipped

ARKA BANDHU, a name of Buddha meaning the kinsman of the sun.

ARKEA and Baitum, rivers in Gwalior territory. The Arkea runs near Neemuch.

ARKO or URKOW. Beng. Curled flowered Calotropis, Calotropis gigantea.

ARKOLA. Kashm. A poisonous tree of Kashmir which, when green, blisters the hand that touches it.

ARLAL-SAMUDER, a town in India, in Long. 77° 22′ E. and Lat. 12° 36′ N.

ARMAK. Hind. Pandanus odoratissimus.

ARMEGON, or Durguraz-patnam, on the Coromandel coast, was an early settlement of the English from which they removed to the present site of the chief city, Madras, in about 1728. It is in Lat. 14° 1′, N. Long. 80° 10′ E. It has a shoal off it, of the same name, within which is a safe roadstead called Blackwood's harbour.—*Horsburgh.*

ARMENIA. The upper Euphrates is nearly in the centre of that great range of territory called by the ancients Armenia, which extended eastward from that river to the Caspian Sea, and again westward over a part of Asia Minor. The former portion was almost universally known by the name of the Greater, and the latter by that of the Less Armenia; but both were sometimes subdivided into First, Second, and Third Armenia: a fourth division was added by Moses Choronensis and others. This last division, being on the eastern side of the Euphrates, constitutes in reality part of Armenia Major; while Armenia Minor is confined to the country westward of the Euphrates and is composed only of the three sub-divisions above alluded to. Armenia Major in the time of its greatest prosperity, extended from 36° 50′ to 48° N. Lat.; and eastward, in one direction, from 38° to about 48° 40′ E. Long. with a surface of nearly 84,756 square miles of diversified country. Strabo makes it 200 schoens long by 100 wide, which would give a much greater superficies. (*Lib. xi. p.* 530.) The general limits of this territory will probably be best understood by considering the Euphrates to be its western boundary from Sumeisat until a few miles south of Erzingan, where the boundary quits the river, and preserves the direction of Tarabuzún, till it meets the mountains southward of Gumish Khanah.—(*Col. Chesney's Euphrates Expedition, p.* 94.) The populations to whom the term Armenian is now applied, call themselves Haik. Their chief occupancies are the Turkish province of Erzerum, and the Russian district of Erivan, and in Erivan the patriarch resides. They are now under the sway of Russia, Persia and Turkey, but they are found in all eastern countries; 37,676 are in European Russia alone, and one important settlement of them is in Venice, that of the Mechitarist monks, on the island of St. Lazarus. In figure, the Armenians have been likened to the Jew, the Turk and the Afghan. They evince great commercial aptitude, and are bankers and merchants. In Armenia, however, they cultivate the soil. Before their conversion they were fire worshippers. Many of them now are Nestorians, some are Romanists. The language of the present day has affinities with the Iron, and Persian, Arabic, Syrian and Turk. General tradition and the formation of language point alike to the mountains of Armenia as the birth-place of the Arab and Canaanitish races, and there is especial native evidence to the same effect as regards Edom, consequently, also, the Phœnicians.—*Latham's Descriptive Ethnology. Col. Chesney's Euphrates Exped. p.* 94. *Bunsen's Egypt, iii.* 431. See India, *p. p.* 309, 314 and 327. Koh. Sassanian kings. Tigris. Afghanistan, p. 312. Jews. Kirman. Sanskrit. Iran.

A native of Kaghan, China and the West of Asia, but grown in gardens of India. It is found also in the Sutlej valley between Rampur and Sungnam, at an elevation of 7,000 to 13,000, but does not ripen above Shalker (*J. D. Cunningham*). It is, there, a common article of food, and source of wealth. The plantain is last seen below Kotgurh, and the mango near Rampur. The apricot is a staple produce in Kullu, and common article of food, they are small and firm-fleshed, so that they dry well. According to *Dr. O'Shaughnessy*, this is common about villages in the Himalayas, and oil of the finest kind is made by expression from the kernels, which are sold separately in the bazars under the name of Badam kohi, or hill almonds. The oil is clear, of a pale yellow colour, and smells strongly of hydrocyanic acid, of which it contains usually about 4 per cent.—*O'Shaughnessy, pages* 222-23. *Roxb. ii.* 501. *Voigt,* 200. *Veg. King.* 299. *Cleghorn, Punj. Rep. p.* 65, 80.

ARMENO-CHALYBES, of Pliny, occupied the Cushdim territory of the Chaldees. See Chaldea.

ARMLETS, are worn by hindus and mahomedans, by men and women; of gold or silver, ivory, deer-horn and brass, some in the form of massive carved rings, some as lockets; the more expensive, worn by royalty are the bazu-band, literally arm-binder. They have been worn as ornaments, since the most ancient times, like earrings, (*Gen.* XXXV, 4: *Ex.* XXXII, 3, 4; *Hosea* XI. 13: *Judges, viii,* 24) the ενωτια in aures often of gold, like those of the Ishmaelites. But they are often caskets containing, as with the mahomedans, charms, their taviz or like the jangam sect of hindus, the phallic lingam. These charms are often worn round the neck like the golden bulla and leather torum of the Roman youth or as in Prov. vi, 21, and most women have frontlet ornaments such as are alluded to in Deut. vi. 8. See Talsam. Taviz. Phyllactery.

ARMORE, a town in India, in Long. 72° 52′ E. and Lat. 21° 21′ N.

ARMORIAL BEARINGS belong to the east and were little known till the period of the Crusades. The twelve tribes of Israel were distinguished by the animals on their banners, and the sacred writings frequently allude to the "Lion of Judah." The peacock was a favourite armorial emblem of the Rajpoot warrior; it is the bird sacred to their Mars (Kumara), as it was to Juno, his mother, in the west. The feather of the peacock is used to decorate the turban of the Rajpoot and the warrior of the Crusade, adopted it from the hindu through the Saracens. "Le paon a toujours ete l' embleme de la noblesse. Plusieurs chevaliers ornaient leurs casques des plumes de cet oiseau; un grand nombre de familles nobles le portaient dans leur blazon ou sur leur cimier; quelquesuns n'en portaient que la queue.—*See Art. Armoirie, Dict. de l' ancien Regime. Tod's Rajasthan, Vol. I. p.* 137.

ARMOSIA DASYCARPA.

Thitwajee.....BURM.

This tree is found here and there widely scattered in the Swar and other forests north of Toungboo. The wood is red, and equivalent to mahogany.—*McClelland.*

ARMOUR. In South-eastern Asia samples of the armour and arms which have been in use, in all ages and in all countries, can every day be seen, and at the exhibition of 1851, there was a display of many actually worn in India at the present day; such as chain and scale armour, both for man and horse, helmets and shields, spears, battle-axes, bows and arrows, with daggers in every variety. There was a sword formed of two blades, and another in which pearls were let into the centre of its blade. Among the daggers was one with daggers, one within another all of hard steel, with the line of junction so beautifully welded as to be hardly perceptible even with a magnifier, also a dagger, most nicely brought into juxa-position, but which on striking separated into five blades. The twisting of gun-barrels and the damasks of their blades of steel have been imitated in India and beautiful specimens were sent, chiefly by the native princes of the north-west of India, from Putteala to Sind, as well as from the central government of Hyderabad. Near Hyderabad in the Dekkan, valuable sword blades are made at Kona Samudram: and at the Langar festival of the Nabob, on which occasion all the troops file past, men with bows and arrows in quivers, with javelins, lances, pistols, muskets, ancient forms of weapons and new, may all be seen, with quilted doublets, chain and steel armour on them, with steel and chain armour and gold and silver trappings on horse and camel and elephant. No Indian prince or chief is without his *silleh khanah* or *armoury*, and a Rajput prince can pass hours in viewing and arranging his arms. Every favorite weapon, whether sword, matchlock, spear, dagger, or bow, has a distinctive epithet. The *sirohi*, or slightly-curved blade, is formed like that of the Damascus, and throughout Rajpootana, is the greatest favorite of all the variety of sabres. The long cut-and-thrust, like the *Andrea Ferrara*, is not uncommon; nor the *Khanda*, or double edged sword. The matchlocks both of Lahore and Rajputanah are often highly polished and inlaid with mother-of-pearl and gold: those of Boondi are the best. For the shield, the rhinoceros hide offers the best resistance, and is often ornamented with animals, beautifully painted, and enamelled in gold and silver. The bow is of buffalo-horn, and the arrows of reed, and barbed in a variety of fashions, as the crescent, the trident, the snake's tongue, and other fanciful forms. The custom of engraving incantations or verses of the koran on weapon is Eastern, thence adopted by the mahomedan, as well as the use of phylacteries. The name of the goddess guarding the Rajput tribe is often inscribed, and an entire copy of the *Bhagvat Gita* has been taken from the turban of a Rajpoot killed in action: in like manner the mahomedans place therein the *koran*. The devotions of the Rajpoot are still paid to his arms, as to his horse. He swears 'by the steel,' and prostrates himself before his defensive buckler, his lance, his sword, or his dagger. The worship of the sword (asi) prevailed amongst the Scythic Getæ, and is described exactly by Herodotus. To Dacia and Thrace it was carried by Getic colonies from the Jaxartes, and fostered by these lovers of liberty when their hordes overran Europe The worship of the sword in the Acropolis of Athens by the Getic Atila, with all the accompaniments of pomp and place, forms an admirable episode in the history of the decline and fall of Rome; and had Gibbon witnessed the worship of the double-edged sword (khanda) by the price of Mewar and all his chivalry, he might have further embellished his animated account of the adoration of the scymitar, the symbol of Mars.—*Tod's Rajasthan, Vol. i. p.* 616, *ii.* 638. *Royle. Arts of India*, 469. *Exh. of* 1851.

ARMY. The Army of India, up till the year 1858, when the queen of Great Britain assumed, from the East India Company, direct control of that country, was composed of European Cavalry principally from the Army of Britain; Native Cavalry recruited amongst the people of India, and officered and drilled like European Regiments by natives of Great Britain, but with fewer officers; and of other Regiments of native Cavalry, also raised amongst the natives of India, but with still fewer European officers, generally only a Commandant and Adjutant. The last were usually styled Irregular Cavalry, they were contractors, supplying their own horses, horse furniture and horse food, and were classed as sillahdars and bargirs, according as they were owners of horses or servants, for certain sillahdars had the privilege of supplying two or more horses and horsemen, styled "assami." The Artillery, both horse and foot, were wholly servants of the East India Company, the whole of the officers and the soldiers of the European Artillery being natives of England, but the native Artillery, horse and foot, called the Kali or black troop, and Golandaz, were recruited from amongst the same classes of natives as supplied the native cavalry and native infantry. The Infantry, similarly to the cavalry, were in part the servants of the Company, and in part composed of British Regiments taking a tour of duty in India : in part, also, they were native regiments of foot, regular and irregular, the last generally local corps, such as the Goorkha battalions, the Nair Brigade, and serving in their own locality. These troops were arranged in the three commands of Bengal, Madras and Bombay, and their numbers in times of peace and war, varied between 250,000 and 350,000 armed men, ready for war. In the Bengal Native Army, there were mahomedans, but the bulk of the soldiery were hindus, many of them of the brahminical and chetrya castes, brave, buoyant and jaunty, but proud, vain and conceited. The Madras Native Cavalry were almost entirely mahomedans with a few Mahrattas, from near Arcot ; their Native Infantry was about 2-5ths mahomedans and 3-5ths hindus, chiefly Sudras with a mere sprinkling of higher or lower castes, and Christians : while the Bombay Army was recruited partly in Northern India from the same men as the Bengal Army, partly from the Mahrattas of Maharashtra and had a sprinkling of Jews, low caste men and Christians. The duties of the Bengal and Bombay Native Armies, were chiefly amongst people speaking their own tongues, but the Madras soldier, took the entire duties, of Borneo, Singapore, Malacca, Penang, the Andamans; Moulmein, Rangoon, Prome, Theyet Myo and Tonghoo, and often held Aden, Khyouk Phyo, Canton, and Hongkong The Engineers were officered by natives of England, but had under them, a large body of native sappers and miners who, in Madras, were Tamul Sudras, Christians and Pariahs. In 1857, however, the regular Native Army of Bengal, composed of hindoos, and mahomedans, recruited mostly in the North West Provinces, rebelled and revolted from its allegiance to the British, and it took all 1858, 1859, and much of 1860 to subdue the mutineers, and restore order, for many chiefs and races rose in succession and had to be put down by arms. A few regiments of the Bombay Presidency also failed, but one of these, the 21st B. N. Infantry had formed part of the regiment of the Peshwah, Baji Row, commanded by Captain Pott, and had come over to the Company during the middle of the battle that ensued on the attack on the Residency at Poonah, and the soldiery of that corps had continued, as in the Peshwah's times, to be recruited in Northern India. From 1858, the entire European soldiery of India, became formed from British Corps, amongst whom those previously belonging to the East India Company were enrolled, and great reductions were then made amongst the regiments of native infantry, and their organization changed from the regular to an irregular system, *i. e.*, with fewer European Officers ; by degrees nearly all the native artillery, were eliminated and Europeans alone left in this arm of the service. These changes were carried out during a period of several years, and as the ultimate effect is not yet perceived, it may be well to indicate in what respects the present constitution of the Native Army differs from that of the one that passed from the scene. All the reasons that led the Government to give so decided a preference to the "Irregular" system are not known, but it is stated that the principal was the noble and loyal behaviour of the Goorka and Punjab Irregular Regiments. These regiments, however, had no sympathy or feelings in common with the "revolters," who were men of other countries and religions to themselves, and other Irregular Regiments, composed of men of the same caste and country as the rebellious sepoys, such as the Gwalior, Kotah and other contingents, did mutiny, and join with the men of the Regular Army in their attempts to throw off the British rule. Again, it may be questioned whether, if the Seik and Goorka Regiments had been officered on the Regular system, they would not have been even more efficient than they proved themselves to be. Difference of caste only was not sufficient to deter the hindoos from joining in revolt with the mahomedans of the same regiment who were in daily communication with each other. Indeed, the mahomedans from the North West frontier look upon the mahomedans of the Central Provinces as "hindooised mahomedans." In 1858, the Punjab Government, acting on the principle of *divide et impera* ordered that certain regiments about to be raised in that province, should be organised "in companies" of different castes, Seiks, Punjabees, Dogras, Pathans, and others. The number of officers now attached to Irregular Regiments is, however, still very nearly as great as the average number of officers that were usually present with the old Regular Regiments of the Bengal Army.

ARODANA ; this name, as lord of India, is mentioned in an inscription in the Karli Caves. It is in Pali and about A. D. 176 or according to Dr. Wilson B. D. 543.

ARNIYA, a dialect of the Dardu language, spoken by the Dards in Yasan and Chitral. See Dards.

ARNODE, a town in the N. W. of peninsular India, in Long. 74° 50′ E. and Lat. 23° 54′ N.

ARNOOTMUNGALUM, a town in the south of the peninsula of India in Long. 78° 58′ E. and Lat. 9° 45′ N.

The plant-producing Arnotto, called also anatto, and anotta, the *Bixa orellana*, is now naturalised in India, Burmah and the Eastern Archipelago, but its native country is Cayenne, from which it has spread into the hottest parts of South America, and the West Indies, where it is extensively cultivated on the banks of rivers, and gives its name to the Bay of Annatto, on the North of Jamaica. It is likewise grown at the Hawaiian Islands, Tongataboo, Rio Janeiro, Peru, Zanzibar. The Arnotto is a thick extract
obtained, it is said, from the seeds as well as
there the soft sticky rind of the plant, and it is
India at ith in commerce of two sorts. Flag or
armour, rnotto, is furnished almost wholly by
shields, sp from which it is brought to England.
with dagger kind called Roll Arnotto, is a
sword formed more concentrated extract In
which pearls rs obtain a red dye from its fruit.

9	27	17
1850	72	...

In the Madras Exhibition of 1855, where many good specimens of fruits and seeds were exhibited, a specimen of cake Arnotto, of a thick pasty consistence, prepared by macerating the seeds gave an orange colouring matter. It is used as an ingredient, for tinging cheese and butter, to which it imparts various shades of colour from yellow to ren and it is also mixed with chocolate, oils, spirits and varnishes as a colouring material. Arnotto dissolves in milk and is diffused in the milk previous to its manufacture into cheese and butter. The Spaniards color their soups, deeming it wholesome and stomachic. Arnotto is soluble in alkalies, by which means it is fixed to silk or wool. The colour obtained from fresh pods of the plant, is so superior to that of either the flag or cake Arnotto as to lead to the conclusion that the method of preparing these, which is by a great degree of heat and fermentation, is injurious to the colour.—*Mason. Simmonds M. E. Jur. Reports. Tomlinson. Birdwood's Bombay Products. Poole's Statistics of Commerce.*

blades AROMATIC BARKS, roots and seeds, spices and condiments are found in every bazar
beautiouth Eastern Asia, are found in every bazar, for domestic use, and some of them are largely
natiported. The following are the better known :—

Aromatic barks of *Laurineae*, the *Oulit-lawang*, *Massoy*, *Sintoc*, are articles of commerce in the Indian Archipelago, and are but imperfectly known in Europe. The traveller should embrace the opportunity, when it occurs, of seeing the bark collected, and of obtaining authentic specimens of it, and of the tree yielding it. There are several kinds of aromatic roots found in Malabar, the products of various species of Curcuma, Zingiber, Costus, Kempfœria, &c., *M. C. C.*

ARNELLI PULLUM. TAM. Cicca disticha. அரிநெல்லி.

ARONE, a town in India in Long. 77° 30′ E. and Lat. 24° 26′ N.

ARORE, OR ALORE, was the capital of Sind in remote antiquity: a bridge over the stream which branched from the Indus, near Dura, is almost the sole vestige of the capital of the Sogdi of Alexander. On its site the shepherds of the desert have established an extensive hamlet; it is placed on a ridge of siliceous rock, seven miles east of the insular Bukkur and free from the inundations of the Indus. The Soda tribe, a powerful branch of the Pramara race, has ruled in these countries from remote antiquity, and to a very late period they were lords of Oomrasoomra in which division was Arore.—(*Tod, Vol. I. p.* 42.) According to Burton, however, its site is 4 miles east of the Indus at Sukker and Rori. Sehl and his capital were known to Abul Fazil, though he was ignorant of its position, which he transferred to Debeil, or Dewul, the modern Tatta. This indefatigable historian thus describes it: "In ancient times there lived a raja named Sehris (Sehl), whose capital was Alore, and his dominions extended north to Cashmere and south to the ocean." Sehl, or Sehr, became a titular appellation of the country, its princes, and its inhabitants, the Sehrai. Alore appears to have been the capital of the kingdom of Sigertis, conquered by Menander of Bactria. Ibn Haukul, the Arabian geographer, mentions it; but a superfluous point in writing has changed Arore into Azore, or Azour, as translated by Sir W. Ouseley. D'Anville mentions it; but, in ignorance of its position, quoting Abulfeda, says, en grandeur "Azour est presque comparable, a Mooltan."—*Tod's Rajasthan, Vol. I. p.* 42, *Scinde, Vol. I, p.* 166.

ARPALLY, a town in India in Long. 74° 52′ E. and Lat. 17° 12′ N.

AROSIS, a river mentioned by Nearchus, supposed to be the Kheirabad river, the Ab-i-Shirin of Timur's expedition. See Hindyan.

AROSTIGMA RELIGIOSUM, Miguel, Syn. of Ficus religiosa.—*Linn.*

ARPHAKHSAD or ARRAPAKHITIS, i. e., the primeval land of the *Kasdim* (Chaldees), the frontier mountains of Armenia towards Assyria. The Arphaxad of scripture is the district of Arrapakhitis, and was the starting point of the settlement and reminiscences of the race of Abraham. It is one of the south-western slopes of the mountain range, by which the primeval seat of the human race was surrounded, and on which the inhabitants of the northern plains took refuge in their flight. It is, however, to that half of it, to the westward of their original residence, that the Semitic races as a body resorted, and these settlers, who became so prominent a feature in history, successfully advanced westward from Arphaxad the starting post of the Abrahamitic reminiscences. According to Chevalier Bunsen, Arphaxad was the son of Shem, and lived 215 years before Abraham's immigration.—*Chevalier Bunsen, iii, p.* 361. *Chesney's Euphrates.* See Heber. Lud or Ludi.

ARPPANA, in Ceylon Buddhism, the superior form of Samadhi restraint.

ARPESI. Amongst the Tamuls, the 7th month of the Solar year, answering to the Hindu month Cartiga during which the sun is in the sign Tula.—*E. Warren.* Kala Sanhita.

Like the word alcohol, in Europe, Arrack is a term applied, in most parts of India, and the Indian Islands, to designate every sort of spirituous liquor, however obtained. The use of intoxicating fluids and drugs is considered by mahomedans to be forbidden by the Koran, but its words admit of a different interpretation. In Chapter II. Mahomed tells his followers that people "will ask thee concerning wine, and lots: Answer, in both there is great sin, and also something of use unto men, but their sinfulness is greater than their use. In Chapter XVI, entitled the Bee, Mahomed, giving proofs of the resurrection, says, and of the fruit of palm trees, and of grapes, ye obtain an inebriating liquor, and also good nourishment." Indeed, the quantities of these spirits used in all eastern countries is very great, and there is much open drunkenness. But the bulk of the Asiatic races, Arab, Persian, Hindi, Burman, Malay, Siamese, Buddhists, Christians, Mahomedans, and Hindus are spirit abstinents. This is equalized by the great quantities of food articles which they consume, a grown man eating daily two, three and four pounds of solid farinaceous food. Recently a hospital physician, as an argument against teetotallers says, he is as active as most men, driving daily 10 miles, walking during three hours, and working very hard for about six hours daily at head work. His daily diet, irrespective of fermented liquors, consists of two eggs, three ounces of milk, a third of a pound of cooked meat, one potato the size of an egg, two ounces of bread, a trifling amount of butter and sugar, and an ounce of cheese, in all about 15 ounces per day, and he asks whether any teetotaller can do the same, taking tea, coffee, and water ad libitum: only other diet is light wine. Although hindus and mahomedans and budhists are by their religions or by social usage prohibited the use of alcoholic fluids they do use them largely, either stealthily or openly, the fermented palm wines, or the distilled arracks or spirits being in great demand. In ancient times the conquering Aryans seem to have largely used distilled spirits, because the excitement described from drinking their soma juice could not have resulted from another source. The advantages of a moderate use of alcohol are thus well summarized by the Saturday Review, in noticing Dr. Barclay's pamphlet on the Temperance question,—"When the teetotallers confess that out of five hundred thousand persons who have taken the pledge in America, three hundred and fifty thousand have broken it, they prove what science had previously asserted--that a moderate use of alco hol is proper for man; and the experience of the hydropathic establishments proves an enormous increase in the use of food. If we only drink water, our consumption of farinaceous and animal food must be very largely extended. The effect of alcohol is to arrest the destruction of the tissues and to utilise the constituents of life; and therefore, under the present conditions of modern life, where the nervous system is liable to so much waste, alcoholic substances, as the most portable form of accessory diet, are more than ever necessary. If, as is the case in infancy, the only purpose of life were to live, the complimentary diets of animal, farinaceous, and leguminous food would be sufficient to sustain life; but so soon as man begins to work and think, alcohol, as preventing and arresting the destruction of tissue, is the cheapest food. If a man have a shilling to spend on food, he will do a better day's work on nine penny worth of bread and meat and three penny worth of beer, than on six penny worth of bread, six penny worth of meat, and sufficiency of water. Another important fact is, that total abstinence from stimulating drink actually predisposes to certain diseases. Arrack to a small extent is imported into England in leagers or large casks from Ceylon and Java, holding 150 to 156 gallons, and sells at 1s. 6*d.* to 2s. the gallon exclusive of duty. Alcoholic liquor in Europe, when dis[illegible]om grape wine, is known as brandy; when from a malt liquor, it is called a corn spirit, when from molasses, as in the West Indies and America, it is a rum. But from Turkey on the west, through all the countries on the south and east, Arrack, from the Arabic, عرق is the term applied to all ardent spirits from whatever source obtained, whether from the Sorghum, palms or cane, from flowers, or fruits or rice, or barks or mixtures of all these. Alcoholic liquors are produced from the black ant in Sweden: from cow's milk or mare's milk in Tartary, from sheeps milk in Afghanistan: from lambs flesh in China, and formerly, in England from honey, where mead was the only strong drink known for centuries. Ardent spirits of various kinds are said to be prepared by the hakims of India by distillation from various gramineæ as also from rose buds, jasmine flowers, orange peel and Indian fennel seed. The purest native spirit that we have met with in India is the cane Arrack manufactured in the valley of Kowlass, near Beder. Along all the sea- bord of eastern countries, where the various palms most abound, the toddies,--the sap or palm wines of the cocoanut, Cocos nucifera: of the date palm, Phœnix dactilifera: the Palmyra, Borassus flabelliformis; the Gomuti, or Arenga saccharifera, or the Caryota urens, are the materials chiefly employed for making arrack. After this juice is fermented it is distilled & rectified, and it usually yields about an eighth part of pure spirit. The three principal kinds known in commerce however are the arrack of Batavia, Goa and Colombo. That from Batavia is the strongest, and is distilled from a mixture of 62 parts of molasses, 3 of toddy, or palm wine, and 35 of rice. The last of these Crawfurd states to be boiled; and, after cooling, a quantity of yeast is added and the whole pressed into baskets, in which condition it is placed over tubs, and left for eight days, during which time a liquor flows abundantly from the rice. This liquor is distilled and then mixed with the molasses and toddy, which is all left to ferment for a week in large vats; after the fermentation is over, the Arrack is distilled one, or two, or three times, according to the strength required. That made at Java is chiefly for home consumption, but is also exported to China or India, very little is brought to China, and altogether in Junks. Another statement however describes the Batavia or Java Arrack as obtained by distillation from molasses and rice, with only a small admixture of toddy. The Arrack produced at Goa, is sweeter than that which comes from Java, and being made entirely from toddy, by repeated distillation, it is preferred by the Hindus to the Batavian, on that account, though it is an inferior spirit, containing only one-seventh of pure alcohol.—*Morris.* Arrack in one part of Ceylon, is distilled from the fermented palm wine of the cocoanut palm, and is prepared in certain districts of the Southern province of the Island, under licenses from the government, but for many years past the only exports have been to the Indian Presidencies and some of the Eastern Islands. Similar to the Indian practice, in Ceylon, the right of vending Arrack in shops and bazars, is rented out and realizes about £55,000: the shipments of Arrack have fallen off, from 1000 pipes in 1845, to 520, in 1850. (*John Capper in Asiatic Soc. Journ. Vol. XVI. London* 1856, *p.* 274.) It should be remembered, however, that, in Ceylon – three palms yield Palm sugar, (*Cocos nucifera*), the Palmyra palm (*Borassus flabelliformis*), and the kittal or jaggerry palms (Caryota urens.) From each of these palms the juice of the flowering stalk is collected under the name of toddy, and from it sugar, known in the East as jaggery, is regularly prepared; but it is from the palmyra palm that nearly all the palm sugar is obtained, and it is from the saccharine matter of the cocoaunt palm that Arrack is made in Ceylon. This palm becomes productive there in about six or seven years: In collecting toddy, the spathe is stripped off the spadix before it has fully expended; [illegible] spadices are afterwards beaten between pieces [illegible] wood, and slices are cut with a sharp [illegible] as to allow the juice to flow out. [illegible] continues to yield juice for about [illegible] nearly the average rate of half a [illegible] hours. When it is intended to [illegible] from the toddy, great care is [illegible] pieces of wood in the small [illegible] be attached to the flowers, and [illegible] interior with charcoal, to remove [illegible] likely to promote fermentation: [illegible] additional precaution chips of the [illegible] the Vateria Iudica are placed in each, in [illegible] to retard fermentation. The jaggery of [illegible] central province of Ceylon, is entirely made [illegible] the Caryota urens juice, which yields a much larger quantity of sugar than does that of the other two palms, and of a quality much more highly prized by the natives. When toddy is collected for the purpose of making Arrack, no care is taken to prevent fermentation, and as it is brought from the trees it is poured into wooden vats in which that process rapidly advances. If attention be not paid to the fermentation, acetic acid is formed, and this often causes the Arrack to take up lead from any portion of that metal with which it may be brought into contact. (*Dr. Smith, in Edinburgh New Phil. Journal, Vol. IV, No. I, July* 1856, *p.* 175.) In most parts of the East Indies, a very intoxicating spirit is prepared from the large, Mahwa flower, Bassia latifolia, the fleshy petals of which contain sugar. This is largely distilled in Bhandoop, about 20 miles from Bombay. (*Faulkner.*) And the Mahwa with the inner part of the white keekur tree, Vachelia farnesiana, or Acacia leucophlœa, form ingredients in the manufacture of the spirit sold under the name of "Arrack" in every bazar. (*Faulkner, O'Shaughnessy.*) When prepared from jaggery and the bark of the Acacia leucophlœa, which is rich in tannin, the tannin combines with the albuminous and nitrogenous substances in the jaggery and decomposes them. In most of the native stills,—composed of clay-pots or chatties, with bamboo pipes, ten per cent of the sugar is wasted by the loss of its resulting alcohol. Arrack in Madras is made from the Velvelam Puttai Acacia leucophlœa bark and Palmyra jaggery; the quantity required for one still, being 1 viss of the bark and 13½ of the sugar, the produce being 4½ gallons. Its cost of manufacture to the Government is 5 annas a gallon, and it is sold to the retail dealers of that city and within the boundary of ten miles at Rs. 3 per gallon, but to all beyond the limits for Rs. 1-8 per gallon. The jaggery is usually imported from Tinnevelly and from the Northern Circars. Pariah Arrack is a term employed by Europeans in India to designate a highly pernicious [illegible], said to be adulterated with the [illegible], datura, cannabis sativa and other intoxicating drugs. In the four years 1852-53 to 1855-56, inclusive, Madras

Exported.		Imported.

The imports principally from Ceylon and Bombay and the exports to Cutch, Pegu and Ceylon. In Siam, Arrack is manufactured by the Chinese, and consumed furtively by the Siamese, though sobriety is certainly one of the virtues of the Siamese national character. In Penang, ardent spirits are distilled from sugar-cane, and used by the hindoos of the lower order. Backerkatee is the spirit distilled in which cardamom is put and weakened with water, and called 'Illachee;' 'Cumlaha' with orange peel; 'Joboabee' and 'Pattaha' are adulterated with tobacco leaf, and 'Attaree' is scented with utter. '*Aunish*' *is the only* pure spirit distilled from aniseed. In Cuttack a spirit distilled from rice, is the only alcoholic liquor used by the natives of the province, and that only by those of the lower classes. It is the same to the use of which the wild tribes of Orissa, the Kond, Sahar, and Col are so addicted. It is unpalatable and nauseous. It is made 25 below London proof, 1 maund of rice making 8 gallons. A spirit is distilled in the Sumbulpore district, chiefly from the flower of the *Bassia latifolia*, locally called Mahool. This tree is met with throughout the forest jungles of that province and its flower is a favourite food of wild animals, especially the bear. In Malda, a spirit is prepared from the mango, the taste is not unlike whisky, and far superior to any thing of the sort sold in Indian bazaars for every purpose to which the latter is applied. Its specific gravity is about 903·5, which at a temperature of 80° F. gives about 60 per cent. of alcohol to the volume of spirit. Throughout the Hyderabad territory, generally, the spirit distillation is from the mahwa flower, the flower of the Bassia latifolia, along with the bark of the Acacia leucophlœa or acacia rugata and produces a coarse nauseous liquor. Four kinds are made in the Hyderabad city, viz :—

The *Rassi spirit*, from Argal fruit alone.

The *Black sugar spirits*, from black sugar alone.

Strong spirits, made by twice distilling Rassi spirit.

Sugar spirit, from black sugar, anise (star ?) sandal shavings and rose flowers.

The ingredients of other spirits made in the Hyderabad provinces are Gul-Mahwa (Bassia latifolia flowers) and the bark of Acacia leucophlœa. In the cantonment of Secunderabad, there are several ardent spirits and liqueurs made.

Mahwa spirit. One pullah of Mahwa flowers is first wetted with two seers of chall (bark of Acacia leucophlœa) and then distilled. The Do-bara arrack is a second distillation of the above and the Battavia arrack is a third distillation of it.

Jaggery liquor. One pullah of Jaggery is wetted with 4 seers of bark and then distilled.

In Misree liquor, one pullah of jaggery liquor is distilled with 4 seers coriander seeds, 3 seers dry rose flower, ¼ seer cachoora (Curcuma zerumbet,) ¼ seer nagen mothah (Cyperus rotundus), ⅛ seer cardamomum, ⅛ seer aku putree (Cassia leaves, cinnamomum iners,) ¼ seer Chandan (Sandal wood), ¼ seer Cushbalah (Andropogon muricatum,) 1-16th seer Cloves, 3-16th seer Somph (Pimpinella anisum,) 2 seers Milk, 3 seers Buttasah (sweetmeat.)

In the Masalah liquor, 1 pullah of jaggery liquor is distilled with the above ingredients with the exception of 3 seers of Buttasah.

Wood Apple liquor, 1 pullah of jaggery liquor, is distilled with 6 seers of Wood Apple.

Mango liquor, 1 pullah of jaggery liquor, is distilled with 6 seers of Mango.

Sibara liquor, 1 pullah of jaggery liquor, 3rd distillation of jaggery liquor.

In India, the right to distill and sell Arrack is sold by Government annually to the highest bidder, It forms in all eastern countries an item of the Abkari. In British India, the revenue from the exise, Sayer or frontier dues, Abkaree and forest, amounted in 1865, to Rs. 2,575,793.—*Ainslie's Materia Medico, pp* 140-263. *Pooles Statistics of Commerce.* See Cocoanut Palm.

ARRAH, a town in India, in Long. 84° 40′ E. and Lat. 25° 35′ N.

ARRAKAN and Tenasserim came into British possession in 1826. Arrakan, with an area of 18630 square miles had 100,000 of an indigenous population. In 1835, the number was 211,536 ; in 1845, 309,608 and in 1855, 366,310. It is now a province of British Burmah. See Arakan.

ARRAN, the home of Zoroaster, mentioned in the Zend Avesta.

ARRANTANGY, a town in Southern India in Long. 79° 6′ E. and Lat. 10° 11′ N.

ARRARA, a town in Manbhoom.

ARREGAN, called also Argan and Arejan, is a ruined town, half-way between Behbehan and the river Kurdistan.

ARREL, a town in India in Long. 79° 40′ E. and Lat. 28° 7′ N.

ARREMUTI MARAM. TAM. Pentaptera coriacea.

ARRIA, a town in India in Long. 87° 34′ E. and Lat. 26° 0′ N.

ARRIALOOR, a town in India, in Long. 79° 10′ E. and Lat. 11° 10′ N.

ARRIAN lived in the times of the emperors Adrian, Antoninus, Pius and Marcus Aurelius. He was a native of [illegible]media in Bithynia, where he studied, [illegible] was born about the end of the first century of the christian era. He was one of the most eminent disciples of the famous Epictetus, graduated iuto a priest in the temples of Ceres and Proserpine and distinguished himself as a historian and in philosophy. His account of the expedition of Alexander the Great, is based on the lost works of Aristobulus and Ptolemy, the son of Lagus, both of whom accompanied the king, during the expedition. He also wrote a treatise on India, in the Ionic dialect, and a periplus of the Black Sea : descriptions of the coasts of the Sea of Asov and of the Red Sea, are also ascribed to him, but these are supposed to be of a later date. Perhaps, there has been more than one of this name, and the Arrian, whom Colonel Tod, may be correct in mentioning as the author of the Periplus of the Erythræan Sea, and a Commercial Agent at Baroach, living in the second century may be one of them. He says that Arrian the author of the Periplus, resided at Baroach, or, as he called it, Barugaza, as a Commercial Agent, in the second century of the christian era ; Baroach was then within the Balhara Sovereignty.—*Encyc. Brit. Vol. iii. 8th Edition*, 1853. *Tod's Travels, p.* 145. See Kalian : Kasr : Khetri : Khuzistan : Megasthenes.

ARROA ISLANDS, from near the parallel of 2° 48′ to 2° 56′ N. and in Long. 100° 38′

E. consist of several small islands and rocks lying mid-way between the Sumatra shore and the extensive banks called the North Sands. They are known as the Round, the Long or Great, and the Western Arroa.—*Horsburg.* See Sumatra Coast.

ARROD, a town in India, in Long. 76° 4′ E. and Lat. 27° 19′ N.

ARROE or ARRU ISLANDS, extend, from Lat. 7° 0′ to Lat. 5° 52′ S. and in Long. 133° 56′ E, for upwards of 100 miles N. and S. and lie between the Timor Laut group and the S. W. Coast of New Guinea. They are a closely packed group, distant about sixty miles from the south-west coast of New Guinea, and between forty and fifty miles in breadth. On the eastern side of the group are found banks of sand and mud, stretching far out to sea, which are only covered to the depth of a few feet at low tides. The trepang or sea-slug, which, when cured, is an article of great consumption in China, where it is much used as a delicacy for the table, exists in great abundance on these banks, which also furnish pearl-oysters of two varieties, namely, the large oyster, whose shell is the mother-o'-pearl shell of commerce, and the smaller variety in which the seed-pearls are found. Some of the more eastern islands contain limestone caverns, within which the small swallow constructs the edible bi[illegible] nests of commerce, also an article in great [illegible]and for the markets of China, where it is said to be worth its weight in silver. These circumstances, coupled with the industrious habits and friendly disposition of the islanders, have led to the group becoming a great resort for traders from the western parts of the Archipelago, including natives of Java and Celebes, Chinese, and even Europeans, who bring large quantities of manufactured goods and other articles suited to the tastes of the inhabitants. The latter have consequently become the most wealthy and prosperous of all the native tribes of the neighbouring seas. The Arru islanders bear a strong personal resemblance to the aborigines of Port Essington; indeed on several occasions in which natives from the neighbourhood of the late settlement visited the islands in European vessels, they were considered by the Arruans as belonging to some remote part of their own group. But the Arruans also possess so many characteristics in common with the *Outanatas* of the opposite coast of New Guinea, that it would be necessary to include them in a general account of the Papuans. One of their most singular peculiarities consists in the value which they attach to elephants tusks, brass gongs, and huge porcelain dishes. An odd custom, and one that is probably unique in the world, consists in the destruction of a man's goods on his death, instead of a distribution of them among his surviving relations. All the chattels which he has collected during his life, including tusks, gongs, and precious China dishes, are broken in pieces and thrown away; and in the villages may be seen heaps of these fragments of property which custom or some singular superstition has deterred the living from appropriating. The ports frequented by the foreign trading-vessels are all in the north-western part of the group, where the people are evidently of a mixed race, the natural result of strangers from the west having married and settled among them during an intercourse which appears to have extended over several centuries. Their hair is usually black and strongly curled. Like the African Somali, they wash it with wood-ashes or lime water, which impart to it a lightish colour and cause it to appear rough, both these peculiarities being considered very tasteful by the Alfoeras, as well as by the Papuans. The Arruans are taller and more muscular than the Malays and Bughis of Celebes, but are inferior in proportions, if not in stature, to the ordinary run of Europeans. The usual height of the men is from five feet four inches, to five feet eight inches, and there is a great inclination to slimness about the lower extremities among the taller men, some of whom attain the height of six feet. Vorkay, an inland lying exposed to the ocean at the south-eastern extremity of the group, is of great importance from its pearl fishery. At a distance of eight miles to the eastward, lie several small islands, between which and Vorkay the trepang banks are situated. At low water, hundreds of men, with their wives and children, may be seen wading from Vorkay towards these isles (the water being only two or three feet deep,) carrying a basket at their backs, and having in their hands a stick, provided with an iron point. When the water is deeper than this, they make use of canoes. For fishing on the banks situated at a greater distance, the Alfoers use a prahu, constructed for the purpose, in which they embark their entire families. These vessels have a very strange appearance. They have great beam, and the stern runs up into a high curve, while two planks project forward from the bows. The family resides in three or four huts composed of *atap*, or Nipa fruticans leaves, erected within the vessel, and a railing runs entirely round it, apparently to prevent the children from falling over-board. The prahu is propelled by a large sail made of rushes, which folds up like a fan (in a similar manner to the sails of a Chinese junk), set upon a tripod mast of bamboos, while it is steered with two rudders. Two other masts are also erected, which answer no purpose but that of displaying several small flags. The Pearl Fishery is thus carried on. The trader makes an agreement (for the oysters) for so much a hundred, paying in advance a certain quantity of arrack, cloth, &c. When the price is agreed on, the fisher goes to the bank and dives for the oysters, which are mostly small and black, in from twenty-four to thirty feet water, selecting the best he can find. The diving is attended with much difficulty and danger, as, from the time he remains under water, the blood often bursts from the nose and mouth of the diver, while he is also liable to be destroyed by the numerous sharks which are to be found there. In engaging these people, it is necessary to pay off their debts, and, free from this incumbrance, they will readily proceed to any part of the Archipelago. These islands have become the emporium of the south-east corner of the Archipelago, and form a connecting link between the rich islands of the Indian Seas and the Australian continent to which they are ethnologically related. They are probably destined to attain considerable importance, when the northern shores of Australia are settled and civilised.—*Mr. Earl's Indian Archipelago and Papuans Quarterly Review, No. 222, p. 512. Kolff, Voyage of the Dourga in John's Indian Archipelago, Vol. ii, p.* 89. See India, p. 350, 552. Kyaboka.

ARROWS are sometimes used in north-western India, as tests of innocence. The opposite ends of two arrows are held by a rattan laid upon the hands by two persons placed opposite to each other; they are parallel to and just sufficiently apart to allow of the suspected person's hand being held between them. The ends of the arrows merely rest upon the fingers. The arrows are supposed to move towards and close upon the guilty hand. See Divination.

ARROW-HEADED IPOMÆA. See Ipomæa.

ARROW-ROOT.

Pen-bwa ...	BURM.	Jau-irsi ...	TAM.
Kua-ka-neshasteh	HIND.	Kua maoo, ...	„
Tikhur ...	„	Arrow-root kelangu	„

This is a largely exported article, from several of the countries of Southern Asia The name was originally applied to the rhizome or root of Maranta arundinacea, in consequence of its supposed efficacy in counteracting the effects of wounds inflicted by poisoned arrows. Of late years, however, the signification of the term has been employed to designate almost every fecula or starch, which bears any resemblance to the true Maranta Arrow-root. In the great Exhibition of 1851, there were present the Arrow-roots of Trinidad; Bermuda; British Guiana; Montserrat: Jersey, Guernsey: Van Dieman's land; Western Africa; and East Indian varieties from Assam; Calcutta, Calicut; Ruttnagherry: Vizagapatam; Borneo, Java; and Ceylon. In the West Indies, Arrow-root is obtained from the Maranta arundinacea, M. allongia, and M. nobilis; also from the Canna glauca and C. coccinea: to both of which the local name of tous les mois, or tulema is applied. In the East Indies, Arrow-root is prepared from the Maranta arundinacea, also from M. ramossissima, a Sylhet species. The Maranta arundinacea was introduced in 1840-1841, into Rutnagherry, by the Collector, Mr. Elphinstone, where it throve extremely well, though it is not grown to any extent. It was introduced into the Tenasserim Provinces, several years ago, by Mr. O'Riley, and the Arrow-root made is not inferior in quality to any. East Indian Arrow-root, is now obtained largely from the Maranta aurundinacea, which is largely grown in Travancore, at Chittoor near Arcot, in the Tenasserim provinces, at the Andeman Islands. The Mahabaleshwar arrow-root is obtained from Curcuma caulina, Graham. In Travancore, arrow-root is obtained mostly from the Maranta arundinacea, but the fecula of Curcuma angustifolia and of the cassava meal from the Jatropha manihot is likewise sold under that name, but according to Roxburgh, O'Shaughnessy and Royle, Curcuma angustifolia, is also the source of an arrow-root prepared at [illegible] Benares, in Bengal and Chittagong. The tuber [illegible] urcuma rubescens, *Roxb.* also are descr [illegible] aughnessy as yielding an arrow-root in [illegible] ore and Bengal; those of C. leucor [illegible] Roxb. in Behar, and, as tikor, the *Hindi* ter[illegible] for all such feculæ, that from the [illegible] of Batatas edulis is sold at Patna and [illegible] pur. Ratnagherry arrow-root is obt[illegible]m Curcuma pseudomontana of Graham as also Alpinia galanga Swartz and Canna glauca, Roscoe. Indeed, many households in India, make the arrow-root for home consumption, from the products of their own gardens. We have seen it thus in Thayetmyo the Andamans, and Secunderabad. The Rutnagherry Arrow-root is prepared principally from the "kut-cherra" or perhaps "kutchoora," a general term in that part of India applied to all the species of curcuma.—*Mason. Hassall. M. E. Jur. Reports. Simmond's. Faulkner. Cal. Cat. Exb.* 1862. See notices under Curcuma angustifolia; Food; Marantaceæ; Maranta arundinacea; Curcuma leucorrhiza, also Curcuma rubescens.

ARROW-ROOT-KALANG. TAM. Arrow-root. Maranta arundinacea.

ARROZ. PORT. SP. Rice.

ARRUB-UL-SALIB. ARAB. Solanum nigrum; S. dulcamara.

ARSACES I, B. C. 254-250, the first of Arsacidan kings, a native of Balkh, rev under Antiochus Theos, is supposed to [illegible] been killed in action with Ariarathes of Cappidocia, but the date and circumstances not known.

ARSACES II, (Artabanus ?) son of Arsaces I about B. C. 220, at first extended the Parthian empire but was afterwards driven into Hyrcania by Antiochus Magnus in B. C. 212, ; allying himself with the Scythians he recovered Parthia.

ARSACES III, B. C. 196, called Priapatius, or Phriadatius, son of Arsaces II reigned 15 years, left three sons, Phrahates, Mithridates and Artabanus.

ARSACES MITHRADATESI, B. C. 177, made Balkh his capital, subdued Media and Persia and captured Babylon, brought under his dominion Western Bactria, Aria, Seestan, and Arachosia, and made a successful expedition into India.

ARSACES PHRAHATES II, B C. 139. In his reign Bactria seems to have been subjugated entirely by Scythians. He was defeated and slain in B. C. 130, when restraining the Parthians from ravaging the country.

ARSACES ARTABANES, B. C. 126, uncle of Phrahates and youngest son of Priapatius, died of a wound received in action from the Tochari Scythians. After many kings the Greco-Parthian or Arsacian dynasty in central Asia ended with Arsaces Artabanus in A. D. 215, who was involv[illegible] in a war with Rome, but ultimately slai[illegible]ttle at Balkh by one of his Parthian o[illegible] the [illegible]deshir Babakan or Artaxerxes, wh[illegible]ned his own, that of the Sassanians in [illegible] 235 and it lasted nearly 500 years. The capital in the time of the Cæsars was at Selucia on the Tigris. The system of Government was Asiatic, by Satraps, or rulers possessing full power over the persons and properties of all the subjects of the state. See Arsacidæ.

ARSACIA. Rhages, Europa, Arsacia, and Rhey, have all, at different periods, been designated to be this ancient metropolis ; each name giving just grounds for anticipating the richest succession of antiquities.—*Porter's Travels. Vol. I., p.* 357.

ARSACIDÆ. This name was given to the Parthian kings whose family name was Arsaces. The Arsacidian kings of Armenia, according to Moses of Chorene, reigned from B. C. 130 to A. D. 450, when the Armenian kingdom was extinguished. (*Thomas' Prnsip, p.* 300.) But *Thomas' Prinsep, Vol. ii,* 76. gives sixty kings from Arsaces I in B. C. 255 till the succession of Artaxerxes, *King of Persia*, the first of the Sassanidæ. Arsaces I, is described by some as a native of Sogd ; by others as of Bactria, but by Moses of Chorene as of Balkh, and Moses adds that the dynasty was called Balkhavensis or Pahlavian. He used Greek only on his coins, and in his public letters and correspondence only, with the head of the sovereign on one side. Only one coin has a lingual inscription. The last of the dynasty, Arsaces Artabanus, became involved in a war with Rome, but was ultimately slain at Balkh, by one of his Parthian officers, Ardeshir Babekan, or Artaxerxes.—See Greeks of Asia : Kabul, pp. 435-437 : Persian kings.

ARSENIC, is a metal resembling steel in colour, crystalline, volatile below a red heat, vapor of a strong garlic odour, readily oxydised : with one equivalent of oxygen it forms the arsenious, with two equivalents the arsenic acid With sulphur it forms the yellow sulphuret, orpiment, and the red, realgar. *Beng. Phar. p.* 313. The various compounds of arsenic are to be obtained in every bazar in India, and the native medical practitioners, painters, &c., considerably employ them. None of the compounds of Arsenic have been discovered to be products of Southern India, but they are imported largely. The white oxide from Bengal, the red and yellow sulphuret from Burmah, where it is found in great quantities, as also from China and Japan and the Persian Gulf. Dr. Helfer reported the existence of ore sof arsenic in the Mergui Islands, Mr. Piddington found it in the antimony ores, and Professor Mitchell also found arsenic in lead ore that he analyzed—(*Mason.*) Arsenic is principally employed in trade to produce a peculiarly vivid and showy shade of green which has superseded the less decided tints. This dangerous material is used to colour children's toys and sweetmeats : papers, coloured with this green, live fruit boxes, wrap up confectionery chocolate, line books, house walls, and it is used for tinting food articles, and colouring articles of dress. Its white oxide, Safaid Sambul, has long been used in India for the cure of intermittents. Although Dioscorides and Pliny, Celsus and Galen used this substance, in which they were followed by the Arabian physicians Rhazes, Serapion and Avicenna, none of these appear to have employed it in fever and it was not till the end of the 17th and the commencement of the 18th century that the treatment of intermittents by arsenical preparations became known in European practice. Senious acid has real febrifuge properties in intermittents the product of marsh miasma. It succeeds in tertians better than in quartans and quotidians. The tolerance of Arsenious Acid administered up to 1½ gr. and even a litte more daily, has been complete in one-half the patients. The disturbances of the system it has caused has seldom been of importance. This tolerance does not necessarily require the aid of a copious diet and good supply of wine. The employment of emeto-cathartic medicines has the triple advantage of facilitating the tolerance of the medicine, of stopping all its disagreeable effects and of helping to cure the fever. Jacquot's Report goes to show that emetics increase much the effect of Arsenic, while their action is indifferent with quinine. It is prudent to suspend the use of the medicine on the occurrence of pain at the epigastrium, colic, nausea or diarrhœa. The Arsenious acid should be administered during the intermissions or the decline of the paroxysms. When the paroxysms have been stopped the use of the medicine should be gradually diminished, as it was commenced. The preparations of Cinchona administered after Arsenic appear to be more efficacious, than when simply administered by themselves. This is denied by Jacquot probably with reason. The arsenical treatment is less powerful and less sure than Quinine. Relapses do not appear to be either more or less frequent under the one or the other treatment. The arsenical treatment should not be adopted in the treatment of pernicious fevers.—*Macniven and Cameron. Paper Trade Review. Ind. Anns. Med. Sci. for April* 1856, *p.* 398. *Bengal Pharmacopœia, p.* 313.

This is found native in S. America: Saxony, Persia and China. It has a bright lemon or golden yellow colour. It is brought to Bombay from the Persian Gulf and is an article of trade from China and Burmah where the red is also procured and from Japan.

In China the sulphuret of arsenic is sometimes cut into ornamental figures in the same manner as prehnite and agalmatolite.—(*Williams, p.* 248.)

Yellow Orpiment is much used by the Tamil painters, in preparing a yellow pigment. " Native Orpiment, the auri pigmentum of the ancients, is of a brilliant yellow colour. It is used in dyeing and calico printing. *Ainslie.*

ARSENOE, called also Myos Hormos, a port on the Red Sea, the emporium for Indian articles during the time of the Greeks holding Egypt.

ARSHA: See Hindu.

ARSI. HIND. ارسي. A small mirror worn by women on the thumb, in a thumb ring.

ARSINA. CAN. Turmeric.

ARSIS RUGOSA. LOUR. Syn. of Grewia microcos.—*Linn.*

ARTA, according to Herodotus, the town of Herat, whence the term Artæi, for th[illegible] ancient Persians. See Hindu.

ARTABANUS. Of the Parthian Kings, the[illegible] were five of this name, the first in B. C. 2[illegible] and the last about A. D. 235, and with wh[illegible] ended the Arsacidæ, he having been slain [illegible] Ardashir Babegan (Artaxerxes) one of his [illegible] cers, who became the first of the Sassani[illegible] It is supposed by Malcolm, that Artabanus [illegible] was the Shah-poor of the Greeks. His [illegible] Vonones, reigned for a short period. [illegible] name is sometimes written Pollas: he was [illegible] Volageses of the Greeks, whose war with the Emperor Nero, and embassy to Vespasian, are related in the Roman history. Hoormus, appears to have been Artabanes the fourth of the Romans.—*Malcolm's History of Persia, Vol. i, p.* 85. See Greeks of Asia. Kabul, p. 437.

ARTA BHAGA, according to Herodotus, Lord of Herat. In Hindu mythology, one of the Rishi. See Hindoo.

ARTABOTRYS ODORATISSIMUS, *R. Br.*

Uvaria odoratissima. *Roxb.*
„ uncata. *Lour.*
Unona esculenta. *D. C.*
„ uncinata. *D. C.*
Modira Walli ?......MALEAL ?

The generic name is derived from Artao, to suspend, botrys, a bunch; the peduncle has a curious hook, which lays hold on any support near and assists in bearing up the clusters of fruit. This is a scandent shrub with shining leaves, and very sweet smelling flowers. It is grown in Bombay, gardens, as an ornamental plant. The flowers of the Artabotrys odoratissimus and Unona odorata are extensively cultivated in China for their perfume.—Drs. Hooker and Thomson describe Artabotrys Burmanicus, D. C., of Burmah and Mergui. A. Cadatus, Wall. of Silhet; A. Odoratissimus, R. Br. of Ceylon and Malacca. A. Suaveolens Blume of the Archipelago and A. Zeylanicus.—*H. f. and T. Graham's Cat. pages 4 and 5. William's Middle Kingdom. Voigt, p.* 15.

ARTAMUS FUSCUS. Toddy Shrike, feeds on the flies and insects that hover near to the luscious juice of the Palmyra palm. It is the Tal-Chatok of Bengal, and is found growing there in Assam, Arakan and in India generally.

ARTAMUS LEUCORHYNCHOS, one of the Swallow Tribe. It is the Lanius leucorynchus of authers.

ARTANISSA. Pliny, writing of Iberia, observes that its chief city was called Harmastis, and that it was situated near the river Neoria. Ptolemy mentions the same place, under the name of Artanissa.—*Porter's Travels, Vol. i. p.* 104.

ARTAXERXES, this name, as known to [illegible]e Greeks and Romans, is their mode of pro[illegible]uncing Ardeshir. Ardeshir Babegan, the [illegible]n of Sassan, an officer of the Parthian king, [illegible]saces Artabanus V, murdered his sovereign [illegible] assumed the Persian throne as the first of [illegible] Sassanian dynasty, in A. D. 226: his [illegible]cessor was the Shappur or Sapor, who cap[illegible]d the Emperor Valerian. There were other [illegible]xerxes, the first in A D. 381, and the se[illegible] A. D. 629. And the Sassanian dynasty [illegible]d in A.D.641, when Yezdejird or Izdejerd, [illegible]as overthrown by the mahomedans. See G[illegible]s of Asia. Kabul, p. 437. Persian Kings.

ARTAXERXES LONGIMANUS, was the Kai Bahman, or Ardashir daraz dast of the Kaianian dynasty of Persian Kings.

ARTAXERXES MNEMON, a Persian King, B. C. 426, at whose Court Ctesias, resided for some years. After Scylax, Ctesias was the next Historian of India, and in his Indica, Cap. iv; p. 190, he mentions that Artaxerxes Mnemon and his mother Parasatys presented him with two iron swords, which when planted in the earth, averted clouds, hail and strokes of lightning. This is the first notice of the lightning conductor. The Tee on the tope of every buddhist pagoda in Burmah shows their acquaintance with one means of protecting, from lightning. See Scylax: Lightning conductor.

ARTEMISIA WORMWOOD, a genus of plants of the natural order Matricariaceæ, of which *Roxburgh* describes ten and *Voigt* nine known species in India, viz. Artemisia.

Abrotanum...	... *L.*	Paniculæformis	*D. C.*
Caruiflora ...	*Buch.*	Parviflora ...	*Buch.*
Grata	*Wall.*	Scoparia ...	*Waldst.*
Indica	*Willd.*	Vulgaris ...	*L.*
Lactiflora ...	*Wall.*		

Most of these grow in the mountains of Northern India, Persia, Cashmir, Nepal, Kamaon, Crimea, Caucasus, Armenia, Khassya, Siberia, China and Japan, but several, as the A. Abrotanum or Southernwood and A. Indica, are cultivated in India, as also is the Naga doua or A. vulgaris, and A. grata belongs to the Peninsula. The European Absinthium, though not growing in India, furnishes part of the (Afsantin) absinth used in Asiatic medicine, and the A. Chinensis of China and Siberia, supplies the materials for the Moxa. According to *Dr. O'Shaughnessy*, the A. Judaica, is the Saheba of Avicenna, and a native of Judea, Arabia and Cochin China, and is known as the Indian worm seed, or Indian Semen Contra, finely powdered and sifted, it is a popular worm remedy, especially in the round and long worms of children: the dose is three to ten grains given in honey or milk.—*Beng. Phar. page* 406. *O'Shaughnessy, page* 416. *O'Shaughnessy. Beng. Pharm.* 270. *Dispensatory,* 417. *Roxb. iii,* 417-24.

ARTEMISIA ELEGANS, ROXB., Particularly when young is uncommonly elegant when in blossom.

This is a native of Europe and according to Thunberg of Japan. He says that for tinder the Japanse use the woolly part of the leaves which is prepared so as to form a brownish coloured wool. This substance catches fire much quicker than Moxa, but Dr. O'Shaugnessy says that this is a native of Europe and that the Moxa of Japan is prepared with the leaves and stalks of a neighbouring species.—*O'Shaughnessy, page* 415. *Thunberg's Travels. Vol. iii. p.* 71.

ARTEMON, the last Bactrian king, A. C. 207, who ruled in Asia, Drangia and Arachosia.

ARTESIAN FIRE-SPRINGS IN CHINA.—According to the statement of the Missionary Imbert, the Fire-springs, "Ho-tsing" of the Chinese, which are sunk to obtain a carburetted-hydrogen gas for salt-boiling, far exceed the European artesian springs in depth. These fire-springs are very commonly more than 2,000 feet deep; and a spring of continued flow was found to be 3,197 feet deep. This natural gas has been used in the Chinese province Tse-tschuan for several thousand years; and "portable gas" (in bamboo-canes) has for ages been used in the city of Khiung-tscheu. More recently, in the village of Fredonia, in the United States, such gas has been used both for cooking and for illumination.—*Curiosities of Science, p.* 118.

ARTICHOKE. Cynara scolymus.

Harshuf ...	ARAB.	Kharshuf ...	PER.
Kanjir	HIND. PERS.		

Only cultivated in some gardens of India, and is not general: the cultivation is expensive.

ARTICHOKE, JERUSALEM. Helianthus tuberosus. Cultivated for the tubers attached to the roots, may be lifted annually, after flowering, and kept like potatoes for three months, or they may be allowed to remain for years in the same situation, if kept clear of weeds and the ground annually top dressed with manure; cooked similar to potatoes, and sometimes fried.—*Jeffrey.*

ARTICULATA, a division of the animal kingdom, in which are included the Aptera, Arachnida, Myriapoda, Stomatopoda, Cirrhipedia and Annelida.

ARTIE, in Madras, timber of various sizes 12 to 18 feet long and from 1 to 1½ feet in breadth.

ARTIFICIAL HATCHING of Eggs, Fish, Pearls. See Eggs. Fish. Pearls.

ARTOCARPUS, a genus of plants belonging to the Urticaceæ, several species of which occur in the South East of Asia. Voigt enumerates eight species, and as most of them furnish useful products, they are noticed separately. But, it may be mentioned that the *Trap* tree, which furnishes the Gutta used as bird lime in the Malayan Peninsula, and at Singapore the fibres of its bark are used for cordage, fishing lines and nets; the *Chowat Kurnat*, similar to the above, from Beram River, also the *kumut* or bark cloth, worn by the Karens when mourning for the dead, from the river Baram, and Glam-tree bark, from Borneo, which furnishes a paper-like-bark, much used in caulking the seams of vessels, are all supposed by Dr. Royle to be species of Artocarpus, and the Catalogue for the Exhibition of 1862, states that the Singapore Trap tree is an *Artocarpus* and furnishes the Gutta used as bird lime, and the bark is also used for fishing lines, cordage and nets. One species, A. Philippensis, Lam. occurs as a tree in the Philippines, and the A. polyphema, PERS. is a tree of Penang, perhaps the Glam or Trap above noticed. A, angustifolias Roxb. is mentioned by Voigt as a tree of the Malay Islands, and A. serratus Roxb. as a tree of Travancore. *Artocarpus integrifolia* is the jack, *A chaplasha*, the lesser or thorny Jack, and *A. laecucha* the small Jack. The fruit of all three species is prized by the Burmese as an article of food, especially the first, which grows to great perfection every where throughout the province with little care.—*McClelland. Mason. Useful Plants. Royle Fib. Pl. p.* 341. *Hog's Vegetable Kingdom, p.* 679-680. *Mason's Tenasserim. Voigt, p.* 289-290. *Cat. Ex.* 1862. *Roxb. iii,* 521-527. Wight also figures lanceæfolia 670. —See Chowat Kurnat. Dyes.

ARTOCARPUS, *Species.* Small Breadfruit. This species is not scarce in the Tenasserim forests. It yields an orange colored fruit resembling in taste a custard apple, and in appearance a fig.—*Dr. Mason.*

ARTOCARPUS. *Species.*

Thoun-ben. *Burm.*

Dr. Wallich tells us that a species of this genus grows in Tavoy, and is a large tree, used generally in boat building. Perhaps identical with the last.

ARTOCARPUS. *Species.*

Patta del. SINGH.

Grows in the Southern provinces of Ceylon, and is there used for boats and buildings, at cubic foot of the wood weighs 24lbs. and it is said to last 30 years. The fruit 9 x 2½ inches is boiled and eaten as food.—*Mr. Mendis.*

ARTOCARPUS, *species.*

Py-nathe ...	BURM.	Tanna	BEN. BURM.

Dr. Wallich describes this as growing in Tavoy, but that its wood is not used.

ARTOCARPUS, *species.*

Myauk Sook.—*Burm.*

A tree of Akyab, used in house-building. It grows to a large size, very plentiful in the province and the fruit is edible.—*Cat. Ex.* 1862.

ARTOCARPUS, *species.*

Toun-nein-nai......	BURM.	Toun-pein-nai...	BURM.

A tree of British Burmah. Its wood yellow, a cubic foot weighs lbs. 39. In a full grown tree on good soil the average length of the trunk to the first branch is 80 feet and average girth measured at 6 feet from the ground is 12 feet.—*Dr. Brandis in Cat. Ex.* 1862.

ARTOCARPUS, *species.* Trap tree, of Singapore, furnishes the gutta used as bird-lime; and the fibres of its bark are used there for fishing lines, cordage and nets.—*Royle's Fib. Pl. Cat. Exhib.* 1862.

ARTOCARPUS CHAPLASHA, *Roxb.* iii. 525.

Lesser Jack ...	ENG.	Chaplash ...	BENG.
Thorny Jack ...	„	Chaplasha ...	HIND.

This tree grows in Malabar, the eastern frontier of Bengal, Assam, Tipperah, and Chittagong, and in some places attains an immense size. Its trunk is straight, yields a valuable timber, from which the canoes of the Hence and Gomootee rivers are made. The wood is applied to various other purposes and is said by Dr. Roxburgh to be reckoned superior to every other wood, particularly valuable for work which has to be immersed in water.—*Roxb. iii.* 525. *Voigt,* 290.

ARTOCARPUS ECHINATA. *Roxb. iii.* 527.

Toung Ben. ...	BURM.	Mountain Jack ...	ENG.
„ Peing-nai.	BURM.	Taunpooni ...	MALAY.
Kanae Kya-tha...	„	Tampoine ...	„

This is a large tree (according to Roxburgh a moderate sized tree) with its leaves gashed like some species of oak. It is very common about the Balaghat and Wynaad, is found in Burmah, and, though not abundant, all over the Tenasserim and Martaban Provinces, in Amherst, Tavoy and the Mergui Archipelago, and in other places east of the Bay of Bengal—a large expanse of conntry. Its maximum girth is 5 cubits and maximum length 30 feet. The wood is not known to be used in Sonthern India, but, in Burmah, according to Dr. Mason, it is deemed a valuable timber by the natives, especially for canoes. Captain Dance however, tells us that though it floats in water when seasoned, the seasoned wood is too light and spongy for durability, and should be regarded as a useless wood. Whether these conflicting opinions be the consequence of examining trees which have grown in different localities subseqnent enquiries must determine, but the wood possibly improves by immersion in water. It is said to produce an agreably acid fruit which Roxburgh says is eaten by the natives. And Dr, Mason mentions Dr. Wallich as saying that it produces a sort of caoutchouc with which the Burmese pay their boats. But Dr. Mason imagines this to be a mistake, as the Burmese almost universally pay their boats with a substance that is produced by a bee, mixed sometimes with dammer.—*Dr. Mason. Mr. McIvor. Voigt,* 290. *Roxb. iii.* 527. *Captain Dance.*

ARTOCARPUS HETEROPHYLLA. LAM.

Syn. of Artocarpus integrifolius.

ARTOCARPUS HIRSUTA. LAM.

This large, handsome tree, well adapted for affording shade. It is indigenous in Burmah, is not found in the Northern jungles of the Bombay Presidency: sparingly in those south of the Savitri to the bounds of Sawantwarri, after which it becomes more plentiful and continues abundant all down the Western Coast of the Peninsula, attaining in Malabar, a great magnitude. Dr. Gibson says that it grows in Canara and Sunda, above, and in the ravines of the Ghats, but mostly in the Honore and Bilgy Talooks, and is there valuable for canoes and planks. It is scarcely entitled to a place in the list of Coimbatore woods, being a native of the coast, and not extending so far inland, but abounds in the forests of Malabar, whence Mr. F. N. Maltby, in 1860, estimated that ten thousand loads per annum, of this wood, for five years, could be supplied at the rate of twelve to fourteen rupees per candy. It grows on the Western, Southern and Eastern sides of Ceylon, and its timber, which is there used for fishing boats and in house building, weighs 40 to 51 lbs. the cubic foot, and is calculated to last from 25 to 70 years. The fruit (9 in. by 3 in.) is there boiled and eaten as food by the natives. It yields the Anjely-wood of commerce, esteemed a useful timber which bears exposure under water, and valuable for canoes, fishing boats, ships' frame-work and in house building, for which purposes it is largely used on the Western side of the Peninsula of India, in Malabar and Canara, and is sought after for H. M. Dockyards. Its bark is occasionally used in Canara in the preparation of a brown dye, the dye yielded by the Jack and Champada, being yellow. The fruit is the size of a large orange, and abounds in a viscid juice which flows freely from the rough rind if touched. This is manufactured into bird lime. The pulpy substance, which surrounds the seeds is much relished by the natives, being almost as good as the fruit of the Jack.—*Dr. Wight. Madras Exhibition Juries' Reports. Dr. Gibson, Dr. Mason. Mr. Jaffrey. Voigt, p.* 290. *Useful Plants, Dr. Cleghorn, in Conservator's Reports. Mr. Mendis. Roxb. iii.* 521. *Bombay Products.*

Bread-fruit tree... ENG. | Nang-ka... ... MALAY.
Rima fruit au pain... ... SONNERAT.

This tree is a native of the South Sea Islands, and has been introduced into the various parts of South Eastern Asia, into Ceylon, in some parts of the Madras territories, where it is occasionally seen in gardens, in parts of the Bombay Presidency, in some parts of the Dekhan, is cultivated in a few gardens in Tavoy and Moulmein, is extensively cultivated throughout the Malay Archipelago as also the variety, called A. communis. According to Dr. Mason, it is the true seedless bread-fruit tree cultivated in Penang, and recently introduced into Mergui, where it is said to flourish. It is of slow growth, but it attains a tolerable large size in Bombay, where however it seldom ripens, the fruit which is muricated falling off in the cold season. In the Dekhan, its fruit is of that variety which is full of seeds and of no value, is the size of a large orange, or small pumplemose with a muriated rind, but it bears well at Tavoy and Moulmein. The fruit of the useful variety, cut into slices and fried, has something of the flavour of the sweet potato, similarly dressed. Like the jack, the Artocarpus integrifolia, it bears fruit on the branches, the trunk and the root. It will grow from cuttings, and requires a light soil, with care, and watering at first. The bark stripped, and then beaten and prepared, makes a kind of cloth with which the South Sea Islanders clothe themselves. At Tahiti, clothing made of it, and worn chiefly by the common people was more common than that made from the paper mulberry, though inferior to it in softness and whiteness.—*Royle, p.* 84. *Crawfurd's Dictionary. Dr. Riddell. Dr. Mason. M. E. Juries' Reports, p.* 24. *Voigt,* 290. *Roxb. iii.* 527.

Variety a. ARTOCARPUS INCISUS. *Linn. fils.*

Rademachia incisa. *Thunb.*
Socous granosus. *Rumph.*

Bread-nut... ... ENG. | Rima au pain... SONNERAT. FR.

This is the variety alluded to above with muricated fruit full of seeds and useless for food, is that commonly seen in the South of India, and so extensively cultivated throughout the Eastern Archipelago.

Variety b. ARTOCARPUS COMMUNIS. *Forst.*

Soccus lanosus. *Rumph.*
Artocarpus incisa. *Willde.*

This is the true bread-fruit tree of Dampier, Anson, Cook and Ellis, growing in the South Sea Islands, especially Otaheite and the Moluccas, but growing also in Java, Sumatra, at Mergui, in Ceylon, at the Mauritius and Bourbon, in the W. Indies and on the Western Coast of South America. It is said to be cultivated in several parts of Peninsular India, but we have never seen it there. It is cultivated in Penang, and to have been introduced into the Tenasserim Provinces and Mergui, where it is said to flourish, but there, too, we have never seen it.

The fruit is terminal, round, not muricated, but marked with reticulations, whose areolæ are flat or but slightly prominent. It is this seedless variety, that has given the name to the tree, and in some Islands of the Pacific is much used. The Malay term Nang-ka is perhaps the Persian Nan-Khah eat-bread.

The fruit has an unpleasant smell. It is often larger than a man's head, and weighs sometimes as much as fifty pounds, is round, greenish, and covered with prominent papillæ, enclosing a white fibrous pulp, which becomes yellow, and succulent at maturity. The pulp contains much starch eat. The natives of the Polynesia Islands, before eating the unripe fruit cut it into quarters and roast it in the ashes. The ripe fruit requires no preparation. The bark when stripped and then beaten and prepared, makes a kind of cloth with which the South Sea Islanders clothe themselves. At Tahiti, clothing made of it, and worn chiefly by the common people, was more common than that made from the paper mulberry, though inferior to it in softness and whiteness.—*Crawfurd's. Dic. Riddell, Juries' Reports, M. E. page* 24. *Royle. p.* 341. *Roxb. iii.* 527. *Voigt,* 290. *Dr. Mason.*

This valuable fruit and timber tree is found more or less abundantly, all over India, growing rapidly to about 2½ feet in diameter. In the Bombay Presidency, it is met with commonly about villages, rare in the North Konkan, but most common south of the Savitri creek. It is, there, always, planted and often carefully manured, and when so treated it attains a great size. In the South Eastern and Western provinces of Ceylon, its fruit, weighing from 50 to 60 lbs. is used in various ways for food, and its timber, which weighs 42 lbs. to the cubic foot, and is esteemed to last from 25 to 80 years, is in general use for building boats and for all kinds of furniture. Colonel Frith mentions that this wood, in Travancore, is of 0·554 sp. gr. and measures 2 to 4 feet in circumference. Dr. Gibson has seen pillars of it, in the interiors of the buildings of the old forts at Severndroog, having four feet on each side. In Burmah, it occurs abundantly in Rangoon, seemingly indigenous in the forests, and in Moulmein its yellow wood is used to dye the yellow cloths that the poongyes or Burmese priests wear. It is there a large tree and affords a very dark grateful shade, and when the fruit, which is often larger than a man's head is hanging all around its branches, it is a grand object. Malcolm says it is a very common tree in South Eastern Asia, thought to be indigenous, attaining a height of 80 to 100 feet, with thick alternate and spreading branches, and very dark green leaves.

It yields an excellent and valuable timber, at first yellow when cut, but afterwards changing to various shades of brown. When made into tables and well kept, it attains a polish little inferior to mahogany in colour and appearance. It is used for musical instruments and ornamental work. It is suitable for house carpentry in general, but is a very brittle wood when dry does not bear great alternations of dryness and moisture and splits in dry situations. It is well known in England as the jack fruit tree wood, where it is used for cabinet and marquetry work, likewise for the backs of brushes. It affords an excellent fancy wood for tables, chairs, frames, &c., and the roots of the older trees furnish a dark coloured wood admirably adapted for picture frames and carving work of all kinds. The wood is also valued for grain measures. Dr. Mason says that the yellow wood of the jack affords beautiful timber for furniture, and in some parts of India it is highly valued, but this last remark does not seem applicable to the present day, though Mr. Faulkner tells us that jack-wood is imported into Bombay from the Malabar Coast, and was at one time in great request for making furniture. Of late years, however, it has been entirely superseded by blackwood for this purpose. It is imported into Britain in logs from 3 to 5 feet diameter, and also in planks; the grain is coarse and crooked, and often contains sand. The wood is yellow when first cut, but changes to a dull red or mahogany colour. It is still, however, used in parts of India for almost every purpose of house carpentry and furniture, and in England for cabinet work, marquetry, and turning, and also along with satinwood for hair brush backs. The jack-wood is sometimes named orange-wood from its colour and also jack-wood, jack and kanthul. In Cuttack the ghanna or oil mill is made from this wood and its sp. gr. is 0·750 and cost 1*s.* the cubic foot. In the South and West of Ceylon, where the trees are of rapid growth and very fruitful, it is in general use for building: beams, rafters, doors, and furniture are all made of it. It is not a common timber in the Circars, though some good trees are occasionally procurable from the hill zemindaries, resembling mahogany in colour and appearance. Marsden in his history of Sumatra, p. 96, mentions that the roots of the chapada or chapada, (*Artocarpus integrifolia*) cut into chips and boiled in water produce a yellow dye. To strengthen the tint, a little turmeric (the kungit tumma a variety of curcuma) is mixed with it, and alum to fix it; but as the yellow does not hold well, the operation of steeping and drying has to be frequently repeated.

The Fruit.

This fruit is not relished by some people owing to a peculiar strong smell that it has: others are partial to it from its luscious sweetness. Aghastier, in his work on diet, says that it is apt to increase the secretion of bile, and if frequently eaten, will produce dyspepsia. The fruit sometimes grows from that part of the trunk which is underground and by its growth bursts the soil and discovers itself. These are always accounted to be the best. The full grown fruit weighs from 30 to 60 lbs., growing direct from the branches, trunk, and roots to which it hangs by a peduncle, and only in aged trees, grows from the roots, where they are detected by the cracking of the soil. The fruit is covered with a very thick, rough green skin, has an unpleasant odour, and is full of white kernels, the size of a pullet's egg, the fleshy parts around which are eaten both green and ripe. It is not prized by Europeans, who, at most, have only tasted it, but it is said to be more relished by a continued use. Natives of India, however, highly prize the fruit, and to the natives of Burmah, where it is more abundant than any other fruit, except the plantain, it is invaluable. It is said to be very indigestible. The kernels of the ripe fruit, boiled or toasted, resemble the Spanish chesnuts in flavour to which Roxburgh says they are not inferior and when roasted are prized by the natives. The green fruit, after removing the outer rind, is used in curries, and, when ripe, the pulp and seeds are used similarly. As with all cultivated fruits, there are many varieties of the Jack. From the juice of the uneatable parts of the fruits and tender parts of the trees, a good bird lime is prepared. In Travancore, the entire fruit is planted, and when the various seeds germinate and grow up, the shoots are tied together with straw, and they unite into one stem, which bears fruit in about 6 or 7 years.—*Roxburgh iii*, 522. *Mr. Mendis Dr. Wight. This tree is occasionally grown in gardens or near houses, in Bengal, Burmah and the Tenasserim Provinces, where it is usually called a kind of fig, and two varieties of it grow in Ceylon, near Rutnapura and in the south and centre of the islands. Dr. Royle thinks it may be found to yield fibres. Its roots are used in dyeing yellow. Dr. Brandis says the wood is used for canoes, a cubic foot weighs 40 lbs. In a full grown tree on good soil the average length of the trunk to the first branch is 30 feet, and average girth measured at 6 feet from the ground is 6 feet. The whole tree and unripe ruit contain much tenacious milky juice. The fruit is prized by the Burmese, and is eaten in Bengal. The male spadix is acid and astringent, and eaten by the natives in their curries.—*Roxb. iii*, 524. *Thwaite's En. Pl. Zeyl. Voigt*, 290. *Dr. Royle. Drs. McClelland, Mason, Wight, Brandis. ARTS, MANUFACTURES AND TRADES.

There are but few arts or manufactures, in which Eastern nations excel those of Europe. Perhaps in the spinning and in the weaving and dyeing of cotton and silk stuffs, of such kinds as are suitable for the clothing that they wear and to their habits, the weavers and dyers of South Eastern Asia are not approached by any European race. In field and garden cultivation, in the economy of waters and the utilization of manures, there are several races skilled in varied degrees, though none exceed the Chinese in their acquaintance with these subjects, to their acquisition of which they are stimulated by the example of the Imperial family, the emperor annually ploughing the first field and the empress and her attendants watching the silk worms and their produce. The little permanency, since eight hundred years, of many Indian dynasties, has prevented Architecture attaining the position of which it was capable. For the past 1500 years, in general, are to be seen the result only of spasmodic efforts of hindu and mahomedan sovereigns, such as still exist at Agra, Bejapore, Aurungabad, Gogi, Kulburgah, Dowlatabad, and Hyderabad, but only in the ruins of palaces, and tombs. The hindu sovereignties of India and prior to them, the buddhist and jaina rulers were of longer duration, and the vast cave temples of Prome; Karli; Elephanta; Ellora, and Ajunta testify to the stability and power of their projectors, for some of them must have been in progress for hundreds of years, and their commencement from prior to the birth of Christ. The only Indian sovereigns who have long possessed territories are the rajput races of Rajaputanah, and the solar dynasty of Mewar have erected numerous magnificent structures in their capital. In the towns of Calcutta, Madras and Bombay, there is as yet no building under the British rule of any interest. In Ceylon, the buddhist temple of Anarajpura seems to have been erected prior to the present era. At Rangoon and at Prome are buddhist temples, grand in their colossal dimensions, but the dwelling houses and religous buildings generally in Burmah are all of wood and do not permit the display which can be attained with stone or even with brick and mortar. The architecture and ornamentation of the temples of Southern India have lately been made known by the photographic representations and descriptions of Beejapoor, Dharwar, Ahmedabad, and other cities, by Mr. Fergusson and Col. Taylor. They are by far the most interesting and complete memorials of the ancient sacerdotal and regal grandeur of Southern India which are in existence and give a striking impression of the former splendour of the ruling empires. The Dharwar sculptures are the records of Chalukya, Hoi Sala, Bellal, and other local dynasties. Some of the figures are clothed with defensive armour, and there is no trace of a sewn garment. All the men's figures have short waist cloths or dhotees, like kilts, with an end in some cases cast over the shoulder; the women are in the same costume, but both in the earlier memorial stones and on some of the profuse sculpture on the temple at Hullabeed in Mysore (Dhara Samoodra, tenth to twelfth century, A. D.), they wear bodices, tied in front, as hindu women wear them at present. Many temples in the south and west of India, as also in Guzerat and Orissa, &c., are known to belong to periods as early as A. D. 500. The groups of figures on them are numerous beyond description, the men wear head-dresses in the form of conical crowns richly covered with ornaments; their bodies are naked, and their breasts and arms show necklaces and armlets of very ornate patterns. From the loins to the knee, or middle of the thigh, they have in most instances kilts, as it were, also composed of ornaments; and many are altogether naked; both male and female, with a girdle of ornamental pattern round the loins. These figures abound among the sculptures of Ellora, and upon the hindu temples of Dharwar and Mysore of the eighth to the thirteenth century; also upon the 'Chola' temples at Conjeveram, and elsewhere, probably of the same era. In the Jain sculpture the male and female figures are invariably naked; but ornamented in general with necklaces, bracelets, armlets, and zones of exceedingly intricate and beautiful patterns, in imitation, probably, of the chased goldwork of the period. All these illustrate the early progress of India in many useful arts.

Spinning yarn for weaving is at the present day practised by all classes of women in India; even the highest, at one time, used to amuse themselves with the spinning wheel. Among the agricultural classes, the occupation is constant, or fills up time not required for other occupations. Dr. Buchanan, in one of his able statistical reports estimates the annual produce of hand-spun yarn in one district alone at thirteen lacs of rupees =£130,000. The spindle in use is not much thicker than a stout needle. It is from ten to fourteen inches in length, and attached to it near its lower point, is a ball of unbaked clay to give it weight in turning. The spinner holds it in an inclined position, with its points resting on a piece of shell, and turns it between the thumb and forefinger of one hand, while she at the same time draws out the single filaments from the roll of cotton in the other hand, and twists them into yarn upon the spindle. A certain degree of moisture, combined with a temperature of about 82 degrees, is the condition of the atmosphere, best suited to the carrying on of this operation. Dryness of the air prevents the filaments of cotton, from being sufficiently attenuated or elongated and is therefore unfavourable to the spinning of fine yarn. The Dacca spinners usually work from soon after dawn to nine or ten o'clock, and from three or four in the afternoon till half an hour before sunset. The finest yarn is spun early in the morning before the rising sun dissipates the dew on the grass; or, when this is wanting, and the air is unusually dry, it is notunfrequently made over a shallow vessel of water, the evaporation from which imparts the necessary degree of moisture to the filaments of cotton, and enables the spinner to form them into thread. As a proof of the fineness of the yarn thus delicately spun, Mr. Taylor mentions that one skein which was carefully weighed, proved to be at the rate of 250 miles in length to the pound of cotton. Dr. Watson gives the result of microscopic examinations of French, English, and Dacca muslins, in an elaborate table; and he reports that the diameter of the Dacca yarn is less than that of the finest European: that the number of filaments in each thread is considerably smaller in the Dacca than in the European yarns: that the diameter of the ultimate filaments or fibres of which the Dacca yarn consists is larger than the European: and it appears from the investigation that the superior fineness of the Dacca yarn depends solely on the fact that it contains a smaller number of filaments. These causes, combined with the ascertained result, that the number of twists in each inch of length in the Dacca yarn amounts to 110.1 and 80·7, while in the English it was only 68 8 and 56·6, not only account for the superior fineness, but also for the durability of the Dacca over the European fabric; and as already a very great advance has been made in the spinning of yarn by machinery, it may be possible, perhaps, to raise the standard of quality, both in fineness and strength, to that of Dacca. The manufacture of these very delicate muslins is, however, not confined to Dacca. At Nandair on the Godavery, and at Muktul, Dhanwarum, and Amerchinta, all towns in the Nizam of Hyderabad dominions, and Arnee, near Madras, muslins, which rival those of Dacca, are made in considerable quantities, and are sold in Madras and Hyderabad, as well as supplied to the west and south of India. In these localities, the process of spinning by the spindle is the same as that of Dacca; but as the climate is dryer, the spinners, who are both men and women, work in partially darkened rooms, the floors of which are watered to produce the necessary amount of moisture. The manner of dressing the thread, and weaving it, does not differ from the Dacca system in any great degree: and if the muslins are probably not so fine as those of Dacca, they have an advantage in superior clearness and transparency. The hand-spinning of fine thread used for Brussels lace, according to Mr. Palliser's account of it, is similarly spun by women in darkened rooms. The manufacture of muslins of such qualities as are produced at Dacca, and indeed in Europe, must necessarily be always of a very limited character, and their use confined to very rich purchasers. For the masses of the people, the English manufacturer sends to India the plain and striped dooria, mulmul, 'aghabani,' and other figured fabrics, which have established themselves there, and which, both from their good quality and moderate prices, are acceptable to the numerous classes who make use of them. Some of the chintzes of Masulipatam and of the south of India are as beautiful in design as they are chaste and elegant in colour. Printed cloths are worn occasionally, as in Berar and Bundelkhund, for sarees; and the ends and borders have peculiar local patterns. There is also a class of prints on coarse cloth, used for the skirts or petticoats of women of some of the lower classes in upper India; but the greatest need of printed cloths is for the kind of bed cover called palempore, or single quilts.

In the costlier garments woven in India, the borders and ends are entirely of gold thread and silk, the former predominating. Many of the sarees, or women's cloths, made at Benares, Pyetun, and Boorhanpoor; in Guzerat; at Narrainpett, and Dhanwarum, in the Hyderabad territory; at Yeokla in Khandesh, and in other localities, have gold thread in broad and narrow stripes alternating with silk or muslin. Gold flowers, checks, or zigzag patterns are used, the colours of the grounds being green, black, violet, crimson, purple, and grey; and in silk, black, shot with crimson or yellow, crimson, with green, blue, or white, yellow with deep crimson and blue, all producing rich, harmonious, and even gorgeous effects; but without the least appearance of or approach to glaring colour, or offence to the most critical taste. They are colours and effects which suit the dark or fair complexions of the people of the country; for an Indian lady who can afford to be choice in the selection of her wardrobe, is as particular as to what will suit her especial colour—dark or comparatively fair—as any lady of England or France.

Another exquisitely beautiful article of Indian costume for men and women is the doputta, or scarf, worn more frequently by mahommedan women than hindu, and by the latter only when they have adopted the mahommedan loonga, or petticoat; but invariably by men in dress costume. By women, this is generally passed once round the waist over the petticoat or trousers, thence across the bosom and over the left shoulder and head; by men across the chest only. The Doputta, especially those of Benares, are perhaps the most exquisitely beautiful of all the ornamental fabrics of India; and it is quite impossible to describe the effects of gold and silver thread, of the most delicate and ductile description imaginable, woven in broad, rich borders, and profusion of gold and silver flowers, or the elegance and intricacy of most of the arabesque patterns of the ribbon borders or broad stripes. How such articles are woven at all, and how they are woven with their exquisite finish and strength, fine as their quality is, in the rude handlooms of the country, it is hard to understand. All these fabrics are of the most delicate and delightful colour; the creamy white, and shades of pink, yellow, green, mauve, violet, and blue, are clear yet subdued, and always accord with the thread used, and the style of ornamentation whether in gold or silver, or both combined. Many are of more decided colours—black, scarlet, and crimson, chocolate, dark green, and madder; but whatever the colour may be, the ornamentation is chaste and suitable. For the most part. the fabrics of Benares are not intended for ordinary washing; but the dyers and scourers of India have a process by which the former colour can be discharged from the fabric, and it can then be redyed. The gold or silver work is also carefully pressed and ironed, and the piece is restored, if not to its original beauty, at least to a very wearable condition. The doputtas of Pyetun and indeed most others except Benares, are of a stronger fabric. Many of them are woven in fast colours, and the gold thread—silver is rarely used in them—is more substantial than that of Benares. On this account they are preferred in Central India and the Deccan; not only because they are ordinarily more durable, but because they bear washing or cleaning better. In point of delicate beauty, however, if not of richness, they are not comparable with the fabrics of Benares. Scarfs are in use by every one. Plain muslins, or muslins with figured fields and borders without colour; plain fields of muslin with narrow edging of coloured silk, or cotton (avoiding gold thread), and narrow ends. Such articles, called 'sela' in India, are in every day use among millions of hindus and mahommedans, men and women. They are always open-textured muslins; and the quality ranges from very ordinary yarn to that of the finest Dacca fibres.

The textures of the dhotee, saree and loonghi manufactured in Britain and sent to India, are not that required by the people; nor what they are accustomed to. They are in general too close, too much like calico in fact, which of course makes the garment hot, heavy in wear, and difficult to wash. Again, the surface becomes rough, and, as it is generally called 'fuzzy,' in use, which the native fabric remains free from. Comparatively few native women of any class or degree wear white; if they do wear it, the dress has broad borders and ends. But what all classes wear are coloured cloths; black, red, blue, occasionally orange and green, violet, and grey. All through Western, Central, and Southern India, sarees are striped and checked in an infinite variety of patterns. Narrainpett, Dhaawaram, and Muktul, in the Nizam's territories; Gudduk and Bettigerry in Dharwar; Kolapoor, Nassik, Yeola and many other manufacturing towns in the Deccan; Arnee in the south, and elsewhere send out articles of excellent texture with beautifully arranged colours and patterns, both in stripes and checks. The costly and superb fabrics of cloths of gold and silver (Kimkhab), and the classes of washing satins (Mushroo and Hemroo) even if European skill could imitate them by the hand-loom, it would be impossible to obtain the gold and silver thread unless they were imported from India. The native mode of making this thread is known, but the result achieved by the Indian workman is simply the effect of skilful and delicate manipulation. The gold and silver cloths, kimkhabs, are used for state dresses and trousers, the latter by men and women, and ladies of rank usually possess petticoats or skirts of these gorgeous fabrics. Mushroo and hemroo are not used for tunics, but for men's and women's trousers and women's skirts; as also for covering bedding and pillows; they are very strong and durable fabrics, wash well, and preserve their colour however long worn or roughly used; but they can hardly be compared with English satins, which, however, if more delicate in colour and texture, are unfitted for the purposes to which the Indian fabrics are applied. For example, a labada or dressing-gown made of scarlet mushroo in 1842, has been washed over and over again, and subjected to all kinds of rough usage; yet the satin is still unfrayed, and the colour and gloss as bright as ever. Many of the borders of loongees, dhotees, and sarees are like plain silk ribbons; in some instances corded or ribbed, in others flat.

The manufacture of Cashmir shawls is peculiar to that province. Those formerly issued from that province were exquisitely woven, with unrivalled elegance and chasteness of design, softness and finish in quality, arrangement of colours and use of dyes which the finest Paisley and French shawls do not approach. These exquisite shawls of Cashmir grow rare and rare every year, and their place has been usurped by hand embroidered fabrics of lower value, with more showy and more vulgar patterns. In the Punjab and Dehli, of late years, workmen have commenced to embroider Kashmir cloth and net with floss silk and braid, but solely for sale to Europeans, who wear them as tunics, jackets, scarfs and the like. In the hand worked Kashmir shawls as also in the Dehli work, wooden needles of hardwood are used slightly charred, with a hole in the centre of the needle to receive the yarn.

The Turning-Lathe of India.—The simplest form of the Native Turning-Lathe of India consists of two pegs or pieces of wood driven into the ground, with a short iron peg projecting from each inwardly; these constitute the centres.

When the centres get slack, the pegs, or heads of the lathe as they would be called, are driven a little firmer and further in: or should this not suffice, the pegs are pulled up and driven into fresh ground. The rest consists of a cross piece of wood with a handle like a wooden mattock or coal-rake. This is placed in front of the lathe and steadied by the foot. The work to be turned is spun backwards and forwards by a bow held in the right hand: the tool is managed with great dexterity by the left hand and foot, the rest being steadied by the right foot. The native workman is almost literally quadrumanous, and can make his feet and toes almost as serviceable as his hands and fingers. The lathe costs Rs. 2, and a native workman will turn out on this as much rough work as an Englishman will on the best foot-lathe. The tools mainly consist of short bars of steel sharpened at both ends, each end being used alternately—an old file, or anything else that will cut. They have seldom a good edge, they are set on a fineish-grained sandstone, not capable of making them very sharp.

A better variety of lathe has the two heads coupled together by a bar, and made fast by wedges: the other arrangements are the same in both. From these two, bed-posts and pieces of wood, from a quarter of an inch to eight inches in diameter are turned out. Instead of being painted, the works are lacquered on the lathe by holding on a piece of resin, coloured with some mineral paint. They give in this way, at a most insignificant price, the effect of highly polished varnished work. The lathe with one centre and chuks for turning hollow cups and fancy work, is a much more perfect and highly finished implement than the lathes of two centres. It consists of a strong platform of wood, from two to three and a half inches thick, and one by one and a half or two feet square. The heads are morticed into this: an ironpost secures the spindle end—the other works with a wooden collar and washer. The chuck is fastened on without screwing. Like the other lathes, it is worked with a bow, but the bow itself in this case is a neat and well finished implement. The tools and mode of working are the same, or nearly so, in all. In this lathe, the most beautiful ebony and ivory work is turned with singular neatness and speed; and a native would beat any European with this variety of implement: with celerity they turn off beads, spheres, balls, boxes, backgammon men, and plain chessmen,—for each of which half a dozen of turns seem to suffice.

Fish Oils of India.—The manufacture of Fish Oil is practised all along the western coast: The extreme cheapness of cocoanut, castor, and other vegetable oils, interferes with the productiveness of animal oils. The great source of supply is the shark and the skate: the livers of these are cut out, and thrown into a vat or old canoe, or other receptacle, and trodden on with the feet till the oil is expressed. It is then drawn off, and stowed away: boiling does not seem to be resorted to, as there is little or no muscular fibre, such as that of the blubber, to be got rid of, or aqueous particles to be dispelled. The amount of oil manufactured at each fishing-village will in all likelihood be found very nearly proportioned to the value of the trade in sharks' fins. The oil from the variety of skate called "Wagil" by the natives, seems to have a strong resemblance to the cod liver oil now so much in demand for medicinal uses. On the Malabar Coast, especially off Vingorla, the seas literally swarm with a variety of the sardine from which a coarse ill-smelling variety of oil, which sells for from six to twelve annas a maund, is manufactured; the natives employ it for smearing their boats.

Salt.—One of the most extensive manufactures on the Indian shores is that of Sea Salt, and, simple as the process seems, it is far from devoid of ingenuity or interest. Amongst the numerous islands which fringe the Malabar Coast, there are countless narrow, creeks and inlets, left dry at low tide, the expanse of mud then exposed being often enormous. Off the shores of Sewree the tide at springs retires nearly two miles: and this is nothing at all out of the way in the neighbourhood. When salt pans are proposed to be established, the first thing is to construct a mud embankment,—a foundation for it being selected where the water is never more than four or five feet deep. The crest of the embankment is made to surmount this by two or three feet—the base of it is generally from two to three times its height. Openings are purposely left at intervals in the principal embankments, and from these, at right angles to the main line of the wall, other embankments are run inland, parallel to each other, leaving a current between, large enough to admit of a line of salt boats running up. Immediately behind the embankments, the salt-pans are laid down. These consist of rectangular compartments, from twenty to thirty feet across, and commonly twice as long as they are broad, and from a foot to a foot and a half in depth. They are separated from each other by little mud walls, about three feet across at bottom, and two at top, more or less, according as little channels for filling the pans are meant to be run along them or not. Two, three, or four lines of pans, according to the extent of the back water, are carried along the rear of each embankment—care being taken to leave an area of land capable of being flooded by the sea betwixt the pass and the mainland, three or four times the size of the pans themselves. So soon as the monsoon is fairly over, all the fresh water that has accumulated in the pans or back water is run off, and in November or December, the sea is admitted to the back water through a sluice in the embankment. The pans are now carefully cleaned out, their floors and walls being made smooth and nice. In about a month after it has been admitted to the back water, the sea-water, now getting reduced in quantity, and increased in saltness by evaporation, is let into the pans. The first charge requires about six weeks to evaporate: subsequent charges are dried up in half the time of the first, thus diminishing as the season becomes hotter, and the brine more strong. The strength of the brine is judged of by its becoming red; in fact, a curious variety of a creature, of the volvax kind, the same as is to be found in a fossil state in the Punjaub rock-salt, and which often tinges the waters of our seashores as if stained with blood,—makes it appearance just as the salt is ready to crystallize,—often tinting the salt itself of a fine pinkish hue. When very nearly dry, the salt, which has now accumulated to the thickness of an inch or two, is raked off, the upper portion, which is beautifully white, and almost quite pure, being first taken,—the lower portion, often crystallised in pieces of half an inch cube, is taken up next, —is slightly mixed with clay, and is that generally in use. The white and bluish salt are now piled up separately in conical heaps, about sixteen feet in diameter, and ten feet high, which are preserved with a thick thatching of grass during the monsoon. The white salt is as pure as any in the world—the black salt is mixed with about one or two per cent. of clay. Both are in a great measure free of the magnesian salts and sulphates which contaminate pan-made of Britain;—everything more soluble than muriate of soda remaining behind in solution, is washed away by the rains. Salt-pans are much less efficient when new than afterwards, and they continue to improve as the ground becomes impregnated for ten or fifteen years. When the first crystallisation is unsatisfactory, as it often is, a second charge of brine is let on before the salt from the first is removed. The evaporation in the back water goes on, of course, as rapidly as in the pans themselves, and by this contrivance, which requires no care or preparation, an amount of evaporating surface three or four times that of the pans is secured: the pans themselves only require trouble or attention, the back-water requires none. The pans are drawn from three to four times every year: as the rains approach, they are abandoned for the season. The sea is seldom let in more than once or twice into the back water: were the whole available surface kept covered, double the amount of salt at present manufactured might be made. The supply, however, is so close on the heels of the demand, and the profits are so very low, that there is no reason why production should be extended. Such is the convenience of our shores for the manufacture, and so easily and so cheaply can the process of storing and carrying away be managed, that all the attempts made by Banians to bring salt from Scinde, where it is to be had in unlimited quantity ready made, have proved unremunerative. The idea, therefore, of importing salt from England into India is about as chimerical as any that ever entered the human imagination; while the abuse heaped on the quality of the salt used in India is as undeserved as may be. The upper salt is scarcely surpassed in purity by the finest the Cheshire mines send forth: while the black salt contains as much of the pure muriate of soda as does the common pan-made salt of Britain. The matter which contaminates the former is conspicuous, and looks very dirty, but then it is perfectly harmless: the subtle contaminents of the latter are eminently mischievous, though invisible. An adult native of Britain, is supposed to consume at an average of from fifteen to twenty pounds of salt annually, so that he will in this way swallow some three ounces of mud a year: it will be a long time before the peck of dirt every one is said to have destined for him in the course of his lifetime, be at this rate consumed: in India, numbers of people eat pounds' weight of clay by choice! See Salt Sup. C. of I.

Cements.—The chief cement is lime in its various forms: the only Indian building stones, which differ materially from those of the rest of the world, are laterite, concrete and kunkur; and of each of these a short notice may interest. These rocks are either unknown in the other quarters of the world, or have not hitherto been described by geologists. Kunkur is a limestone mostly nodular—always fresh water and recent,—in most cases in the act of being formed under our eyes. It is sometimes found in thick stratified beds like the travertine near Rome, and seems in this case to have been formed by calcareous springs: more generally it is met with in clay or alluvial soil, in the shape of small pieces from the size of pease or filberts to that of the hand. In the blue clay which stretches along all the western shores, it is found in vast abundance, generally assuming the most fantastic forms—indeed it abounds in every rice-field and open soil all over the country. The more recent varieties seem to be formed by the agency of the rains: when the earth abounds with vegetation, the tepid waters are charged with fixed air and dissolve the lime prevailing in the soil everywhere around,—the mineral being again thrown down as the advancing season dispels the excess of gas. It in this state absorbs the clayey matter around, and cements it into kunkur. This is collected by the lime-burner, placed with firewood in small-sized conical kilns, and burnt in the usual way. It contains 72 of carbonate of lime, 15 of sand, and 11 of clay and oxide of iron. Mixed with half its weight of river sand, it makes an excellent mortar: burnt in pieces of a cubic inch or so in size, and then powdered without slaking, it forms a first rate water cement, setting in a few minutes, and becoming as hard as stone. At Poona the finer varieties of kunkur are burnt with charcoal all throughout the city, in neat pigmy looking kilns 2½ feet high and about as much in diameter at the base. These hold about a cubic foot of material, or about 36lbs. of charcoal and kunkur in equal parts. When burnt, it is slaked and then made up into bricks, which are sold in the bazaar for the purpose of whitewashing.

The finer kinds of lime and cement on the western coast are made from shells, brought chiefly from Rutnagherry. The process of burning is a peculiar one. A piece of ground about ten feet square is laid down even and floored over with clay: an upright pole is placed at each end of this, and a sheet stretched out with back stays spread between the poles, which are steadied with strings. On the floor a bed of shells and rice-chaff alternately, about ten inches thick and eight feet by six, is spread neatly out. Some firewood is placed along the windward side of this, and when the sea-breeze sets in the wood is kindled. As the heat extends to leeward, and the shells become calcined, the limeburners draw off the fore part of them with a stick, and so soon as they have cooled on the floor sufficiently to allow them to be handled, they are placed in a scoop basket and the dirt and epidermis winnowed from them. The shells, now white and pearly, are next thrown into a small sized vat partially filled with water: here they for some time boil from the effects of the heat and slaking. The whole in a short time settles down into a fine semi-fluid mass, which is taken out and slightly dried, and is now ready for use.—See Cement C. of I.

Building Stones.—Laterite rock, a clay iron ore, seems peculiar to India. It covers the western coast almost continuously, and for the most part up to the very foot of the ghauts, and from close to Bombay to Ceylon. It is found in detached beds along the Coromandel coast, near Madras and Nellore, Rajahmundry and Samulcottah, extending into Cuttack. It caps the loftiest summits of the eastern and western ghauts, and some of the isolated peaks in the table land in the interior. It occurs in the Southern Mahratta Country, Mysore, Salem, Coimbatore, South Arcot, the Carnatic, and Tanjore: it is found in Berar, near Oomraoti, a great extent near Beder, in Malwa, and in many parts of Bengal and Ceylon. It fringes the shores of Burmah, Malacca, and Siam, and appears on the coast of Sumatra. It is found in boulders and rolled masses all along the Malabar Coast from Bombay north to Gogo in the Gulf of Cambay, beyond the region of the formation itself. Pieces of it have been met with three hundred feet under the surface, in the blue clay-beds at Calcutta, as also in similar beds of lesser thickness in Bombay, and close by Cambay and Kurrachee: so that the formation at one time was probably much more extensive than at present. Its colour is of a red irony or brick-dust hue, sometimes deepened into dark red. It is marked with whitish stains, and is occasionally cellular or perforated with tubiform holes. It rarely if ever contains either crystals or organic remains, is never stratified or columnar, and generally spreads out in vast sheets on the surface of the plutonic or volcanic rocks. When the upper surface is cleared away, the rock below is found soft and easily cut into blocks of any form. It quickly hardens and darkens in hue by exposure to the air, and is not at all liable to decomposition or injury from the weather. The Arcade Inquisition at Goa is built of it, St. Mary's Church, Madras, and also the old fortress of Malacca. Newbold.—(*Asiatic Soc. Transactions.*)

A curious variety of trap-tuffa, sometimes white sometimes greenish or purple, is found in Bombay and many other parts of India, resembles laterite in the quality of being easily cut when raised, afterwards hardening on exposure to the air. It is used as a building-stone, and suits well for basins, troughs, and aqueducts: it is not very extensively employed.

Littoral-concrete is a variety of rock which has not hitherto found a specific place in the geological catalogues: the name has been conferred on it from its being invariably found close by the sea-shore, and from its resemblance to the artificial stone formed by the cementation of sand, gravel, or other coarse material, by lime-water or mortar. It is composed of the material prevailing on our shores—of shells, sand, gravel, and pebbles, and varies in its character, with the rocks in the neighbourhood,—being micaceous towards Cochin and Tellicherry, from the quantity of sand and other nodules from the granite and gneiss; gravelly to thenorth of Bombay, and around it, composed almost entirely of fragments of shells. Sir Erskine Perry states that this strange variety of rock is to be found all along the Himalayas, and prevails extensively in Southern India. We have not observed it mentioned by any of our geologists, but have no doubt of the correctness of the statement of the Chief Justice. It is to be met [illegible] regions where rains abound. Along the [illegible] of Scinde, Arabia, and the Red Sea, though the material composing it is abundant in a position similar to that in which it exists on the Malabar

Coast, it is nowhere cemented into stone. Even here, indeed, the cementation is far from invariable: in one part of the esplanade we have loose sand on the surface, and concrete beneath: at another, sand or concrete as the case may be, from the surface throughout to the rock: and in a recent excavation, concrete was found for the first twenty feet, resting on a bed of fine sand perfectly loose. It is frequently found to rest—as, for example, at Sewree and Mahim—on a bed of blue clay filled with kunkur and mangrove roots, offering evidence of a depression from the time the mangroves grew at high-water mark, so as to permit the gravel deposit to accumulate. The whole must then have been raised by a second upheaval to its present level. The principal quarries of these are at Versova, about twenty miles to the north of Bombay, where the shore is sheltered by a vast dyke of basalt formerly submerged.

The sand, which seldom extends more than a few inches down, is first removed, and the rock is smoothed on the surface. A space about twelve feet each way is next divided into slabs one foot square,—the grooves between them being cut with a light flat-pointed single bladed pick. These are raised successively by a tool something between an adze and a mattock, a single stroke of which is in general sufficient for the detachment of each from its bed. The blocks thus cut out and raised being thrown aside, the bed is once more smoothed, and the operation resumed till the pit reaches the depth of six or eight feet, when, it being no longer convenient to remove the stones by hand or basket, a new pit is cut. This variety of building material is brought in vast quantities to Bombay where a large portion of the native houses are built of it. It is not very strong, but with the admirable cement employed with a lavish hand, it makes a good and economical wall.

Tools—The Native sledge-hammer employed in breaking trap, granite, limestone, and the other numberless varieties of rock is one of the most efficient tools that can be made use of. Its handle is generally of male bamboo about two feet long: its head is something like that of an ill-shapen axe—thick all long. It weighs about eighteen pounds. In the face or striking portion is a bluntish wedge of steel, fastened in with a piece of leather. With this the native quarryman will break up the most obdurate trap into slabs or blocks of almost any size or form, from a pavement flag three inches thick and two feet square, to a block two feet cube. He looks narrowly at the grain of the stone, and then with a series of blows, of no great force apparently, literally cleaves the stone, which falls in pieces apparently without effort. Similar varieties of this, of exactly the same pattern, are used as hand-hammers—they are called Sootkees.

The blasting, or rather the boring tool, or jumper, is a plain round rod of iron, about three feet long, pointed at both ends with steel. No hammer is ever employed in boring: the jumper is raised and struck in with both hands, and a man will penetrate some inch or two in an hour. Stones are usually paid for to the quarry owners at so much for each jumper at work.

The native punch is a short dumpy lancet pointed tool—it is sharpened by being turned point up, and struck with a piece of flint. When used in stone-dressing, it is held in the left hand, and struck with a hollow-faced iron hammer, the cavity being about an inch in depth and as much in diameter.

In the Deccan the most massy structures are raised, and carved from trap, with a delicacy and correctness quite astonishing. The vaults and domes of tombs and temples are commonly bolted with iron from top to bottom, and in many cases, instead of scaffolding, the structure is surrounded with a rough wall ten or twenty feet off, the interval between being filled up with earth: a long inclined plane serves for raising the stones. A magnificent structure of this sort, the tomb of one of the Gwalior princes, stood half finished near Poona for some thirty years; and here native architecture may be seen in perfection in all stages of advancement. The only building materials at the Bombay presidency, beside that already described, consist of greenstone, trap, and a fine grained variety of nummulite like Bath Oolite,—called, from the name of the place whence it comes, Porebunder stone. Bricks are largely used, all over India, laterite, clay and stone and slabs of coral rock in the Mauritius. In many parts of Bengal, wattle-work is in use.

Since the Indian rail roads commenced, with their great spanning bridges, the rocks of all their neighbourhoods have been largely utilized and buildings formed of the green stones, granites, lime-stones and sandstones are every where to be seen. Throughout the great volcanic district of the Dekhan, the various kinds of greenstone are largely used. Amongst the blue slate formation, along the vallies of the Kistnah and Tumbudra, and the compact limestone formation on each side of these rivers, houses have ever been formed from these materials, but the favourite rock for ornamental purposes in the buddhist and hindu temples of peninsular India is the dark greenstone, often, from its polish being called black marble. The buddhist caves of Ellora, and the smaller caves at Mominabad and Adjunta are excavated out of the green stone and greenstone amygdaloid, at Ellora about twenty in number, in the face of the mountains, almost scarped as it falls into the valley of the Godavery. About a similar number at Adjunta in a ravine near the scarped ghats over Khandesh. Those on the right bank of the Irawady near Prome look on the river.. Large quantities of a whitish yellow sandstone are now brought into Bombay. In Madras and Calcutta, and in India generally, brick is the ordinary building material. In the whole of Burmah and the Tenasserim provinces, the houses are built of wooden planks with shinghed roofs.

Lapidary Operations.—The inferior gems, most abundant and familiar are—the agates, onyxes, cornelians, and bloodstones, of the Raj-Peeplá range, and Cambay cornelians as they are called from the place where they are mostly cut, and from which they are almost wholly brought to Bombay.

The cornelian in the Raj Peepla range is found in a bed of blue clay—the detritus, propably, of the adjoining rocks. Shafts are pierced in this to the depth of from thirty to thirty-five feet, and horizontal galleries run in any direction that suits the fancy of the miner: they are distributed promiscuously, and do not appear to lie in veins or lodes. The galleries seldom exceed a hündred yards in length,—they often run into those of other mines: they are generally five feet in height, and four across. To each mine there are thirteen men attached—they work by turns. Each man must send up so many basket full of earth and stones before he is relieved. The stones are collected in baskets and drawn up by a rope run over a roller or pulley. A group of people await them at the mouth of the shaft, and examine them one after another by chipping each on a piece of stone: the compact and fine-grained are the best, and the blacker the hue is at first the redder it becomes after being burnt. There were in 1832 about one thousand miners employed: and each man carried home with him a basket of stones every evening. They were spread out on the ground, and for a whole year turned over every four or five days to the sun: the longer they are exposed the richer become their tints. In the month of May they are burnt. The operation is effected by placing the stones in black earthen pots or chatties. The pots are placed mouth under, a hole being pierced in the bottom of each; over this is put a piece of broken pot. The pots are arranged in single rows: sheep's dung is the only fuel found to answer: the fire is always lighted at sunset and allowed to burn till sunrise. If any white spots appear on the surface of the pot, the burning is reckoned incomplete, and the fire, continued some time longer. On being removed the stones that have flaws are thrown aside as useless: those not sufficiently burnt are kept for next year's burning, and the remainder are sold for exportation.

Nearly the whole of the stones are cut at Cambay—the greater part of them are made into beads. In the process: the stones are first broken up into pieces of suitable size for the end they are desired to serve. An iron spike is stuck into the ground, point upwards: the stone is placed on this and chipped with a hammer till nearly rounded; it is then passed on to the polisher, who seizes it in a pair of wooden clams and rubs it against a piece of sandstone placed in an inclined plane before him, turning it round from time to time till it assumes a globular form. It is then passed on to the borer and polisher a hole is drilled in it with diamond dust, and the beads are finally polished by being put in a bag with some fine emery and rubbed against each other. An excellent paper on Cambay stones by Captain Fulljames is in the Transactions of the Bombay Geographical Society for 1839. The stones for other uses are sawn or ground down: and for this the native lapidary's tools, are simple and efficient. The wheel consists of a strong wooden platform sixteen inches by six, and three inches thick. In this are two strong wooden uprights. Between these is a wooden roller eight inches long and three in diameter, fastened into a head at the one end. This works on an iron spindle or axle at each end. On the one end the axle is screwed and fitted with a nut, by which the saw or grinding wheel can be made fast. The saw consists of a thin plate of iron,—the cutting material consisting of native emery or ground corundum—koorund as it is called. The lap wheels consist of two circular discs or cakes of lac with ground koorund, coarse or fine according to the work—of a copper disc for polishing, and a wooden one for finishing the work. These are spun backwards and forwards by a bow, the string of which passes round the roller. The lapidary sits on his hams, steadying the wheel with his foot and holding on the stone with his left hand while he works the bow with his right. For very fine work a small sized wheel similar to the British lapidary's wheel, but of smaller size, is used. It is driven by a multiplying wheel, strap and pulley. The Custom-house returns, give the value of the traffic in Cambay stones, at an average betwixt £10,000 and £12,000 annually,—one per cent. of the stones finding their way to Europe.

Cornelians—exports of—value :—

Total Rs...	93,478	88,849

The chief articles into which they are wrought are paper-weights, knife-handles, miniature-sized cups and saucers, tables for snuff-boxes, sets of brooches, necklaces, and bracelets, pins, buttons, and studs. A field gun, with all its appointments, is one of the finest ornamental pieces of Cambay stone work—they sell for from Rs. 40 to Rs. 50. The polish of Cambay stones is not such as pleases the eye of the British lapidary—yet were they sent home in their roughly finished state, they are so cheap that they might be expected to become a considerable article of commerce. They might be built up into mosaics for work tables, into chess-boards, and other elegant articles of furniture—the chief part of the work being performed here, where labour is cheap, the final finish being given at home. The Cambay agates equal the finest "Scottish Pebbles" in beauty; they generally exceed them in size, and may be had for a mere fraction of the price.

Stone-Cutting.—The seal engravers tools. The wheel consists of a slight frame ballasted below to keep it firm, with two uprights about eighteen inches in length and eight inches between. Betwixt the two is a small spindle. This turns at the one end on a screw or pivot; sometimes of cornelian: the shoulder is kept in its place by a neat iron clamp—it is steadied by a piece of rag wrapped round it and enclosed in the collar. Why so much pains should be taken to diminish friction by a cornelian pin at one end, while it was increased by this at the other, we cannot explain. A dozen or two spindles such as this are made use of. The spindle is terminated by a small spike of iron of about an inch long, ending in a little circular saw or button, from a tenth up to half an inch in diameter. To this, emery paste—that is, powdered corundum mixed with oil—is from time to time applied, while it is spun round with a bow. The engraver holds the seal up betwixt his fingers and thumb, and a sweep or two of the bow causes a mark on the seal. This is deepened and extended as desired—the larger discs being employed for long straight strokes. The work turned out is by no means very fine, but the celerity of execution is surpassing. Diamond dust is very rarely used in India,—corundum, koorund, or samda stone as it is called, being the chief material employed in polishing gems, marbels, and metals. This mineral is found chiefly in granite or the detritus of granite rocks in the Mysore country and in the neighbourhood of the south-western ghauts. It is brought in considerable quantity to Bombay, and is occasionally exported to Europe. It is packed in orange-shaped parcels with meridional cordings: the pieces are from the size of filberts to that of the hand: they are generally amorphous or fragments of crystals, often contaminated with felspar, mica, and other granitic minerals. Sometimes fragments of crystals perfectly pure are to be met with weighing from ten to twenty-five pounds, but these are rare. Though excessively hard, it is by no means tough—it flies in pieces after a few strokes of the hammer, and is easily pulverized in a mortar. The natives generally beat it on an anvil or stone, keeping it from flying about by a collar or cotton rope. The fine particles are separated from the coarse by sifting—we are not aware that the home process of lixiviation is resorted to. For sharpening swords or burnishing metal it is generally used like a whetstone or burnisher; for polishing gems, it is either made up into a cake with lac or into a paste with oil or grease. It is never employed for a manufacture of emery paper or anything resembling it. For polishing marble or other stone it is used in two forms: the first of these is a cake of about eight inches long, three across, and two deep. This is used by an individual in the hand. For heavier purposes, a cake a foot square or so is employed, placed in a frame. Two men work at this, and the reducing process is very rapidly accomplished by it: it is in fact a file with a lac body and corundum teeth. The diamonds seen in such abundance amongst native gentry are almost all cut in England, and the principal gems used in India are the lapis lazuli, rubies, emeralds, opals, garnets, and the whole family of siliceous gems.

Potstone—Is found in various parts on the western coast of India : it is chiefly prevalent at Turreva Carey in the Madras presidency, and in the ghaut country from betwixt the Phoonda and Ram Ghauts. It is called Bellapum by the natives : it was known to the Romans, and is described by Pliny as used in the manufacture of vessels for culinary purposes—hence its name. The mineral possesses a glistening pearly lustre and greyish tint : it contains 49 per cent. of silica, 30 of magnesia, and 6 of alumina. The stone is prepared for use by reducing it to something like the form, size, and shape desired, by a cleaver, a paued hammer, or strong knife. When a cavity is meant to be circular, it is bored out by being held against the working spindle of a single-centred native lathe. This enables them to be held on by the chuck, when they are chucked and finished in the lath in the ordinary way. Potstone speedily hardens and darkens by exposure to the air: it absorbs grease, oil, or fatty matter, freely : it is stronger than ordinary earthen-ware, stands heat better, and is pretty extensively used for culinary purposes. That sold in the Bombay bazar is mostly brought from Goa.

Shark-fishing at Kurrachee.—There are many large boats, with crews of twelve men each, constantly employed in the shark-fishery at Kurrachee. The value of the fins sent to Bombay varies from Rs. 13,000 to Rs. 18,000 a year. Of this a portion only passes directly into the hands of the fishermen, each boat earning perhaps Rs. 1,000 annually, or Rs. 100 for each man. From this falls to be deducted the cost of material and other charges. Shark-fins sell in China at about $32 per picul, or £6 per cwt. In the market of Macassar the ordinary price is from $15 to $16, or from £2-10s. to £3 per cwt. This trade, was noticed by Dr. Royle (on the Production of Isinglass.—London, 1842,) in 1842. It affords on some occasions to Bombay alone as much as four lacs of rupees—£40,000—taking fish-maws and shark-fins together,—and furnishes the chief means of support to at least three thousand fishermen or, including their families, to probabaly not less than fifteen thousand human beings. One boat will sometimes capture at a draught as many as a hundred sharks of different sizes : sometimes they will be a week, sometimes a month, without securing a single fish. The fishermen are very averse to revealing the amount of their captures : enquiries of this sort are supposed by them to be made exclusively for the purpose of taxation. The great basking shark, or mhor, is always harpooned : it is found floating or asleep near the surface of the water, and is then struck with a harpoon eight feet long. The fish once struck is allowed to run till tired, and is then pulled in and beaten with clubs till stunned. A large hook is now hooked into its eyes or nostrils, or wherever it can be got most easily attached,—and by this the shark is towed inshore : several boats are requisite for towing. The mhor is often forty, sometimes sixty, feet in length ; the mouth is occasionally four feet wide. All other varieties of shark are caught in nets in something like the way in which herrings are caught in Britain. The net is made of strong English whipcord, the mesh about six inches : they are generally six feet wide, and are from six to eight hundred fathoms,—from three quarters to nearly a mile, in length. On the one side are floats of wood, about four feet in length, at intervals of six feet ; on the other, pieces of stone. The nets are sunk in deep water from eighty to one hundred and fifty feet, well out at sea : they are put in one day and taken out the next, so that they are down two or three times a week, according to the state of the weather and success of the fishing. The lesser sharks are occasionally found dead,—the larger ones much exhausted. On being taken home, the fins are cut off and dried on the sands in the sun : the flesh is cut up in long stripes and salted for food, and the liver is taken out and crushed down for oil. The head, backbone, and entrails, are left on the shore to rot, or thrown into the sea, where numberless little sharks are generally on the watch to eat up the remains of their kindred. The fishermen themselves are only concerned in the capture of the sharks : so soon as they are landed they are purchased by Banias, on whose account all the other operations are performed. The Banias collect them in large quantities, and transmit them to agents in Bombay, by whom they are sold for shipment to China. Not only are the fins of all the ordinary varieties of sharp prepared for the market, but those also of the sawfish, of the cat-fish, and some of varieties of ray or skate—the latter, indeed, merges almost insensibly into the form of the shark. The cat-fish, known in India by the same name as in Britain, has a head very like that of its European congener, from which it differs in all other respects most remarkably. Its skin is of a tawny yellowish brown, shading from dark brown on the back to dirty yellow on the belly : it is beautifully covered all over with spots, of the shape and size of those of the leopard, similarly arranged. The value of sharks' fins annually exportde from Bombay amounts to betwixt a lakh and a half and two lakhs of rupees : the largest fishery at any given port is probably that of Kurrachee, which affords nearly one-tenth of the whole, but the shark-fishery is conducted all along coast coast. The fishermen along these coasts are divided into four great castes, over each of which a head man or jemadar presides. 1, Wayttce ; 2, Son-kolie ; 3, Don-gur-kolie; 4, Thankur-kolie. One great jemadar, or chief, rules supreme in the craft over all the fisher castes.—(*Bombay Monthly Times, from* 11*th to* 24*th May* 1850.)

Bombay Fisheries.—The Bombay fishing boat is one of the swiftest and most elegant sea-going vessels of that Coast. A complete set of models of the native vessels plying on the coast, at an estimated price of Rs. 15 each, or about Rs. 1000 in all, was sent to the Exhibition of 1851, The mode of building is, precisely the reverse of that pursued by Europeans who begin with drawing the lines, then lay down the keel, ribs, and frame, and finally apply the planking. In India drawn lines are dispensed with altogether:—having laid down the keel the Indian Shipbuilders fasten on the planking, leaving the ribs and frame to the last. The keel having been laid, and the stem and stern-posts put in their places, they are fashioned in both sides with a grove. The lower edge of the plank next laid is made to conform in shape to this. The under grove is smeared over with red ochre and water, and the edge of the plank that follows tried on from time to time till it takes a tinge everywhere, showing with what exactness it coincides. It is then steeped in water and bent over a fire of wood into the proper shape and applied to its place. When all is ready, the channel in the lower plank is filled up with cotton and tar. The two planks are now sewed together in the following manner; a pair of holes are bored in the upper and a corresponding pair in the lower plank, all along at intervals of a foot or two, according to the nature of the lines; a strong coir string is laced through this in the form of the letter X, the knot being inside. A stout wedge of wood is next driven through the strings outside, so as to bring the planks perfectly in contact. The planks being put sufficiently in their places, when gunwale high is attained, the timbers are put in; when the planks have been nailed to them, the sewing holes are filled up either with nails when opposite a timber, or with wooden pins. The Bombay fishing-boats can beat the best of the English yachts; the masts rake forward instead of back—the keel is hollow in the middle and not so long as the stern-post,—the forepart of the boat sharp, with hollow lines, the stern plump and round. There are three great fishing villages in Bombay,—Worlee, Sewree, and Mahim, At Worlee there was, in 1850, one pattimar, worth about Rupees 3,000, employed in carrying cargo and in general business. There are 110 fishing-boats, worth about Rs. 350 each, and 45 canoes, worth from Rs. 40 to Rs. 60 each. At Sewree there are five large boats, worth about Rs. 1,000 each, employed in carrying bricks and tiles from Salsette to Bombay; one pattimar, worth about Rs. 3,000, employed in general trade; 25 fishing-boats, worth about Rs. 350 each; and 50 canoes. There are, besides, some 20 middling-sized boats, used in the transport of chunam and of black sand from Bellapore for building and other purposes. At Mahim and in the creek on to Sion there are 7 fishing boats, 10 large chunam boats, 10 small, together with 25 canoes. The fishermen of Small Colaba own no more than 16 fishing-boats and 8 canoes. A pattimar employs from 15 to 20 men, a fishing-boat from 10 to 15, a canoe from 3 to 4. Canoes are chiefly employed in the coast-fishing and attending the men on the mud banks, and in landing cargo when there is no depth of water sufficient for larger vessels. They are hollowed out of a single log, and are very serviceable handsome-looking well-finished craft. They are impelled either by paddles or sails: when the latter are employed, an outrigger is resorted to: they will bear a surprising stretch of canvas, and make their way rapidly through the water.

* * * *

Hooks and lines are scarcely ever used on the western shores,—nets of various forms and sizes being alone almost employed in catching fish. The most important and extensively practised variety is the stake-net fishing,—and stakes are often to be found thirty and forty miles out at sea—wherever, indeed, a bank within half a day's sail of land presents itself: the fishermen are quite enterprising enough to extend their operations to any distance, but there is no use in their going further off than they can return with their fish to the market fresh. The fishing stakes vary from 50 to 150 feet in length: they are built up in the following manner of successive pieces of wood,—the lower being frequently the long straight trunk of the cocoanut or palmyra tree. As many as five or six pieces of wood, from eight to ten inches in diameter, are used in the construction of a single stake. They are scarfed across each other, the scarfing being from three to five feet: the pieces are fastened together by strong rectangular fillets of wood.—Two or three boats are employed in towing the stake out to sea. Its point is made wedge-shaped—there is a hole near the point of the wedge, through which a rope is passed. The two ends of the rope are made fast to boats anchored at a considerable distance off: other boats now proceed and haul up the upper end of the stake till the point is found to descend by its own weight. When it has at once caught hold of the mud the rope is released from its lower end, and the boats to which it was attached employed in steadying the top in the direction of the run of the tide. At high water two boats are made fast, one on each side, to the top of the stake, which is forced by their weight ten or twelve feet into the mud. Stakes are thus put in successively, often to the extent of some miles at intervals of twenty feet from each other. Betwixt each pair is extended a long purse-net, the circumference of the mouth of which is about sixty feet, so that when attached to the stakes it exhibits an aperture twenty feet across, and ten feet perpendicularly—the upper edge being a little above high water. The purse is from 100 to 170 feet in length, terminating in a point. The meshes gradually diminish in size from the mouth to the further extremity being about six inches at the former, and three-fourths of an inch at the latter. The fish are carried into this by the tide, and entrapped—boats are always in waiting at high and low water, to secure the capture and reverse the nets. In the creeks and shoals lines of stakes and nets, often several miles in length, are run along where the sludge is exposed at low water. The upper edge of these is considerably under high water mark, and the fish are in consequence entrapped by them on the retirement of the tide : breaks are left at intervals to secure their admission. Close along shore, fishing grounds, about half an acre in area or so, and in a semi-circular form, are built. An aperture is left in the extremity of each of these, into which a net is placed as the tide begins to recede, and a considerable capture of the lesser sized fish secured. Such are the fixed implements of the fisherman : the most frequent of the moveable implements is a conical net, of which the lower lip is loaded with pieces of lead and turned up inwards. The material of which it is made is fine twine, and the meshes small. It is from eight to twelve feet in diameter, and is only used in shore. The fisherman holds it by the top, while he gives it a quick twirl, something betwixt that given to the American lasso and common quoit. Throwing it to the distance of some yards, it spreads fully out as it reaches the water—when pulled down and collapsing by means of the lead, it closes at the mouth as it approaches the bottom. The fisherman now approaches and pulls it up by the apex, when the fish are found entrapped in it. Though this net sometimes attains a weight of sixty pounds, the dexterity with which it is thrown is wonderful. There are various spoon and purse nets of different shapes and sizes, and a bag of muslin on a hoop about three feet in diameter, this last being employed to catch the young prawns, and smallest sized fish, that would escape through any mesh however fine. There is also a long trail-net, with which the fishermen wade neck deep through the water, but the mode of using it does not appear to be in any way peculiar or interesting. The mud banks and shoals in the creeks abound in eels, sometimes reaching the length of two or three feet. The fishermen wade through the mud till they detect these by the bubbling up or disturbance of the water. They then strike them with a harpoon or spear and about two inches each way, with a fine bamboo shaft eight or ten feet in length. Having pinned them against the ground they draw them out with a hook about the same size as the spear, also on a shaft. They are very dexterous in catching the little fish or crabs which lurk under the stones close by the shore, with their hands without the use of any instruments at all : the crabs when caught are immediately stripped of their claws, and so prevented from getting away. Of these there are a wonderful variety on the shores, many of them of the greatest beauty. The fisherman's mooring anchor is generally of stone, from four to five feet in length, four-sided and pyramidal—the apex cut off. At base it is from six to eight inches square, and from four to six at top. Through the top is a hole, through which a cable or hawser passes. Near the base are two holes at right angles to each other ; through these, pieces of wood are thrust corresponding to the prongs or flukes of the anchor. The whole weighs from 80 to 150 lbs., according to the size of the vessel, and answers very well the purposes intended. These anchors are most commonly made of limestone, and are on the whole most suitable.

The fishermen are a strong-made race of men, and are the only labourers in India amongst whom a great degree of obesity is observed,—every fourth or fifth fisherman to be met with being more less corpulent—some of them very much so indeed. They are much given to the use of intoxicating drinks, and are often to be met with in a state of inebriety. They regulate their affairs very much after the manner in which they are regulated by those of kindred professions in other parts of the world. A set of boats and nets belong to a dozen of fishermen, one often advancing the capital required to be contributed by the others ; the capture is divided amongst them on their reaching the shore, and is immediately taken charge of and carried to market by the women, who carry their baskets, not, as in Britain, on their backs, but on their heads. The men when so employed carry theirs in baskets swung at the opposite ends of a bamboo across the shoulders. The women who carry the fish to market are commonly followed by ten or a dozen crows, who constantly watch for anything that may escape, every now and then making a dash at the basket itself.

The mode of making ropes and nets is singularly simple : coir is the material used for the former, cotton or hemp for the latter. One man sits on the ground and lets out the yarn ; another retires half bent, and spins it by means of a spindle,—the yarn being passed through a wooden hoop hung round his neck. He gives the spindle a jerk betwixt the palms of his hands, and keeps its motion up at a very considerable degree of speed indeed. When several piles of fine yarn are to be twisted together, a man with a spindle is placed at the end of each. The whole series are supported at intervals by frames of bamboo: a spinner at the further extremity twists all the strands into one, while a light piece of board is being passed along where the cords are meant to be hard plaited and strong, to keep them from running too rapidly together. In the case of ropes, after the single strands are laid together, the rope is made up by men twisting the larger strands by a stout piece of wood,—a much stronger and longer piece being used for the entire rope, a man sitting by a board with holes through which the several strands pass, to see that all go properly together. To see forty or fifty fine powerful men busily employed in the evening in sewing a cord betwixt each of the cloths of a sail—the sails of a pattimar being often from seventy to ninety feet wide,—with the accompaniments of swarthy dames and children,—boats of the most picturesque forms,—palm trees or an old Mahratta fort in the distance, and fishing tackle every where around,—is frequently highly picturesque; the sight being much more pleasing than the smells which accompany the scene.

The great Irawady river and the seas in which the Mergui and Eastern Archipelagos are enclosed, abound in fish, and the Malays shoot their great skate nettings far into the ocean. The wealth of these eastern rivers and seas is boundless, and we have seen a single Burman in a small canoe, in an hour in the morning capture seventy fish, each between one and two feet long.

Bombay or Mooltan Work.—The inlaid work of ivory, white and dyed, ebony or other coloured woods, for which Bombay has long been famous, is said to have been introduced from the Punjaub, and is still familiarly known as Mooltan work. It consists chiefly of paper-cutters, work-boxes, writing-desks, and other similar articles. The effect of a large mass of it is very poor—the pattern is too fine for being distinguishable, and it fills the eye with a general greyish tint: in articles which do not present more than a foot or two of surface, it is very pleasing. The ground of the inlaid pattern is generally scented cedar or sandalwood, the joinery exhibited in which is very indifferent. The inlaying material is prepared as follows; the wood or ivory is cut into slips of a lozenge or triangular section as may be required—by a long thin-bladed fine-toothed saw. The tin is drawn through betwixt a pair of grooved rollers like those used for laminating or extending iron—they work together by teeth at the extremity: one or two draws through extend the metal into the length desired. The wires and splints are nearly all either lozenge-shaped or triangular, the triangles being equilateral, the lozenges composed of two equilateral triangles. A pattern being fixed on, the splints are built up into pieces, about eighteen inches long, and from a quarter to two inches in thickness, firmly glued together. In the case of borders, or continuous pieces of work, the rods are glued together betwixt pieces of ivory or wood and ivory, alternately, so as to form straight lines on each side of the pattern. When about to be used they are sawn across, the thickness of a sixpence, and arranged in a box divided into compartments, something like a printer's *case*. They are then picked up in succession, and applied with glue to the box or other article to be inlaid. The following is a list of the prices of some of the most common articles to be met with in the bazar:—

Work Boxes, of sizes, from ...	Rs.	8 to 80
Writing Desks of do. from ...	„	15 to 60
Portfolios, of do. from	„	10 to 20
Watch Stands, from...	„	8 to 10
Do. Cases, from..	„	4 to 6
Envelope Cases, from	„	15 to 25
Baskets, of sizes, from	„	6 to 25
Cheroot Cases, from	„	3 to 4
Card Cases, of sizes, from ...	„	2 to 5
Paper Weights, from	„	3 to 4
Paper Cutters, from...	„	[illegible]
Baskets, open work, from ...	„	12 to 15
Table Trays, from	„	10 to 15
Pin Cushions, from	„	3 to 4
Ink Stands, from	„	10 to 15
Jewel Boxes, of Sandal Wood, from	„	20 to 50
Paper Stands, of Sandal Wood, from	„	5 to 10

Blackwood or Rosewood Furniture.—In the Bombay Furniture manufacture, blackwood is the material almost always employed—it is brought from Cochin and other places lower down on the Malabar Coast. It sells for about the same price as teak—it is a brittle, opened-grained wood not at all a favourite with cabinet-makers at home, and the highest prices ever realised for it in the state of log were about £10 per ton. The principal furniture dealers in Bombay, when this was written in 1850, were Parsees; the workmen they employ are mostly from Guzerat. The pattern meant to be carved is first carefully drawn on paper—then on the wood. The tools used are the native adze, chisel, and drill—the centre-bit and other tools of English pattern, from which so much assistance might be obtained, are never resorted to. The general design of the various pieces of furniture is mostly excellent, the patterns elegant and tasteful: the finish for the most part is poor,—the joinery always execrable. Concealed joints never seem to be thought of—pins which might be kept out of view are made as conspicuous as possible, and great clumsy screw nails, which might without trouble be hid, are fully exposed to view. Considerable quantities of blackwood furniture are sent to England annually by residents in Bombay for their own after use, or for the service of friends; it is packed up without being jointed or polished, and is put together by English workmen, who think, we believe, but lightly of its merits. There were then six principal furniture shops in Bombay. They keep from five to ten workmen each, and probably turn out Rs. 25,000 to Rs. 30,000 worth of furniture amongst them annually. The following are the prices of the principal articles manufactured:—

Round Table, from 3 to 8 feet in diameter ...	Rs.	30 to 80
Round Teapoys, 2 feet ditto, per pair ...	Rs.	16 to 25
Card Tables... ...per pair.	„	50 to 60
Flower Stands ... do	„	50 to 100
Pier Tables... ... do	„	100 to 150
Conversation Sofas ... do	„	100 to 150
Sofa Couches ... do	„	140 to 200
Music Book Cases ... do	„	30 to 140
Easy Chairs, each	„	10 to 50
Low Chairs, each	„	25 to 50
Drawing Room Chairs, with damask cushions ...	„	5 to 10
Dressing Tables, each ...	„	8 to 75
Side Boards, each... ...	„	35 to 70
Screens, each	„	20 to 75
Wardrobes, each	„	45 to 75
Clothes, Presses, each ...	„	25 to 40
Bedsteads, each	„	50 to 200
Writing Tables, each ...	„	50 to 100
Bed Room Couches, per pair	„	40 to 60
Chiffoniers, each	„	60 to 80
Sofa Tables, per pair ...	„	60 to 90
Dining Table, in pieces...	„	40 to 50
Chests of Drawers. each...	„	25 to 50
Music Stands, per pair	„	30 to 50

Oil Manufacture.—The number of vegetable oils in India, is very great indeed, and there are two forms of the native oil-mill: one of these will be found described under sugar-making, it being used alternately as an oil or sugar-mill—the other, of which there are some varieties, is a simple wooden mortar, with revolving pestle, and is of wood or stone—generally granite. Two oxen are harnessed to the geering which depends from the upper end of the pestle—a man sits on the top of the mortar, and throws in the seed that may have got displaced. The mill grinds twice a day,—a fresh man and team being employed on each occasion. When sesamum oil is to be made, about seventy seers measure, or two and a half bushels, of seeds are thrown in: to this ten seers, or two quarts and three quarters of water are gradually added: this, on the continuance of the grinding, which lasts in all six hours, unites with the fibrous portion of the seed, and forms a cake, which, when removed, leaves the oil clean and pure at the bottom of the mortar. From this it is taken out by a cocoanut shell cup on the pestle being withdrawn. Other seed oils are described by Buchanan as made almost entirely in the same way as the sesamum. The exceptions are the erindi or harulu, or castor oil, made from either the small or large varieties of the ricinus. This at Seringapatam is first parched in pots containing something more than a seer each. It is then beaten in a mortar and formed into balls: of these from four to sixteen seers are put in an earthen-ware pot, and boiled with an equal quantity of water for the space of five hours—frequent care being taken to stir the mixture to prevent it from burning. The oil now floats on the surface, and is skimmed off pure.

The oil-mill made use of at Bombay and to the northward, at Surat, Cambay, Kurrachee, &c., differs a little from that just described, in having a very strong wooden frame round the mouth of the mortar: on this the man who keeps the seeds in order sits: in Sind a camel is employed to drive the mill instead of bullocks. Castor oil seed is thrown into the mill like other seeds, as already described:—when removed the oil requires to be boiled for an hour, and then strained through a cloth to free it of the fragments of the seed.

The great oil on the seaboard of India is that yielded by the Cocoanut Palm. The nut is first stripped of its husk, this furnishing the substance from which coir rope is made, while the shell is broken, and the copra, or fatty lining, enclosing the milk, is taken out. This is called copri or copra. Three maunds or ninety pounds of copra are thrown into the mill with about three gallons (eleven cutcha seers) of water, and from this is produced three maunds, or seven gallons and three quarters, of oil. The copra in its unprepared state is sold slightly dried in the market: it is burned in iron cribs or grates on the tops of poles as torches in processions, and as means of illumination for work performed in the open air at night. No press or other contrivance is made use of in India for squeezing out or expressing the oil from the cake, and a large amount of waste in consequence of this necessarily ensues. The sandalwood, grass, and other essential oils employed in medicine, is differently conducted.

Tanning.—Leather is one of the manufactures where, with an unbounded quantity of raw material, the results are most unsatisfactory; with an unlimited supply of hides and first-rate bark, the goods turned out by natives of India, are of the worst possible description. The raw hides on first being received are steeped in stone vats for betwixt four and five weeks in a strong pickle of salt and water—from ten to fifteen hides are placed in each vat. While steeping, a pint or quart of the milk bush *Euphorbia tirucalli*—is thrown into each vat. It contains a considerable quantity of elastic gum, and is used for water-proofing leather, and rendering cords elastic. In February and March, Parsee women are to be seen with various male attendants wherever the milk-bush prevails. They apply the milk to their bodies and limbs, and then stick themselves over with tufts of raw cotton. It produces a hot and slightly prickly feeling and a small degree of blistering. It is considered good for the health, and is supposed to ensure fecundity: the exhibitions seen at this season in applying the milk, are often indelicate in the extreme. Dr Heyne (Tracts, Historical and Statistical, on India, &c., vol. I, page 46, Lodon 1814) states that the Morocco manufactured at Hurryhur is treated with salt, and a mixture of water, and the milk of wild cotton, (*Asclepias gigantica*), but he neither explains its qualities nor the function it performs in tanning. The stench arising from the vats is at this time abominable: the epidermis is now decomposed, and the hair comes freely away. The skin, being cleared of this, is next immersed in a decoction of mangrove, babool, or other tanning bark: after remaining some time in this they are taken out and sewed up so as to form a sack, and are then suspended from the roof of the building, or from a cross pole and are filled with fresh tanning solution. When the process is completed they are taken down, the stitches out, and the skins dried. The leather is soft and flexible, and looks tolerably well—but it resists the rain indifferently, is easily penetrated by wet, and during the S. W. monsoon becomes as moist and flexible as paper dipped in water. When set aside it becomes mouldy, and very easily rots. Buchanan gives the following as the method of tanning practised at Bangalore:—For each hide of ox or buffalo take two seers of quicklime and six seers of water: in this keep the skins a week, when the hair may be rubbed off. Keep the hides four days in a solution of unpeeled sticks of Tanggadu (*Cassia auriculata*,) in ten seers of water, for an equal length of time: add the same solutions as before—then stretch and dry the hides. The leather is very bad. (Tracts, Vol. i. p. 223.)

In many parts of the country, the hides are so removed as to form a bag, into which the tan is placed, and the filled bag kept suspended for several weeks.

Distillation.—The principal matters distilled from in India are Toddy, Dates, Sugar, Rice, Mahwa flowers, barks, cereals, and substances yielding perfumes. The Bombay Toddy or Arrack still is a most simple and clumsy contrivance. The still consists of a large earthern jar, of the shape of that used by water-carriers, but many times more capacious. The receiver is of the same form and material as the still, but somewhat less in size,—the former being two and a half, the latter one and a half feet in diameter. The still mouth is plugged up with a piece of wood luted with clay—a hole is cut in the side of the still near the top, and into this is fastened a wooden spout, which conveys the spirituous vapour to the cooler. This last stands on a trestle or frame of wood, placed over a pit for holding water, and cooling is effected by a man lifting successive fills of water from the well in a cocoanut ladle, and pouring it on the top of the cooler. A vessel of water with a small spout or drip is occasionally resorted to. A cocoanut tree will yield about four seers of toddy or sap a day: seventy-five seers of toddy or the produce for one day of eighteen cocoanut trees, furnish a charge for a still, yields twenty-five seers of liquor on a first distillation—on the second it affords eight seers of liquor considerably under proof, the process of distillation just described is nearly as unskilful as can be, and a third, if not a half, might be added to the returns were a little [illegible] care and attention bestowed on the matter.

Date and palmyra trees yield toddy as well as cocoanuts. A strong liquor, called mawah, is in pop[illegible]ute amongst the natives, especially [illegible] from [illegible]es, in Western India. The following pro[illegible] employed in making it at Surat. The berries of the mawah are about the size and form of marbles: they are first steeped or mashed in casks. So soon as they get into a state of active fermentation, the fermented liquor is drawn off and carried to the still, and more water poured over the berries, successive charges being added as long as the worts are strong enough to ferment. A sufficient number of casks, or mash tuns as they may be called, are employed in the work so as to permit a charge of the still to be supplied on each drawing off from the fermenting tuns: as it takes a couple of days to complete the process of fermentation, but worts already drawn off would sour were this to be waited for before the first run was run off. The still consists of a wooden tub, with a copper bottom, built over a surface of brickwork:—over the mouth of this is placed a huge copper saucer, the centre of the bottom terminating in a nipple. This is placed over the mouth of the tub which contains the liquor, and is fitted tight after the still has been charged: it is then filled with cold water, a fresh supply of which is poured into it from time to time as the original fill gets heated. A bamboo spout passes through the side of the tub just above the level of the liquor inside—it terminates in a flat shovel or ladle shaped dish under the nipple. Into this the spirit condensed in the under side of the saucer trickles down—it is run off and removed into a suitable receptacle outside. A second or third distillation is resorted to when the liquor is required to be made very strong.

The Portuguese in India for the purpose of rectification use a very neat and serviceable variety of still, by them called an alembic. It consists of a common cooking pot as a boiler, with a cylindrical head of the same diameter, and generally about the same depth, as the boiler. The bottom of this is a cone closed in at the apex, the mouth of which covers that of the boiler. Around its inner edge is a slight turned up ledging or flange, from which a pipe or worm leads off the spirit. The cylindrical portion of the top being filled with cold water, the spirituous vapour is condensed by it in the inside of the cone, and, trickling down, is caught by the flange and carried off by the pipe. This is a convenient and serviceable implement, and may be so used to give very excellent results.

Otto of Roses. Rose Water.—A description of the manufacture of rose-water and otto of roses, is given in the 8th volume of the Transactions of the Bengal Asiatic Society, by Dr. Jackson, Ghazeepore :—

" Around the station of Ghazeepore there are about 300 beegahs, or about 150 acres, of ground laid out in small detached fields as rose gardens, most carefully protected on all sides by high mud walls and prickly pear fences, to keep out the cattle. These lands, which belong to zemindars, are planted with rose trees, and are annually let out at so much per beegah for the ground, and so much additional for the rose plants—generally five rupees per beegah, and twenty-five rupees for the rose trees, of which there are 1,000 in each beegah. The additional expense for cultivation would be about 5-8 ; so that for Rupees 30-8 you have for the season one beegah of 1,000 rose-trees.

" If the season is good this beegah of 1,000 rose trees should yield one lac of roses. Purchases for roses are always made at so much per lac. The price of course varies according to the year, and will average from 40 to 70 rupees.

" As soon as the roses come into flower the Zemindar and cultivators of the rose gardens, as well as intending purchasers, meet in the city, and according to the demand and expected produce, a *nerick* or selling rate is established, and purchasers then enter into agreement with the cultivators for so many lacs of roses at such a price. This agreement is considered binding, and the cultivator is obliged to deliver the quantity at the contract rate ; when that is completed another can be made, but this latter is always at a much higher rate.

" The rose trees come into flower at the beginning of March and continue so through April. In the morning early the flowers are plucked by numbers of men, women, and children, and are conveyed in large bags to the several contracting parties for distillation. The cultivators themselves very rarely manufacture.

" The native apparatus for distilling the rose-water is of the simplest construction ; it consists of a large copper or iron boiler well tinned, capable of holding from eight to twelve gallons, (shaped like the earthen hoondahs in which the Gomastahs send in their opium) having a large body with a rather narrow neck, and a mouth about eight inches in diameter ; on the top of this is fixed the head of the still, which is nothing more than an old degchee, or cooking vessel, with a hole in the centre to receive the tube or worm.

" This tube is composed of two pieces of bamboo, fastened at an acute angle, and it is covered the whole length with a strong binding of corded string, over which is a luting of earth to prevent the vapour from escaping. The small end, about two feet long, is fixed into the hole in the centre of the head, where it is well luted with flour and water. The lower arm or end of the tube is carried down into a long necked vessel or receiver, called a *bhubka.* This is placed in a hundee of water which, as it gets hot, is changed. The head of the still is luted on to the body, and the long arm of the tube in the *bhubka* is also well provided with a cushion of cloth, so as to keep in all vapour. The boiler is let into an earthen furnace, and the whole is ready for operation.

" There is such a variety of Rose-water manufactured in the bazaar, and so much that bears the name, which is nothing more than a mixture of sandal oil, that it is impossible to lay down the plan which is adopted. The best rose-water however in the bazaar may be computed as bearing the proportion of one thousand roses to a seer of water ; this perhaps may be considered as the best procurable. From one thousand roses most generally a seer and a half of rose-water is distilled, and perhaps from this even the attar has been removed.

" The boiler of the still will hold from eight to twelve or sixteen thousand roses. On eight thousand roses from ten to eleven seers of water will be placed, and eight seers of rose-water will be distilled. This after distillation is placed in a carboy of glass, and is exposed to the sun for several days to become puckah ; it is then stopped with cotton, and has a covering of moist clay put over it ; this becoming hard effectually prevents the scent from escaping. The price of this will be from twelve to sixteen rupees. This is the best that can be procured.

"To procure the attar, the roses are put into the still, and the water passes over gradually as in the Rose-water process; after the whole has come over, the rose-water is placed in a large metal basin, which is covered with wetted muslin tied over to prevent insects or dust getting into it; this vessel is let into the ground about two feet, which has been previously wetted with water, and it is allowed to remain quiet during the whole night. The attar is always made at the beginning of the season when the nights are cool; in the morning early the little film of attar which is formed upon the surface of the Rose-water during the night is removed by means of a feather, and it is then carefully placed in a small phial; and day after day as the collection is made it is placed for a short period in the sun, and after a sufficient quantity has been procured it is poured off clear, and of the colour of amber, into small phials. Pure Attar when it has been removed only three or four days has a pale greenish hue, by keeping, it loses this and in a few weeks' time it becomes of a pale yellow. The first few days distillation does not produce such fine attar as comes off afterwards, in consequence of the dust or little particles of dirt in the still and the tube being mixed with it. This is readily separated from its sinking to the bottom of the attar, which melts at a temperature of 84°. From one lac of roses it is generally calculated that 180 grains, or one tolah of attar can be procured; more than this can be obtained if the roses are full sized, and the nights cold to allow of the congelation. The attar purchased in the bazar is generally adulterated, mixed with sandal oil or sweet oil; not even the richest native will give the price at which the purest attar alone can be obtained, and the purest attar that is made is sold only to Europeans. During some years, it sells from 80 to 90 rupees the tolah; in other years it can be purchased for 50 rupees. Native stills are let out at so much per day or week, and it frequently occurs that the residents prepare some rose-water for their own use as a present to their friends, to secure their being provided with that which is the best. The natives never remove the calices of the rose flowers, but place the whole into the still as it comes from the gardens.

"The best plan appears to be to have this removed, as by this means the rose water may be preserved a longer time, and is not spoiled by the acid smell occasionally met with in the native rose-water. It is usual to calculate 100 bottles to one lac of roses. The rose-water should always be twice distilled; over ten thousand, rose-water may be put to allow of sixteen or twenty bottles coming out; the following day these twenty bottles are placed over eight thousand more roses, and about eighteen bottles of rose-water are distilled. This may be considered the best to be met with. The attar is so much lighter than the rose-water, that previous to use it is better to expose the rose-water to the sun for a few days, to allow of its being well mixed, and rose-water that has been kept six months is always better than that which has recently been made.

"At the commencement of the rose season, people from all parts come to make their purchases, and very large quantities are prepared and sold. There are about thirty-six places in the city of Ghazeepore where aose-water is distilled. These people generally put a large quantity of sandal oil into the receiver, the oil is afterwards carefully removed and sold as sandal attar, and the water put into carboys and disposed of as rose-water. At the time of sale a few drops of sandal oil are placed on the neck of the carboy to give it a fresh scent, and to many of the natives it appears perfectly immaterial whether the scent arises solely from the sandal oil or from the roses; large quantities of sandal oil are every year brought up from the south and expended in this way.

"The chief use the natives appear to make of the rose-water, or the sandal attar as they term it, is at the period of their festivals and weddings. It is then distributed largely to the guests as they arrive, and sprinkled in profusion in the apartments. A large quantity of rose-water is sold at Benares, and many of the native Rajahs send over to Ghazeepore for its purchase. Most of the rose-water as soon as distilled is taken away, and after six months from the termination of the manufacture there are not more than four or five places where it is to be met with.

"I should consider that the value of the roses sold for the manufacture of Rose-water may be estimated at 15,000 rupees a year, and from this to 20,000, and from the usual price asked for the rose-water and for which it is sold, I should consider there is a profit of 40,000 rupees. The natives are very fond of using the rose-water as medicine, or as a vehicle for other mixtures, and they consume a good deal of the petals for the conserve of roses, or *Goolcund*, as they call it.

There are several other kinds of essential oils produced from the strong scented flowers in this district. But, other perfumed oils are manufactured without resorting to distillation. The layers of the jasmine, four inches thick and two inches square, or other flowers, are laid on the ground and covered over with layers of sesamum or any other oil-yielding seed. These are laid about the same thickness as the flowers, over which a second layer of flowers like the first is placed. The seed is wetted with water, and the whole mass covered with a sheet held down at the end and sides by weights, and allowed to remain for eighteen hours in this form: it is now fit for the mill, unless the perfume is desired to be very strong, when the faded flowers are removed and fresh ones put in their place. The seed thus impregnated are ground in the usual way in the mill, and the oil expressed having the scent of the flower. At Ghazeepore, the jasmine and bela are chiefly employed: the oil is kept in dubbers, and sold for about Rs. 2 a seer. The newest oils afford the finest perfumes. The process here described is the same as that pursued at Bombay. In Europe, a fixed oil, usually that of the bean or morunga nut, is employed. Cotton is soaked in this and laid over layers of flowers, the oil being squeezed out so soon as impregnated with perfume.—*Monthly Bombay Times, 25th November to 24th June* 1850.

Amongst the other arts and manufactures of South Eastern Asia, may be mentioned the lacquer work of Burmah, China and Japan; the ivory work of China: the marble work of Burmah; the gold and silver work of Trichinopoly and Cuttack: the horn-work of Vizagapatam, the sandal-wood work of Canara; the lac work of Kurnool, the tutanague work of Beder, the wood work of Nirmul and Hyderabad in Sind; the shawl and woollen work of the N. W. of India and the muslins of Dacca.

The principal of the arts and manufactures of the Chinese, have been noticed in the Cyclopœdia of India, from the writings of the Honorable Mr. Morrison, Reverend Mr. Williams, Mr. Fortune and Sir John Davies. The last named author is of opinion that the art of printing, the composition of gunpowder, and the magnetic compass, which he says are justly considered in Europe as three of the most important inventions or discoveries of modern times, had their first origin in China. He tells us also, that their printing is by a system of stereotype, the types being made from the pear tree wood, called by them, *ly-mo*. Their paper is made from refuse paper, rags of silk and cotton, rice-straw, the liber of a species of morus, but principally of bamboo.

Koftgari work, or steel inlaid with gold, has in former days, been carried on to a considerable extent in various parts of India. It was chiefly used for decorating armour; and among the collections at the Exhibition, were some very fine specimens of guns, coats of mail, helmets, swords, and sword handles, to which the process of koftgari had been successfully applied. These specimens, however, are not the manufacture of the present day. Since the revolt in India, of 1857, the manufacture of arms has been generally discouraged, and Koftgari work is, consequently, now chiefly applied to ornamenting a variety of fancy articles, such as jewels, caskets, pen and card trays, paper weights, paper knives, inkstands, &c. The process is exactly the same as that pursued in Europe, and the workman can copy any particular pattern required. The work is of high finish, and remarkable for its cheapness.

Koftgari is chiefly carried on in Goojeerat and Kotli, in the Sealkote district.

Several admirable specimens of inlaid metal work by the native artisans of Bhooj were likewise found in the collection of arms contributed by H. H. the Rao of Kutch.

The tradesmen and artizans of India are mostly all associated in classes or sects, or castes, who do not intermarry and seldom eat with others. Amongst these, may be named the Baujara, or wandering grain merchant: the Bhatthari or cook: chichri or scavenger: the dhor or currier and leather worker; dhangar or shepherd; erkel vadu or basket maker: gaoli or dairy man: kalaigar or tinner: kassar or brazier; khanjar or poultryman; ladaf or cotton seller: larkassai or beef-salesman: Lalbeg or scavengers: Lohar or blacksmith; Mookre mealman; Muchi, leather worker: Rangrez or dyer; Saikalgar or Cutler: and Sonar or goldsmith. There are many wandering tradesmen tribes, mostly predatory.—*Proceedings of Bombay Committee for Great Exhibition of* 1861. *Monthly Bombay Times, 25th November* 1850 *to 27th June* 1851. *Edinburgh Review for July* 1867, *Dr. Watson and Taylor quoted in same. Madras Exhibition, Juries' Reports.* See Armour Boats; Dyes; Fisheries: Cloths: Spinning: Weaving.

ARUB KHAN, a town in India in Long 71° 10′ E. and Lat. 35° 8′ N.

ARU CHANGALI ? అరుచంగలి. Tel. Andropogon montanus, *R.* i. 267. A doubtful name.

ARUDONDA. అరుదొండ-(అదొండ.) Tel. Capparis horrida, *L.*

ARUDU. అరుదు.(సదాప.) Tel. Ruta angustifolia, *Pers. R.* ii. 374.

ARUGAM-PILLU. அருகம்-பில்லு. Tam. Cynodon dactylon. Pers.

ARUGO. Verdigris. See Copper.

ARUGUM. Maleal. അറുഗം. Agrostis linearis.

ARU KANLA KACHORAM. అరుకంలకచోరం. Tel. Curcuma amada, *R. Aru kanla* meaning "six eyes" *Shadgrandhika* "six jointed," are also given as Syns. of *Nalla altivasa* or *C. caesia* and seem to be merely Sans. Forms of the same word, both probably referring more correctly to *C. Zedoria* or "long zedoary."

ARU KANUPULA KRANUGA. అఱుకనుపుల క్రానుగ. Saccharum officinarum, *Var* ?

ARUKZYE, an Afghan tribe of the Khyber pass, herdsmen, who pass the winter in the lower levels of the Khoat and the Tiri hills and in summer drive their flocks and herds to the mountain tops.

ARULI. HIND. Emblica officinalis, Gært.

ARUM, a genus of plants of the natural order Araceæ, of which Roxburgh enumerates 22 species; Wight, 19; and Voigt, 8. Many species of Arum are edible on being cooked and some of them greatly prized. Those enumerated by the three authorities are Arum.

bulbiferum...	R. W.	lyratum	...R.V.
campanulatum.	R. W.	margaritiferum	R.W.V.
colocasia	...R. W.	montanum	...R.W.V.
cucullatum	...R. W.	nymphæfolium..	...R.
curvatum	...R.W.V.	odorum	...R.W
cuspidatum	...R.W V.	orixense	...R.W.
divaricatum...	...R.W.	rapiforme	...R.V.
flagelliforme ...	R. W.	sessiliflorum...	R.W.V.
fornicatum...	...R. W.	sylvaticum	...R. W.
gracile	...R.W.V.	trilobatum	...R.W.
indicum	...R.W.	viviparum	...R.W.

But only curvatum, cuspidatum, gracile, lyratum, margaritiferum, montanum, rapiforme and sessiliflorum are now referred to this genus, others having been placed with the genera amorphophallus, colocasia, typhonium which see. A. lyratum, Roxburgh, the Adavi or wild Arum of the Circars, needs to be carefully dressed to remove its hurtful qualities. A. montanum Roxburgh, also the Kunda rakasi of the Sircars, is so poisonous that its root is employed to poison tigers.—*Roxb.*

ARUM ÆGYPTIACUM. RUMPH. Syn. of Colocasia antiquorum.—*Schott.*

ARUMAN, variegated white and black, is employed for canes, handles, and spears, &c., and is very heavy.

ARUM CAMPANULATUM. Syn. of amorphophallus campanulatus.

ARUM COLOCASIA. Syn. of Colocasia antiquorum.

ARUM INDICUM. LOUR. Syn. of Colocasia Indica.—*Roxb.*

ARUM NYMPHÆFOLIUM. ROXB. Syn. Colocasia nymphæfolia.—*Roxb.*

ARUM ODORUM, (*Roxb.*) the Fragrant arum, (Peing-ma ha-yaw, Burm.) is a most singular plant. It has a stem one or two feet high and six inches in diameter resembling a low palm, with gigantic cabbage leaves three or four feet long by two or three wide. The flowers are said to be fragrant. The natives cultivate it, not for food, like the other species of arum, but, as they say, for medicine. *Mason*, 436. *Roxb. ii.* 499.

ARUM ORIXENSE. *Roxb.* Syn. of Typhonium Orixense.—*Schott.*

ARUM RAPIFORME, (*Roxb.*) grows in India.

ARUM RUMPHII. GAUDI. Syn. of Amorphophallus campanulatus.

ARUM TRILOBATUM. LOUR. Syn. of Typhonium Orixense.—*Schott.*

ARUM ZEYLANICUM. COMMEL. Syn. of Amorphophallus campanulatus.

ARUNA. BENG. Rubia cordifolia. *Linn.*

ARUNA, in the Sabaean system of the Veda, is the charioteer of the sun, driving his six horsed car—corresponding with the Aurora of the Greeks. The emblem or vahan of Vishnu is *Garuda*, or the eagle, and the Sun-god both of the Egyptians and hindus is typified with this bird's head. *Aruna* (the dawn), in hindu mythology, the son of Kasyapa and Vinata, is the brother of Garuda, and the charioteer and harbinger of Surya. He is, therefore, described as the dawn, and as a handsome youth without thighs or legs.—He is hence styled the charioteer of Vishnu. His two sons, *Sumpati* and *Jutayoo*, attempting in imitation of their father to reach the sun, the wings of the former were burnt and he fell to the earth: of this the Greeks may have made their fable of Icarus. Aruna's imperfect form has been supposed, to be allusive to his partial appearance, his head and body may be seen, but his legs are yet in invisible night, or lost in the blaze of Surya's brilliancy.—*Moor, p.* 447. *Cole. Myth. Hind. p.* 374. *Tod's Travels. Taylor's Mackenzie, M. S. S.* See Garuda. Surya: Vahan.

ARUNDAWALL, a town in India in Long. 82° 12′ E. and Lat. 18° 20′ N.

ARUNDHATE, the wife of the rishi Vaisistha, a resident of swerga, whom the devoted suttee woman invokes, before mounting the pile. See Sati.

ARUNDINA, Dr. Hooker in his Himalayan travels found this beautiful purple grassy-leaved orchid, abundantly in flower on the hill top, and the great white swallow-tailed moth (*Saturnia Atlas*) was extremely common, with tropical butterflies, and other insects. It is perhaps A. bambusifolia.—*Hooker Him. Jour. Vol.* II. *p.* 305.

ARUNDINARIA UTILIS, BENG. HIND.

Hill bamboo ...	... ENG.	Nigala	... PUNJAB.
Ringal	... HIND.		

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 9000 feet. Used for wicker work, and for lining the roof of houses. Shepherds' pipes, baskets, and mats are made of it.—*Cleg. Panj. Rep. p.* 80.

ARUNDO, a genus of the Gramineæ, several species of which occur in India, some of them not defined. Of these there are in Burmah, five species, the Pyoo, the Lai, the Phoung, the Kyoo and the A-loo of the Burmese.

ARUNDO ARBOR. LINN. Syn. of Bambusa spinosa.

ARUNDO BAMBOS. LINN. Syn. of Bambusa arundinacea, also of Bambusa spinosa. LINN.

ARUNDA KARKA. ROYLE.

Arundo Roxburghii KTH.
Trichoon karka, ROX.
Cala magrostis „ GMEL.

Nul ... ... HINDI. | Sur ... ... SINDI
Nultura ... ... „

This grows in Bengal and Sind. Its culms, sur jŏ jauee, are made into chairs, and its flower-stalks beaten to form the fibres called Moonyah. These are made into string or twine (Moonyah jo naree), and into ropes (Moonyah jŏ russa). The culms are also made into baskets, and the common door-mats of Calcutta are made of the stalks split open, ships generally use them as dunnage. *Roxb. i.* 347.—*Royle Fib. P. page* 32. *Hog. Veg. Kingdom,* 821.

ARUNDO ROXBURGHII. KTH. Syn. of Amphidonax karka.

AURUNG-ANGAMI, a Tibeto—Burman tribe that has intruded on the Bodo and Mikir tribes, in Assam. See Angami. India 342, in C. of I.

ARUN TUTA, the inspissated juice of a bulbous plant, supposed to be a species of Colchicum. It is sold at a high price and is much sought after by the people of the Hazarajat, in Central Asia, being of high repute in diseases of the eye. It is sold in small pieces of a dark brown colour, but is indiscriminately applied and must often act injuriously.—*Masson's Journey, Vol. ii. p.* 338.

ARUNGPOUR, a town in India, in Long. 91° 44′ E. and Lat. 24° 40′ N.

ARUS. BENG. Solanum verbascifolium.

ارس **ARUS,** also **ASGANDA,** also **ANIS.** HIND. Adhatoda vasica.

ARUSHKARA, SANS. Semecarpus anacardium.

ARUVAR, a sect or class or division of the Buddaga race of the Neilgherry hills. See Buddaga, Kurambar, Neilgherries.

ARUZ ارز. ARAB. Properly Araz, Rice.

ARVAD. The island of Ruad, about a league from the shore, is supposed to be the Arvad, Arpad, or Arphad of Scripture, the Aradus of the Greeks and Romans, once a powerful maritime republic.—*Robinson's Travels, Vol. ii. p.* 70.

ARWI. اروي HIND. Arum colocasia.

ARVANUS, The nearest approximation to Valerianus, supposed to be the emperor Valerian (Valerianus) *Arvanus*(اروانس) and *Arianus* اريانوس. That these names indicate Valerian appears from Tabris description of the person who bore them; for he was one of the Roman sovereigns(ملكي بود اريوميان) who having been conquered by Shapur in a fort near Antioch, was led into Susiana; where the Persian monarch undertaking some extensive structures (at *Shushter*), obliged his captive to assist in the work, by procuring experienced artists from Rome or Greece, and he promised that liberty should be the reward of this co-operation. The task was performed, and Shapur observed his promise; but first cut off the Roman chieftain's nose, to brand him with an indelible mark of captivity. *Ouseley's Travels, Vol. I. p.* 287.

ARYA. See Aria.

ARYA in Ceylon buddhism the rahatship, the last of the four paths leading to nirwana.—*Hyder's Eastern Monarchism, p.* 433.

ARYA BHATTA, a celebrated hindu astronomer who flourished in the 4423d year of the Cali yug, answering to A. D. 1322. He left several Mathematical tracts, some particularly relating to the properties of the circle.—*Captain Edward Warren's Kala Sanhita.*

ARYA SIDDHANTA. A treatise on astronomy, composed by Arya bhatta, of which there is a spurious one. There is some variation in the copies of this work preserved in Bengal and in the Carnatic, the former making the Solar year 365d. 31p. 17c. 6″, the latter 365d 15g. 31v. 1p.; and the Lunar Synodical month, the former 29d. 31. 50v. 6p. 7s. 84, &c., and the latter 29d. 31g. 50v. 5p. 40s. 21, &c.—*Captain Edward Warren's Kala Sanhita.*

ARZAL, HIND. Low; any inferior object; also applied to humble people.

ARZAN. PERS. ارزن Panicum pil[illegible]. Millet. Setaria Italica.—*Roxb.* also cheap.

ARZENIE, in Lat. 24° 46′ N. Long. [illegible]° 42′ E., an island 1¼ [illegible] long on the S. side of the Persian gulf.—

ARZO-BISHO IS[illegible], **or BONIN SI-MA,** several groups in the Archipelago, [illegible] tending from L. 27° 44½′ N. to 26° [illegible] N. and to the most northerly of which has been given the name of Parry Group.—*Horsb.*

ASA. HIND. Hope. The hindu goddess of hope, Asa, Pl. A-en, Sansc. according to Bunsen, means "existent," "living ones," in opposition to Wana divinities of the air.

ASAF. آصف ARAB. Capparis spinosa.

Asafœtida ...	Lat.		

This gum resin is the product of the Ferula asafœtida, a synonim of the Narthex asafœtida, and has perhaps also the produce of other umbelliferous plants mixed with it. Dr. Cleghorn tells us that an umbelliferous plant, yielding asafœtida grows north of Kilar. The plant is an annual, and attains a height of 8 or 10 feet. It grows in Persia, in the neighbourhood of Herat, on the Hindu Kush at an elevation of 8,000 feet; it is found growing in the Dandan-Shakoh pass and in Panji, in the valley high up on the Sutlej river, and in the mountains of Daristan and Beluchistan. Sir A. Burnes believed this plant to be the Silphium of Alexander's historians. Moorcroft tells us that the chief article of the commerce of Sykan beyond Bamian is asafœtida, of which about two hundred maunds are gathered annually from plants that grow wild upon the mountains. In the spring, the earth is partly removed from about the root, and the stem and leaves cut off close to the ground; a juice exudes from the surface, which, when dried, is scooped off; a slice is then cut from the root, and the juice exudes again from the fresh surface; this is repeated a third and a fourth time. A root of a good size yields about half a pound of the dried juice. The asafœtida brought to India is obtained from Bokhara. The gum has so very fetid an odour as to have obtained the name of devils' dung. It is obtained by slicing the roots and a white milky juice exudes, then turns yellow and hardens in which state it is put into hair bags and exported, and it is met with in commerce in shapeless masses of a waxy consistence with small transparent brittle and white tears. The fracture is vitreous, at first white, and passing to red by contact with the air, a property which distinguishes it from all other gum-resins. Another and much more valuable kind of Asafœtida is sometimes met with in the bazars and druggists' shops. It is in tears, or semi-transparent whitish granulations, free from impurities, and of most powerful odour; this kind is readily reduced to powder, and is much valued by European druggists. In India it is but rarely met with, and readily meets purchasers at a high price. About 100 tons are annually imported into England valued at £1 to £4 the cwt., but it is nearly all re-exported being little used but in veterinary practice. It comes to India by the Persian Gulf, and is largely used by all the hindu people as a condiment, and in medicine. It is used particularly by the brahmins who from living entirely on vegetable food and milk, require some powerful corrector of acescency, and find nothing that answers the purpose so well as this which is besides cardiac and antispasmodic, and so strongly are they impressed with an idea of its virtues that they think they would die without it.—(*Ainslie's Mat. Med. page* 267.)

For medical uses, Asafœtida is a powerfully carminative and stimulant tonic, devoid of acrid and irritating properties. It produces a sensation of heat, and increased secretion in the alimentary canal, with eructation; head-ache, and giddiness are often experienced, and the urinary and genital organs seem to be sometimes materially excited. It is chiefly used in hysteria, hypochondriasis, flatulent colic proceeding from dyspepsia, in chronic catarrh, and in spasmodic asthma not connected with disease of the heart or lungs. In worm affections too it is often employed with benefit.—*O'Sh. p.* 363. *Dr. Mason. Poole's Statistics. Hog's Veg. King. p.* 387. *Mr. Faulkner.* Moorcroft, ii. p. 395. *Cal. Cat. Ex.* 1862. *Ainslie's Mat. Med. p.* 267. See Ferula also Narthex.

ASALOO. A small plant cultivated about Ajmeer, the seeds are heating, and promote the secretions, they are also taken in milk to strengthen the body; much used in mesalih for camels; to the taste they are bitter and hot.—*Irvine Gen. Med. Top. p.* 124.

ASAM KA PHAL. Duk. Var. of Mango.

ASAN. Sans. Terminalia alata, also T. tomentosa.

ASAN, or ASANA. Mar. Briedelia spinosa.

ASAN. Pers. One of the solar months See Fasli.

The leaves and roots of this European plant are met with in all the bazars of India, but Dr. Royle states that much of it is spurious, those of a hill plant named Tugger being often substituted: 40 to 60 grains infused in eight ounces of water act as an emetic, in large doses as cathartic and the powder of the leaves causes violent sneezing. Until the introduction of ipecacuanha into Europe, the Asarum was used for most of the purposes for which the Southern American drug is now employed and other virtues are attributed to it.—*O'Shaughnessy*

ASATI, a town in India, in Long. 78° 50′ E. and Lat. 25° 24′ N.

ASAWAL or AHMADABAD, is on the left bank of the Sabarmati.

ASCALON, the modern Askulan, anciently a maritime town of the Phœnicians now a mass of ruins.

ASCARIDA INDICA. CASS. Syn. of Vernonia anthelmintica. *Willd.*

ASCESINES, one of the rivers of the Panjab, as known to the Greeks, now called the Chenab. It joins the Indus. See Kabul; Indus: Panjab.

ASCETICS, amongst the hindu devotees are several sects, but the more common are the Viragi or Saniasi, who live in monasteriee: The Pandaram who live in the temples as the pujari or worshipping official, who also abstain from women. Amongst the buddhists, in the [illegible] all the young men and all the Foungyes live in monasteries. Amongst the Jains, a sect with a mixture of hinduism and buddhism, all their teachers are ascetics. Amongst the mahomedans, there is little asceticism, the Kalendar darvesh (dervis) alone practicing celebacy.

Some of the hindu ascetics used to carry their asceticism to the extremes of bodily punishment and torture, sitting for years over a hot fire, or with eyes open looking at the sun exposed to summer heats and winter colds, naked and maiming their persons by suspending heavy weights; holding their hands closed until the nails would grow through; holding their arms upright till the joints became fixed, or lying on beds with iron spikes, or with iron collars so placed on their neck as to prevent repose—or making vows that they will not take rest till they have accomplished some act. All buddhist monks of Burmah and many hindu devotees, to obtain their daily food, perambulate the streets, walking rapidly, soliciting from no one. Of the mahomedans one sect in the Dekhan, voluntarily become eunuchs and dress like women, visiting the houses of mahomedans on the birth of a son or daughter, and exacting a money dole, up to five rupees. Under British sway, all these classt es are fast disappearing not being esteemed: few Europeans and few natives even have seen the more pretensious of them, yet, recently, we saw in the Elephant buddhist cave of Ellora, a hindu Biragi, sitting naked, smeared with ashes (vibudhi) who had then so sat for five years: and we have known one instance of an upright young hindu in good employ and with fair prospects abandoning his wife and children to lead an ascetic monastic life. Suliman the Arab traveller, writing A. D. 851, mentions that some of them go about naked, wander in forests and mountains, live solely on herbs and fruits, stand naked with the face turned to the sun, with only a panthers skin as a covering, and mentions having seen a man standing so, and on returning sixteen years afterwards found him still in the same posture.—(*Elliot's History of India.*) Col. Tod had seen one of these objects, self-condemned never to lie down during forty years, and there remained but three to complete the term. He had travelled much, was intelligent and learned, but, far from having contracted the moroseness of the recluse, there was a benignity of mien, and a suavity and simplicity of manner in him, quite enchanting. He talked of his penance with no vain-glory, and of its approaching term without any sensation. The resting position of this Druid (vana-perist) was by means of a rope suspended from the bough of a tree, in the manner of a swing, having a cross-bar, on which he reclined. The first years of this penance, he said, were dreadfully painful; swollen limbs affected him to that degree, that he expected death; but this impression had long since worn off, "Even in this, there is much vanity, and it would be a nice point to determine whether the homage of man or the approbation of the divinity, most sustains the energies under such appalling discipline.—(*Tod's Rajasthan.*)

Even yet, the behests of such ascetics are secondary only to those of the divinity, whose organs they are deemed. Like the Druids of the Celts, the Vana-perist Jogi, from the glades of the forest (vana) or recess in the rocks (gopha), issue their oracles to those whom chance or design may conduct to their solitary dwellings. It is not surprising that the mandate of such beings prove compulsory on the superstitious Rajpoot: we do not mean those squalid ascetics, who wander about India, and are objects disgusting to the eye; but the genuine *Jogi*, he who, as the term imports, mortifies the flesh, till the wants of humanity are restricted merely to what suffices to unite matter with spirit; who has studied and comprehended the mystic works, and pored over the systems of philosophy, until the full influence of *maia* (illusion) has perhaps unsettled his understanding, or whom the rules of his sect have condemned to penance and solitude; a penance so severe, that we remain astonished at the perversity of reason which can submit to it. To these, the Druids of India, the prince and the chieftain resort for instruction. See Aghora, Anthropophagi, Buddhism: Darvesh: Fakir: Hindu: Jogi: Mastani: Sanyasi: Viragi.

ASCHARA, Sansc, according to Menu, the syllable O'M. All rites ordained in the Veda, oblations to fire,and solemn sacrifices, &c., pass away; but that which passeth not away, is the syllable O'M, hence called Aschara since it is the symbol of God, the Lord of created beings. See Gayatri. Hindu. O'M.

ASCIDIA. See Tunicata. Ascidiadæ.

ASCIDIADÆ, a family of the class Tunicata or Tunicaries, of the Mollusca. The Ascidiadæ, have five genera, viz.: Molgula; Cynthia; Pelonæa; Chelyosma and Boltenia. See Mollusca. Tunicata.

ASCLEPIACEÆ, a natural order of plants, of which several genera and species occur in South eastern Asia, in Arabia, China, Japan and 221 species in India, Ceylon and the Archipelago; fifty of which occur in the Himalaya, the Khassya hills and Assam. See notices under Dogbanes, Pergularia odoratissima, Tweedia, Cryptostegia grandiflora, Cynanchum, Marsdenia tenacissima, Stapelia Buffonia. Gymnema-lactiferum: Tylophora asthmatica, Secamone emetica, Solenostemma argel; Calotropis gigantea; Hoya; Pergularia; Sarcolobus; Holastemma, Hemidesmus.

ASCLEPIAS, of the genus of plants, of the natural order Asclaceæ, though Roxburgh [illegible] enumerates twenty-nine, and Wight, in his Icones, gives figures of nineteen, species, Asclepias acida; annularia: cordifolia: echinata: herbacea, laurifolia: longistigma: montana: ovalifolia, pallida, parasitica, pendula: pseudosarsa: racemosa: tenacissima: tenuissima, tinctoria: tingens: and volubilis,—most of these have now been classed by other authors under other genera; as in the following instances viz:

Asclepias acida. Roxb. Syn. of Sarcostemma brevistigma.—*Wight.*

Asclepias annularia. Roxb Syn. of Holastemma Rheedii, Spr.

Asclepias aphylla. Roxb. Syn. of Sarcostemma brevistigma.—*Wight.*

Asclepias asthmatica. Roxb. Syn. of Tylophora asthmatica.—*W. and A.*

Asclepias convolvulacea. Herb. Syn. Heyne. of Holastemma Rheedii, Spr.

Asclepias echinata. Roxb. Syn. of Dæmia extensa.—*R. Brown.*

Asclepias gigantea. Willd, Syn. of Calotropis gigantea. Brown. also of C. procera.

Asclepias microphylla. Roxb. Syn. of Pentatropis microphylla.—*W. and A.*

Asclepias pendula. Roxb. Syn. of Hoya pendula.—*Wight and Arnott.*

Asclepias pseudosara. Var. latifolia, Roxb. Syn.of Hemidesmus Indicus.—*R. Brown.*

Asclepias pubescens. Wall. Syn. of Tylophora asthmatica.—*W. and A.*

Asclepias rheedii. W. and A. Syn. of Hoya pendula.—*Wight and Arnott.*

Asclepias tenacissima. Roxb. Syn. of Marsdenia tenacissima.—*W. and A.*

Asclepias tinctoria. Roxb. Syn. of Pentatropis microphylla.—*W. and A.*

Asclepias tinctoria. Roxb. Syn. of Marsdenia tinctoria.—*R. Brown.*

Asclepias tomentosa. Herb. Madi. Syn. of Marsdenia tenacissima.—*W. and A.*

Several of these are reared as flowering plants. See Calotropis; Hindoo: Marsdenia.

ASCLEPIAS VOLUBILIS. *Linn.*

ASCLEPIAS CURRASAVICA. *Linn.*

Indian Root.	Currassavian Mallowwort.
Wild Ipecacuanha.	Yellow milk weed.
Bastard „	

a native of the West Indies, is now found in most parts of Tropical America and India and cultivated in China as a flowering plant: is a pretty little annual, with a small saffron and orange-coloured flower, and is quite common in the Tenasserim Provinces. The root is emetic and is also used by the negroes of the West Indies. The juice is made into a syrup and is used as a vermifuge.—*Williams' Middle Kingdom p.* 288 *Voigt p.* 539.

ASEES. HIND, a form of hindu benediction only bestowed by women and priests: it is performed by clasping both hands over the person's head, and waving over him a piece of silver or other valuable which is bestowed in charity. The Tamil people similarly wave a fowl or sheeps head around a sick man. This is a very ancient ceremony, and is called *Nachravali.* Col. Tod frequently had a large salver filled with silver coin waved over his head, which was handed for distribution amongst his attendants. It is most appropriate from the ladies from whom also be had this performed by their proxies, the family priest or female attendants. It is also a mahomedan rite. *Tod's. Rajasthan Vol. i, p.* 618. See Bulain Lena.

ASELLUS. The Cod. See Cod Liver Oil.

ASFALT. Rus. **ASFALTO.** Sp. Bitumen.

ASFIDAJ. Arab. آسفيدج White Lead.

AS-GANDH. Sans. Dekh. Physalis flexuosa, Nees : P somnifera.

ASGHUR, a town in the Punjab, on the Indus, where there are gold washings.

ASH TREE. Fraxinus.

Aran...	... Arab.	Ornus...	...Lat.
Oren ..	... Heb.		

Of this genus, there are two species in the Western Himalayas, the Fraxinus floribunda, or large Ash and F. Xanthylloides or Crab Ash. The wood of the former in toughness resembles English ash, it is a large tree, occasionally 12 or 13 feet in girth, but is not abundant. The crab ash is only large enough for tool handles. They grow in the Western Himalayas, in the Mehra forest, near Abbotabad, Hazara, and in the valley of the Sutlej, there is abundance of yew and olive, and a considerable quantity of box and ash, the ash and olive near the river but the box and yew on the higher slopes, 2,000 feet or more above the Sutlej. The larger ash and yew are much esteemed for Jampan poles, hafts and tool handles, &c., and the Ash, in colour, grain and toughness resembles the English and makes good walking sticks.—*Cal. Cat. Ex.* 1862. *Clegh. Punjab Report.* See Fraxinus.

ASHAAR, a son of Joktan. See Joktan.

AS-HAB, Arab, companions of Mahomed. The Astuwanat-el-Ashab, the Column of the Companions, whose graves are at the El Bakia, 301.—*Burton's Pilgrimage, iii. p.* 396.

ASHADAH, Sans. A. Purva, the 20th, and A. Uttara, the 21st Lunar mansions, also the 4th Lunar month.—*Ed. Warren Kala Sanhita.*

ASHADHA, the 3rd Solar month, Hindu denomination, when the Sun is in the sign Midhuna, II, answering to the Tamil month Audi.—*Ed. Warr. Kala Sanhita.*

ASHAKA-BASH. See Youkharee bash.

ASHARY, in Malabar, the carpenter caste, who in common with the brass founder, gold and iron smiths, continue the practice of polyandry, but in Civil inheritance follow from father to son, and not the old Italian practice of maternal descent, descensus ab utero. The elder brother marries and the wife is common to all the brothers. If a junior wish to marry he must live apart and set up business apart, but if any of his younger brothers reside with him, his wife is common to them. See Polyandry.

ASHDOD, the modern Esdud, now an insignificant village, 11 miles, S. W. from Ekron.

ASHER, the modern Accho, is situated at the northern corner of the Bay of Acre, opposite Mount Carmel.

ASHES.

Sambool	... Tam.	Bhasnuam	... Sans.
Boodida	... Tel.	Vibudi	... Tel.
Rakh	... Hind.	Tiroonoot Oondi...	Tam.

Wood ashes are useful for cleaning metals; enclosed in a bag and dusted through it by striking it on a knife board, it is a good substitute for bath brick for cleaning knives. Balls of cowdung ashes are sold in the bazars under the Teloogoo name of Vibudi, *Tamul*, Tiroonoot Oondi, and are much used for cleaning military appointments and brass mountings of harness, &c. In commerce, the term applies to such vegetable ash as the alkaline salts are extracted from.—*Mr. Rhode, M. S. S.*

ASHKANIAN, written also **ASHGANIAN** a name given by the Persians to a number of petty kings who followed after Alexander, they are the Arsacidæ of the Greeks and are also described as the Muluk ul Tawaif. See Arsacidæ : Persian Kings.

ASHLESHA, in hindu astronomy, the asterism of the serpent.

ASHOK. Sans. Jonesia asoca.

ASHON. Beng. Terminalia tomentosa.

ASHOO-KUCHOO. Beng. Colocasia antiquorum.

ASHORA or **ASHRAH.** Arab. From Arabic, 'ashr' a tenth part, the first ten days of the mohurrum, or the ceremonies observed during that part of the month. Houses are appropriated in which they set up Allums, Taboots, Shah-nasheens, Booraq's, &c., and sometimes screens made of mica. These places are called the Ashoor Khanah (ten day house); Tazeea Khanah (the house of mourning); and Astana (a threshold or faqueer's residence). In Upper Hindustan, opulent mahomedans erect an Imambara, and the Shiahs generally follow a similar practice.—*Herklots.*

ASHPHUL. Beng. Nephelium longan or Scytalia longan. Mclay longan.

ASHR. Arab. Calotropis gigantea.

ASHR. Ar. The tenth, by mahomedan law, land is liable only to two imposts, viz., the Ashr or tithe, a poor rate due only on the actual produce of the soil, and the khiraj or tribute, generally imposed on land within reach of running water or means of irrigation. A land can be subject both to Ashr and Khiraj at the same time. See Khiraj.

ASHRAF. This poet dates his history of Sekander or Alexander, entitled *Zaffer. Nameh* the Book of Victories, A. H. 848, (A. D. 1,444).—*Ouseley's Travels, Vol. ii. p.* 391.

ASHRAFFI, a gold coin of India, no longer current, value 15 and 16 Rupees called a gold mohur. See Silver Coinage.

ASHRAF-UL-BALAD, an appellation of Kandahar.

ASHRE. A grove. The groves in which the ancient Sabæans worshipped. – *De Bode.*

ASH-SHORA.—? Limonia pentaphylla?

ASHSHOWRA. Beng. Glycosmis pentaphylla.

ASHTA, four towns in India one in L. 75° 19′ E. and L. 18° 45′ N., another in 76° 15, E. and L. 19° 24′ N., a third in L. 76° 49′ E′ and L. 18° 32′ N., and a fourth in L. 76° 51. E. and L. 23° 9′ N.

ASHTA Sans. Eight. Asta Dika, the eight points of the compass, including the cardinal.

ASHTAKA. Sansc. A book or chapter of the Vedas, a series of which forms a Sakta. See Arian; Veda.

ASHTANGA DANDA; Dandawat, a hindu reverential salutation, consisting of the prostration of the body with the application of eight parts—the forehead, breast, hands, knees and insteps of the feet, to the ground.

ASHTA SAHARISKA, a book on buddhism. See Prajna.

ASHTI, in L. 18° 48′ N L. 75° 11′ in the Dekhan; 30 miles S. E. of Ahmednugger, the site of the last battle with the Maji Rao. The mean height of the village is 1,460 ft. *Buist*. another Ashti is in L 75° 41′ E. and L. 18° 25′ N. and a third in L. 75° 29′ E. and L. 17° 50′ N.

ASHTORETH, Ασταρτη, Astarte, the principal female divinity of the Phœnicians, as Baal was their principal male divinity and her worship seems to have gone with the Phœnicians to all their colonies. Astarte, of the Syrians, Ken of the Egyptians, Hera of the Assyrians, Venus of the Greeks and Romans, the Myletta of the Arabs and Doorga of the hindus are all one and the same divinity, with modifications to suit the views of the different nations who followed the worship of the female generative principle. The worship was baredon a physiological theory. The hindu Doorga, as well, stands erect upon a a lion and holds a serpent in her hand as does Ken in the Egyptian tablet, or Hera in the Assyrian bas reliefs. See Astarte.

ASHWA GUNDA. Beng. Physalis somnifera, var. P. flexuosa, Nees.

ASHWAPOOR, a town in India in L. 80° 51′ E. and L. 17° 52′ N.

ASHWITH. Beng. Ficus religiosa.—*Linn.*

ASI, was the term applied to the Gete, Yeut or Jut, when they invaded Scandinavia and founded Jutland. The Asi seem to have been a northern race with several divisions some of which appear to have been conquered by the Egyptian king Seti III. Colonel Tod considers that Scandinavia was occupied by a tribe of the Asi. He says that the Suevi or Sivones, erected the celebrated temple of Upsala in which they placed the statues of Thor, Woden and Freya, the triple divinity of the Scandinavian Asi.

ASIA, the Southern and Eastern portion of this part of the Old World, which may be noticed in this Cyclopædia, may be indicated as lying South of Siberia. Traversing the kingdoms of Hindustan and Kabul, from the East of Bengal to Herat, we find India everywhere bounded on the North by a chain of mountains, which is covered with perpetual snow for almost the whole of that extent, and from which all the great rivers of both countries appear to issue. This chain commences near the Bramhaputer, and runs nearly Northwest as far as Kashmir. During this part of its course, from Hima, the Sanscrit, for snow, it is called Himaleh, by the natives of the neighbouring countries and it is the Himalaya of the British. From Kashmir, its general direction is a little to the South-west, as far as the high snowy peak of Hindoo Coosh, nearly north of Kabul. From this peak its height diminishes, it no longer wears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Kabul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the west, and extend so far into Persia, as to justify, if not completely to establish, the opinion of the ancients, which connected this range with mount Caucasus on the west of the Caspian Sea. From Cashmeer to Hindoo Coosh, the whole range is known by the name of that peak. From thence to the meridian of Herat, the mountains have no general name among the natives, but that of Paropamisus has long been applied to them by European geographers. As seen from the plains of Peshawar, the fourth is the principal range of the Indian Caucasus, and is always covered with snow. It is conspicuous from Ractria, and the borders of India, and is seen from places far off in Tartary. Elphinstone says that the ridge of Imaus or Himalleh, is seen from a distance of 150 and even 250 miles. The Paropamisan chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is a maze of mountains, and, though it affords a habitation to the Eimauk and Hazara tribes, it is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained. It is certain, however, that the range of Hindoo Coosh is there no longer so lofty as to be conspicuous among the mountains by which it is surrounded, and that no continued line of perpetual snow can any more be traced. The eastern half of this elevated region is inhabited by the Hazareh, and is cold, rugged, and barren; the level spots are little cultivated, and the hills are naked and abrupt. The western part, which belongs to the Eimak, though it has wider valleys, and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh: their acclivity is less on their other extremities, except perhaps on the west or south-west. On the north-west they seem to sink gradually into the plain which borders on the desert. The slope of the whole tract is towards the west. To the north of this, extending eastwardly and to the west, are the elevated plains of Tartary, the Asiatic dominions of Russia, Chinese Tartary and China, and the regions occupied by several Turkoman nations. To the south is India with its two peninsulas, and its archipelagos on the eas, with the dominions of Persia, of Turkey in Asia and Asia Minor and the peninsula of Arabia on the west.

Central Asia, is a term of the present day, used differently by geographers, ethnologists and politicians, but is usually applied to the region entervening between Russia in Asia and British India and lying to the west of Chinese Tartary. The whole country of Central Asia between India and Tartary, is one broad mountain range, the Himalaya forming the southern crest and the Kuen-lun the northern. The interior has some lovely valleys, like Kashmir, but it is more usually broken into rocky ravines, through which the affluents of the Indus force their way towards the plains; or else stretches away in those vast treeless uplands, which are one of the chief characteristics of the range through its whole extent. The direction of this range is from east to west trending slightly to the north, while the parallel chain that bounds Siberia to the south and the outer crest of which is the Thian Shan, trends somewhat to the south; so that at a short distance to the west of Yarkand and Kashgar the great interior depression of Chinese Tartary terminates and the bounding ranges coalesce in the elevated table land of Pamir. The ascent from Yarkand and Kashgar westward to the table land of Pamir is almost imperceptable: and when that lofty position is gained, where the average elevation is probably as much as 15,000 feet above the sea a vast open plain is seen which stretches from the valley of the Jaxartes in one direction, across the head streams of the Oxus to the top of the Kashgar or Chitral valley in another. This plateau may be 700 or 800 miles in extent. It is studded throughout with lakes; and from it, descend four great river systems. The Narym which is the main stream of the Jaxartes, runs through a long luxuriant valley between the culminating ridge and outer range of the Thian Shan, and drains all the northern range of the plateau. The Oxus rising in the Sari Kul or yellow lake of Pamir, at least 300 miles to the south of the Jaxartes, receives from its right bank a multitude of small streams, which run to the south through rugged valleys on the south western face of the Pamir Uplands. The western face of Pamir between the Jaxartes and the Oxus is far more precipitous than the eastern. Ridges run out as far as Samarcand and Karshi, and the streams from the upland which twine amongst these ridges form the Zar-afshan and Karshi part of the water system of the Oxus, though before they reach that river they are entirely consumed in irrigation. The water system of the Indus is formed on the south eastern extremity of Pamir, where the table land is lost in the rocky summits of Muz Tagh and a number of streams drain off to the southward, forming two subsidiary Indus systems. A culminating ridget Pusht-i-khar or Ass's back, which runs out from the south east corners of thePamir plateau is the true watershed between Thibet and Kabul, the streams flowing to the southward being separated by the shoulder which joins the Hindu Kush, from the streams descending through Vakkan and Badakhshan to the Oxus, and forming the Kabul river which falls into the Indus at Attock, while those that flow to the south east are divided by the Muz Tagh range from Tartary and descend through a series of rocky valleys and precipitous gorges into the upper Indus at Little Thibet. From the eastern face of Pamir again, which slopes off very gradually into the plains of Tartary, is supplied a fourth water system, in the form of a series of small streams which, passing by Yarkhand and Kashgar are ultimately lost in the sandy desert or in some cases reach the central lake of Lobnur.

Central Asia has a hardy peasantry, dwelling in the mountain regions, with its vast upland downs well suited for summer pasture, partly decendants of the original inhabitants and in part of the many migratory races who have swept through the country. At the foot of the mountains, in the tracts of surpassing fertility, Turk, Bokhariot, Kalmuck Kirghiz, Ouigur, Manchus, Chinese, Armenians and Indians dwel in the well watered plains. Beyond thsee, in every direction is the pathless desert which has been tenanted by pastoral nomades ever since the earth was peopled. There seems from the Vendidad opening chapters in ancient times to have been a great kingdom in Central Asia. An eastern branch with its primeval seats on the Oxus, the Iranian people, who were settled between the Oxus and the Jaxartes as early as the time of the Judges of Irsael, and still hold their ground in the country, under the names of Tat, Tajik, Sert, Galsha and Parsiwan,—a primitive and not impure Iranian population, is to be found in almost every district from the Indus to the Jaxartes, and throughout the valleys of the Oxus. Very little exact knowledge is available, as to the history of the races who dwelt in Asia, in ancient times. The earliest starting points from which emigrations have been traced, are on the one hand, the pre-historic time when the Semitic races, dwelt in the land at the sources of the Euphrates on the western part of that great mountain chain above noticed : while the primeval seats of the Arians were on the slopes of the Belur Tagh, in the highland of Pamir, between the 40th and 37th degrees of N. latitude and 86th and 90th degeees of longitude. The Arians who migrated thence through the valley of the Indus, into India, notice in their writings, a territory, the Uttara-Kuru as their original dwelling places, but the site of that place is now unknown, though every Arian hindu still speaks of it. On the western slope of the Belur Tagh and the Mustagh (the Tian-Shang or Celestial mountain of the Chinese) the Haro-berezaiti (Albordsh) is likewise to be looked for, which is invoked in the Zendavista as the principal mountain and the primeval source of the waters, and Lassen has remarked that, at the present day, the old indigenous inhabitants of that district, and generally those of Kashgar, Yarkhand, Khoten, Turfan and the adjacent highlands, are Tajik who speak Persian, and who are all agriculturists. The Turcoman either came after them and settled at a later period, or else they are aborigines whom the Arians found there. What seems to have induced the Arians to leave the steppes of Pamir was some alteration in the climate induced by some vast disturbance of nature and they followed a northerly route to Sogd and not along the course of the Oxus, which would have taken them to Bactria. Chevalier Bunsen (iv. 491) indicates from B. C. 7250 to 5,000 as having seen, in Asia, the united races of the Arians and their gradual separation into the Indo-Germanic races, as Kelts, Armenians, Iranians, Greeks, Slaves, Germans, &c., and the formation of the separate races of Northern and Southern Semites, and from B. C. 5,000 to 4,000 as the period of the formation of the Arian kingdoms in Central Asia, as far as Northern Media and to Kabul and Kandahar, at which date, the Semites commenced to use written characters ; and he considers that, on the last date, B. C. 4,000 the Arians moved into the Indus valley and B. C. 3784, a powerful Chaldean kingdom was formed in Southern Babylonia. He names B. C. 3250 as the date of the building of Babylon : the birth of Abraham in Ur of the Chaldees as occurring B. C. 2927, and his withdrawal with his father to the South Western part of Mesopotamia, B. C. 2,900. These Indo-Germanic and Semitic families, from those early ages until now, have been exercising a paramount influence in the world. Klaproth includes under the designation Indo-Germanic, in Asia, Indians, Persians, Afghans, Kurds, Medes, Ossets, Armenians, and in Europe, Slavonians, Germans, Danes, Swedes, Norwegians, English, Greeks, Romans, and all the people who there speak a language derived from Latin (*Kennedy on the origin of languages, p.* 217) and he is of opinion that the wide dispersion of the Indo-Germanic race took place probably before the flood of Noah ; and that it is the only Asiatic race which appears to have descended after that event from two high mountains ; namely, from the Himalaya into India and Middle Asia, and on the West from the Caucasus into Asia Minor and Europe. In India says Colonel Kennedy, this race mixed itself much with the dark coloured aborigines and though its speech predominated its physical characteristics were deteriorated, as has ever been the case when a mixture has taken place between a white and black or brown race ; when the physical qualities of the latter, and the moral qualities of each undergo an inevitable change. (*Kennedy on the origin of languages, p.* 217) The earlier races here alluded to, however, whom the Arian immigrants found in India and encountered by the Semites in the south east of Asia seem in part to have come from a more northern and perhaps a more eastern region and in part from Africa, and the languages still current in India, the Mahratta, Guzerati, Hindi, Bengali and Panjabi on the north of the river Kistnah, with the Telugu, Tamil, Canarese, Malayalam, and Tulava amongst the nations south of that river, the former having as a basis the Sanscrit which the Arians spoke, the latter class with a Tartar origin, while they indicate the extent of the Arian intrusion into India, also mark distinctively the different origins of the two great races now in India.

There is little of written history connected with much of Asia, until comparatively recent times, and in all ages the changes have been very rapid amongst the dynasties. On this point, Chevalier Bunsen remarks (iii. 437-8) that the history of all the Asiatic monarchies is the same. Formed by great conquerors and supported by powerful armies, after a single reign or a few generations during which the energy of the founder still survives, they sink under the internal weakness of despotisms, and the enervating luxury of harem life. The heads of the dominant race, the military nobility, become gradually corrupted, and the empire built upon an artificial basis, only awaits the first shock from without to yield to some new and enterprising conqueror. Thus Babylon fell: thus fell Nineveh before it: thus fell Persia after it and so even, though in a different manner, fell the empire of Alexander. (*Bunsen, iii.* 437-8.) Amongst the earliest of the conquering nations were the Egyptians on the west of Asia, the Assyrians, the Arabs, the Greeks under Alexander, and the Tartar races. The whole of the country on the right bank of the upper Indus now known as Peshawar, opposite Attok (Taxila) and still higher up was tributary to the Assyrians as it afterwards was to the Medes and Persians. According to Pliny, Semiramis captured here, on the Kophen (the Cabul river, the Kabba) the city of the same name. That queen, in B. C. 1230 fitted out an armament in Bactria and crossed the Indus with a vast force The Indian ruler had taken up a position, there, especially formidable from the number of his archers and elephants: he retreated at first, but soon drove back Semiramis in total disorder, to the river, which she crossed after great difficulty, and with an immense loss. Semiramis concluded an armistice, made an exchange of prisoners and retreated into Bactria with a third of the army she had brought against India. The Indian king, styled Havira-pati or Shora-pati seems to have then ruled in the doab-territory south of the Saraswati (*Ch. Bunsen iii, p.* 547 *to* 550) and it seems to have been Jarasandha of Bagadha, the son of Brihadatra of the Lunar race.

The Arian hindus are tall as a race, of a large frame, and of a yellow colour, in varying shades: but the previous settlers in India are darker, with various shades of black, and shorter, in stature. It is the opinion of Chevalier Bunsen that there is a historical connexion between the Greek mythology, the primæval records of the Bible and the oldest religion of Egypt and Asia, and that primæval Asia was the starting point of the intellectual movement of the human race, and that its language was Semitico Arian, in which the Semitic or Western Asiatic element predominated: constant interruptions to progress seem to have occurred by inroads or migrations of the northern race or races whom the Greeks called Scythians. The earliest existing accounts of this people, describe them as rude and unlettered, living in various independent tribes, as not united into one nation, and perfectly unacquainted with the learning and arts of civilized society. Herodotus characterises the Scythians as the most ignorant of men, and every subsequent description of them fully confirms this. (*Sir W. Jones, in Kennedy on the origin of languages, p.* 4.) Mr. Palgrave tells us that the great Asiatic highland south-east of the Black Sea and south-west of the Caspian, has ever been remarkable for its numerous races and is now a well-head of nationalities where the people promise at no distant period to combine into new nations. This region is enclosed on the west by the torrent river Kizil Irmak, the Halys of the ancients; on the south it has the Tigro Euphrates valley and its border lands: on the east are the desert tracts of central Persia; and on its north, the Black Sea, Russian Georgia and the Caspian Sea. The highland is formed by several entangled mountain chains apparently belonging to but somewhat apart from the Caucasus, from which it is separated by the wide valley of Georgia, and the plains watered by the Rion or Phases and the Araxes. These highland mountains run N. West and S. East from the Anatolian Coast beyond Trebizond to the lofty peak of Demavend, and the neighbourhood of Tabriz or Taurus. It comprises parts of Turkey, Russia and Persia, the whole East of Anatolia, with Northern Kurdistan, both of which belong to Turkey, the Russian provinces of Erivan and Karabagh, with the Persian province of Azerbijan and in their central point is the double cone of Ararat, covered by never melting snows.

The soil is fertile up to 6,000 feet, and produces all kinds of cereals, and the "yaila" or pasture lands of vast extent rise still higher, clothed with excellent grass. In the valleys below, are the vines, fruit trees, maize, rice, tobacco and varied cultivation alternating with forests in which grow the ash, walnut, box, elm, beech, oak, fir and pine, and amongst its minerals are iron, copper, silver and lead. From its valleys, flow the great rivers, Chorook, Araxes, Tigris and Euphrates, with all their countless tributaries with other water courses, some for the Black Sea, some to the Caspian, some to the Mediterranean and some to the Persian Gulf.

The population of that mountain tract is made up of Armenians, Turkomans and Kurds, and until recently did not exceed fifteen to the square mile. But to avoid the pressure of Russian rule many of the Turkomans from the N. East and many Circassians have crossed into the Turkish dominions and many Turkomans also have joined from Persia.

If we now turn to the S. Eastern parts of Asia, the races occupying it are those named by Prichard Iranian, (also Indo-Atlantic or Caucasian) Turanian (or Mongolian); Negro; Papuan (or woolly haired races of Polynesia) to whom Pickering gave the name of Negrito; the Alfourou or Australian race, the Malay and Indian. In British India, the Aryan race occupy the North and N. West parts, commonly known as Hindustan and the Punjab. Peninsular India is chiefly inhabited by a Tamulian stock. On the borders of British India, in the N. West, North, N. East and East, are of the Mongolian stock,—the Tibetans, tribes, several populations of the Sub-Himalayan range, the Burmese, the Siamese, the Natives of Pegu, the Cambojians, the Cochin-Chinese and the Chinese. In the south of the Malay Peninsula, in the Andamans, in the Arru group of Islands of the Archipelago, in New Guinea are negro races and the Malay race extends from Sumatra into most of the Archipelagic islands.—Ch. Bunsen notices that in Eastern Asia are countless tribes and races, on the confines of the Semitic and Aryan races, but occupying a large portion of Central Asia and nearly the whole of Northern Asia to the extreme North of Europe. These present the widest diversity of degrees of culture and in their developement of languages, from that of Thibet only just beginning to advance beyond the use of monosyllables through the Tatar Turkhism, up to the elaborate refinement of the Turkish, Finnic and Magyar, offshoots from the same stem. Among some of these people, religion is in the early stage of nature worship: in some, it has given a Turanic form to buddhism, Christianity or Mahomedanism. But wherever we find Turanians, we find a tendency, a yearning, to transport themselves out of ordinary life into a state of enthusiasm, which in its highest grade rises to ecstasy and carries the votary quite out of his senses. It is their view of the relation of man to God, their mode of access to a more exalted consciousness. It is this to which Europeans apply the budhistic word Shamanism. It is an ecstatic condition which they produce by physical excitement of the mind. The Mongolian races of North America refuse nourishment till nearly dead of hunger, with the object of producing a clairvoyance, and this is the end, constantly sought for by the use of intoxicating drinks, the noisy beating of drums and tambours and all kinds of deafening and overpowering music which are the invariable accompaniments of all Turanic modes of excitement, as also of the giddy revolving dance, customary with them. The Turanian mind sees in the world of nature, powers and spirits of which he stands in awe. It stands in fear of the invisible. Everything around is full of spirits and it is to exorcise such and avert the influence of the evil eye that he strives to work himself into a condition of excitement, to become an equal match with the surrounding spirits. The belief in magic is universal amongst all Turanian tribes. The Turanian form of Government is a sanguinary despotism, tempered at best by a military aristocracy.—*Bunsen's God in History Vol. i. p.* 236 *to* 240. Mr. Logan says of the races of the south-east of Asia, that the Chinese head when viewed from the front has a strongly marked physical relation not only to all the races of the Mongolian type, but in a much closer or more special manner to the Tibetan tribes, the American Indians and some of the eastern Asianesian tribes, in all which one of the prevailing Chinese types may be traced. Numerous examples of the elongated head, obtusely wedge-shaped cranium, and arched nose of America and New Zealand may be seen in every assemblage of Chinese in Singapore. The occipital truncation remarked in America and Polynesia is common in south-eastern Asia. It is very strongly marked in the Lau race. The Tibetan tribes have the rise of the skull at the coronal region, but the other characteristics are wanting. The heads of the American men of Dr. Prichard's Natural History of Man resemble those of the Chinese. The prominent lateral expansion of the zygomæ is comparatively rare in the Chinese as in the Americans. The Sumatra Malays have much more frequently the typical Mongolian head, as have also the allied tribes of the Irawadi basin, with whom they are most nearly connected and whence they have undoubtedly derived their physical stock. The Chinese-like tribes of Ultra-India appear to have intruded into an ancient harmonic formation that extended from the Himalayas to Tasmania, and it is more probable that their languages were partially influenced by the native ones than that, on their first emergence from the western highlands of China, a change occurred. If the Burman stock was a tribe ejected from the Alpine polytonic province on the north east of Ultra-India, and cut off from all connection with its kindred Alpine tribes, the difference between the Burman phonology and the Chinese might have been affected by internal decay. But it cannot be assumed that it was so. Burman may be a fully polytonic formation akin to Chinese and partially modified by the influence of harmonic Turanian languages with which it came in contact. A searching comparative analysis can alone solve such questions. The Indo-European formation can, with much probability, be referred to one small province in the south east of Asia, where it must at one period have characterised the single language of a single tribe. The nature of this formation, and its relation to the conterminous languages, prove that it is of comparatively recent and rapid expansion, and consequently of little comparative importance in the investigation of the ethnology of the world or of any one of the multitude of languages which are connected with other and older diffusions. The Japanese, northern Chinese and the principal north American races, do in fact so strongly resemble each other and differ so considerably from the Ugro-Scythic and allied Asiatic races and from the Esquimaux, that there can hardly be a doubt that they are descended from the same east Asiatic stock. But even if this is admitted, the western affinities of the Japanese and American languages would prove that there was no direct connection between the latter and the Chinese. The Japanese people may be Chinese but the language is Fin much more than it is Chinese. On the whole, no other conclusion can be drawn from a comparison of the African, the pre-Iranian, European and the north Asiatic languages with the American, than that, before the latter spread into the New World, formations akin to it predominated throughout the Old, save in the secluded tracts protected by the great southern mountain systems extending from Caucasus to Shan Garjan, and that the present mid and northern Asiatic formations are modifications of the ancient ones, caused, in all probability, by the perennial influence of the crude formations of civilised southern races.

The following are the principal Asiatic rivers and their lengths, viz.

Yeneisy and Selenga, Siberia... ...	3550
Kianku, in China...	3290
Hoang-Ho...	3040
Oby and Irtish, Siberia	2890
Lena, ... ,, ...	2550
Amour, Tartary	2500
Mekon, Cambodia...	2200
Burhamputar, India	2000
Euphrates, Asiatic Turkey	1900
Indus, India...	1906
Thy-lu-nun, Burmah...	1860
Ganges in India...	1850
Irawadi, Burmah...	1280
Gihon or Oxus, Central Asia ...	1200
Tigris, Asiatic Turkey	1160
Garrah, Panjab...	1000
Godavery, Peninsular India... ...	850
Jumna, India	800
Gogra... ,, ...	780
Nerbuddah ,, ...	780
Benjer, Borneo	570
Jordan, Canaan...	176

ASIA ISLANDS, in the Gillolo Passage, are three low level islands, the most south-westerly of them being in lat. 1° 0′ N. and 24 miles N. E. of Aiou Islands.—*Horsburgh*.

ASIA MINOR. See India, p. 333. Javan Kurdistan, Lud, Polyandry.

ASIATIC OR ORIENTAL SOCIETIES are found in almost every country of Europe and in each of the Presidency towns of India, most of them publish journals. The Asiatic Researches commenced in 1783, with Warren Hastings as patron, and Sir William Jones and Charles Wilkins on the committee: they concluded with its 20th volume in 1839, but are continued in the Journal of the same society.

ASIATIC PENNY-WORT. ENG. Hydrocotile Asiatica.—*Linn.*

ASII OR ASIANI, are nomades who took Bactria from the Greeks, and who Mr. Prinsep considers to be Scythians of Azes, who overpowered the Greek dynasties in Soghdiana and northern Bactria between 140 and 130 B. C.

ASIL, ARAB. HIND. A maid servant.

ASIL-DURGAH, or Asilghur, supposed by Prinsep to be the town of Junaghur, q. v.

ASINUS, the Ass. Much confusion prevails as to the species of this genus, resulting apparently from naturalists describing them from imperfect skins and from animals at different ages, and of different sexes. Two Tibetan wild animals are enumerated, the Equus Kiang of Moorcroft and the Equus Hemione of authors, as found generally throughout Tibet. But Mr. Hodgson, states that there is no species of wild horse in Tibet and only one species of wild Ass, the "*Kiang*," which Moorcroft named the Equus kiang, but to which Mr. Hodgson applied two names, viz., Asinus equioides, and Asinus polyodon. Mr. Bligh retains the term A. equioides as the wild Ass or the Kiang of the Tibetans and common on the plains of Tibet. Dr. Horsfield considers As. Kiang, Eq: Kiang and As. Polyodon to be synonymous. The following species of the division Asinus, as defined by Gray, are now likely to be generally acknowledged:—

Asinus Quagga. The Quagga is obtained from the Cape territories, and is scarcely found northward of the Gariep or Orange river: but still in great herds southward, associating with the white tailed Gnu, as A. Burchellii does with the Brindled Gnu, and both with ostriches (as in Xenophon's time the A. hemippus did in Mesopotamia). The most horse-like in structure of any; the Hippotigris Isa bellinus of Col. C. H. Smith is probably founded on a Quagga foal, perhaps not very exactly represented. Such an animal as this, or as the "Isabelline Zebra" of Levaillant could not have been overlooked by all subsequent explorers of South Africa.

Asinus Burchellii, Gray, (Equus zebra of Burchell). The Damo, or original Hippotigris of the ancients and also the original Zebra of Pigafetta from Congo; but unknown to Buffon, who regarded the next, or Mountain Zebra, and the Quagga as the two sexes of one species, denominated by him the Zebra (Hippotigris Burchellii and H. antiquorum of H. Smith,) extensively diffused over Africa, even to Abyssinia and to Congo, and southward to the Gariep river.

A. Zebra, (Equus montanus, Burchell). The Zebra of modern nomenclature, or (more distinctively) the mountain Zebra; Wild Paard (Wild Horse) of the Dutch colonists of South Africa. A thorough mountaineer, and known only to inhabit South Africa. Also the most completely striped of any, down to the very hoofs.

A. *Vulgaris*, Gray (E. Asinus, Z.) The true Onager, Onagrus, or aboriginally wild Ass. Indigenous to North East Africa, if not also to the Southern parts of Arabia and the Island of Socotra.

A. Hemippus; E. hemippus, Is, St.—Hilaire; E. asinus onager, apud Wagner. The Hemionus or Hemippus of the ancients. Inhabiting the deserts of Syria, Mesopotamia, and the northern parts of Arabia.

A. Onager. (E. asinus onager, Pallas). The Koulan or Ghorkhur, Inhabits West Asia, from 48° N. latitude Southward to Persia, Beluchistan, and Western India.

A. Hemionus. (E. hemionus, Pallas; E. Kyang, Moorcroft; E. polyodon, Hodgson). The Dshiggetai or Kyang. Inhabits Tibet, and thence northward through the Gobi Desert into Mongolia and Southern Siberia.

So far as known for certain, the last two, A. onager and A. hemionus are distinguishable by shades of colour only, and by unimportant differences in the relative extension of different hues and markings. The A. hamar of Col. C. H. Smith is rejected, as having been founded on insufficient evidence of the existence of such an animal. It is highly improbable, also, that other wild asinine species yet remain to be distinguished.

It would seem from the above. That the true Onager and Hemionus of ancient writers were unknown to Pallas, who has assigned these names to cognate species or races that were unknown to the Greeks and Romans.

That, accordingly, the Koulan of N. Asia is not the true Onager or aboriginal Wild Ass, but that it is identical with the Ghor-Khur. That the true Onager, or wild Ass, is not an inhabitant of North Asia, but of the North-East of Africa and the Southern part of Arabia.

That the Koulan and the Dshiggetai or Kyang, instead of being strongly distinguished apart, bear so exceedingly close a resemblance that no decided specific distinction has yet been satisfactorily pointed out, however probable it may be that such distinction may exist. Why, therefore, the one should be popularly styled, " wild horse," and the other a " wild Ass," it is difficult to comprehend. Even Pallas terms the Dshiggettai " un Cheval sauvage," though describing it as " ni Cheval ni Ane ;" while the other he both designates as the Ass of the steppes and as the "Cheval ou Ane," employing the word " Cheval" in its German equivalent evidently in the sense of equus. Col. Chesney, as we have seen, terms the Arabian A. hemippus as " wild Horse," as distinguished from his wild Ass of South Arabia. The fact seems to be that the vague application of these names has resulted merely from the colouring.—(*Mr. Bligh in the Annals and Magazine of Natural History*, p. 252-254.)

It has been supposed to be the wild Ass of the Runn of Cutch, that is alluded to in Job, " Who has sent out the wild Ass free? Or who hath loosed the bands of the wild Ass? Whose house I have made in the wilderness, and the barren land his dwelling. He scorneth the multitude of the city, neither regardeth he the crying of the driver. The range of the mountains is his pasture, and he searcheth after every green thing."

The Persians, Tartars and ancient Romans eat the wild Ass, and with Roman epicures a haunch of wild Ass roasted was a favourite dish. Olearius affirms that he saw 32 wild Asses slain in one day by the Shah of Persia and his Court, and that the bodies were sent to the royal kitchen at Ispahan.—*Horsfield's Catalogue*, p. 191. See Ass.

ASINUS EQUIOIDES. See Horse.

ASINUS HEMIONUS. Rubruk relates that he saw in the solitudes of Tartary asses that resembled mules, and he probably speaks of the animal called the *hemi'on*, which Messrs. Huc and Gabet often met with in numerous herds during their journey from Pekin to Lha-ssa, through the Mongolian steppes.—*Huc's Christianity, Vol. I*, p. 225.

ASINUS ONAGER. See Gorkhar.

ASINUS POLYODON. See Horse.

ASIR, an Arab tribe, of whom the Berekede are a branch. The Berekede are said to allow strangers to visit their wives, like the Jakuri Hazara.

ASIRGAR, a fort in Kandesh: on a seal found there, of the 10th or 11th century, engraved in Sanscrit, mention is made that the Rajas Aditya Varma and Isvara Varma were married to the eldest daughters of the Gupta race, which may be that of the Allahabad inscriptions and Kanouj coins. If so, the Deva Nagari of the inscription would confirm the belief of the Guptas being of the ninth and tenth centuries. The Rajahs were probably Princes of Kandesh. —*Cal. As. Jour. Vol. V*, p. 482.

ASKA, a town in India in L. 84° 48′ E. and L. 19° 35′ N. It is in the district of Ganjam and sugar is its chief product.

ASIR-VADAM. See Hindoo.

ASKALANDA, a town mentioned by the ancient Arabic writers, has been supposed to be the Alexandria built at the confluence of the Acesines with the Indus. But it was also called Askalanda Usa, and seems to be the Uchh of modern times.—*Elliot.*

ASKELON lies to the westward of the road to Gaza, and near the sea. It was once a satrapy of the lords of the Philistines, but at the present day is without a single inhabitant within its walls. Askelon was taken by the Crusaders, who strengthened the fortifications, but it was subsequently re-taken by Salah-ad-din, who destroyed the works made by the christians —*Robinson's Travels, Palestine and Syria, Vol I, p.* 22.

ASKOT, a town in India, in L. 80° 20′ E. and L 29° 45′ N.

ASKHAR. ARAB. Jatamansi, Lemon Grass.

ASLESHA. SANS. The mansion, sign, or asterism of the serpent, called also Sarpa. See Serpent.

ASL-US-SUS ARAB. اصل السوس root of Glycyrrhiza glabra; Liquorice.

ASNA, two towns in India, one in L. 86° 26′ E. and L. 24° 36′ N. the other in L. 87° 3′ E. and L. 24° 7′ N.

ASNAHA, a town in India in L. 86° 10′ E. and L. 22° 24′ N.

ASNEA, a town in India in L. 87° 19′ E. and L. 24° 21′ N.

ASNEE, a British military cantonment in the lower Derajat.

ASOCA. See Asoka.

ASOF JAH, the first of the present dynasty of Hyderabad in the Dekhan, hence the title, Asof-Jahi of the dynasty. The ruler in 1868 bore the title of Asof ud Dowlah. *See Hyderabad.*

ASOF-UD-DOWLAH. See Jews. Kalmuck.

ASOGA. SANS. Uvaria longifolia.

ASOJ, the last day of this month ushers in the hindu winter (*surd rit*). On this day, nothing but white vestments and silver (*chandi*) ornaments are worn, in honor of the moon (*Chandra,*) who gives *his* name to the

> Pale and common drudge
> "'Tween man and man."

An intercalary month is the mode followed by hindus to adjust the annual seasons, their ordinary calculations being by Lunar months, and such are called *Lunar*. On the Asoj there is a procession of all the Rajpoot chiefs to the Chougan; and on their return, a full court is held in the great hall, which breaks up with "obeisance to the lamp" (*jote ka moojra,*) whose light each reverences. When the candles are lit at home on this day every Rajpoot, from the prince to the owner of a "skin (*charsa*) of land," seated on a white linen cloth, should worship his tutelary divinity, and feed the priests with sugar and milk.—*Tod's History of Rajasthan.*

ASOKA, SANSC. TAM. In the south of India, Asok, or Asoka is the name of the Uvaria or Guatteria longifolia.

ASOKA, SANSC. *from* "a" not, and soka, sorrow, is the Jonesia asoca Roxb. which yields a beautiful flower diversified with orange, scarlet and bright yellow tints and in hinduism is consecrated to Siva; as the lotus flower, called Kamala or Padma, is sacred to Vishnu and his wife Lakshmi; a sweet scented jasmine (J. undulatum) to Vishnu and Mariamma the goddess of the pariah or servile race. The superb crimson Ixora bandhuca is offered at the shrines of Vishnu and Siva, and the Nauclea cadamba a stately tree, yields in the hindu belief the holiest flower in India. The Asoka is one of the most beautiful of Indian trees. Sir W. Jones observes, that 'the vegetable world scarcely exhibits a richer sight than an Asoka tree in full bloom. It is about as high as an ordinary cherry-tree. The flowers are very large, and beautifully diversified with tints of orange scarlet, of pale yellow, and of bright orange, which form a variety of shades according to the age of the blossom.' In spring, it bears beautiful red blossoms. The Asoka is sacred to Siva, and is planted near his temple. It grows abundantly in Ceylon. In Hindu poetry disparing lovers very commonly address objects of nature, clouds, elephants, and birds, on the subject of their lost or absent mistresses. (See the Megha duta, the 4th Act of the Vikramorvas′i, and the 9th Act of the Malati M′adhava.)

In some places in India it is more esteemed than at others The women bathe in some holy streams with the blossoms floating in it. The hindoos say that the contact of the stem of the Asoka tree with the foot of a woman of superior beauty, is supposed to make it blossom. This tree is often alluded to in Select Specimens of the Theatre of the Hindoos, translated by Mr. Wilson. In the 'Toy Cart,' Maitreya says, describing a garden— "And here the Asoka tree with its rich crimson blossom, shines like a young warrior bathed in the sanguine shower of the furious fight." Captain D. L. Richardson, however, (Flowers and Flower Gardens, p. 189), says that the flower is small and yellow, and is eaten by young Hindoo women as a medicine. Voigt, also, says its flowers are of an olive yellow colour. These differences as to the colour of the flowers arise from their changing during developement. They are numerous and pretty large and are fragrant during the night. When they first expand, they are of a beautiful orange colour, gradually changing to red, forming a variety of beautiful shades. Coleman says that men and women of all classes ought to bathe, on a particular day, in some holy stream, especially the Brahmaputra, and drink water with buds of the Asoka floating in it. Sita is said to have been confined in a grove of it while in captivity by Ravana: other relaters say she was confined in a place, or house, called Asocwan.—*Coleman's Mythology. Lady Faulkland's Chow-Chow. Roxb. ii.* 218. *Richardson's Flowers and Flower Gardens. William's Story of Nalc p.* 117.

ASOKA the first king of Magadha, was the son of Sis South Sisunaga was the minister and mil striped of of the Maurya family, the fo which family were all A. *Vulgaris*, Gray (E w the last of the Mau- true Onager, Onag , Asoka the 1st, formed Ass. Indigenous ya dynasty. Asoka's mother not also to the d of the dancers of a king of the Island of Vaisali and subsequently became *E. Hemi* The Brahmans gave to Asoka I, Hilaire ; F name of Kaka-Varna, or raven black, Hemios to their hatred of Asoka II, who so greathal patronised buddhists.—*Bunsen iii*. 542.

ASOKA II. grandson of Chandra Gupta, began to reign B. C. 255-6, and for the next few years, he was styled the "Furious." Immediately on his father's demise, he seized the government and gave orders for the slaughter of all his brothers save Tishya, who was born of the same mother, and immediately applied his whole energies to the achievement of military glory. In the short space of four years, he reduced the whole of northern India from the mountains of Kashmir to the banks of the Nerbudda, and from the mouth of the Indus to the Bay of Bengal, but afterwards became a convert to the buddhist religion. His conversion occurred B. C. 251-2, and thenceforward, he was known as the pious: but in his conversion he carried his fiery character into his new faith, and in four years, compelled the whole of Northern India from the mountains of Kashmir to the banks of the Nerbudda and from the mouths of the Indus to the Bay of Bengal to receive his own buddhist views. He distributed throughout the chief cities of India, the relics of Sakya, which had been collected by Ajatasatra and deposited in one large stupa at Rajagriha, and he erected a great number of vehara or buddhist monasteries. He also issued numerous edicts, which he engraved on massive rocks and stone pillars, or columns, evidently in imitation of Egyptian obelisce, in which buddhist doctrines are earnestly inculcated. The oldest of these are found at Dhauli in Kutack ; at Girnar in Guzerat and at Kapurdigiri near Peshawur, and in all these, he styles himself Priyadarsi, "the beloved of the Devas." Professor Wilson, however, doubts this identity of Asoka with the Priyadarsi who published the edict. The name is also read Piyadasi or Loving minded. Asoka defeated Antiochus and graved in the Pracrita an account of his victory on certain rocks. After he succeeded to the throne B. C. 255-6, he was crowned in Pataliputra, in the third year of his reign, before Christ, 252-3, after which he reigned thirty-seven years. After his installation, when he openly seceded from the brahmanical to the buddhist religion ; his conversion seems to have been effected by the son of his brother whom he had murdered. In his zeal he erected 84,000 buddhist sanctuaries or Chaitya, partly temples and partly tumuli, called Sthupa or Topes, which to the present day continue to be the greatest monuments of the buddhism of Central and Western India and Hindustan. In B. C. 246, he held a third buddhist council at Pataliputra (Palimbotha.) In his rescript to the council he mentions a collection of several hymns or gatha, of Buddha, as also of Aphorisms. Asoka died B. C. 222, after a long and prosperous reign of forty-one years. The Asoka era has been ascertained to be B. C. 250, probably dating from Asoka I.

Asoka II was contemporary of Selcucus Nicator. He sent ambassadors to the rulers n Egypt, Cyrene, Syria and Macedonia. He was to buddhism, what Constantine was to christianity. Asoka II removed the royal residence from Rajagriha in the South to Pataliputra, and was succeeded by his eldest son Bhadrasena, and his nine brothers in succession. Immediately after his death, the Magadha dominions were broken up and anarchy followed.—*Bunsen iii.* 544 ; *Thomas' Prinsep's Indian Antiquities. Cunningham's Bhilsa Topes. Bunsen iii.* 542. See Cyclopædia of India, articles, Buddha ; India 322, 363 ; Inscriptions 373, 385, 391 ; Junaghar ; Kabul 437 ; Kumala ; Lat.

ASOKAM. Tel. అశోకం. Guatteria longifolia, *Wall.—W. and A.* 35 ; *Ic.* 1.—Uvaria longif. *R.* ii. 664. This name is everywhere applied to Guatteria longifolia in the south where the true Jonesia asoka is rarely seen. See Asoka.

ASP. Boten. Arab. Peten. Heb.

The Asp is mentioned in Deut: xxx. 33. Job xx. 14-16 : Ps. lviii. 4 : xci. 13, and Isaiah xi. 8, but though supposed to be some kind of serpent, naturalists have not determined the particular reptile alluded to. The word is probably very ancient, and is possibly the "Oub" serpent worshipped in Chaldæa and Egypt, and obion is said to be still used in Egypt as Afa and Afi is in Arabia, to designate a snake, and the Greek term οφις is the same. Perhaps the English Oaf and Scotch Ouf, are also connected. See Serpent.

ASPA, was the ancient Persian name for horse, (in the modern Persian it is Asp) and in the Scythian names Aspabata, Aspakara, and Asparatha, we recognise the same element. Even the name of the Aspasian mountains, placed by Ptolemy in Scythia, indicates a similar origin. *Muller's Lectures, p.* 231.

ASPALATHUM WOOD, is supposed to proceed from the Aquilaria in a state of decomposition, but of this nothing is known with certainty. Rhodes wood (Convolvulaceæ) has also been called "Aspalath."—*O'Shaughnessy, page* 314.

ASPALATHUS INDICUS. Linn. Syn. of Indigofera aspalathoides.—*Vahl.*

ASPARAGUS, of this genus of the Liliaceæ, Roxburgh (ii. 150) mentions five species but Voigt (674) gives a list of eleven, viz. :—

A. Æthiopicus. Linn.
A. Asiaticus
A. acerosus. Roxb.
A. Capensis Linn.
A. curillus Buch.
A. falcatus. Linn.
A. lanceus. Thunb.
A. adscendens. Roxb.
A officinalis. Linn.
A. racemosus. Willd.
A. scandens. Thunb.

ASPARAGUS ACEROSUS. Roxb. Sheet-ma-tet, Burm. A charming shrub, a native of the interior of Bengal and the Tenasserim provinces, which produces a passable substitute for the English vegetable, to which, however, it is much inferior. It bears a sweet-smelling flower, and is deserving of cultivation as an ornamental plant.—*Mason. Roxb. ii.* 150.

ASPATI, An emperor is called the Aspati, meaning perhaps Aswapati, 'lord of steeds.'—*Tod's Rajasthan, Vol. ii. p.*

ASPARAGUS ADSCENDENS. *Roxb.*

A climbing shrub, found in Rohilcund, Travancore and the Peninsula. The root, which is long, white, and fleshy, is bruised and soaked in water, and the latter, if drunk, is said by the natives to be a remedy in preventing small-pox from running into the confluent kind. In Ceylon, the root is mixed with milk and eaten (*Ainsl.*) and by the Chinese, it is made into a preserve, and also candied. Dr. Honigberger, (p. 237,) says that the stalks, he procured at the bazaar at Lahore, were as long as a finger, and as thick as a quill, rather spiral and longitudinally indented, of a horny yellow semi-transparent appearance, of a mucilaginous, sweet and astringent taste. They are used as a substitute for salep and in native medicine and in China are candied and used as a preserve.—*Roxb. ii.* 153 *Honigb. p.* 237. *Voigt,* 674. *Hog,* 735.

In India as in Europe, this is found only in a cultivated state. It is, remarks Mr. Jaffrey, a very delicate vegetable, raised from seed, takes four years to come to a proper size for the table, and ought not to be eaten before the fourth year; the seedlings, when one year old, should be planted in well prepared beds raised three inches above the surrounding level; three years after being transplanted they will produce a crop if the beds have been annually top dressed with decayed leaves, and manure. A little salt sprinkled over the beds once a year during the rains, will be useful to the plants. It is a very expensive vegetable to grow in any country.—*Jaffery.* Dr. Honigberger mentions that the hakims use the seeds in debility of the stomach, in liver, spleen and renal disorders; they also attribute to them diuretic and aphrodisiac properties. They believe that the cultivated is more effective than the wild plant. The country asparagus or country greens of the British in India, are the stalks of the Amaranthus oleraceus.—*Rox. ii.* 150. *Voigt,* 674. *Hog.* 735. *Honigberger,* 237. *Jaffrey's Hints. The British name for this substance is derived from the Lake Asphaltites, and the substance is found in several countries, but the term is also applied to a compound made from the natural product mixed with other matters. It is found on the surface of volcanic productions; and floating on the Asphaltic Lake or Dead Sea in Syria. It is also found near ancient Babylon, and it is supposed that the cement used for the walls of that city as also for the temple of Solomon, was a preparation of Asphalte, and Herodotus mentions that it was heated and mixed with reeds and so used. It is supposed to be the substance translated in the Bible as pitch and to have been used by Noah to coat or pay the ark and by the mother of Moses to coat the vessel in which he was laid afloat, and it seems to be the substance known in central Asia and in the north of Persia under the name of Momiai. At one time, Asphalte composition was overlauded as a roofing and paving material, and in consequence soon fell into unmerited neglect. Where damp has to be resisted, it is useful, it is found impervious to wet, white ants or vermin, and as it does not vegetate, rot or decay, it is superior to wood, or mortar as a flooring material. Dr. Honigberger (p. 238 and 239) writing of the Persian Mumia—says that it is a certain specific in fractured bones, deserving the name of osteocolla. It is a solid, hard, heavy, black, glistening mass without any particular odor. The genuine is but seldom to be met with even in Persia itself, the place of its origin, for the king of Persia is reported to collect the whole product yearly and to inclose it in small silver boxes, which are distributed as presents to his family and friends. In all Eastern bazars may be found under the name of Persian Mumiai, a compound resembling the genuine in appearance. According to Dr. Seligmann, Mum, in Persian, signifies wax; lai or Ajin is the name of the village in the vicinity of which the spring of water containing Mumiai or Mumiajin is found The Mumiai was discovered in the time of Feridun. He also says that the *Asphaltum Selajit, Asphaltum Punjabinum* or Punjab Asphalte, is an officinal article at Lahore, brought from the hills. The hakims and hindoo doctors use it instead of the Persian Mumiai in cases occurring from exterior violence.—*Honigberger, p.* 238-9. *Bingley i.* 150. *Foole's Statistics of Commerce, p.* 14.

ASPHOTA. BENG. Jasminum sambac. Jasmine.

ASPIDIOT SHIELDED SAURIAN. See Crocodilidæ.

ASPIDISTRA, KER., a genus of the natural order Smilaceæ, of which A. lurida, KER and A. punctata, *Lindley*, occur in China.—*Voigt.*

ASPIDIUM, LINNÆUS. Of this genus of ferns of the order Polypodiaceæ, several species are known in India, the A. splendens, and parasiticum, described by Mr. Graham, the unitum and flagelliferum, in Voigt's Catalogue; and Dr. Hooker mentions that both in Sikkim and Nepal the watery tubers of an *Aspidium* are abundantly eaten.—*Hooker, Him. Jour. Vol. i. p* 292. *Voigt.* 734.

ASPIDIUM BAROMETZ, the Tartarian lamb, so enthusiastically described by Darwin in his Botanic garden, has long been celebrated in China. The ingenuity of Chinese gardeners, taking advantage of the natural habits of the plant, form it into a shape resembling a sheep or other object.—*William's Middle Kingdom, p.* 275.

ASPIDOCARYA UVIFERA, *H.* et. T. This interesting plant is one of the Menispermaceæ. It is a native of Sikkim, where it is found at elevations of 1000 to 5,000 feet. *H. et. T. p.* 189.

ASPLENIUM, a genus of the Polypodiaceæ. A. nidus. Linn. is a native of Amboyna.

ANASPHENIUM, a plant of Kaghan, is there called "Kanji."—*Voigt. Cleghorn.*

ASPORE, a town in India, in L. 77° 59 E. and L. 25° 15′ N.

ASR. ARAB PERS. HIND. Noontide, a time of mahomedan prayer. Owing to the mahomedan divisions of time, into watches of the day, and night, apportioning the whole day and the whole night into stated watches, all the periods of the day change with the varying length of the time that the sun is above the horizon, the Asr or noon day watch excepted, it being always when the sun is at the meridian.

ASRAMA. SANC. In hinduism, the fourth or mendicant stage of life, in which the hindu should enter after passing through the previous stages of student, householder and hermit. It is a name borne by the Dandi sect. See Dandi.

ASRAYA, in the buddhism of Ceylon, four modes of evils, so called.—*Hyder's Eastern Monachism, p.* 434.

ASRESSAR, a town in India, in L. 86° 14′ E. and L. 20° 26′ N.

ASROENE, called also Sarug, towards which Terah, father of Abraham journeyed in his route from Ur of the Chaldees towards Horan (Karra) on his way to Canaan. See Terah.

Æhmire ...	ETHIOP.		

Four species of the Ass besides three of Zebras have been described by naturalists, but the domesticated Ass is descended from the Asinus tœniopus of Abyssinia. In Syria, are four domestic breeds, a light graceful animal, with a pleasant action used by ladies; an Arab breed kept for the saddle; a stouter animal for ploughing and other purposes, and the large Damascus breed, with a peculiarly long body and ears. The Ass can with ease be greatly improvod in size and strength. The Ass is occasionally striped or barred as in the parent form A. tœniopus: that on the shoulder is the most constant, sometimes even triple barred, but bars also occur on the legs. Albino Asses are occasionally seen. (*Darwin p.* 63, *Animals and Plants*). A notice of the Ass tribe has been given under the generic term Asinus, with the species pertaining to that genus. The common Ass now found in all countries has been domesticated from ancient times. It is a patient, steady going, sure footed beast of burden, and easy tempered. In ancient Jerusalem the Ass was the favourite pony of the upper classes and the priests. Deborah describes the greatest men in Israel as those who rode on white Asses, and we are told that Abdona, a Judge of Israel, had forty sons and thirty grandsons who rode on seventy asses. Nevertheless the Israelites considered the ass unclean, and to yoke an ass with an ox in the same team, was an offence against the law of Moses. The ancient Egyptians even entertained a fierce hatred towards the ass and regarded it as a symbol of all kinds of misfortune. They were the first to symbolize a stupid person by the head and ears of an ass. The Ass has a large head and a large body on very slim and somewhat short legs, unsuited therefore to move rapidly. Its hoof has exceedingly sharp rims with a hollow in its centre, to fit it for travelling on slippery ground and for ascending the precipitous sides of hills. The Ass is a beast of burden for the mountain as the camel is for the sandy desert, the elephant for the jungle and the horse for the level plain. He will carry a reasonable burden without a murmer, and he will trudge on for miles over the roughest roads, patiently and steadily, without showing any signs of fatigue. (*All the Year Round*, 10*th September* 1864.) There are two sorts of asses in Arabia, Niebuhr mentions the smaller or lazy ass, as little esteemed there as in Europe; and a larger and high spirited breed, much valued and sold at a high price and he thought them fitter for a journey than horses are. (*Niebuhr's Travels, Vol. ii. p.* 304.) In Oman they are large, well made, and endure great fatigue. The Arabs take considerable care of them; and some of the better kind fetch from forty to fifty dollars. Those which traverse the Jabel Akhdar, in point of size, sturdiness, and sureness of step, are almost equal to mules, crossing the most difficult passes, over a smooth limestone rock, without a single false step. A great many asses are shipped from Oman to the Eastern ports of Persia, and also to the Isle of France, where they are highly valued. Some seen by Burton (iii. 339) resembled mules in size and speed. He considers that Pliny is certainly right about this useful quadruped and its congeners, the Zebra and the wild ass, in describing it as "animal frigoris maxime impatiens," for he says that it degenerates in cold regions, unless as in Afghanistan and Barbary, there be a long, hot, and dry summer. Aden, Cutch, and Baghdad have fine breeds, whereas those of India and South-Eastern Africa are poor and weak. The best and the highest-priced come from the Maghrib, and second to them ranks the Egyptian race. At Meccah careful feeding and kind usage transform the dull slave into an active and symmetrical friend of man: he knows his owner's kind voice, and if one of the two fast, it is generally the biped. The asses of the Holy City are tall and plump, with sleek coats, generally ash or grey-coloured, the eyes of deer, heads gracefully carried, an ambling gait, and extremely sure-footed. They are equal to great fatigue, and the stallions have been known, in their ferocity, to kill the groom. The price varies from 25 to 150 dollars.—*Burton's Pilgrimage to Meccah, Vol. iii. p.* 339. *All The Year Round, September* 1864. *Playfair's Yemen. Niebuhr's Travels, ii.* 204. See Asinus.

ASSALIA SEED, in Marathi and Guarati (Aleeva)—Lepidium sativum.

ASSAM, a great valley stretching from the head of the Bay of Bengal to the North-East, towards China. It is the ancient Kamrup, and its history ('Assam Buranji') by Huliram Dhaikiyal Phukan, of Gohati, who, after bringing down the genealogies to the Kshatriya dynasty of Dravir (Dharmapala) says he invited brahmins from Gaur to his court, north of the Brahmaputra, gives the following dynasties:

a. Brahmaputra dynasty, reigned 240 years. After A. D. 1478, Assam was divided into twelve petty states, and in 1498, was invaded by Dulal Ghazi, son of Hoossain Shah.

b. The Indrayansa (Indu) dynasty reigned from A. D. 1330 to 1780, with the interregnum caused by the invasion of Hoossain Shah. Chukapa, became independent in 1230, and spread conquests and was named Asama (unequalled), hence Assam. The language spoken, the Assamese, is almost or identically the same as the Bengali.—*Prinsep's Antiquities by Thomas, p.* 273. This long valley runs from the eastern side of Bengal proper from the 90° of east longitude in a north-easterly direction as far as the Mishmee hills in longitude 97° east. The valley is about 60 miles in breath and 350 miles long, and has the river Brahmaputra running through its centre. It is, in fact, the valley of the Brahmaputra, and is now called Lower and Upper Assam, being bounded on the north by the Mishmee, Aboor and Meeree hills and, on the south, has the Naga, Cossya and Garrow hills. Assam in ancient times was of the buddhist faith, the braminical religion was introduced about A.D. 78. In all Assam there are 983

Mouzzahs, containing 4,006,610 Begahs, the rental of rice land is 1*s.* 10*d.* an acre and 1*s.* 6*d.* for all other kinds. The whole of Assam, omitting the permanently settled district of Goalpara, pays only £100,000 of land revenue. The whole population from the baby at the breast to the very few old men use opium, and in 1864-5 the population consumed £143,543 worth of opium. Before the incursions of the Burmese, Assam had its roads, bridges, cities and civilization, but under British rule it has fallen off. Assam, is one of the most fertile districts in India, the mahomedans found its people hardy and courageous in Upper Assam, but towards the middle of the 19 century they had become apathetic and unambitious, though those of Kamroop were less so. But the Assamese were to the mahomedans what the Numidians and Mauritanians were to the Romans, a genus insuperabile bello. The British drove the Burmese from it in 1824, and annexed it on 31st July 1829. The first Treaty with any of the Assam chiefs was a commercial agreement made in 1783, with Rajah Surgy Deo. But Government never ratified or published it, on the ground that the Rajah's government was not sufficiently strong to ensure its observance. The country subsequently relapsed into anarchy and fell under the Burmese. It was invaded by the British when the first Burmese war broke out, and the province was annexed to British India. In 1833, Upper Assam was granted to Rajah Poorunder Sing, with whom a Treaty was made. The principal tribes on the frontier of Upper Assam are the Muttock, the Khampti, and the Singpho. The Bur Senaputtee or chief of the Muttock entered into an engagement, in May 1826, whereby he acknowledged the supremacy of the British, and bound himself to supply 300 soldiers in time of war. The management of the country was left in his own hands, except as regards capital offences. In January 1835, the obligation to supply troops was commuted to a money payment of Rupees 1,800 a year. In 1826, similar agreements were made with the Khampti chief of Suddeya, but in 1839 they attacked the town of Suddeya, and many persons, as also Colonel White, the Political Agent, was slain. Agreements were also made in May 1836 with the *Singphoos.* These tribes were implicated in the *Khamptee* rising in 1839, but they were allowed to surrender under conditions. Many of the Singphoo clans have become extinct, and the main body have left Assam for Hookong, in Upper Burmah. (*Aitchison's Treaties, &c., page,* 127.) Throughout its whole breadth, from the Khassia and Naga hills up to the southern foot of the Himalaya, this valley was formerly the basin of a fresh-water lake, and is now drained by the Brahmaputra. This mighty river runs through the country from Brahmakund to Goalpara for a mean length, exclusive of its numerous small curves, of more than 400 miles. The entire surface of Assam presents a gentle uniform slope, with a few isolated granite hills, sometimes of no considerable mean elevation. The Brahmaputra nowhere presents any remarkable contraction of its bed, and the only rapid of importance is situated fifteen miles below its confluence with the Dihong. The level of the Brahmaputra at Sadia is 210 feet. A little to the south of the entrance of the Tista begins that part of the river where the stream branches off in the shape of a delta, and shortly joins that of the Ganges. The ebb and flood of the tide extend in the season when the river is low, upwards beyond Dacca; the fall from Sadia to the delta consequently amounting to half a foot per mile. Sadia is situated near the spot where the most considerable of its affluents join the Brahmaputra, viz. the Dihong (a river identical with the Tibetan Zambu) into which, before its confluence with the Brahmaputra, flows the Dihong. The Brahmakund is a very deep basin-shaped enlargement of the river, just before it emerges from the mountains to descend into the plains of Assam. The velocity of the current, which, both above and below the Brahmakund is very great, suffers a great diminution at this point. The sources of the Brahmaputra proper may be assigned to L. N. 33° 32½°, and L. E. Gr. 97° 30'. The first snow-covered mountains occur in L. N. 28½°. The Brahmaputra is called by the Tibetans, Záyö chu, after the province, Záyö, through which it flows, the Mishmi and Singpho give it the name of Tálu Ka. Its direction as far as L. N. 27° 55' is nearly due south, from the entrance of the Galum river to the Dū river north-west, and from this point to Sadia south-west. Along the whole length of the left shore of the Brahmaputra, and nearly parallel to the broad valley through which it runs, we meet with a longitudinal range of secondary hills, inhabited by the various scattered tribes of the Naga, Khassia, Jaintia, and Garro. There exists but comparatively meagre information about these mountains. The Khassia hills present in general the aspect of a well-defined plateau with comparatively small, isolated elevations. The plateau is terminated to the north by the valley of the Brahmaputra, to the south by that of the Surma.—(*Schlagentweit's General Hypsometry of India, Vol. ii. p.* 98.) Hills lie between the two British Provinces of *Assam* and Cachar and the North-Western portion of the territory of Burmah. It is an immense extent of mountainous country, inhabited by numerous mountain tribes. And in this great mountain tract one or two valleys occur. The largest—that of Munnipore—is, from its connection with the British Government, and from the tribes around it all admitting its supremacy, the most important, between latitude 23° 50′ and 25° 30′ north, and longitude 93° 10′ and 94° 30′ east, the mountain tract in question is bounded on the north and west by the British Provinces of Assam and Cachar, and on the east by the Kubbo valley now subject to Burmah. To the north-east and south, the boundary is not well defined, and would much depend upon the extent to which the Munnipore Government might spread its influence amongst the hill tribes in those directions, but in the north-east it may be denoted by a line drawn north from the north-western corner of the Kubbo valley, until it strikes the Assam boundary and in the south by one drawn west from the source of the Numsailung river, the fixed south-east boundary, till its junction with the Tooyai river. Of the space comprised in these bounds, the valley of Munnipore occupies nearly the centre. It is called by the Munniporees, "Meithei-leipak." The Burmese call it Kathe, the Bengalees, Moglai, and Assamese, Mekle. The area of the whole territory is about 7,000 square miles, and that of the central valley about 650. Much of the valley is at all seasons covered with water. It seems indeed at one time to have formed a large lake, and the piece of water in the south called the Logtak, appears to be an unfilled but rapidly filling remnant of it. From the most credible traditions, the valley appears originally to have been occupied by several tribes, the principal of which were named Koomul, Looang, Moirang and Meithei, all of whom came from different directions. For a time, the Koomul appear to have been the most powerful, and after its declension, the Moirang tribe. The population is composed of different classes. The principal is the Meithei, next the Phoongnai, after whom the Teng kul, the Ayokpa, the Kei, the Loee and mahomedan. The Meithei population is divided into four parts called "Punnah," which are designated in the order of their seniority "Kaphum," "Lai phum," "Ahulloop" and "Niharoop." The Loee population consists of people who pay tribute, and is considered so inferior that the name Meithei is not given to it. The marshes of the south in the vicinity of the Logtak afford a retreat to serpents of a formidable size, and the whole valley of Munnipore is much infested by the serpent tribe. Some of them are exceedingly active and bold as the Tanglei, it is fond of ascending bamboos, along the branches of which it moves with great velocity, and if enraged, throws himself from an extraordinary height upon the object of his anger. His bite is said to be mortal. This, added to his great activity and fierceness makes (*McCulloch, Records Government of India, Foreign Department, pp. x. xii.*) the Tanglie an object of much terror. Dr. Latham notices that the valley of Assam and its bordering hills are remarkable for the number of populations which they contain. Amongst these are the Bodo or Borro of Assam and Cachar, Garo, Kasia, Mikir, Aka, Dofla, Abor, Miri, Bor Abor, Mishmi, Muttuk, Singhpo, Jili, Naga, Changlo, Bhot, KuKi. On the south, Assam is bounded by the Garo, Khasia and Jaintia hills, then the lands of the Naga in north Cachar and Naogong: then those of the Singhpho up to the great bend of the Brahmaputra. All their native populations are more or less akin to the peoples of the Burmese empire. (*Latham's Descriptive Ethnology.*) There are many kinds of slaves in Assam distinguished by distinct appellations. The Moorukea is a kind of Chapunca, neither servant, slave, nor equal, but partaking of all. The master provides the Moorukea with a pair of bullocks and a plough, and he tills his master's land for two days. On the third day the Moorukea may plough his own ground with his master's bullocks and plough. If he does not take his reward or wages thus, by using his master's cattle and implements of husbandry. (*Butler's Travels, Assam, p.* 228-29.) The valley of Assam possesses gold, tea, caoutchouc, lac and ivory. It abounds in silk, its two principal indigenous varieties of this article, being the *muga* and the *eri*. A dress made of *muga* is prized beyond all others, by the Assamese. Of its woods, thirty-six species, applied to various useful purposes, have been described by Major Hannay as belonging to Upper Assam. Most of them are light, strong, and durable; while not a few combine with these qualities a fine grain, which renders them well adapted for articles of furniture. The spices of the country comprise, in addition to such as are commonly cultivated in Bengal, black pepper, long pepper, cardamoms, tejpatra or malabathrum leaf, and jubrang, the capsule of a species of xanthoxylum, peculiar to the country and described as aromatic, fragrant and highly pungent.—*Dr. Taylor*, 141. In the end of 1861 the Meyong Abor attacked and plundered a village in British territory, but the tribe expressed a desire to renew friendly relations, and begged that their offences might be overlooked. On the 5th November 1862, an agreement was made with them binding them tc respect British territory, and the same engagement was snbscribed on 16th January 1863 by the Kebang Abor.

On 8th November 1863 a similar engagement was concluded with the Abors of the Dihang Dibang doars. (Treaties engagements and sunuuds, *Vol. vii. p.* 343.)

Goalpara is under a permanent settlement, but the other five districts Kamroop, Durrung, Nowgong, Seebsagur and Luckimpore are under ryotwari tenure.

It is said, that opium was first introduced into Assam in 1794 from Bengal, when British troops assisted the Rajah against the Muttuck; since then it has spread over the whole country, and deteriorated and enfeebled the population.—*Dr. Taylor in Reports on Great Exhibition of* 1851. *Butler's Travels in Assam, p.* 228-9. *Latham's Descriptive Ethnology. McCulloch's Report in Records of the Government of India, Foreign Department, p.* 11. *Schlagentweit's General Hypsometry of India, Vol. ii. pp.* 95-98. *Prinsep's Antiquities by Thomas, p.* 273. See India, pp. 317; 340; 344. Inscriptions 374, Joboka;—Kashmir: Kasia: Kino: Mikir: Petroleum: Sati: Sciurus: Singhpo, Tea, Volcanoes.

ASSAMESE ROOT. Coptis teta.

ASSAMI. HIND. PERS. An individual, a non-proprietor, a hired trooper in a cavalry regiment.

ASSARET. FR. Asarabacca.

ASSARHADDON, King of Babylon, was the son of Sennacherib. The latter resided at Nineveh, the capital of Assyria; Sennacherib displaced the Satraps and invested his son as king of Babylon B. C. 675.—*Ch. Bunsen*, iii.

ASSASSIN, a term applied in Europe to the Al Hassani, a heterodox mahomedan sect who are spread through Asia from Persia to Western India. The heterodox point in their belief is that the deity is incarnate in their chief. The first of the tribe, who arrogated these divine pretensions, was Hassan Sahib; a man, whose domineering passions, consummate subtility, and persevering spirit of enterprise, perfectly fitted for his plan of imposture. He appeared about the year 1090; and by various intrigues, a singular mysterious deportment, as well as an invincible courage, few who approached him, dared to resist, Christians, Jews, Mahomedans of Omar or of Ali, that is to say, mahomedans of the Sunni or Shiah sects, all were alike the objects of his excommunication; and he sold his dagger, or rather that of his followers, to whatever party were vile enough to buy the blood of their enemies. Al Jebal, literally, the mountain, was the old [illegible]c name for the whole of the very moun[illegible]s quarter of Irak-i-Ajam, which lies be[illegible] Hamadan and Kirmanshah. It stretches far to the south-west of the Caspian range, and comprises Mount Elwund, the Orontes of the ancients, this branch also, bearing the appellation Elburz. A colony of these fanatics, [illegible]r the leading of one of Hassan Sahib's [illegible] odious representatives, settled themselves [illegible]gst the heights of Lebanon, and have been [illegible]sly called Ismaelans, Bathenians, and Assassins and during the crusades, he or one of his successors was known as the old man of the mountain. The present chief of the Ismaili has for many years past been residing at Bombay, and in 1865 or 1866, instituted a civil suit in H. M. High Court for some matter connected with his faith. The term Assassin has also been derived from Hashishi, a person given to the intoxication of hemp (Hashish, Ar.) but the accepted derivation is from Al Hassani.—*Porter's Travels, Vol. i. p.* 286-288.

ASSAWUD, a town in India in L. 75° 22′ E. and L. 23° 48′ N.

ASSAYE, a small village in L. 75° 56′ E. and L. 20° 17′ N. It is on the borders of Kandesh, near which Colonel Wellesley in 1803, defeated a large army of Mahrattas. Of the British Forces, 1 in 3 were killed. The hamlet is built on the bank of a small stream, and one of the French officers who fell in the battle has been deified and at his tomb worship is performed by the mahrattas of the village and neighbourhood. Tha battle was fought on the 23rd September 1803, by the Indian army under Sir Arthur Wellesley, against the confederate Mahrattahs. Scindiahs artillery rested on the right bank of the rivulet and beneath a banian tree, there, is the tomb of the officer whose spirit is worshipped. In 1868, the potail of the village, who was a lad, at the time of the battle,— subadar, Papadu, of the 21st M. N. I. wh[illegible] a soldier present in the battle, were still [illegible] the former at Assay, the latter at Secund[illegible]

ASSAY MASTER, an officer with this [illegible] nation, is in each of the Indian mints, at Ca[illegible] Madras and Bombay, who conducts the chemical analysis of the precious metals brought for sale and determines the quantity of gold or silver in any mixture with the baser metals. He also examines the pix coins prior to issue to ascertain that they are up to the standard. The process was formerly, by cupellation, but latterly the humid mode has been followed.

ASSEY, a river north of Lebanon, the ancient Orontes. See Lebanon.

ASSEAGAUM, a town in L. 77° 23′ E. and L. 20° 11′ N.

ASSEER, a town in L. 78° 11′ E. and L. 22° 17′ N.

ASSEEREE, a town in L. 73° 3′ E. and L. 19° 46′ N.

ASSEERGHUR, a fortress in L. 73° 18′ E. L. 20° 41′ N. ten miles west of Yevar, and a tree in the fort is 1154 feet above the level of the sea at Bombay. It was besieged on the 21st October 1803, and on the 8th and 9th April 1819 it was captured by the Indian Army.

ASSEWAN, a town in L. 80° 21′ E. and L. 26° 51′ N.

ASS-POISON, this is a translation of Khar Zahra, Persian, and supposed to be oleander.

ASSUM, a tin mine in Banca. See Tin.

ASSUR. A semitic race who settled originally on the upper Tigris, but to the east of that river, in the modern Kurdistan. It was the stem of the empire of Ninus on the Upper Tigris.—*Bunsen, iii,* 363.

ASSUR, in the hinduism of India traditional giants, who made war on the children of the Diti. In these Assur are doubtless typified the Assyrian conquerors who overran Asia to the Trans-Indus lands. It has also been surmised that the Assur of the Mahabaratha may be the Hasaures or Asii of Indo-Germanic history.

ASSYRIA, the Assyrians are the Eissor of the Scythians; the Ashur of the Hebrews, Assyrii of the Romans, who under the guidance of Bel (the Jewish Nimrod) invaded Mesopotamia, defeated Noah, who fled to Ardmion (Armenia.) Bel founded the town of Ba-bel in the plain of Shinar, and established the Assyrian Empire on the ruins of the Scythian one, more than 2,000 years before the christian era. Chevalier Bunsen gives the following as the successive dynasties who have ruled there. (See Assyrian, Lud; Sacti.) The period of the 2nd to the 9th dynasties was 1903 years.

1st.—Dynasty, 86 Chaldean kings.

2nd Dynasty, 7 Median Kings, Zoroaster and his successors, reigned 224 years, began B. C. 2234.

3rd Dynasty, 11 Kings (probably Chaldæans, reigned 288 years.

4th Dynasty, also Chaldees, 49 kings, reigned 458 years.

5th Dynasty, Arabs, 9 Kings, reigned 215 years.

6th Dynasty, 45 Assyrian Kings and Ninyads, amongst them Semiramis, 526 years.

7th.—6 Assyrian Kings, 122 years, viz: Nabonassar, B. C. 747.

Sarguia.

Sennacherib slain, B. C. 676, reigned 28 years, he was coeval with Esarhaddon (Assaradin) of Babylon.

Asarhaddon.

Saosdukhim (Samuges.)

Sardanapalus, brother of Samuges, B. C. 626.

This famous king of Assyria, was the Phul and Tiglath Peleser of scripture. He burned himself in his palace, B. C. 626. In his reign, his satrap at Babylon, Nabopolassar, the father of Nebuchadnezzar, rebelled, and not only made himself independent, but, in alliance with the Medes, checked the career of the almost universal empire of the Assyrians, and raised Babylon into the seat of empire of western Asia; S[illegible]danapalus had ordered Nabopolassar [illegible] march against the Medes who had revolted. But instead of that he formed an alliance with Cyaxares and marched with him against Nineveh which fell B. C. 626, (Bunsen iii. 435.)

8th.—Dynasty, 5 Chaldee kings, 87 years.

1. Nabopolassar, 22 years.
2. Nabokolasser, son, 43 years, [illegible]bukodrossor, Nebuchadnezzar.)
3. Illoarudam, son, (Evil Merodach of the Bible.)
4. Nerigassolassar (Neriglossar.)
5. Nabonadus, in the last year of whose reign Babylon was captured by Cyrus.

9th.—Dynasty, 10 Persian kings, 207 years.

Cyrus: Darius Codomanus: Alexander, B. C. 331.

The term assigned by Herodotus to the Assyrian dominion in Upper Asia, is 520 years.

The Empire of Nineveh was founded B. C. 1273, and Herodotus names the Medes (B. C. 753) as the first who threw off the Assyrian yoke, and this great empire [illegible] to an end B. C. 747. As early as the [illegible] year of Ninus i. e. in 1257, the Assyrian [illegible]pire had reached to the extent which it [illegible]tinued to hold till its downfall in the eight century, for in the sixteen years from B. C. 1273 down to 1257, the Assyrian empire extended itself over the whole of western Asia as far as Syria and Palestine, indeed to Egypt itself. (*Ch. Buns. iii.* 274.) The territory of Authur (from Asshur, Shem's son) was originally of small extent, and formed the second part of the kingdom usurped by Asshur the giant warrior, (Gen x. 11, 12,) who built, or rather restored, the three cities, Rehoboth, Calah, and Resen, besides the capital, Nineveh. The ruins of the latter city are sufficiently known from the descriptions of Rich, Ainsworth, and earlier travellers. They are in Assyria Proper, on the left bank of the Tigris, opposite Mosul, and the natives still call them by the original name. (*Euphrates and Tigris.—Col. Chesney, p.* 119.)

Babylon was built B. C. 3250, and was taken by Zoroastrian Medes B. C. 2234, the Median empire at Babylon again ended B. C. 201[illegible].— This was followed by the Arabian dynasty in Babylon and lasted to B. C. 1518, to be followed by the Assyrian dynasty of the Ninyads, (*Ch. Bunsen*, 78,) and according to their own and Greek account, the Assyrians conquered Egypt after the exodus of the Hebrews. Three centuries later, [illegible] first king of the 22nd dynasty captured [illegible]salem in the fifth year of Rehoboam the s[illegible] Solomon. The flourishi[illegible] age of Assyria [illegible]mmenced with Ninus. Se-miramis was [illegible]irth a philistine (Palestine) and first appeared at the Assyrian court with the army as the wife of the Assyrian Satrap of Mesopotamia or Syria, she was fanatical for the bloody and profane worship of the fish goddess Derketo. (*Ch. B. iii.* 274.) She seems to have reigned conjointly with Ninus after his tenth year (*Ch. Bunsen* 443. *iii.*)

According to Mr. Sharpe, Assyria, was supreme in western Asia, from B. C. 12[illegible] It was progressive till B. C. 1222, th[illegible] of Semiramis. (*Bunsen iii.* 289.) [illegible] Semiramis set out for India. The [illegible] on the right bank of the Indus the site of the present Peshawar, from above the At-tock, was tributary to the Assyrians, as afterwards was to the Medes and Persians The celebrated black monument from Nineve in the British Museum, a monument at least o the 9th century B. C. ha[illegible] Bactrian camc side by side and the Indian rhinoceros anc Indian elephant, and establishes the paymen of Indian tribute to the Assyrians. Semiramis fitted out an army in Bactria and captured o the Kophen (the Cabul river, the Kubha of th Rig-veda) the city of the same name. Sh the Indus with a vast force. The ruling ja had taken up a position there als a vast force, especially formidable from th nber of his archers and elephants. At firs ie retreated, but soon again advanced anc drove back the Assyrians in total disorder to the river which they recrossed with difficult and with immense loss. Semiramis concluded an armistice, made an exchange of prisoners and retreated into Bactria with a third of the army she had brought against India. This expedition took place in the latter part of her reign, consequently between B. C. 1235 and 1225. (Bunsen, iv. 549-550.) During the 520 years of dominion from B. C. 1273 to 753 the Assyrian power increased at times and waned The long line of Assyrian kings had been brought to an end when the weak and luxurious Sardanapalus was conquered by Arbaces the Mede. But after the death of Arbaces, Media in its turn fell into a state of weakness; and the Assyrians made themselves again independent under a king of the name of Pul. Their chief Nineveh, on the banks of the Tigris, was [illegible] capital of an empire which in- only the upper part of the country watered by the Tigris and Euphrates, but also the mountains of Kurdistan, and the plains on the further side of that range, which are watered by rivers running into the Caspian Sea. The kingdom was so well established by Pul, that his successor was able to indulge the ambition of widening it. Tiglath[illegible], the next king, marched westward, and [illegible]quered Syria, and hen took Galilee from [illegible] Israelites. His ches us that at that time Nineveh was of friendship with [illegible] Assyria in [illegible] under Shalmanezer, essor of Tiglath-Pileser.

lmanezer soon conquered all the neig ouring countries, Sidon, and Acre, and the land of Cyprus. Tyre alone held out against siege. The Assyrians therefore (Menander , Joseph, 2 Kings, Ch. xviii. 10.) overran the bellious Samaritans in spite of their Egyptian [illegible] they put down the kingdom of Israel, [illegible] away the nobles as captives to the banks [illegible]pian; and made Samaria a province of

Tirhakah the third Ethiopian king of Egypt, coming to the throne, found Sennacherib, Kings, ch. xix. 9.) the next king of Assyria, pursuing these successes, and threatening the destruction of the kingdom of Judæa. Sennacherib marched towards Egypt to attack Tirhakah instead of waiting to be attacked. He came to the walls of Pelusium (Josephus x. 2.) the frontier city, and laid siege to it in due form. Before they met the enemy, the army of Sennacherib was no more. An unseen hand had routed or destroyed the Assyrians in the night.—*Sharpe's History of Egypt, Vol. I. p.* 124-126. According to Mr. Layard the power of Bactria was broken by the Assyrians B. C 1200. The Assyrians are not particularly alluded to in Holy Writ, until the period when their warlike expedition to the west of the Euphrates, brought them into contact with the Jews. The first king whose name is recorded was Pul, who reigned between eight and nine hundred years before the Christian era, and about two hundred previous to the fall of the empire: consequently he must have been nearly the last of a long succession of kings who, it is generally admitted, had ruled over the greater part of Asia. The latter monarchs are more frequently mentioned in the Bible; as their conquests over the Jews, whom they led captive into Assyria, brings them continually under notice. But except when they particularly concern the Jewish people, very little is related of the deeds of even these monarchs. We have the testimony of ancient authors, who attribute the invention of letters to the Assyrians, and give the name of Assyrian to the cuneiform writing, even when changed and modified by the Persians.

In the more recent inscriptions at Khorsabad, Kouyanjik, and Nimroud, we have eunuchs writing down the number of heads, and the amount of spoil, on rolls of leather, or some other flexible material. It could scarcely have been papyrus, as that substance is too brittle to be rolled or bent, as represented in the sculpture. Parchment was not invented, which he Egygtians used occasionally as early as the 18th dynasty.—*Layard's Nineveh, Vol. i. p. xix. Vol. ii, p.* 178-184.

There is little connection between the Assyrian and Greek mythology, though a few attributes have a similarity. Nisroch or Asshur, he time god, the great triune deity, was associated with the planet Saturn. Bel with upiter; Merodach with Mars; Mylitta with Venus: Nebo with Mercury; Ishtar with the moon and Shamash with the sun. Mylitta, in Assyrian sculptures, holds in her right hand, a staff tipped with a crescent; in her left the symbol ♀ still used by astronomers, to represent the planet Venus. It is like the straight rod and [illegible]cle separated by a cross bar of the Egyptian symbol of life (the crux ansata) emblematic of the temporal and eternal life, separated by death. Mylitta was sometimes represented with the water of life issuing from her breasts.—*Proctor's Saturn, p.* 197. *Sharpe's Egypt. Layard's Nineveh. Bunsen's Egypt.* See Cyc. of Ind. Supp, ii. Inscriptions, p. 371: Iran; Kelat, 490 Ken: Luristan: Nabopolassar, Nineveh; Rawlinson: Sennacherib.

ASSYRIAN LAKE, the Assyrium stagnum, is the Dead Sea.

ASTA, or Patoo, a bast in use in Bheerbhoom.—*Royle Fib. Pl.* See Patoo.

ASTABAH. PERS. A ewer, in use in Persia, for washing the hands and feet. It resembles a coffee-pot, has a handle and long spout; from this a servant pours water on the hands held over the *laggan*. Some *laggans* are merely dishes, used as wash-hand basins.—*Ouseley's Travels, Vol. i. p.* 247.

ASTACUS, the Craw fish.

ASTANA. HIND. A threshold: a fakir's residence. See Ashr.

ASTARAK. ARAB. HIND. PERS. Storax.

ASTARKHI. ARAB. Red Orpiment.

ASTARTA, the Astaroth of the Bible, and Astarte of Greek authors, according to Chevalier unsen, is derived from the Egyptian word estoreth, the throne or seat of the Cow; *i. e.*, e Queen of Heaven, Baalti, the wife of Baal, e Lord: and it meant originally, Nature, the vine Kosmos. But after the year B. C. 2500 B. C. 2000, Astarta signified the polar star, hich was dedicated to that primeval goddess. —*Ch. Bunsen, iv.* 350-352. In Jeremiah xxiv. 15-17 and xix. it is called the Queen of Heaven —See also Judges x. 6; 1 Samuel vii. 3; xii. 10.

ASTARTE, or Ashtoreth or Baalith, the Queen of Heaven, the great female divinity of he Phænicians, the female power or Sacti of Baal, whom the Greeks changed into Baaltis or Belthes. was the chief deity of Sidon, but er worship was extended to the E. of the ordan. Physically, she represented the moon, ence her name in Gen. xiv. 5; Deut. i. 4; Josh. ii. 4. Ashtaroth Karnaim or the two horned. rom the crescent moon. See 1 Kings xi. and . 53; 2nd Kings xxiii. 13; vii. 18: 44; xxv. It as by the names, Ashtoreth or Astarte that he moon was worshiped by the Israelites, Asyrians, Phœnicians, Carthagenians and the eople of Tyre and Sidon. See Ken.

ASTEH, a surname of Arsaces, supposed to ave been a descendant of the ancient Persian ings.

ASTER, a genus of plants belonging to the atural order Matricariaceæ. These are named om Aster, a star: and furnish nearly every ariety of colour. Some beautiful additions om Germany are striped and of larger size han the Chinese. They are propagated by seed sown at the end of the hot weather, and continued during the rains. Mr. Jaffrey observes that the flowering of the asters is of so short a duration they will scarcely remunerate for the trouble taken to raise them. Mr. Mason mentions that a species of aster, or christmas daisy, is seen occasionally in European gardens, in Tenasserim.—*Riddell. Jaffrey. Mason. Voigt,* 408.

ASTERABAD. The small province of *Asterabad* is sometimes included in Mazenderan, which it resembles in appearance, climate, and productions. This is the ancient Hyrcania, and the paternal estate of the present king of Persia as chief of the Kujur tribe, who have entire possession of the province. It is bounded on the west by the Caspian sea; to the south it is separated by a lofty ridge of mountains from the districts of Dâmghân and Bistan, it extends to the east as far as the longitude of 58,° and is divided from Dâghestan by the River Ashor. The city of Asterabad, the "capital of the province, is situated near the mouth of the river Ester, on a bay of the Caspian sea." From Astrabad, it is eighteen days' journey to Herat, and from thence, passing through the hilly country of the Hazara people, you arrive at Kabul on the eleventh. The Hazaras are independent and Shias. They possess large herds of cattle, and great numbers of fine shawls.—*Mohun Lal's Travels, p.* 320. *Malcolm's History of Persia, Vol. ii. p.* 126.

ASTERACANTHA LONGIFOLIA. *Nees.*

Syn.

Ruellia longifolia. *Roxb.*

Barleria longifolia. *Linn.*

Grows in wet places all over India, and is considered tonic and diuretic.—*Roxb. iii.* 42. *Birdwood's Bombay Products. Voigt.* 485.

ASTERACEÆ. See Chrysanthemum.

ASTERIA, of Pliny, the star rubies of the moderns, are found at Ratnapoora in Ceylon.

AST'HA DIK PALAKA ARATANAM. See Hindu.

ASTHOL. See Math.

ASTMABAYDA. SANS. Illecebrum lanatum.

ASTOLA ISLAND, Aptallah or Sungadeep, in Lat. 25° 7′ N. Lon. 63° 47′ E. on the south coast of Persia, is 3 miles long and of moderate height.—*Horsburgh.*

ASTOR, a mountainous district, on the borders of little Thibet to the west of Ladak. They speak a dialect of the Dardu language. See Ladak; Tibet; India 336.

ASTRACAN; hindus extend to Astracan and the remote parts of the Russian Empire.

ASTRAGALUS, a genus of plants belonging to the natural order Fabaceæ. Its species, A Aristatus: A. Criticus: A. Dicksonii: A. Gummifer: A. Verus and A. Strobilifera, of Mount Lebanon, Crete, Ionia and the Peloponesus, produce the gum tragacanth of commerce, which is used as an ingredient in dye stuffs and as a glaze for calico and silk, and in medicine as a styptic powder and in lozenges. Its price in England is 4*s*. to 8*s*. the pound. Several Astragali are common in the higher Himalayas. Two species in Kaghan, are called Bachmal and Kenchirunga, and the hindi term Makhmal is given to the Astragalus spinosus, but none of these have been ascertained to yield Tragacanth. It is largely produced in Persia and exported to Bagdad, Bassoraiand India.—*Voigt*. 217. *O'Shaughnessy, p.* 294. *Hog. Veg. King*. 274. *Poole, p.* 304. See Tragacanth.

ASTROLOGY. Sir J. E. Tennent mentions that the practice of astrology at the present day in Ceylon, and the preparation of the ephemeris predicting the weather and other particulars of the forthcoming year, appears to have undergone little or no change since this custom of the inhabitants of India was described by Arrian and Strabo. But in later times the brahmans and the buddhists have superadded to that occupation the casting of nativities and the composition of horoscopes for individuals, from which the Sophistæ described by Arrian abstained. It is practised alike by the highest and most humble castes of Singhalese and Buddhists, from the Vellala, or agricultural aristocracy, to the beaters of tom-toms, who have thus acquired the title of "*Nakatiya*," or Astrologer. The attendance on particular ceremonies however, called *Balli*, which are connected with divination, belongs exclusively to the latter class. The Mahomedans of British India, keep their calendar, or Jantri and the Joshi calculates the ephemeres. The hindus also have their Calendar or Panjangam, but they all practice divination from books, of which the Chintamani pastakam is in use in the South of India.—*Tennent's Christianity in Ceylon, p.* 184. See Divination.

ASTRONOMY is supposed to have been invented by the Chaldæans (q. v.) It has however been attributed to the Egyptians, who probably derived their knowledge from a more ancient nation. The Chinese have no claim, and when the claims are investigated of the Indians, Persians and Babylonians, it is found that their systems of Astronomy belong to a latitude considerably higher than Benares, Persepolis or Babylon, but somewhere between 35° and 55° North. Brahminical books teach that the longest day in summer is twice as long as the shortest day in winter which is not the case in any part of India. Zoroaster taught the Persians similarly, and Ptolemy obtained ancient Babylonian records of star risings, belonging to latitudes not lower than the 40° parallel.

The astronomical symbols of the planets have been derived, in all probability, from Chaldean and Assyrian sources. The symbol of the planet mercury is the (☿) is the Cauceus, which, like the petasus is an emblem of eastern origin. The symbol of Mars (♂) represents a round shield and spear. The symbols of Jupiter and Saturn (♃ and ♄) are doubtful, but are probably the Syro Arabic forms of the numbers 4 and 5, indicating the position of these bodies, in the planetary five. The symbol of the earth (♁) is the inverted emblem of life, and probably bears some reference to terrestrial corruption and decay. (*Proctor's Saturn, p.* 197.) The astronomical systems of the old Arabian authors are founded on those of Hipparchis and Ptolemy. The Arab prince Albategnius stated the procession of the equinoxes to be 1° in 66 years. The divisions of time of all nations are astronomical. From the remotest tin
amongst the Chaldeans, Egyptians, Arabi
Hindus, Greeks and the natives of Nor
Europe, there has been a hebdomadary d
of the month. In this, the days are comn
with the day of the sun, followed by th
and the five planets, Mars, Mercury,
Venus and Saturn. The hindus also
by the light and dark halves of the
which they designate Kista and Săkla pakshad.. The modes of determining divisions of times of the day have been various among the nations of antiquity, and there are still variations in these modes in the modern world. The manner of reckoning the days by the ancient Jews, and which subsists amongst that people at the present time, is, to commence the day at a certain hour of the evening, and to finish it on the next evening at the same hour. Thus their Sabbath begins on the afternoon of Friday, and is completed on the afternoon of Saturday. The Roman Catholic Church also commences its festivals in the evening; and this custom is retained amongst the British in some of their popular observances, such as the eve of St. John, and Christmas eve. The civil day of Britain now commences at 12 o'clock at midnight, and lasts till the same hour of the following night. The civil day is distinguished from the astronomical day, which begins at noon, and is counted up to 24 hours, terminating at the succeeding noon. This mode of reckoning the day, is that used in the Nautical Almanac, and it sometimes leads to mistakes with persons not familiar with this manner of computation: a little consideration will obviate the difficulty. Thus January 10, fifteen hours, in astronomical time, is January 11, 3 in the morning civil time. In France and most of the States of Europe, as

with the British, the hours are counted up to 12, from midnight till noon, and from noon till midnight. In parts of Italy, and of Germany, the day is held to commence about sunset and the hours are counted on till the next sunset. This mode is very inconvenient to travellers, as the noon of the Italian hours at the summer solstice is 16 o'clock, and 19 o'clock at the winter solstice.

The division of the day among mahomedans is chiefly subservient to the stated times of performing their devotions, and is not generally very accurate. They begin their account at sunset, reckoning twelve hours from thence to sunrise, whether the night be long or short; from sunrise to sunset they also reckon twelve hours, and consequently a night hour is longer in the winter than an hour of the day, and in summer the hours of the day are longer than those of the night. At the equinoxes alone, all the hours are of equal length, and then they coincide with those adopted by the British in commencement and duration, differing, of course, 6 hours in enumeration, so that the British six o'clock is their twelve, and the British seven is their one, &c. At other periods of the year, also, their six o'clock coincides with the British twelve, but every other hour differs more or less from that of Britain. The time of sunrise, and, consequently, the length of the day, being known, the length of each hour will be easily found by division, and the period of any given hour determined. Thus, if the sun rise at 7 o'clock, the length of the day will be ten hours (of 60 minutes each) and that of each hour 50 minutes. One o'clock, mahomedan reckoning, will then be at 50 minutes after 7, two o'clock 40 minutes after eight, and three o'clock will be half past nine, and so on of the others. When the sun rises at 5 o'clock the three first hours of the day will be completed severally at 10 minutes after six, twenty minutes after seven, and half past eight. In every case six o'clock arrives exactly at midday, which in India is called "*do pahar*, or the *second watch*."

The *Chinese* division of the day is as simple as the British and not much unlike it. The Chinese begin the day an hour before midnight, and divide the twenty-four hours into twelve parts of two hours each. Instead of numbering their hours they give a different name to each period of two hours; the names and corresponding time, according to the British mode, are as follows:—

Taze.	11 to 1	Morning.	Woo.	11 to 1	Afternoon.
Chow.	1 to 3	"	We...	1 to 3	"
Yiu..	3 to 5	"	Shin.	3 to 5	"
Maou.	5 to 7	"	Yew.	5 to 7	"
Shin..	7 to 9	"	Seo...	7 to 9	"
Sze...	9 to 11	"	Hae..	9 to 11	"

The word Keaou is added when the first hour of each period is intended, and Ching for the last. Thus, Keaou tsze is 11 at night, and Ching tsze 12 at night; Keaou Chow 1 in the morning, Ching Chow 2 &c. &c. The word K'hih "quarter," is used after the hour with the numerals yih 1, urh 2, or san 3, to subdivide the hours into quarters, which is the smallest division commonly employed: example, ching maou yih k'hih, a quarter past 6; keaou woo urh k'hih, half past 11.

Both the hindoo and the mahomedan, in India, divide the day into four watches, and the night, into the same number; the day being considered to extend from sunrise to sunset. The watches are again divided into *ghurees*, which are 24 minutes each in length. As, in the summer, the days are longer than the nights, each day watch will then be longer than any watch of the night, though, from the necessity of each watch comprising an exact number of ghurees, there will generally be the difference of 1 ghuree between two watches of the same day. There is much variation in this respect, and although, in the latitudes of India, the difference is not so great as it would be in a country more towards the north, it is still so inconvenient that the natives of India rarely understand their own method of dividing the day, and readily adopt the British mode.

In order to explain the mode of subdividing the watches, we shall detail the correspondence of ghurees with British hours in March and September when the days and nights are equal, and when, in consequence, more regularity may be expected than at other seasons. It must be remembered that a ghuree contains 24 minutes, and that 60 ghurees make up the 24 hours; 30 ghurees, therefore, make up the time between sunrise and sunset at this season. If these 30 ghurees were equally divided between the four watches, giving 7 ghurees and a half to each watch, their correspondence with British hours would be easily made; but as the hindoo practice is never to divide a ghuree between two watches, but to continue every watch until the last ghuree is completed (with o[illegible]n) the watches will be of unequal length; the first and last watches will be of 8 ghurees, and the second and third of 7 ghurees each.

At 6 o'clock, the first ghuree begins with the rising sun and is completed at 24 minutes after 6; the second ghuree strikes at 48 minutes after 6, the third at 12 minutes after 7 and so on in succession until the end of the first watch, at 12 minutes after 9. At 36 minutes after 9, one ghuree strikes again, and the same detail continues until midday, when the second watch ends. The third watch [illegible] at 48 minutes after 2, and the fourth [illegible], or sunset. The same succession [illegible] during the night.

In the summer, when the sun rises about 12 minutes after five, and sets at 48 after 6, th day is 34 ghurees in length, and the night only 26. In this case the first watch of the day contains 9 ghurees, the second and third 8 each, and the fourth nine. In the night the four watches will contain, respectively 7, 6, 6, and 7 ghurees. In winter, of course, the contrary arrangement takes place, the day consisting of 26 ghurees, and the night 34; circumstances being the same in other respects. In the intermediate seasons the watches will contain 6, 7, 8, or 9 ghurees each, according to the length of the day; arranging them so that each watch may contain an equal number of ghurees, if possible; if there be one ghuree in excess, it is to be added to the first watch; if two, to the first and last; and if three, to the first, second, and last. The last ghuree of the day will occasionally be lengthened or shortened, in order to finish the day with sunset, and the last of the night altered in the same way, that the day may begin at sunrise.

With such a variable system as the above, it is evident that no clocks could be made to mark the time; but a mode denoting time has been adopted by the hindoo, which is not without ingenuity. They provide a thin metal cup, a clepsydra, through the bottom of which a small hole is drilled; this cup swims on the surface of a vessel of water, until the water, running gradually through the hole, fills the cup, which then sinks. The hole is made of such a size, that the water rising sinks it in 24 minutes. A sort of gong, or shallow bell metal pan, called a ghurial, is hung up near the vessel, to be struck at the expiration of each ghuree, which is known by the sinking of the cup. A man, who is employed to watch the sinking of the cup, and to strike on the bell, is called a ghuriali. For the complete establishment of a ghuree, six or eight servants are necessary, who keep watch in turns. Such an expense can, of course, be afforded only by the wealthy; but the sound of a gong is usually loud enough for a whole village, and serves the purpose of a church clock.

We shall explain the operations of the ghuriali through the twelve hours of an equinoxial day; and the process of striking throughout the year will be easily understood from this detail.

At six o'clock in the morning, as soon as the sun appears on the horizon, a little cup is put on the surface of the water; when it sinks, which will be at 24 minutes after 6, the time is called, but not struck, 1 ghuri. This ghuri is considered sacred to the sovereign and his ghuriali, alone, has the privilege of striking it: with this exception the first ghuree is passed in silence throughout Hindostan. At the second ghuri, two blows are struck; at the third three, and so to the end of the watch, when eight blows are struck for the eighth ghuri of the watch: then eight to show that 8 ghuris of the day are passed; and after an interval of a second or two, one loud blow is struck to shew the end of the first watch. The same process is repeated to the end of the second watch, except that the first ghuree is not passed in silence; and that, at the end of the watch, which consists of 7 ghurees, after striking the seven blows, fifteen more are sounded, to show that fifteen ghurees are elapsed from sunrise, and then two loud blows to show the end of the second watch. At the end of the third watch, seven blows are struck for the 7 ghurees of the watch, twenty-two for the ghurees of the day, and three loud strokes for the third watch. At sunset, after the eighth stroke for the eight ghurees, thirty are sounded to show that 30 ghurees are passed since sunrise, and four loud ones for the completion of the fourth watch. As the fourth watch is never struck until sunset, the last ghuri will increase with the lengthening days, until, in April, it would be equal in length to two ghurees, and the whole watch would contain 9 ghurees. To avoid so long a watch, one ghuree is added to the second watch, which before contained only 7 ghurees, and the last watch is reduced to its former length. In May the day is one ghuree longer, and this addition is made to the third watch, which before contained only seven. The four watches are then of equal length. At the end of May, a ghuree is added to the first watch, and near midsummer another to the last watch. The day then consists of 34 ghurees, and the night of 26 only: and, as the days decrease, 1 ghuree is taken away at a time, in the same order as they were put on, until the shortest day, when the whole detail recommences.

Some variation will occasionally take place in consequence of the difficulty of ascertaining the precise moment of sunrise, though much less, in India, than would be the case in a cloudy atmosphere. Change will also arise from the negligence or idleness of the ghuriali; and tales are sometimes told of great men, for whose convenience the complaisant ghuriali will add a ghuree to a watch, or accelerate the sinking of the little cup to accommodate their master's pleasure. These circumstances will prevent any exact coincidence of ghurees with hours practically, though there will be no great discrepancy by attending to the rules laid down above.

The British names of the days of the week are derived from the Saxons; and they partly adopted these names from the more civilized nations of antiquity. The following ingenious origin of the ancient names has been suggested in connexion with astronomical science. The planetary arrangement of Ptolemy was thus—1, Saturn; 2, Jupiter; 3, Mars; 4, the Sun; 5, Venus; 6, Mercury; 7, the Moon. Each of these planets was supposed to preside, successively, over each hour of the 24 of each day, in the order above given. In this way would preside over the first hour of the first day, Jupiter over the second hour, Mars over the third, the Sun over the fourth, and so on Thus the Sun presiding over the fourth, eleventh, and eighteenth hours of the first day, would preside over the first hour of the second day, and carrying on the series, the Moon would preside over the first hour of the third day, Mars over the first hour of the fourth day, Mercury over the first hour of the fifth day, Jupiter over the first hour of the sixth day, and Venus over the first hour of the seventh day. Hence, the names of the days yet used in the learned professions throughout Europe. The present English names, however, are derived from the Saxon :—

Latin.	*English.*	*Saxon.*
Dies Saturni	Saturday	Saterne's day.
Dies Solis	Sunday	Sun's day.
Dies Lunæ	Monday	Moon's day.
Dies Martis	Tuesday	Tiw's day.
Dies Mercurii	Wednesday	Woden's day.
Dies Jovis	Thursday	Thor's day.
Dies Veneris	Friday	Friya's day.

Tiw, Woden, Thor, and Friya were deities of the pagan Saxons. Thor was the god of thunder, as well as the ancient Jove, and Friya was a goddess, the wife of Woden.

Almost all nations have regulated their months and weeks, in a great degree, by the revolution of the moon. Some have endeavoured to unite this division with the annual course of the sun, by an augmentation of days at the end of each year, or by adding a thirteenth month at the end of every third year. The Jews and the Athenians followed this latter method; the Macedonians, and some nations of Asia, assigned their months 30 and 31 days; the Turks and the Arabs have 29 and 30 days; the months of the Anglo-Saxons were governed by the revolutions of the moon. Their common year consisted of twelve lunar months, three months being appropriated to each of the four seasons; but every third year contained an additional lunar month, which was given to the summer season. The names of their lunar months, either had reference to their religious ceremonies, or to the natural appearances of the year.

A considerable variation prevailed, generally, amongst the nations of antiquity, and still partially prevails with regard to the commencement of the year. The Jews dated the beginning of the sacred year in the month of March; the Athenians in the month of June; the Macedonians on the 24th September; the Christians of Egypt and Ethiopia on the 29th or 30 of August, and the Persians and Armenians on the 11th of August. The Jewish civil year begins on the first day of the month Tisri, which year corresponds with our 9th of September; the mahomedan's begins on the 1st of the month Moharam, which year, corresponds with our 14th of July. Nearly all the nations of the Christian world, now, commence the year on the 1st of January; but, as recently as 1752, even in England, the year did not legally and generally commence till the 25th of March. In Scotland, at that period, the year began on the 1st of January. The difference caused great practical inconvenience, and January and February, and part of March, sometimes bore two dates, as we often find in old records as 1711-12. This practice often leads to chronological mistakes; for instance, we popularly say, "The British Revolution of 1688," that great event happened in February of the year 1688, according to the then mode of computation; but if the year were held to begin, as it does now, on the 1st of January, it would be "The Revolution of 1689," In the anniversaries given in the Almanacs, the alterations of style made in 1752, are not followed, as any correction of dates would embarrass the reader in historical and biographical references.

The year, properly so called, is the solar year, or the period of time in which the sun passes through the twelve signs of the Zodiac. The period comprises 65 days, 5 hours, and 48 minutes, 51 seconds, 6 decimals, and is called the astronomical year.

The CALENDAR in India, the Jantri of the hindus, is a table of the days of the year arranged to assist the distribution of time, and to indicate remarkable days connected with devotion or business. If every nation had adopted the same division of time, and an uniform calendar had been general throughout civilized states, history would present much fewer difficulties and contradictions. The progress of astronomical science has necessarily produced great changes in the manner of dividing time; and thus, whilst some nations have been ready to give their calendar every possible advantage of a [illegible] construction, the prejudices of others ha[illegible]dered them unwilling to depart from their accustomed mode, however inaccurate.

The Romans called the first days of each month Calends, from a word which signified "*called*" because the Pontiffs, on those days, called the people together, to apprize them of the days of festival in that month. Hence we derive the name of Calendar.

The Roman Calendar, which has, in great part, been adopted by almost all nations, is stated to have been introduced by Romulus, the founder of this city. He divided the year into ten months only,—Mars, Aprilis, Maius, J[illegible], Quintilis (afterwards called Julius), [illegible] (afterwards called Augustus.) Septem[illegible]ber, November and December. Mars, [illegible] Quintilis, and October, contained 31 days, and each of the six other months 30 days, so that the ten months comprised 304 days. The year of Romulus was, therefore, of 50 days less duration then the lunar year, and of 61 days less than the solar year, and its commencement, of course, did not correspond with any fixed season. Numa Pompilius corrected this calendar, by adding two months, Januarius, and Februarius, which he placed before Mars. Julius Cæsar, being desirous to render the calendar still more correct, consulted the astronomers of his time, who fixed the solar year at 365 days, 6 hours, comprising, as they thought, the period from one vernal equinox to another. The six hours were set aside, and, at the end of four years, forming a day, the fourth year was made to consist of 366 days. The day thus added, was called intercalary, and was added to the month of February, by doubling the 24th of that month, or according to their way of reckoning, the sixth of the calends of March. Hence the year was called bissextile. This almost perfect arrangement, which was denominated the Julian style, prevailed generally throughout the Christian world, till the time of Pope Gregory XIII. The Calendar of Julius Cæsar was defective in this particular, that the solar year, consisting of 365 days, 5 hours, and 49 minutes, and not of 365 days, 6 hours, as was supposed in the time of Julius Cæsar, there was a difference between the apparent year and the real year, of eleven minutes. This difference at the time of Gregory XIII, had amounted to ten entire days, the vernal equinox falling on the 11th instead of the 21st of March, at which period it fell correctly at the time of the Council of Nice, in the year 325. To obviate this inconvenience, Gregory ordained, in 1582, that the 15th of October should be counted instead of the 5th, for the future; and to prevent the occurrence of this error, it was further determined, that the year beginning a century, should a whole bissextile, with the exception of the beginning of each fourth century. Thus 1700 and 1800 have not been bissextile, nor will 1900 be so, but the year 2000 will be bissextile. In this manner, three days are retrenched in four hundred years; because the lapse of the eleven minutes makes three days in about that period. The year of the Calendar is thus made, as nearly as possible, to correspond with the true solar year, and future errors of chronology are avoided. The adoption of this change, which is called the Gregorian, or New Style, (the Julian being called the Old Style,) was for some time resisted by states not under the authority of the See of Rome. The change of the style in Britain was, established by an Act of Parliament passed in 1752. It was then enacted, that the year should commence on the 1st January, instead of March 25th; and that in the year 1752, the days should be numbered as usual until September 24, when the day following should be accounted the 14th of September, omitting 11 days. The Gregorian principle of dropping one day in every hundredth year, except the fourth hundredth, was also enacted. The alteration was, for a long time opposed by the prejudices of individuals; and, until lately, with some persons, the Old Style was so pertinaciously adhered to, that rents were made payable on the old quarter days, instead of the new. The Russians still retain the Old Style, thus creating an inconvenience in their public and commercial intercourse with other nations, which, the growing intelligence of the people will eventually correct.

During the period in which France was a Republic, the authorities introduced an entire change in the calendar, which was in existence more than twelve years; and is important to be noticed, as all the public acts of the French nation were dated according to this altered style. The National Convention, by a decree of the 5th October 1793, established a new era. which was called, in the place of the Christian Era, the Era of the French. The commencement of each year, or the first "Vendimaire," was fixed at the midnight commencing the day on which the autumnal equinox fell, as determined at the observatory at Paris. This era commenced on the 22nd of September 1792, being the epoch of the foundation of the Republic; but its establishment was not decreed till the 4th "Frimaire" of the year II, (4th November, 1793.) Two days afterwards the public acts were thus dated. This Calendar existed till the 10th "Nivose," year XIV (the 31st December, 1805,) when the Gregorian mode of computation was restored.—(*Madras Almanac, p.* 70 *to* 74.) The Parsees of India have a new years day, in March.

The mahomedans of Persia reckon the year, from their Nao-roz or New year's day, the day on which the sun enters Aries, but the mahomedans of India follow the lunar months and have no intercalary periods, so that their anniversaries and festivals make, continuously, circuits of the seasons.

The hindus of India follow the lunar months, but, every twenty-fifth year, insert an intercalary month to adjust.

Hindu festivals and holydays are very numerous, and several of those which the masses observe have an astronomical origin or refer to the seasons. The *Makar Sankranti* festival, about the 12th January, is held on the occasion of the sun entering the tropic of Capricorn or Makar. On this day, the hindus bathe, and anoint the body with sesamum oil, and listen to the prayers of brahmans to whom they give presents. The prayers on this day are only to the sun. They have friends to dinner at night and put on new clothes.

Shoondoah, is a tiny ship which hindus launch on the Ganges. They have garlands of flowers and are illuminated with lamps. It is performed by hindu mothers to propitiate the goddess, in behalf of their sons. The goddess resembles Amphitrite. It is supposed to be a propitiatory rite handed down from times when the hindus were engaged in maritime avocations. It is held on the day, on which, according to hindu astronomy, the sun turns back from Capricornus to resume his northern ascension and when the steady N. W. wind blows favourably for outward bound voyages : feastings are held on that day, and farewell entertainments are given to the voyagers. The sun's festival with the Getc and Aswa nations of the Jaxartes, as with those of Scandinavia, seems to have been the winter solstice, the Sacrant of the Rajpoot and Hindu in general.—*Tod's Rajasthan, vol. i. p.* 676.

The ceremonial of the horse's return after a year, evidently indicates an astronomical revolution, or the sun's return to the same point in the ecliptic. The return from his southern declination must have been always a day of rejoicing to the Scythic and Scandinavian nations, who could not, says Gibbon, fancy a worse hell than a large abode open to the cold wind of the north. To the south they looked for the deity ; and hence, with the Rajpoots, a religious law forbids their doors being to the north.

Basant Panchmi occurs about the 9th February, is in honor of Basanth, the spring, in hindu mythology, personified, and an attendant of Kama, the god of love.

Ruth' Saptami, from ratha a car and saptami, the 7th day of the month, is dedicated to the worship of the sun. This is held about the 11th February and is regarded as the beginning of the Manwantaram or period *embracing the age of Manu*.

Holi or Hutasavi, in Sanscrit Holikha or Phal gotsava, is called also dola or dolavatra, the swinging festival and is supposed to relate to the vernal equinox and to be similar to the Persian New year. It is held about the 19th March, or 15 days before the full moon of Phalgun. It is in honor of Krishna and is quite a saturnalia, red powders are thrown and red fluids squirted at passers by and licentious songs sung. At the close of the festival, a pile is lighted, and a wheaten cake or poli, offered on it.

Guddi padva, or flying of paper kites is held at the new year, on the new moon of *Chaitra*, *about the 5th April*.

Ashadi Ekadasi, is the eleventh of the light half of the month Ashad and is dedicated to Vishnu. It falls about the 12th July, and refers to the summer solstice, and on this feast day, commences the night of the god, during which he reposes for four months on the serpent Sesha.

Shravan or Purnima, this feast occurs about the middle of August, on the 15th of Shravan Shukla. It is attended, on the western coast of India, about Bombay, with much ceremonial. The S. W. monsoon is supposed to be ended. Cocoanuts and flowers are thrown into the sea to obtain favour for those who are to trust themselves on the ocean.

Gouri, a name of Parvati or Ceres, has a festival about the beginning of September, on the 7th of Bhadrapad, when Parvati is worshipped as a tender maiden. It lasts three days.

Pitra Baksh, Pitra, paternal ancestors, the Patrii of the Romans, is a hindu festival about the end of September on the last day of Bhadrapad or first day of Ashwin, on which offerings of fire and water are made to the manes of deceased ancestors.

Dasara, from das, ten, occurs about the first day of October, on the 10th of Ashwin shud. It is supposed to relate to the autumnal equinox. The nine days preceding the Dasara are the Nao-ratri, during which a brahman is engaged to read the praises of Durgi, and on the tenth, is the homa or fire sacrifice, in which rice and ghi are poured into the fire. Bunia women keep up a dance called Garbhu. The 10th day of Asoj is commemorative of the date on which the deified Rama commenced his expedition to Lanka for the recovery of Sita.

Kartik Ekadusi, is the 11th in some years the 12th day of the light half of the month Kartik or about the 8th November. On this day, Vishnu is supposed to rise from his four month's sleep and this has reference to the sun being at the winter solstice.

Ganesh Chaturthi or Chauth. On this day, which falls about the beginning of September, was born Ganesh called also Ganapati made from the turmeric and oil off the head of Parvati. He is the god of wisdom who removes obstacles and is invoked at the commencement of all undertakings. Ganapati has a man's body with the head of an elephant, his head is said to have been cut off or destroyed by Siva, when Ganesh tried to prevent Siva entering the chamber of Parvati when bathing. Clay images are made and worshipped for from one to nine days and then thrown into water. The Chinchor or Chinchwad who resides at a village of that name near Poona is believed to be an incarnation of Ganesh, who promised an ascetic, named Moroba, who lived in Sivaji's time, that he would be incarnate for seven generations in his family. The earth image of Ganesh is one of three forms in which the earth deity mrittika is worshipped by hindus. The first is the Nagpancham : in which feast a snake of clay is worshipped, the second is Gokul Ashtami, when a clay image of the infant Krishna is worshipped, and the third occasion is that on which Ganesh is worshipped, and this last day of the worship of Mrittika is observed with great pomp. The Vahan or carriage of Ganesh is a rat. The feast in honor of his birth is held on the 4th of the month Bhadrapad, and falls on the first days of September and has some seasonal connection. Ganesh is brought to the house with much pomp.

ASTRUK. GUZ. استرق HIND. Gum ammoniac.

ASTUR TRIVIRGATUS, Temm. Goshawk. This species of hawk inhabits the hilly parts of Nepaul, India and the Malay countries. The other Indian species, A. palumbarius is a native of Europe and Asia, but in India is confined to the Sub-Himalayas. See Aves.

ASTYAGES OR APANDA, a persian king of the Kaianian dynasty. He was son of Isfandiar.

ASTZ : GER. Soda. Natron.

ASUN. MAR. Briedelia spinosa.

ASUR. SANS. A demon. An order of beings who reside under *Maha-meru.—Hyder's Eastern Monochism, p.* 434. See Assur ; Asura.

ASURA. SANS. Strength or lordship, a word of uncertain etymology, perhaps from Assur, as above ; or the god Ashur, perhaps from Ahuramasda (Ormuzd.) The Asura evidently were a nation with whom the immigrant Arians came in conflict, and have been described in hindu mythology as demons. It is a term much employed in hindu legends from a very early period after the deluge down to the time of Krishna. The earlier Asura are probably the offspring of Ashur. The later Asuras seem to have been the Assyrians. But Daitya, Danava, Dasya, Rakshasa, are the names applied by the intruding Aryans to the races whom they found in occupation of India. *Taylor. W. H. of I.* See Ashur ; Assur ; Assyria ; Hindoo ; Mahadeva ; Parvati ; Ravana.

ASURA DHRUVA, the South Pole, its inhabitants opposed to the Suras, those of the North Pole.

ASURAYANA AND YASKA. See Hindu.

ASVINI. See Aswini.

ASWA OR ASI, an Indu or Lunar race, [illegible] and Bajaswa. They were spread over the countries on both sides the Indus, and probably gave their names to the region now called Asia.

ASWA AND HYA, synonymous Sanscrit terms for 'horse;' the *asp* of the Persians ; and as applied by the prophet Ezekiel to the Getic invasion of Scythia, B. C. 603 : "the sons of Togarmah riding on horses ;" described by Diodorus, the period the same as the Takshas invasion of India. Amongst the Scythians, the horse was sacred to the sun. In India, Sept-Aswa is the seven-headed horse of Surya, the sun.

In Aswa we have the derivation of the ancient races, sons of Bajaswa, who peopled the countries on both sides the Indus, and the probable etymon of Asia. The Assa-seni, the Ari-aspi of Alexander's historians, and Aspasiana, to whom Arsaces fled from Seleurus, and whom Strabo terms a Getic race, have the same origin, hence Asi-gurh, 'the fortress of the Asi' (erroneously termed Hansi), and Asgard were the first settlements of the Getic Asi in Scandinavia. Alexander received the homage of all these Getic races at 'the mother of cities' Balkh, 'seat of Cat'h-haian Khan,' according to Marco Polo, from whom Milton took his geography.

Hi, Hya, Hywor, and Aswa, denote the steed in Sanscrit and its dialects. In Gothic, hyrsa ; Teutonic, hors, Saxon, horse.—*Tod's Rajasthan, vol. i. p.* 76. Of the three great branches of the Indu (Lunar), Aswa bore the epithet of *Mida* (pronounced Mede), *viz.*, Poora-mede, Uja-mede, and Deomede. The Aswa invaders of Assyria and Media, the sons of Bajaswa, are expressly stated to have multiplied in the countries west of the Indus, emigrating from their paternal seats in Panchalica.—*Tod's Rajasthan, Vol. I. p.* 58, 209.

ASWAD. El-Aswad-ibn-Kaab, of the time of Mahomed, was the chief of the tribes of Ans, in Arabia, and a man of eloquence: he embraced mahomedanism and again seceded, to set up a religion of his own. He was slain on the instigation of Mahomed, shortly before the demise of the latter.

ASWAGANDHI—S. (*V. Perneru,*) TEL. అశ్వగంధి. Physalis somnifera, *Nees.*

ASWALAYANA DARBHA GADDI. TEL. ఆశ్వలాయనదర్భగడ్డి. Poa cynosuroides, *Retz.*—

ASWAMEDHA, the sacrifice of the horse, Medha, Sanscrit, signifies to kill was practised in India, in ancient times, but its occurrence within any recent period is not known. It seems to have been a Scythic rite, where often the horse after certain ceremonies was liberated, in fulfilment of a vow, and sacrificed on the deaths of chiefs. Up to the present day, in India, cows and bulls are let loose in fulfilment of vows, but the liberation of a horse is not now known. Col. Tod surmises that the grand solstitial festival, the *Aswamedha*, or sacrifice of the horse (the type of the sun), which was practised by the children of Vaivaswata, the 'sun-born,' was most probably simultaneously introduced from Scythia into the plains of India, and *west*, by the sons of Odin, Woden, or Boodha, into Scandinavia, where it became the *Hi-el* or *Hi-ul*, the festival of the winter solstice; the grand jubilee of northern nations, and in the first ages of Christianity, being so near the epoch of its rise, gladly used by the first fathers of the Church to perpetuate that event. It was practised he adds (*Rajasthan, Vol. I. p.* 63.) by the Getes in the time of Cyrus; deeming it right, says Herodotus, to offer the swiftest of created to the chief of uncreated beings: and this worship and sacrifice of the horse has been handed down to the Rajpoot of the present day. The sanguinary part of this ceremony would, according to Mr. Colebrooke, appear like that of the *purushamedha* or *human sacrifice*, to be merely nominal, the horse, after certain ceremonies, being let loose. Mr. Ward, however, states that he was liberated only for a twelve month, when he was again taken, and being magnificently caparisoned, was, after various preliminary proceedings, slain by the hota or priest. He who offers a hundred sacrifices of a horse is entitled to the throne of Indra. —(*Cole. Myth. Hind. p.* 374.) But in the Rig Veda, are two hymns, describing the sacrifice of the horse, which leaves no doubt that the early ritual of hinduism did authorise this sacrifice as a burnt offering to the gods. As, however, these two, in all the body of hymns in the Rig Veda, alone relate to it, it may be inferred that even then, the rite was falling or had already fallen into disuse. As described in the Rig Veda, it appears that the horse was immolated, and afterwards cut up into fragments, part of which were eaten by the assisting priests, and part offered as burnt-offering to the gods. This sacrifice is described in the Puranas as one of the highest order, insomuch that if it be performed a hundred times it elevates the sacrificer to the throne of Swarga, and thereby effects the deposal of Indra himself. In the Rig Veda, however the object of this rite seems to be nothing more than the acquiring of wealth and posterity; and even in the Ramayana it is merely performed by king Dasaratha as the means of obtaining a son by a universal monarch, but it was performed by kings in celebration of auspicious events, especially after marriage, in the hope of securing issue, when largesses were distributed to the brahmans and officiating priests. It seems also to have been performed by kings, in assumption of supremacy, on which occasion their tributary sovereigns were the officiating priests. On this point Col. Tod mentions, that when Yudishtra was firmly seated on his throne, he resolved to signalise his reign and paramount sovereignty by the solemn rites of Aswamedha and Rajsoo, in which princes alone officiate, every duty, down to that of porter, being performed by royalty. The "Steed of Sacrifice" was liberated under Arjoona's care. He wandered whither he listed for twelve months; and none daring to accept this challenge of supremacy, he was reconducted to Indraprestha, where, in the meanwhile, the hall of sacrifice was prepared, and all the princes of the land were summoned to attend. The hearts of the Kuru burned with envy at the assumption of supremacy by the Pandu, for the prince of Hastinapoor's office was to serve out the sacred food. Animate creatures and inanimate, things have been objects of adoration amongst most of the nations of the earth: the sun, the moon, and all the host of heaven; the sword; the serpent; and the horse, and the last seems to have been worshipped as a type of the sun by all the Sytbic races.—*Tod's Rajasthan, Vol. i. p.* 76. The last Aswamedha was undertaken by the celebrated Sowaie Jey Sing of Amber; but the milk-white steed of the sun was not turned out.—*William's Story of Nala, p.* 119-209. *Tod's Rajasthan, Vol. I. p.* 63. See as to the sacrifice of the Cow, under Cow also LAKSHMI.—INDIA, 340. SACRIFICE.

ASWINA, the first month of the hindu lunar year. According to Warren, the 6th solar hindu month, when the sun is in the sign Canya, answering to the Tamil month Paratasi. According to Ward, this month is named from the stellar mansion Ashwini the name of a mare.

ASWICULAPA, in hindu mythology, are genii.

ASWINI, in hindu mythology, a form of Parvati or the earth goddess, as a mare, in which Surya, the Sun, breathed, producing the Aswini Kumara.

ASWINI. The twins or Gemini of the hindu Zodiac. In hindu mythology, the physicians of the gods and seemingly corresponding to the Dioscuri, Castor and Pollux.

ASWINI KUMARA, according to one legend were two sons of Surya by Sangnya, who taught the art of medicine.—*Taylor.* See Hindu; Kali; Pandu; Polyandry; Saraswati; Surya.

ASYLUM, or refuge places, or sanctuaries, are known in Persia as Bast. The [illegible] prevailing in the mahomedan East, of having places of asylum, owes its ori- origin probably to the Mosaic law concerning the six cities of refuge, which were allotted to such as had slain any person at unawares. "Then shall ye appoint you cities to be cities of refuge for you; that the slayer may flee thither, which killeth any person at unawares. And they shall be unto you cities for refuge from the avenger; that the manslayer die not, until he stand before the congregation in judgment," &c., &c. Numbers xxxv. 11, 12. See likewise in Joshua xx. 1-9, for the names of the six cities of refuge, and the rules laid down for them. A place of refuge, somewhat similar to the Persian "Bast," existed formerly in the city of London, where debtors could not be molested by their creditors, and were out of reach of pursuit. This place bore the name of Alsatia, and embraced the space between Blackfriars-bridge and Temple-bar, leading to the water side. A similar place existed in Liverpool (perhaps still in use) and Holyrood precincts in Edinburgh were similarly free.

There was an ancient law of Athens analogous to the Mosaic, by which he who committed "*chance-medley*," should fly the country for a year, during which his relatives made satisfaction to the relatives of the deceased. The Greeks had *asyla* for every description of criminals, which could not be violated without infamy. Gibbon gives a memorable instance of disregard to the sanctuary of St. Julian in Auvergne, by the soldiers of the Frank king Theodoric, who divided the spoils of the altar, and made the priests captives: an impiety not only unsanctioned by the son of Clovis, but punished by the death of the offenders, the restoration of the plunder, and the extension of the right of sanctuary five miles around the sepulchre of the holy martyr.—*Tod's Rajasthan, Vol. I. p.* 527. *Baron C. A. De Bode's Travels in Luristan and Arabistan, p.* 70.

ATEES. Beng? Hind. A word applied to very dissimilar substances. According to Dr. Royle, Atees is the root of the Aconitum heterophyllum and forms the medicinal Atees of the Indian bazars, employed as a tonic in fevers. But the substance sold under that name, in the South of India, perhaps over India generally, is quite inert, for two drams as a dose have been given. O'Shaughnessy mentions that the spurious Atees roots are the dry tubera of asparagus sarmentosus : but the same term, in the South of India, is applied to linseed, to which also, the terms Alsi, Tisi and Mashina are applied. According to Ainslie, Atees is the Hindoostani name of the bark of a species of Betula, used in the northern parts of India for dyeing chintz red, and which is sometimes, though rarely, brought to the Coromandel coast. The root of Aconitum heterophyllum has long been celebrated as a tonic and valuable febrifuge ; it is intensely bitter and slightly astringent, with an abundance of farina. There are two kinds of atees, the black and the white, both equally valuable. The true bitter atees is devoid of any astringency, yields to water 18 per cent. to alcohol 32. In any trial of this medicine prescriptions should invariably give the vernacular name, to prevent confusion with the formidable aconite.—*Cat. Ex*, 1862. *Ind. Ann. Med. Sci. for April* 1856, *p.* 395. *Dr. O'Shaughnessy Bengal Dispr. Ainslie's Mat. Med. p.* 141. *H. f. et T. O.*

ATHOON, the chief town of the Mair or Mera race, the mountaineers of Rajpootana, and the country is styled *Mairwarra*, or "the region of hills." The Mair is a branch of the *Mena* or *Maina*, one of the aboriginal races of India. He is also called *Mairote* and *Mairawut* ; *Mairwarra* is that portion of the Aravalla chain between Komulmer and Ajmeer, a space of about ninety miles in length, and varying in breadth from six to twenty. Rajpootana rises from three to four thousand feet above the level of the sea. *Mera* is 'a mountain' in Sanscrit ; *Mairawut* and *Mairote* of or belonging to the mountain ; the name of the Al-

...*dainole*, has the same ...om prevailing i *Mair* are a branch of the ...having places ...rtant division of the *Mena*, origin probabl... consists of as many branches as the six ci...querors, the Rajpoots. All these wild such...s have the vanity to mingle their pedigree "with that of their conquerors, though in doing so they stigmatize themselves. The Cheeta-Mena accordingly claim descent from a grandson of the last Chohan emperor of Delhi. Unail and Anoop were the sons of Lakha, the nephew of the Chohan king. The *coco-nut* was sent from Jessulmer, offering princesses of that house in marriage, but an investigation into their maternal ancestry disclosed that they were the issue of a Mena concubine: and their birth being thus revealed, they became exiles from Ajmeer, and associates with their maternal relatives. Unail espoused the daughter of a Mena chieftain, by whom he had Cheeta, whose descendants enjoyed almost a monopoly of power in Mairwarra. The sons of Cheeta, who occupied the northern frontier near Ajmer, became *mahomedans* about fifteen generations ago, when Doodha, the sixteenth from the founder of the race, was created Dawad Khan by the hakim of Ajmér; and as Athoon was his residence, the "Khan of *Athoon*" signified the chief of the Mairotes. Chang, Jhak, and Rajosi, are the principal towns adjoining Athoon. Anoop also took a Mena wife, by whom he had Burrar, whose descendants have continued true to their original tenets. Their chief places are Burrar, Bairawara, Mundilla, &c. The Meenas were always notorious for their lawless habits, and importance has been attached to them so far back as the period of ... the celebrated prince of Ajmer, whom the bard Chund states to have reduced them to submission, making them "carry water in the streets of Ajmer." Like all mountaineers, they broke out whenever the hands of power were feeble.—*Tod's Rajasthan, Vol. i. p.* 681.

ATHUR, the ruined city near the mouth of the upper Zab, now usually known by the name of Nimrud, is called *Ashur* by the Arabic geographers, and in Athur we recognise the old name of Assyria, which Dio Cassius writes Atyria, remarking that the barbarians changed the Sigma into Tau.—*Muller's Lectures, p.* 233.

The atmosphere everywhere surrounds the globe, to a height of 45 miles.

It is an invisible gaseous body, devoid of odour and of taste, compressible, easily expanded by heat. The mahomedans of India and Persia, use the words Ab-o-Howa, water and air, to indicate climate. The hindus of

India, use "water" for the same subject.—*Royle's Mat. Med., p.* 22.

ATN IL, HIND. Astragalus spinosus.

ATOLL, in the Eastern Archipelago and the Pacific ocean, are many of these Coral Islands. An atoll differs from an encircling barrier reef only in the absence of land within its central expanse; and a barrier reef differs from a fringing reef in being placed at a much greater distance from the land with reference to the probable inclination of its sub-marine foundation, and in the presence of a deep water lagoon-like space or moat within the reef." The polypes that make these, are chiefly Antipathes glaberrima, Madrepora corymbosa; M. pocillifera; Gorgonia tuberculata and two species of Astrea, Leiopathes glaberrima, and L. Lamarckii. Atolls sometimes constitute a great circular chain enclosing a deep basin, but opening by one or more deep breaches into the sea. Sometimes they surround a little island by a girdle of reefs; or form the immediate edging or border of an island or continent. Atolls occur in the Pacific, in the Chinese Seas, in the Marianne and Phillipine Islands, Maldives and Lacadives, and, also may be mentioned the atolls of Sunda group.—*Louis Figuier Ocean World, London* 1868. *The structure and distribution of Coral Reefs, by C. Darwin, p* 146. *Macgillivray Voyage, Vol. i. p.* 73. See Coral. Polype.

ATR, (Arabic); UTR; ITR; OTTAR, and OTTO, for it is spelled in all these varied forms, is a fragrance, perfume, or essence of flowers, though by Europeans the term is confined to that from roses. An *atr-dan* contains the Atr, and the perfumer, druggist or distiller, is called Attar. The perfumes sold under the name of Atr are as various as are the flowers from which they are extracted, and the term Atr has the same extent in India, as the word perfume in English. At the Hyderabad Exhibition of 1854, there were exhibited ten kinds of Atr; those from Aurangabad, were named Sohag: Panch; Bahar; Amber; Moothea, Minbohvin; others from Jasminum: Pandanus odorotissimus; four from Hyderabad were named Mujmooah, one from the Lawsonia inermis: and another called the Rahut-i-Rooh; literally Heart's Ease. In addition to the above, in the Madras Exhibition of 1855, were observed from Hyderabad, Atrs, named

Perfum[illegible] [illegible]ually obtained in India by en[illegible] [illegible]metimes by distillation. [illegible] succes-sive batches [illegible] [illegible]il becomes impr[illegible] grease, animal fa[illegible] spreading it on th[illegible] filling this with fra[illegible] it another dish also greased[illegible] the grease has become frag[illegible] [illegible]e living flowers continue to give out [illegible]ir odour. To remove the odour from the fat, it is scraped off the plates and put into alcohol which takes up the odour and becomes scent and the grease again becomes odourless. The rose, orange, acacia, violet, jasmine, tuberose and jonquil are treated in this way by the French flower farmers of the Var. A ton of rose flowers will yield about 40 ounces of Atr or Otto worth £200 Sterling and the residuary water highly saturated with odour, another £10. The Atr or Otto of Roses, is a highly valuable and delightful perfume. It is an essential oil, prepared in several countries in the East, and has this remarkable composition, that it is a compound of two oils, one liquid and the other solid, and inodorous. At Ghazipore in Bengal, the Attăr is always made at the beginning of the season when the nights are cool. To procure the oil, the roses are put into the still and the water passes over gradually as in the rose-water process. After the whole has co[illegible] over, the rose-water is put into a large me[illegible] basin, which is covered with we[illegible] tied over to prevent insects or dust g[illegible] it, and being let about two feet into the grou[illegible] which has been previously wetted with [illegible] it is allowed to remain quiet during t[illegible] night. In the morning early, the littl[illegible] Attăr which is found on the surface [illegible] rose-water during the night, is ren[illegible] means of a feather and carefully placed in a phial. Day after day as the collection is made, it is placed for a short period in the sun, and after a sufficient quantity has been procured it is poured off clear, and of the colour of amber, into small phials. Pure Atr has, at first, a pale greenish hue, but in a few weeks it becomes of a pale yellow. It is generally calculated that 100,000 roses will produce 180 ns of Atr, and the ... of 100,000 rose ... es from 40 to 70 are and the tolah ...) grains, of the division ld at 80 and 9(... pees. At this price as [illegible] be supposed, i ... rarely if ever used poo by the wealthiest o ... atives, and the natimin urts employ the atr "with perfumed oils prep or by their own distil ... lers from the Jasmine sambac and grandi flora) and bela and Lem grass (Andropogon schœnanthus). The Rosa oil, the oil of Neemaur (Andropogon Iwarancusa), Atr of khus-khus, Newar oil, A m ini, a volatile oil, erroneously called oil of s kenard, is met with in the shops and obtained from a plant named by Dr. Royle, Andropogon Calamus aromaticus. See Citronella oil: Pa houly: Ægle marmelos; Jasmine, Gingelly, M inga, Sandal-wood oil.

The *Mandragora*, or mandrake, the root of which was so celebrated in the magic rites and toxicology of the ancients, is known in the bazars of Central Asia and the north of India. Its properties are identical in nature with those of A. belladonna but weaker in consequence of drying and decomposition of the atropia.—*O'Shaughnessy, p.* 466. *Hog's Veget. King-*

ATROPIA. See Henbane seed.

ATSAK-ZYE PUSHT. An Afghan tribe.

ATSHEY. A tin mine in Banca. See Tin.

ATTA. GUZ. HIND. Meal; wheaten flour. When sifted *Maida* is the finer part of wheaten flour; and *soojee* the coarser. In India, the unsorted wheaten flour, the Atta, does not readily leaven into wheaten bread, and the sifted sooji is used solely for that. The natives who use wheat use the Atta or unsorted flour and the Maida where obtainable.—*Mrs. Hervey's Adventures of a Lady in Tartary, Vol. I. p.* 62.

ATTADI. CYNG. Chiretta.

ATTAI-KAI. TAM. Ficus racemosa. அத்திகாய்.

ATTAI SAGHUR, a town in L. 94° 30′ E and L. 27° 0′ N.

ATTALEA FUNIFERA. A valuable palm, of the maratime provinces of Brazil. A coarse black fibre is obtained from the dilated base of the petioles. It is collected by the natives, and partly used for consumption, partly exported to Europe, tied up in bundles of several feet in length, and sold in London under this name at about £ 14 the ton. It is manufactured into cordage in its native countries, and as it is light, cables made of it do not sink in the water. It yields the *Coquilla Nuts* and might advantageously be introduced into Southern Asia. They are excessively hard, beautifully mottled with dark and light brown, and capable of aking a very high polish, they are extensively sed for turnery work, especially in making the andles of bellpulls, small tops, the knobs of walking sticks, umbrellas and other articles. In 850, about 250,000 nuts were imported into England and sold at 30 to 40s. the 1,000.—*Seeman. Holtzappfel. Poole's Stat. of Com.* 98.

ATTA PATTI, అత్తపత్తి. Mimosa pudica.

ATTAR. ARAB. PERS. HIND. a druggist, a perfumer, a distiller.

ATTARAD. AR. The planet Mercury.

ATTAVEESY, a district in the West of ndia largely occupied by Kols. See Kol.

ATTEET, a monastic order of hindus. Jhaoca, one of their monasteries, is near Bhynsror and was founded by the Bhynsror Chiefs. Colonel Tod mentions that their monastery is an isolated dwelling, on the terraced roof of which he found a party of the fraternity squatted round a fire, enjoying the warmth of the morning sun. Their wild appearance; their matted hair and beard had never known a comb; their bodies were smeared with ashes (*bhaboot*), and a shred of cloth round the loins seemed the sole indication that they belonged to a class possessing human feelings. Their lives are passed in a perpetual routine of adoration of *Chatoorbhoojah*, the 'four-armed' divinity, and they subsist on the produce of a few patches of land, with which the chiefs of Bhynsror have endowed this abode of [illegible] ascetics, or with what their patrons or town's-people and passengers make up to them. The head of the establishment came fo[illegible] to bestow his blessing on Colonel Tod, [illegible] to beg something for his order. He, howeve[illegible] in the first place, elected Colonel Tod, one of his *chelas*, or disciples, by marking his forehead with a *tika* of *bhaboot*, which he took from a platter made of *dhak*-leaves.—*Colonel Tod's Travels.*

ATTEI. Tam. அட்டை. Leeches.

ATTI CHETTU. అత్తిచెట్టు. [illegible] merata, *Roxb.* perhaps also F. racem[illegible] See Mahratta Sikhs.

ATTOCK, a town in the Punjab, at right bank of the Indus river, in L. 33°, 53 N. and L. 72°, 13' 6" E. The level of the Indus about 18 miles above Attock is 1,049 feet above the sea. The name is said to be derived from the Hindi At'k or barrier, and, formerly, it was said that hindus hesitated to go by the west of the Indus lest they lost caste. The name was bestowed by the Indus only in modern times, when the Hindus, from difference of faith, became exclusive. Menu tells us that hinduism was established in Central Asia. Arrian says that Omphis was son of Taxiles and that his father dying at this time, Omphis did homage to Alexander, who invested him with the title and estates of his father Taxiles. This name, itself, perhaps, was given from *Tak.* Colonel Tod supposes the name of the Indus, at *Attac*; the term *Uttak*, or 'forbidden,' according to modern signification, has only been applied since the mahomedan religion for a time made it the boundary between the two faiths. According to Fraser, Attock in desert tracts in Khorasan means the skirt or foot of the hills, and commencement of the desert, and it is commonly used for the desert itself in these parts. Attock on the Indus is near the Ab-duzd, a subterraneous passage of water, *lit*: water stealer. *Tod's Rajasthan, Vol. I, p.* 10[illegible] *Tod's Travels, p.* 155. *Vigne. Pers. AUNWERA. Hind. Phyllanthus emblica.

AURANGABAD, in L. 19° 53' N. and L. 75° 21' E. in the Dekhan, a large city, greatly decayed, and a military station. The mean height of the station is 1,885 feet above Bom Colabah. It may now have about 15,000 people. It is in the dominions of the nabob of Hyderabad, and has several times, for short periods, been occupied by his predecessors. The daughter of Aurungzeb, son of Shah Jahan, is buried there in tomb, said to resemble the Taj Mahal at Ag. Aurungzeb is buried at Roza 25 miles distant, on an elevated plateau overlooking the valley of the Godavery, and the Ellora caves are excavated on its face. Also, the fortress of Dowlatabad is near. The very handsome ola tomb which Aurungzeb erected to daughter's memory, is in imitation of Taj Mahal at Agra. There is also a ter mill at the Shah Mutafar garden. It is of te marble, in which elegant arabesques and flowers are carved with great skill, and the doors are ornamented with plates of metal, in which also are flowers and ornaments. Near the osque is a handsome marble hall, and round t a neglected garden.—*Sinnet's Voyage, p.* 159. See Dowlutabad.

AURANGZEB, son of Shah Jahan, and randson of Akbar. His principal residence in he latter part of his long reign, was in the kkan and he died at Ahmednuggur—where was embalmed, and the body removed to e plateau of the hill overlooking Ellora. Europe was made more particularly acquainted with Aurungzeb by Bernier's mention of him in his Travels. He died in 1707, and the Indian mpire of the Moghal was again desolated by ch opened the way to India to a Nadir Shah (called, likewise, Kouli Khan). Nadir, who was the a shepherd of Khorassan, began his rerkable career as a highway robber; but in one of those political revolutions which so frequently occur in despotic countries, he rose to the dignity of king of Persia, and in 1739 penetrated to Delhi; plundering, burning, and laying waste, not sparing even the child in the cradle. After a dreadful massacre, he, however, gave the throne to the weak Mahomed, a son of Aurangzeb, and soon afterwards returned to Ispahan, with the most prodigious booty recorded in history. Among it was the throne representing the tail of a peacock displayed, composed of precious stones, which still adorns the audience chamber in the palace at Teheran. The Moghul empire attained its utmost extent in Aurangzeb's reign. His authority reached from the 10th to the 25th degree of latitude and nearly the same in longitude, and his revenue exceeded thirty millions of pounds sterling, in a country where the products of the earth are four times as cheap as in England. Both his declared heir, Shah Allum, and Azim, as well as his favourite grandson, were the offspring of Rajpootnis; but, his bigotry outweighed his policy, and he visited the Rajpoots with an unrelenting and unwise persecution.

The bigotry of Aurungzeb endeared him far more to his mahomedan co-religionists than did the liberality of Akbar and even to the present day the memory of Aurungzeb, the persecutor is honored by them far more than that of Akbar the beneficent. It is a fact but little known, that most Asiatic princes profess a trade: the great Arungzeb was a cap-maker, and sold them to such advantage on the 'ninth day'.

fairs, that his funeral expenses were by his own express command defrayed from the privy purse, the accumulation of his personal labour. A delightful anecdote is recorded of the Ghilji king Mahmood, whose profession was literary, and who obtained good prices from his Omra for his specimens of caligraphy. While engaged in transcribing one of the Persian poets, a professed scholar, who with others attended the *conversazione*, suggested an emendation, which was instantly attended to, and the supposed error remedied. When the Moolah was gone, the monarch erased the emendation and re-inserted the passage. An Amir had observed and questioned the action, to which the king replied : " it was better to make a blot in the manuscript than wound the vanity of a humble scholar." After Arungzeb's death in 1707, his son Sultan Mauzum, or Shah Alam the First, succeeded him, but died five years afterwards.—*Tod's Rajasthan, Vol. i. p.* 374, 344. *Bjornstona jerna, British Empire in the East, p.* 98-99. *India* 328. See Mahratta Governments in India. Kalora : Sivaji ; Sikhs.

AURANGPUR, furnishes a clay used at Roorkee for crucibles.

AURANTIACEÆ. See Citraceæ ; Citrus.

AURASIUS, Mount Aurasius is behind Tunis and Algiers: the native kabyle on that mountain are fair red haired men and have been conjectured to be descendants of the ancient Vandals. See India, 336.

AUREA CHERSONESUS. The country thus named by the ancient geographer Ptolemy, has been shown by D'Anville to be the Malay Peninsula, and his Sin-Hoa, the Western part of Cochin China. Others have pointed to Galle.—*India in the* 15*th Century*. See Galle.

AURELIANA CANADENSIS. Syn. of Panax quinquefolius.

AURICULA. A genus of shells or molluscs, one species of which Auricula auris Midæ, occurs in the Moluccas. It has been transferred to the genus Voluta.

AURIPIGMENTUM. Lat. Arsenic.

AURORA. Phæton in the Greek mythology was the son of Cephalus and Aurora. The former answers to Aruna the Hindu bird-headed messenger of the sun. The hindu *Aruna* is the Aurora of the Greeks, who with more taste have given the dawn a female character. —*Tod s Rajasthan*. See Arun. Saraswati.

AURUM, Lat. Gold.

AUSENA MARAM. Tam. அசனை மரம் Pterocarpus.

AUSJENI. Maleal. ആസഞ്ഞിന് Artocarpus hirsutus.

AUSTERN. Ger. Oyster.

AUSTRALIA. The primary formations of this continent are equally metalliferous with those of south Eastern Asia. Copper ores have been found at Port Curtis, near the southern extremity of the range which extends along the north-east coast, and as long ago as 1802, Flinders met with indications of copper at Good's Island in Torres Straits, but this suggestion does not seem to have been followed up by the naturalists attached to subsequent expeditions (Flinders' Voyage to Terra Australis, vol. II. p. 120.) Lead and copper mines have been worked in South Australia for some years past, and others have been opened recently in the western coast range, a little to the north of Swan River. Hematitic and specular iron ore and copper pyrites, have been found on the north-west coast near Admirality Gulf. In Australia, the prevailing vegetation differs materially in its character from that of south-eastern Asia, the forms now existing throughout the interior of Australia being identical with those discovered in the coal beds of New South Wales, and, it would seem, in those of Upper India also. The north-east coast is well wooded, chiefly with the Mimusops kauki, trees of which are, there, often 60 feet high and 3 in diameter. —*Macgillivray's Voyage, Vol. I. p*, 106. See India, p. 381 ; Magar, 310, 350 ; Semang ; Palms ; Waringin tree.

AUTEUIL. M. d', a French officer who commanded the French forces at the battle of Amboor and gained the battle. Anwar-ud-din fell in that battle at nearly 100 years of age.

AUTHAULAY. Tam. Jatropha glauca.

AUTHUR. See [illegible]ia.

AUTMORA. [illegible] Indian Screwtree, Isora corylifolia.

AUTRUCHE. Fr. Ostrich. See Struthionidæ.

AUVANI. A Tamil month, when the sun is in Libra. See Varsha.

AVA, or AYN-WA, a town in Burmah, in L. 95° 59′ E. and L. 21° 50′ N. It was at one time the capital city. Its state name was Ratnapoora, or Gem-city ; it is stated to have been founded in A. D. 1364, by Thado-men bya, prince of Tagoung, who mastered the kingdoms of Panya and Sagain, into which the country had been divided. The first mention made of [illegible] by any European traveller, is that by Nicolo di Conti, who was there about 1440 (Ramusio, i, 340.) It continued usually to be the royal residence, with some intervals, till the end of the eighteenth century. In 1526, the Shans of Monyin and Mogoung took the city and overran the country, of which they held possession till 1554. In that year the Toungoo king of Pegu, Tshen-byoo-my[illegible] (Lord of many white Elephants) co[illegible] and destroyed the city. The [illegible]nen-tara, who re-established the c[illegible]dom after the fall of Pegu in 1601; appears to have been a natural son of the conqueror. Ava was taken by the Peguers during their resumption of independence in 1752. They were speedily expelled by Alompra, but he always resided at Mout-sho-bo. In 1763, on the accession of Tshen-byoo-yen, Ava again became the seat of royalty. It was however abandoned on the founding of Amarapoora in 1783, and re-occupied in 1828 by the king and queen who entered in great state, accompanied by the white elephant, and by all the dignitaries of the court only to be again deserted in 1837 by Tharawadi who had vowed to make it a heap of ruins.—*Yule's Embassy*, *p.* 184. See Buddha; Jain; India, 311, 344, 345; Karen, 467; Kiayn, Lawa; Mangles; Negrais; Nicolo di Conti, Petroleum, Rangoon, Tee.

AVA. ఆవ. Sponia Wightii, *Planch.*

AVA, a drink of the south sea islanders, prepared from the Macropiper methysticum. It is chewed, spat in a bowl, and allowed to ferment and drank. In the Samvau islands, the large ava-bowl is made from the tamanu, *Calophyllum inophyllum*, and occupies a conspicuous place.—*Capt. Elphinstone Erskine, Islands of the Western Pacific, p.* 46.

AVA ARDUI SUR JASAN A Parsee festival held in honour of Ava, the angel, in their theology, who presides over the sea. On this day, Parsees should approach the sea-shore or any stream of water and chant prayers from the Zend, but these people now generally mix with their prayer several hindoo rites such as offering flowers, sugar, cocoanuts, &c., &c. In Bombay a fair is held on the esplanade on this day.—*Paris.*

AVA CROTON. See Croton pavana.

AVADHUTA. SANSC. In the south of India, a religious ascetic mendicant of the Saiva hindus, who, similarly to the Virakta Viragi, has subdued the passions and entranged himself from the interests and emotions of mankind, abandoning religious observances and worldly restraints.—*Wilson.* See Hindu; Sanyasi. Vairagi.

AVA GEM-SAND, comes from the neighbourhood of Ava, and sometimes one of the Shan articles of merchandise. It consists of small fragments of nearly all the precious stones in the country, but garnet, beryl, and spinelle are its principal constitutents, more especially the last, which seems to constitute nearly three-fourths of the whole mass. A single handful will contain specimens of every shade, black, blue, violet, scarlet, rose, orange amber, yellow, wine yellow, and white.—*Mason.*

AVALANCHE RIVER, 6,725 feet above sea, on the Neilgerries.

AVALU. TEL. ఆవాలు. Sinapis alba, ramosa, Chinensis. Any mustard seed, of which several kinds are sold in the bazar.

AVAL VULLI KALANG. TAM. Root of Janipha manihot.

AVANAK. MALEAL. ആവണക്ക Ricinus communis.—*Linn.*

AVANTARA. SANSC. In the brahminical religion, a descent of the deity, in the shape of a mortal, it is an inferior kind of Avatar, and intended to answer a purpose of less moment. It is an incarnation of an inferior kind. See *Acasanavi*; *Oujein*; *Tripati.*

AVA PLANT. KAVA. MALAY. Piper methisticum.

AVARAI PUTTAI. TAM, Cassia auriculata. ஆவாரப்பட்டை.

AVASTA. The religious books of Zoroaster, twenty-one in number, named differently in Zend and Pehlevi.—*The Parsees, p.* 242.

AVATARA. In the brahminical religion, a descent of the deity in the shape of a mortal.

AVANJA. A town in L. 78° 18′ E. and L. 16° 42′ N.

AVANOOR. A town in L. 75° 44′ E. and L. 14° 53′ N.

AVANTI, the ancient name of the modern Oujein; also called Ujjayani, Visala, and Pushpa-Karandini. This city is noticed in the Meghaduta, verses 28 and 31.—*William's Story of Nala, p.* 116. *Captain Edward Warren.*

AVA PEPPER, also called Cava or Kava, is from the Macropiper methysticum of the Pacific. Its root produces a stimulating liquor.

AVATAR. HIND. from the Sanscrit, Avatara, a descent or incarnation, a term employed by the hindus to designate the incarnations of Vishnu usually arranged and named —1. Matsya, or Fish—2. Kurma, or Tortoise —3. Varaha. or Boar—4. Narasingha, or Man lion—5. Vamana, or Dwarf—6. Parasu Rama, the name of a favoured person in whom the deity became incarnate—7. Rama, the same—8. Krishna, the same—9. Budha, the same—10. Kalki, or Horse. Of these, nine are past; the tenth is yet to come and those of Rama and Krishna are the most remarkable.

When the hindus speak of the deity having been thus incarnated, we must understand it with some qualification; for in fact, there is, perhaps, scarcely one point in their mythological religion that the whole race of hindus have faith in. There are sectaries and schismatics without end, who will believe only certain points that others abjure; individuals of those sects dissent from the doctrine believed by the majority; other philosophical sceptics will scarcely believe any thing, in opposition to their easy-faithed brethren, who disbelieve nothing. Thus some Saiva, or followers of Siva, admit the sacredness of the Avataras of Vishnu, but in different degrees of potency and sanctity: they generally admit the personified interposition of the preserving attribute of the deity in the affairs of the world without yielding the point of supremacy in the' prototype. And some zealous Vaishnava, or followers of Vishnu, giving themselves up to his adoration in some incarnation, Krishna or Rama, for instance, reject with indignation, commensurate with their zeal or bigotry, all farther application of divine terms. Hence may, in part, be discerned the liability under which inquirers labour, of being misled by sectaries into receiving schism as orthodoxy, and of forming general conclusions from individual or partial information.

1.—*Matsya or the Fish.*—This Avatara has been supposed to have immediate reference to the general deluge, and to be the same history, disguised in oriental fiction, of that event, as is related in the scriptures. Sir W. Jones (As. Res. Vol. I) assents to the opinion of Bochart, that the fable of Saturn was raised on the true history of Noah: he shows that the seventh Menu, Satyavrata, corresponds in station and character. In his reign, the hindus believe the whole earth to have been destroyed by a flood, including all mankind, who had become corrupt, except the pious prince himself, the seven Rishi, and their several wives; who, by command of Vishnu, entered a bahitra, or spacious vessel accompanied by pairs of all animals. Vishnu, assuming the form of a fish commanded the ark to be fastened by a cable, formed of a vast serpent, to his upe[illegible] horn, [illegible] cured thereby until the flood subsided; when he and Brahma slew a monster, named Hyagriva, who while Brahma was reposing at the en[illegible] convey[illegible]pa, stole the Vedas, and mankind h[illegible] or[illegible]sequently fell into the depths of ignorance and impiety. [illegible] mighty demon is called the prin[illegible]f Danavas; his name means Horse-necked. The Vedas having been recovered, the world was progressively re-peopled with pious inhabitants, descendants of the devout Satyavrata and his favoured companions. The history of this Avatara is the subject of the first Purana, or sacred poem, consisting of 14,000 stanzas, and is concisely told in the eighth book of the Sri Bhagavata, or life of Krishna.

2.—*Kurma or the Tortoise.*—The second grand Avatara of Vishnu, in the form of a tortoise, evidently refers also to the flood. For the purpose of restoring to man some of the comforts and conveniences that were lost in this flood, Vishnu is fabled to have become incarnate again in the form of a tortoise: in which shape he sustained mountain Mandara, placed on his back to serve as an axis, whereon [illegible] gods and demons, the vast serpent Vasoky [illegible]ving as a rope, churned the ocean for the recovery of the Amrita, or beverage of immortality. The result of the operation that chiefly distinguished this Avatara was the obtainment of fourteen articles, usually called fourteen gems, or chaterdesa ratana; in common language chowda ratni. These fourteen jewels are thus enumerated: 1. The Moon, Chandra.—2. Srif or Lakshmi, the goddess of fortune and beauty, —3. Sura, wine, or Suradevi, the goddess of wine.—4. Oochisrava, an eight-headed horse. —5. Kustubha, a jewel of inestimab[illegible] —6. Parijata, a tree that spontaneously [illegible] every thing desired.—7. Surabhi, a co[illegible] larly bountiful.—8. Dhanwantara, a physician. —9. Iravat, the elephant of Indra, with three probosci.—10. Shank, or Sanku, a shell conferring victory on whoever should sound it.—11. Danusha, an unerring bow.—12. Bikh, poison, or drugs.—13. Rhemba, the Apsara, a beautiful and amiable woman.—14. Amrita, the beverage of immortality.

3.—*Varaha, or the Boar.*—In this avatara, Vishnu is generally represented four-handed, armed as usual, and with the head of a boar, on whose tusks rests a crescent, containing in its concavity an epitome of the earth, which had been immerged in the ocean as a punishment for its iniquities. So that this, as well as the two former avatara, seems to be a repetition of the story of the deluge: the second combines with it a portion of astronomical allegory; and none of the other of the ten avatara have any apparent reference to the universal catastrophe, s[illegible]dly indicated by th[illegible]

throne, who [illegible] to do ho[illegible]
Vishnu. Quarrelling with his son, Pr[illegible]
the king boasted that he himself was [illegible]
the Universe, and asked wherein Vishnu

greater than himself, Pralhaud replied that Vishnu was supreme over all and was everywhere. Is he, cried Hiranya Kasipa, in this pillar? striking it at the same moment with his sceptre, if he be, let him appear. In an instant the magnificent column was rent in twain, and Vishnu in the form of a man with the head of a lion, issued from it and tore Hiranya Kasipa in pieces.

5.—*Vamana, or the Dwarf.*—The four first Avataras are said to have occurred in the earliest, or Sataya, age of the hindus; corresponding in character with the golden or virtuous age of the fabulists of other regions. The fifth happened in the second, or Tirtyayug. Maha Bali, a virtuous monarch, was still so elated by his grandeur, that he omitted essential ceremonies and offerings to the deities; and Vishnu finding it necessary to check the influence of such an example, resolved to mortify and punish the arrogant raja. He therefore condescended to become the son of Kasyapa and Adite, and the younger brother of Indra, and assumed the form of a wretched Brahman dwarf, and appearing before the king, asked a boon, which being promised, he demanded as much land as he could pace in three steps: nor would he desire farther, although urged by Beli to demand something more worthy of him to give. Vishnu, on obtaining the king's promise, required a ratifica-

Vishnu.

[illegible]—*Rama or Parasu Rama.*—Among the [illegible]aras of Vishnu are recorded three favoured personages, in whom the deity became incarnate, all named Rama. They are distinguished by the names of Bala Rama, usually called Balaram, Parasu Rama, or Parasram and Rama Chandra, and are all famed, as great warriors, and as youths of perfect beauty. The first named Bala Rama, was elder brother to Krishna, and greatly assisted him in his wars; so that, in this instance, Vishnu seems to have duplicated himself, as indeed may be also said of the other, for Parasu Rama, and Rama Chandra, otherwise called, patronimically, Dasrat Rama, were contemporaries. But it has been made a question, whether they be not three representations of one person, or three different ways of relating the same history: and, whether any, or all of them, mean Rama, the son of Cush. Sir W. Jones (As. Res. vol. ii. p. 132) says he leaves others to determine, He deems Rama to be the same as the Grecian Dionysos, who is said to have conquered India with an army of Satyrs, commanded by Pan; and Rama was also a mighty conqueror, and had an army of large monkeys, or Satyrs, the general or prince of whom was Hanuman, a name said by this author to mean with high cheek-bones: others translate it, with bloated cheeks, alluding to his fabled origin from Pavan, regent of the wind. Rama is also found to resemble the Indian Bacchus; he is a descendant of the sun, and the husband of Sita; and it is very remarkable, that the Peruvians, whose Incas boasted of the same descent, styled their greatest festival Ramasitoa. (See, on this subject As. Res. vol. i. p. 426, vol. iii. p. 68.)

Krishna, [illegible] ing himself to Arjun as the first of all th[illegible]s, hindus "Among those who [illegible] arms, I am [illegible]ma."—*Gita, p.* 86. Of Parasu Ra[illegible] it is related, that he was born near Agra, in the Tirtya yug, or second age. His parents were Jamadagni, whose name appears as one of the Rishis, and Runeka.

7. *Rama Chandra*—In this avatar, Vishnu appears in the person of a courageous and virtuous prince, the son of the powerful sovereign of India (whose capital, *Ayodhya*, is said to have extended over a space of forty miles) to punish a monstrous giant, Ravan, who then reigned over Lanka or the island of Ceylon. The Ramayana contains the heroic description of the battles and life of all three Ramas, although it more particularly details the exploits of Rama Chandra, or Dasrast Rama, so distinguished from his royal father Dasarat'ha. The name of this heroic monarch means, he whose car had borne him to ten regions, that is, to the eight cardinal and intermediate points, the zenith, and nadir. He was a descendant from Surya, or Heli, which is a name of the sun in Greek and Sanskrit; and one of his ancestors, the great Raghu, had conquered

the seven Dwipas, [illegible] whole earth. But we cannot explain, [illegible] yavansa, or descendant of the sun, [illegible] be styled Rama Chandra, the latter patronimic referring contradistinguishingly to the descendant of the moon, Chandravansa. In the hindu mythology, however, every thing seems, directly or indirectly, to merge in, radiate from, or amalgamate with, the Sun, or Sûrya, in one or other of his names, or prototypes. All sects and tribes of Vaishnavas (bating such deistical philosophers as sceptically deny the personal existence of inferior deities, attributes, or avataras,) agree in stating, that, with the exception of Krishna, the potentiality of the preserving power of the deity was never exhibited in such plenitude as in this Avatara of Rama. In popularity, and in dramatic, historic, and poetic shapes, it rivals the Avatara of Krishna. And as the Gocalastha sect adore Krishna as the deity himself, and draw rules for their religious and moral conduct from the Sri Bhagavata, so the sect called Ramanuj, similarly clothe Rama in almighty attributes, and deem the Ramayana a complete body of ethics and morality.

8.—*Krishna*—In this Avatara, Vishnu is said, by his sectaries, to have manifested himself in a degree of power and glory far exceeding any other of his former: in which he assumed only an ansa, or portion of his divinity, while Krishna was Vishnu himself in mortal mould. Other tribes of hindus call Krishna an impious wretch, a merciless tyrant, an incarnate demon, now expiating his crimes in hell: his mortal parents were Vasudeva (meaning the giver of wealth) and [illegible] A miraculous escape of the infa—*Dr. Mason*, Yamuna is represented, conveyed by his faithful and protected by Sesha, or immortality; tiy, guards placed by Kansa over his pregn[illegible] sister having failed in their vigilance, Kansa, enraged, ordered all newly born infants to be slain; but Krishna escaped his various snares: one of which was sending a woman, named Patnia, with a poisoned nipple, to nurse him. He was fostered by an honest herdsman, named Ananda, or Happy. See the article Krishna for his further history.

9.—*Budh or Buddha.* See Buddha.

10.—*Kalki.*—This Avatar has not yet appear. But Vishnu is to appear in this Avatar in the form of a white horse.—*Moor's Pantheon.* See Acasanavi; Avantara, Hindu, India, Inscriptions, 375, 383; Kama, 454, Krishna, Kurma, Rama, Ramisseram, Tripati, Sakti, Varaha, Narasingha, Man-Lion, Vamana.

AVENA. LAT. PORT. SP. The oat. Of these, one species A. fatua, Linn, is cultivated in the N. W. of India, and A. Orientalis, Schr. and A. sativa, Linn: are occasionally grown in several parts of the country, but nowhere as in Europe are they in use for the food, either of man or beast. Groats or cuttings and oatmeal are imported to a small extent, the groats being the bruised oat seeds freed of the perigard.—*O'Shaughnessy*, 635. *Voigt.* 732.

AVENUES, lined with trees, are, in tropical countries, of much importance for shade. Portia and Banyan branches selected should be straight, neatly trimmed and of an uniform size, and planted perpendicularly (not obliquely as is generally the case). A neat fence of bamboos will be required to protect them from cattle. *Prickly pear* makes an unsightly fence, and it should never be tied on the branches. The prickly branches of the *Acacia Arabica* (Babul), and others of that family makes good fences, and are cheaper than bamboos. After the branches begin to throw out young shoots they should be carefully pruned, selecting two or three of the strongest near the top as leading sh[illegible] to form the future tree. The young tr[illegible] require water regularly in [illegible] and [illegible] weather, care should be taken th[illegible] do not [illegible] loosened at the roots; this w[illegible] Nyctea [illegible] to one side. To so[illegible] Sub[illegible] away of raising young r[illegible] Ninox[illegible] and natural. The trees [illegible] in their growth, and last doubl[illegible] of those grown from [illegible] [illegible] from large branches always ca[illegible] [illegible] and the branches are [illegible] bl[illegible] off in high winds. It would be much mo[illegible]table to raise all the trees from seed, for, [illegible] raised from seed is grown up, it [illegible] last for ages, whereas a tree gro[illegible] from [illegible] large branch is always in a stat[illegible] decay, after a few years from the time [illegible] planted, and it is usele[illegible] as a timber t[illegible] The natural habits of the Banyan make it an exception to this rule. The whole of [illegible] *Ficus* tribe grows well from large branches [illegible] they are not so apt to decay as other [illegible] The planting of young seedling trees requir[illegible] care and [illegible] than the branches. A [illegible] pit should be [illegible] 3 × 3, and filled with good earth mixed with rotten manure. They will require to be fenced and watered regularly, and the earth should be dug up and kept clear of weeds, to keep it from getting hard and sour. In forming new avenues, the trees should planted 30 feet apart; and when the space will admit of it, a double avenue should be planted; it looks well and forms a shady path for pedestrians. That the young trees may be properly raised after they are planted, a few good head gardeners should be employed, and a certain distance of road allowed to each, say three miles, to look after, until the trees are of a sufficient size to do without water, &c. These gardeners should be able to fill up any vacancies that occurred from deaths or damage and so keep the avenues complete.

Ficus Indica. Banyan tree. Ala-marum, *Tam.* Marri, *Tel.* Bar, But, *Beng.* The banyan is the largest and perhaps the most shady of all the avenue trees.

Ficus religiosa. Poplar leaved fig tree. Arasa marum, *Tam.* Ravi, Ragi, *Tel.* Pipul, *Hind.* Ashwuth, *Beng.* A large and handsome tree, commonly distributed over India. It is frequently to be met with near pagodas, house and other buildings.

Ficus T'siela. Jovi or Pedda Jovi, *Tel.* A large and very handsome tree, it is generally planted by the road sides for the sake of its shade, and from its not sending down roots from the branches is, in so far, superior to either *Ficus Indica* (Banyan tree), or *F. Benjamina*, the pendulous roots of which are ofte dangerous impediments on a road.

Ficus nitida. Chinese Banyan tree. A very handsome tree, native of China.

Gualleria longifolia. Mast tree. Thavathroo, *Tam.* Asoka chetto, *Tel.* A highly ornamental tree, which should be planted in avenues more than it is at present.

Tamarindus Indica. Tamarind tre[illegible] marum, *Tam.* Chinta chettu, *Tel.* [illegible] also Amli, *Hind.* This tree is one [illegible] largest in India, with a very extensiv[illegible] shady head.

Casuarina muricata. Casuarina tree [illegible] Tinian pine. This tree [illegible] very pretty [illegible]ues especially in narrow roads.

Casuarina equisitifolia. A tre[illegible] to the above.

Bignonia suberosa. Indian cork tree. A good tree for planting in avenues. Th[illegible] flowers are pure white and very fragrant.

Parkia biglandulosa. This large and elegant tree [illegible] introduced into India from Africa. It is [illegible] the best trees for avenues. It re[illegible]re and water regularly.

[illegible] *regia.* Royal Poinciana tree. This [illegible]oes not attain a great size, but it is very pretty and should be [illegible]anted in mixed avenues

Adenanthera pavonina. Red-wood tree. A large and handsome tree, and is well suited for planting in avenues.

Azadirachta Indica. Neem tree. Vepa arum, *Tam.* Nim, *Beng.* A good avenue tree.

Sterculia fœtida. Fœtid sterculia, Pinata or Pidari marum, *Tam.* [illegible] Badam chettu, *Tel.* Mugli badam, *Beng.* This is a large, and makes a good avenue, tree.

Bombax Malabaricum. Red-cotton tree. Mull Elava marum *Tam.* Buraga chettu, *Tel.* Ruckta simul, *Hind.* This tree attains a great size.

Thespesia populnea, Portia tree, Pursa, or Puvarasa, *Tam.* Gangaravi, *Tel.* Poresh, *Beng.*

Acacia speciosa. Katuvagi, *Tam.* Dirisana, *Tel.* Sirissa, *Beng.* A large and handsome tree of rapid growth.

The above are the best for planting in avenues, in Madras. But there are many other trees suitable for avenues, when they are merely planted as ornamental trees and not for shade. The Palm trees are also very pretty when planted in avenues. See Thespesia populnea.

A. Acid variety, A. acida, Kamaranga.

B. Sweet variety, A. dulcis, Mitha Kamaranga.

This beautiful, but small tree, about 14 feet high, with a spreading head, is supposed to be a native of the Moluccas, from which it has been introduced into Ceylon, India, the Burmese provinces and South America, where it is now quite naturalized. In Burmah, Pegu and the Tenasserim Provinces it is not abundant being often only found near towns, and, in India, in gardens. The tree is said to grow, but, to be scarce, in Ganjam and Gumsur. It there attains an extreme height of 36 feet, but no use is made of the wood, though it attains a circumference of 3½ feet and a height of 9 feet from the ground to the intersection of the nearest branch.

The quality of its dark brown-wood is not known. It bears, and in some places profusely, from three to fifty years and three times a year, a fruit about the size of a hen's egg, with five acute angles and a yellowish, thin, smooth rind. There are two varieties, a sweet and an acid. The fruit of the latter the kama-ranga, when ripe, are cooling, and contain an acid, watery pulp, and are candied, made into pickles or tarts. They make an agreeable dish when cut in pieces and cooked with sugar and wine or with skimmed milk. In Burmah, where the fruit is highly prized as a wholesome dish, it is used like other green fruits, in curries. The juice of the acid variety is useful in removing iron moulds from linen. The acid leaves are a good substitute for sorrel. Rheede tells us that the root, leaves and fruit are used medicinally and the fruit in dyeing. The fruit of the A. dulcis, the Mitha kamaranga, is five cornered, when ripe is rather bigger than a hen's egg, has a sweet pleasant flavour.—*Dr. Mason, Dr. McClelland. Vegetable Kingdom. Useful Plants. Elliot, Ainslie, p.* 233. *O'Shaughnessy*, 257. *Voigt.* 191. *Roxb. ii.* 450.

A shrub or [redacted] ll tree or tree, grows within the trop he world, and is common in I near the mouths of rivers ide rise. In some places it wn to the height of 70 feet, and li mangrove stands on arching roots. It has small dingy yellow flowers. In the Sunderbuns it is of large size and its wood is used for various purposes. The washermen make a preparation from the wood ashes which is used in washing and cleaning cotton cloths, which painters mix with their colors to adhesive properties. The kernels are edible. The green fruit mixed with butter and boiled, is made into a plaster, which is employed for softening and maturing tumours and to induce granulation in ulcers resulting from small pox. In Rio Janeiro its bark is used for tanning.—*Voigt*, 473. *Roxb* iii 88. *Hog's Veg. Kingdom p.* 587; *Rohde MSS. Flor. Andh. Useful Plants.* See Dyes.

AWLA or **AUNLA.** انولا | انولی | Duk. Phyllanthus emblica.

AWNY CURRY WOOD. Eng. Odina woodiar.

AWRI KEERAY. ஆரை கீரை. Tam. Marsilea.

AWNING. The Shamianah of the Mahomedans of Persia and India. *Psalm* civ. says Who stretched out the heavens like a curtain, in allusion to the *curtain* or AWNING, stretched over an area, in which companies of hindus sit at weddings, feasts, and religious festivals, and underneath which are suspended dragons, and other devices, giving it the appearance of the spangled heaven.—*Ward's Hindoos.*

AWUR. Hindi. A stockade. Peshawur Peshavur, the frontier fort &c. The Aornos of the Greeks is supposed to be the same word with a Greek termination. Sir Alexander Burnes supposed Aornos to be the rock of Noagi in Bajawur. Mr. Vigne supposes it to be south of Attok in the Yaziri country.

AWUSADANNELLI. Cyng. Emblic Myrobalan.

AW-WAL. Hind? A shark, sometimes applied to Bahrein.

AXE STONE. See Ceraunite, Jade. Nephrite.

AXIMA, a city of ancient Persia. See Fars.

AXIS MACULATA, Gray. The spotted deer of India. There are three species A. maculata, the cheetul or spotted deer of India, A. oryzeus, the spotted deer of Ceylon, and A. porcenus, the hog deer of Indian sportsmen. The Cheetul is often domesticated. See Cervidæ; Cervus; Mammalia.

AY or **AYU** in Tartar, the moon. The Tartars all claim from Ayu the moon, hence with them, as with the German tribes, the moon was always a male deity. Ayu had a son Juldus, whose son was Hyu and from Hya came the first of the kings of China. The Ay of the Tartars, the Yu of the Chinese and the Ayu of the Poorans, according to Colonel Tod, indicate the great Indu (or Lunar) projector of the three Lunar races of India, which Colonel Tod considers to include the Hya, the Aswa or Asi, the Yadu, &c., who peopled all the regions from Tartary to the Indus and spread a common language over all Western Asia.—*Tod's Rajasthan, Vol. i. p.* 71.

He says that the Yuti and Yadu hav much in their early history to warrant the assertion of more than nominal analogy. The annals of the Yadu of Jessulmer state, that long anterior to Vicrama, they held dominion from Guzni to Samarcand: that they established themselves in those regions after the Mahabharata, or great war; and were again impelled, on the rise of Mahomedanism within the Indus. As Yadus of the race of Sham or Sam (a title of Krishna), they would be *Sama-Yadus*; in like manner as the B'hatti tribe are called *Shama-b'hatti*, the Ashambetti of Abul Fazl. The race of *Joude* was existing near the Indus in the emperor Baber's time, who describes them as occupying the mountainous range in the first Doab, the very spot mentioned in the annals of the Yadu as their place of halt, on quitting India, twelve centuries before Christ, and thence called *Jadu* or *Yadu-ka-dang*, the 'hills of *Jadu* or *Yadu*.' The peopling of all these regions, from the Indus to remote Tartary, is attributed to the race of *Ayu* or *Indu*, both words signifying the moon, of which are the *Hya*, *Aswa* (Asi), *Yadu*, &c., who spread a common language over all Western Asia.—*Tod's Rajasthan, Vol. i. p.* 529.

AYAH Anglo-Indian (qu. Iyer, Sans.) A lady's maid. This word is used by the English in India to designate a lady's maid or child's maid. It is possibly derived from the expression Aya or Ayer which a hindu wife or husband employ to attract the attention of one another, equivalent to the English my love, and the hindu Ayer is doubtless the Aryar of the Sanscrit, a noble.

AYA MARUM. Tam. ஆயா மரம் Ulmus integrifolius.

AYAMATA. Sansc. Hind. Mahr. Tel. The universal earth mother, the Ayi or Ai of the Mahratta predial races and the Amma or Ammun of the races of the Peninsula. This goddess is worshipped by all the non-Aryan tribes. As a rule, these tribes are not zealots, but Colonel Tod tells us that Oodi Sing died thirteen years after his inauguration on the cushion of Joda, and thirty-three after the death of Maldeo. About A. D. 1645, when he was returning home from court he beheld a girl whom he determined to have; but she was the daughter of a Brahmin, an '*Aya-punti*,' or votary of *Aya-Mata*, whose shrine is at *Bai-Bhilara*. These sectarians of Maroo, he says, are very different from the abstinent brahmins of Bengal, eat flesh, drink wine, and share in all the common enjoyments of life with the martial spirits around them. And, as there was no other course by which the father could save her from pollution but by her death, on that he resolved. He dug a sacrificial pit, and having slain his daughter, cut her into fragments, and mingling therewith pieces of flesh from his own person, made the 'HOMA,' or burnt sacrifice to Aya Mata, and as the smoke and flames ascended, he pronounced an imprecation on the raja: "Let peace be a stranger to him! and in three pahars, three days, and three years, let me have revenge." Then exclaiming, "My future dwelling is the '*Dabi Baori*' sprung into the flaming pit. The horrid tale was related to the raja, whose imagination was haunted by the shade of the Brahmin; and he expired at the assigned period, a prey to unceasing remorse. —*Tod's Rajasthan, Vol.* II. *pp.* 35-36 See Kol. 537.

AYANA. SANSC. A place of motion. In Menu Ch. l. 10, the waters are called Nara, and as these were the first production of Nala or the spirit of God, he is thence named Narayana.

AYANA OR AYANAR, in peninsular India, south of the river Palar, a hindu deity, worshipped in small fanes with plaster horses and grooms outside of gigantic size. Women desirous of offspring place pottery images near, as votive offerings. Ayana is said to have been born of Mohini by Siva, Mohini being the female form assumed by Vishnu, when churning the milk sea.—*Taylor.*

AYANA-GOSHA, SANS. the husband of Radha, the favourite mistress of Krishna.—*Ward's Hindus.*

AYANA, in hindu astronomy, a term applied to the equinoctial, and solstitial points.—Mesha Ayana, Tula Ayana; the vernal and autumnal equinoxes.—Uttara, and Dacshina Ayana; the Northern and Southern solstices. —Ayana Bhagas, (vide Ayanansa).—Ayana Cala; the time from one equinox to the ensuing one.—*Ed. Warren's Kal. Sank.*

AYANANSA, in hindu astronomy, the arc between the vernal eqinoctial point, (and the beginning of the solar sydereal (or fixed zodiac or the first point in the solar sign Meshar), being one of the most important elements of Hindu astronomy, as it refets the sydereal, to the tropical zodiac.—*Ed. Warren.* See Cranti. Pata. Gati. Rishis; Varaha; Mihira.

AYAPANA. BENG. Eupatorium ayapana; E: repandum. The dried leaves and twigs used in medicine. An infusion, is a very agreeable diaphoretic and mild tonic. Dose, two fluid ounces thrice daily, is a favorite remedy among the native practitioners.—*O'Shaughnessy. Beng. Phar. page* 298. *Beng. Dispensary.*

AYAR, HINDI. Andromeda ovalifolia.

AYAR-AYAR, MALAY, a species of Lansium. See Duku.

AYASRA. AMBOIN. Sandal Wood.

Ayeen. See Khiraj.

AYENI. MAL. Artocarpus hirsutus.

AYEN PANAS. Hot springs in Naning. See Ganong.

AYER, in the south of India, an honorific or respectful word applied to superiors, It is often applied to Europeans of rank. It is the Ariar, from Aria See Aria, Aya.

AYER BARU, a place in Malacca occupied by the Jakun. See Jakun.

AYER DURIN, a tin mine in Banka. See Tin.

AYER-MADDOO. MAL. Honey.

AYER-MANGKOK BULU. See Tin.

AYER-I-NOSH, a place in Persia with Naphtha springs.

AYER PANAS, AYER TROSS. See Jakun.

AYER UDANG. See Tin.

AYIN AKBARI. See Ain-i-Akbari: *Inscriptions, p.* 385.

AYLMAS, a race in Khammumet and Warungal, well made, tall and rather goodlooking. They are gallant soldiers and dangerous enemies.

AYMAUDUM. CAN. Bishop's Weed.

AYODHYA, (*i. e.* the Invincible), the modern Oude. This city is celebrated in all hindu poetry as the ancient capital of Ramachandra, founded by Ikshwaku, the first king of the solar dynasty. Like other capitals, its importance must have risen by slow degrees; yet, making every allowance for exaggeration, it must have attained great splendour long anterior to Rama. It was for many years the sovereignty of the princes of the Solar line. The remains of the ancient city are still to be seen at the town of Oude, situated in the banks of the Ghogra, seventy-nine miles from Lucknow and adjoining Fyzabad. Overgrown greatness characterized all the ancient Asiatic capitals, and that of Ayodia was immense. Lucknow, the present capital, is traditionally asserted to have been one of the suburbs of ancient Oude, and so named by Rama, in compliment to his brother Lacshman. In the Râmâyâna (Book i. Chap. v.) it is thus described: On the banks of the Sarayú is a large country called Kosala, gay and happy, abounding with cattle, corn, and wealth. In that country was a famous city called Ayodhya, built formerly by Manu, the lord of men. A great city, twelve yojanas in extent, the houses at which stood in triple and long-extended rows. It was rich, and perpetually adorned with new improvements. The streets were well disposed and well watered. It was filled with merchants of various descriptions, and adorned with abundance of jewels; crowded with houses, beautified with gardens and groves of mango-trees, surrounded by a deep and impregnable moat, and completely furnished with arms! In the Sakuntala (Act vi.) Ayodhya is called Saketala. The country of which AYODIA (now Oude) was the capital, and Rama, monarch, is termed, in the geographical writings of the Hindus, KOSHULA; doubtless from the mother of Rama, whose name was *Koshulya.* The first royal emigrant from the north is styled, in the Rana's archives, *Koshula-pootra*, son of Koshula.—*Tod's Rajasthan, Vol. i. p.* 215. *William's Story of Nala, p.* 114. See Hindu; Kush; Sakya Muni; Sallyavansa; Topes; Vishnu.

AYUL. For nine or ten months a disease, denominated by the natives the "*Ayul*," renders the Terai dangerous to man, so deadly are its effects even to the natives of the country. *Oliphant. Journey. p.* 39.

AYUN MUSA, AR., the wells of Moses, are eight miles down the RED SEA from Suez on the eastern shore. The Ain (Ayun plural) is a natural spring, and differs from the Ber or Bir, *Arab*, a cistern to hold rain water Jacob's well, Beer Yakoob, or Bir us Samariah is 9 feet broad and more than 70 feet deep. In 1855 it still had the stone over its mouth (*John iv.*)

AYUSH, the Veda descriptive of the art of music. See Vidya.

AYUTHIA, the old capital of Siam. Ayuthia was founded A. D. 1351, and was devastated by the Burmese in 1751, when Bangkok became the royal residence. The native name of Ayuthia was Sijon Thejan, meaning "Terrestrial Paradise." *Bowring's Siam.* Vol. I. *p.* 21. See Siam.

Blue Nim tree		Nimbamu.	

This beautiful tree is found in Ceylon, throughout India and Burmah, and in some localities attains a large size. It is to be seen every where, though more seldom as a forest tree than in waste places and in the villages of the people and gardens of Europeans, where it is grown for ornament and shade. In the South of India, it is in considerable abundance in most parts of the inland country, and in Pegu province, is plentiful in the Prome district only. The quality of its timber varies in these localities. Throughout the peninsula of India, it yields a compact, hard, heavy, durable wood, when old—difficult to work but, beautifully mottled and deserving attention for ornamental purposes. It is well fitted for ship building and carts. Some samples exhibited by Mr. Rohde, at the Madras Exhibition, equalled the best fancy woods, and some of the finest furniture he had seen, was from an old margosa tree. It is used in Coimbatore for cart wheels, and in bare districts of the Bombay Presidency, it is of great importance for building and agricultural purposes. In the Prome district of Pegue it is described at a large but yielding a soft timber only fis for flooring. Some beautiful specimens are of a light reddish brown colour. It would be of importance to increase this tree, throughout the country. It reaches a large size even in stony ground. It comes into full foliage in the very midst of the hot weather. Every part of the tree is bitter, and its leaves, bark, seeds and the oil from its seeds (bitter oil) are largely used in native medicine. The bark has been recommended in fevers, but is only a bitter tonic. It is venerated by the hindu people, who, regarding the small pox as a goddess, employ the leaves in that disease, and, like the shrew ash tree, in England, it is often resorted to by the friends of the insane, who pass the sick person through a cleft of the tree, or through a stem which, having parted and re-united, forms a circular opening. —*Roxb. ii.* 394. *Voigt,* 138. *Dr. Wight. Mr. Rohde. Dr. Cornish. Dr. Gibson. Elliot. Cat. Ex.* 1862. *Royle Ill. Him. Bot. p.* 140, 141. *Clegh. Panj. Report.* See Avenues.

AZAN, ARAB. The Mahomedan summons to prayer, proclaimed by the Moazzan: the words used, some of which are repeated, mean God is Great, I bear witness there is no other deity but God, and I bear witness that Mahomed is indeed the prophet of God. Come enliven your prayers. Come for refuge to the asylum. God is great. There is no god but the true God.—It is differently pronounced, though similarly worded by every orthodox mahomedan nation. The Moazzan, with his face to Mecca, for the five daily prayers, says,

1. Allah ho akbar (4 times).—God is great.

2. Ash-had-do-an, la-illaha il-lul-la ho (twice) —I bear witness there is no deity but God.

3. Wa ash-had-do-an, Mahomed-ur-rasul ool lahi (twice)—And I bear witness that Mahomed is the prophet of God.

4. Hy ul as-salwat (twice)—Come enliven your prayers.

5. Hy al ul Fallah (twice)—Come for refuge to the asylum.

6. Us-sal-la-to khyrun min nun-nowm (twice in the morning prayer)—Prayer is better than sleep.

7. Allah-ho akbar (once)—God is great.

The Azan is proclaimed from the mosque by the Moazzan. When Mahomed was at Medina the means of calling his followers together for prayer, were discussed. Flags were rejected because they had been defiled by war, bells were rejected because used by Christians; trumpets have long been used by Jews and fire was an object of idolatry to the Persians, but a revelation to Abdullah ibn-Zeid Abderzi prescribed the human voice. The Moazzan is required to speak evenly and distinctly, slowly and gravely. Briefly the words are:—

Most high God, Most high God, Most high God,
I acknowledge that there is no other than God.
Come to Prayer, Come to Prayer, Come to the house of salvation.
Great God, Great God, Great God. There is no deity but God.

But in the morning call, the Moazzan adds, Prayer is better than sleep. The Moazzan stands with a finger in each ear and with his face towards Mecca, till he comes to the words, Come to prayer, come to the temple of salvation. He then turns his face right and left as if addresing all nations of the world.

AZAS, a Bactrian King who B. C. 110, succeeded to the kingdom of Nysa, Gandharitis, and Peukelaotis.

AZEITONUS. Port. Olives.

AZERBAIJAN, a province of Iran. See India. Tabriz.

AZEEM, also AZIM, Ar. Pers. Hind. from the Arabic verbal root, "he was great" often applied by Mahomedans in India as part of a personal name and given as part of a name to towns, as Azeem-ud Dowlah Bahadur, Azimghur. See Azim.

AZERMI DUKHT, a Sassanian king of Persia, A.D. 631,

AZES, B. C. 130. One of the conquering Scythian kings, on whose coins are bilingual inscriptions, with plain, distinct Greek characters, in Arian, Maharajasa Raja Rajasa Mahatasa Ayasa. The figures on the coins are various. Professor Wilson thinks he was an Indian buddhist King about 50 B. C. Professor Lassen regards him as a Sacian Scythian, who conquered the Kabul valley in the time of the second Mithradates, and finally destroyed the kingdom of Menander and Hermæus in about 120 B.C. He considers he was succeeded by Azilises.

Azilises, B. C. 115, reigned with the same titles as Azes. On one coin, the name of Azes is on the Greek obverse and that of Azilises, on the Bactrian reverse.

AZILAS, a Bactrian King B. C. 80. He succeeded Azes and added Taxila and Paropamesadæ. See Azes.

AZIM. Arab. great. The word is part of the Arabic verb, Azm, he was great, and parts of this verb are frequently met with wherever mahomedans are spread, in the names of towns, of individuals and in titles, such as Azim-ghur: Azim-pur; Azim Jah; Mahomed Moazzam; Moazzam-ud-Dowlah, literally the Honoured of the State. See Azeem. Azim-us-Shan, Ar. Splendid.

AZIMGUR, a town in L 83° 11′ E. and L. 26° 5′ N. in the Benares division of the N. W. Provinces of India.

AZIMGUNGE, a town in L. 88° 49′ E. and L. 24° 7′ N.

AZIMKHAN, a town in L. 69° 44′ E. and L. 34° 23′ N.

AZIMNAGUR, a town in L. 88° 21 E. and L. 22° 22′ N.

AZIMPOOR, two towns so named. One in L. 78° 9′ E. and L. 29° 9′ N., the other in L. 83° 12′ E. and L. 26° 5′ N.

AZKHAR, Hind. Andropogon Iwarancusa. See Izkhar.

AZME.	Guz.	Ajwain Seed.
AZOGUE.	Sp.	Mercury.
AZOFAR.	Sp.	Brass.
AZUCAR.	Sp.	Sugar.
AZUFRE.	Sp.	Sulphur.
AZUL DE PRUSSIA.	Sp.	Prussian Blue.
AZUMBAR.	Sp.	Storax.

AZURE STONE or lapis lazuli is said to be found massive with iron pyrites, amongst the Ajmeer hills, especially the Na-puhar range: this stone is sold by all "attars" both as a medicine and as a pigment: though found in the district, it is also imported into Ajmeer from Bombay: the native name, in Ajmeer, is "lajburd."—*Gen. Med. Top. p.* 162. See Lapis Lazuli.

AZURRO PRUSSIANO. It. Prussian Blue.

AZYN. Dut. Vinegar.

B.

B. This consonant has letters with corresponding sounds in Arabic, Persian, Urdu, Sanskrit, Hindi, Mahrathi, Guzerati, Bengali, Urya, Telugu, Karnata, Tamil and Malayalam; and in all but the Tamil tongue, the English Bh is also represented.

BA. Pers. With, possessing; thus, ba-auläd, with offspring.

BAAGUN, a river of Tonk Rampura.

BAAL, in ancient times, the chief deity of the Semitic races: but worshipped, in different localities, under various names, with various attributes and different significations. Baal, otherwise Bel, or Moloch, was the chief deity of several of the ancient nations of western Asia and of Egypt, and became an object of worship also to the Jews, and certain of the rites and ceremonies sacred to this deity were imitated by the Greeks. The western nations, however, seem to have varied the modes of worship. Baal was the great deity of Tyre. Baal or Belus was sometimes made to represent the male principle in creation, sometimes the sun and sometimes only the chief of the gods without special reference to any physical element or function. The Greeks sometimes identified Baal with Zeus, as they did Ashtoreth or Astarte with Venus. Baal and Ashtoreth, the two chief divinities of Phœnicia, were the sun and moon. Their worship was that of the heavenly bodies. Bel or Baal was also identified with the planet Saturn. Mr. Layard is doubtful as to whether Baal of the Assyrians was identical with Bel, but there seems little doubt that by the names Baal, Bel, Belus, Belenus, in Celtic, Beal, Beil, Beul, Abellion, the same deity was included, though his appropriate worship varied. See 2d Chron. xiv. 5; 2 Kings xxiii. 1-11; Jer. viii. 1-2. Baal Pl. Baalim was the supreme male divinity of the Phœnician and Canaanitish nations and Baal in Hebrew means lord, owner, master, possessor; Bel is the Babylonian name of the god, but Rawlinson doubts the identity of Baal and Bel. Amongst the Jews his worship was conducted by burning incense and offering burnt sacrifices, sometimes of human beings. Jer. vii. 9 and xix. 5. Crenzer and Movers consider Baal to be the sun god: on the other hand the Babylonian god is identified by Herodotus with Zeus and Bel. Merodach is Jupiter. Melkarth of the Phœnicians was probably only another form of Baal. In his temple at Gades, his symbol was an ever burning fire. Whatever may have been the origin of the word, the nations, lly, seem to have deemed the sun to be ototype of this deity. In western Asia, sun-worship has long ceased, but it continues to a certain extent, in India. The same division of the powers of nature into active and passive principles, symbolized by male and female deities, which appears in the hindu theology, characterized also the Egyptian and Phœnician. In the Phœnician these were more distinctly connected with the heavenly bodies—in the Egyptian less so, and, in modern hinduism, still less. Osiris was no doubt identified with the sun and Isis with the moon, though doubts exist as to whether these were their primary characters, and Kneph, Ptah and Amun, the oldest of the Egyptian gods, had no astronomical characters. But Baal and Ashtoreth, the two chief divinities of Phœnicia, were unquestionably the sun and moon, and the minor deities appear either to have been the same heavenly bodies or at least to have represented objects of astral worship. Baal was *Baal-semen*, lord of the heavens or sun. Baalbek was dedicated to the sun and called by the Greeks Heliopolis. Bel, the chief god of the Babylonians, was also the sun. Bal, Bel, Belus, the sun or lord of the heavens almost assimilates in character and attributes with Cronos, Ouranos, Moloch. But, in time, Baal began to be regarded as the supreme lord and the sun, in its physical character (2 Kings xxiii. 5) was worshipped separately, as was Ra, of the Egyptians from Osiris and Helios of the Greeks from Phœbus and Apollo. In the sidereal theology, Bel or Baal was the planet Saturn. Many nations have adored the sun: the Jews and the Israelites paid homage to it. The sect of the *Essenians*, among the Hebrews, every day saluted the rising sun, and invoked him in the morning to appear. God expressly forbids this idolatry; and commanded those, who were found guilty of adoring the sun and the moon, to be stoned. Deut. xvii. v. 3. In the book of Kings, c. ii. this idolatry is related as the principal cause of the ruin of the kingdom of the Jews, which was ravaged by enemies, whom God had raised to execute his vengeance. Plutarch endeavoured to destroy this worship among the Greeks; he says, in his book of Isis and Osiris, that the elements are not to be adored, neither the sun nor the moon, because they are only mirrors in which may be seen some trace of the infinite wisdom of the Creator, who has made them so brilliant and beautiful. The brahmins of India today address prayers to the sun every mo in making the Sandivani. Many and interpretations are given of th the celebrated Gaitri Mantram, Veda used when initiating a young, founders of the order, but that it is addressed to the sun under the name of Savitri, there is no doub and much of the hindu worship has an astromical origin. Every day, too, the whol Parsi race worship this luminary.—*Bunse Egypt, Vol. IV.* 350-352. *Sonnerat's Voyage, p.* 76-77. See Astarte, Basava, Bull. Gaetri. Veda.

BAAL-PHEGOR, the god of licentiousness.

BAAL-ZEBUB, the god of flies.

BAALUT. Arab. An acorn. See Oak Quercus.

BAALBEC, called in scripture Baaleth, the Heliopolis of the Greeks and Romans. But, in oriental countries it is still known as Baalbek. In the labour catches of the mahomedans of India, along with Ya Ali, Ya Mahomed, Ya Rasul Allah, the call, Ya Baalbec, is often heard. It is now in ruins, S. E. of Jerusalem.

BAALTIDE, or Midsummer fires are held in Ireland, when, as in Deut. xviii. 10, children and cattle are passed between the fires to do away with the influence of evil spirits.—*Vigne Vol. II. V.* 45.

BAALTIS, *i. e.* Mistress, Queen, the wife of the Egyptian Adonis. As the wife of Adoni, Baaltis is identical with the Greek Hasoreth, Astarte. See Astarta.

BAATOO. Black trepang. See Holothuriadæ.

BAB. Ar, a door. Bab ul maqadas, the royal presence.

BABA, Hind., child: baba-log, plural, children.

BABA, a term applied to the descendants of Oody Sing, the raja of Mewar. He lived for four years after the loss of Cheetore, and expired at Gegoonda, aged forty-two. He left a numerous issue of twenty-five legitimate sons, whose descendants, all styled Ranawut, pushed aside the more ancient stock, and form that extensive clan distinctively termed the *Baba*, or 'infants' of Mewar, whether Ranawut, Poorawut, or Kanawut. His last act was to entail with a barren sceptre contention upon his children; by setting aside the laws of primogeniture and proclaiming his favourite son Jugmal his successor.—*Tod's Rajasthan, Vol. I. p.* 329.

BABA or BABBER, 60 miles W. of Timor, is in Lat. 8° 2' S. The people scarp the hills and dwell on terraces in oblong, barnshaped houses, with wooden walls and palm leaf thatch. —*Horsburgh.* See Java.

BABABOODEN, a range of hills in the Nagar district in the N. W. part of Mysore, attaining a height of 5,000 to 6,000 feet above e sea. The hill sides have been found to tea and coffee well. Fevers of a severe ve occasionally occurred. See Tea.

GOORGOOR, near Kerkook is supe the Korkura of Ptolemy, and is es to the north of Baghdad. In a little circular plain, white with naphta, flames of fire issue from many places.—See Kerkook.

BABAGUNGE, a town in L. 91°45′ E. and Lat. 24° 38' N.

BABAI. *Ocymum pilosum.* Ciliated basil. This is very common in all the Ajmere fields: the leaves have a very fragrant smell, exactly like verbena: the plant is used to prevent the approach of insects, especially of bugs: the seeds are mucilaginous.—*Irvine, Gen. Med. Top. of Ajmere, p.* 180.

BABA-LALI, disciples of one Baba Lal, who was a Malwa Khetryia, born about the reign of Jehangir. He, again, was a disciple of Chetana Swami, he settled at Dehanpur near Sirhind, where he erected a *Math*.

BAB ALLAH, the "gate of God," one of he gates of Damascus, so called from being that hrough which the Haj or pilgrim caravan passes n starting for Mekka.—*Robinson's Travels, Vol. II. p.* 126.

BAB-AL-MAKADDAS, Arab. Turk. The ublime door or porte, the respectful mode of designating the emperor of Turkey. See Bab.

BABAR, or Allow or Bichoo, a stinging ettle described by Mr. Charles Gubbins. Th s prepared from its fibres. It grows in e alleys about Simla and Subhathoo.—*Royle, page* 376.

BAB-AR. A thatch grass, also converted nto twine.

BABARCHI, also BAWARCHI. Hind. cook.

BABAT. Pers. An item in an account.

BABA YADGAR, one of the seven persons, Haft Tan, who, in the early days of mahomedanism were worshipped as the deity in several parts of Kurdistan. His tomb is in the pass of Zardah, and is the holy place of the Ali-Allahi sectarians, who believe in upwards of a thousand incarnations of the godhead. At the time of the Arab invasion of Persia, the Zardah pass was regarded as the abode of Elias. See Ali Allahi; Karund.

BABBASA. Tel. Hydrocotyle rotundifolia, *R ii.* 88.—*Ic.* 564. See Hydrocotyle.

BABCHI. Hind. Psoralea corylifolia.

BABDEE, a town in L. 67° 45' E. and L. 24° 49' N.

BABEE, a clan of the Afghan races. See Kelat.

BABEGAN, the surname of Ardeshir. See Artaxerxes.

BABEL of Scripture is the Babiru of the cuneiform characters and the Beber of the Egyptians. Its age is uncertain, but according to Genesis, it is older than Assur and Nineveh. According to Genesis xi. the tower was a watch tower, a fortified observatory or rallying place, in the midst of a great plain, and there can be no doubt that there was a tower of Nimrod in the early times before the Chaldee period. This tower is connected with the decline of the kingdom of Nimrod and the dispersion of nations, —*Bunsen's Egypt*, iii. 132, 451; iv. 373, 414. 415. See Babylon. Kesra.

BAB-EL-MANDEB. On the north-eastern side of the entrance to the Red Sea, is a prominent head land with low land behind it, giving it the appearance of an island. Quoin Hill, Jibl Mia Ally is 865 feet high and slopes towards the sea. This Cape has numerous projecting rocky points forming small bays, which afford shelter to small vessels that bring sheep from the opposite coast for the Mocha market. Bab-el-Mandeb is an Arabic term, meaning the gate of affliction, supposed with reference to the dangers which were anciently encountered in its navigation. It is a Strait, forming the entrance of the Red Sea, and is the limit of the Turkish possessions to the south. It is fourteen miles broad with the island of Perim lying in it near to the Arabian shore. Sesostris is said to have sailed through it.—*Horsburgh, Playfair.* See Beer us Somal; Okalis; Perim; Somal; Suhaili.

BABEER, in Syria, the papyrus reed. P. antiquorum. It grows in the marshes of Egypt and in the stagnant waters of the Nile.—*Hog. Veg. King. p.* 806.

BABER, Emperor of India, an adventurous, hardy soldier, and pursuing literature in the intervals of his war-spent life. He was born in 1480. He was the son of Shaikh Mirza, the chief of Farghana, and was the sixth in descent from Timur. While yet a lad, at the age of fifteen, he succeeded to his father's principality of Farghana, and after various changes, he became the founder of the Moghul dynasty, which, up to the beginning of the 19th century, held imperial sway in *India.* He reigned over a kingdom composed generally of the provinces situated between the Ganges and Samarcand. His ancestral dominions were on both sides the Jaxartes, a portion of ancient Sakatai, or Saca-dwipa (Scythia), where dwelt Tomyris, the Getic queen, immortalized by Herodotus and where her opponent erected Cyropolis, as did in after-times, Alexander the Macedonian, his most remote Alexandria. From this region the same Gete, Jit, or Yuti, issued to the destruction of Bactria, two centuries before the Christian era, and again in the sixth century to found a kingdom in Northern India. One thousand years later, Baber issued with his bands to the subjugation of India, which his descendants retained up to the end of the 18th century. This portion of Central Asia is the "*officina gentium,*" whence issued those hordes of Asi, Jits, or Yeuts (of whom the Angles were a branch), who peopled the shores of the Baltic, and the precursors of those Goths who, under Attila and Alaric, altered the condition of Europe. Baber quitted Samarcand as a fugitive, and with less than two thousand adherents commenced his enterprize, which gave him the throne of the Pandu.

In A. D. 1494, at the tender age of fifteen he succeeded to a kingdom; ere he was sixteen, he defeated several confederacies and conquered Samarcand, and in two short years again lost and regained it. His life was a tissue of successes and reverses; at one moment hailed lord of the chief kingdoms of Transoxiana; at another flying, unattended, or putting all to hazard in desperate single combats, in one of which he slew five champions of his enemies. Driven at length from Farghana, in despair he crossed the Hindu Coosh, and in 1519 the Indus. Between the Punjab and Cabul he lingered seven years, ere he advanced to measure his sword with Ibrahim of Dehli. Fortune returned to his standard; Ibrahim was slain, his army routed and dispersed, and Dehli and Agra opened their gates to the fugitive king of Farghana. His reflections on success evince it was his due: "not to me, oh God! but to Thee be the victory!" says the chivalrous Baber. A year had elapsed in possession of Dehli, ere he ventured against the most powerful of his antagonists, Rana Sanga of Cheetore. His checquered life may be thus described; but during a long succession of victories and reverses, he retained a cheerful equanimity of mind. His first conquest was Samarcand, but he had held it only for a hundred days when he was recalled to the defence of his own territory. He next, in 1504, captured Cabul which he held for 20 years. In 1519, he invaded India; in 1524, he overran the Panjab, and advanced as far as Sirhind, but he and his brother Ala-ud-Din were forced to relinquish these conquests. In 1526, however, Baber's fifth and last expedition was against India. He had an army of 12,000 men with which he encountered and defeated the Emperor Ibrahim Lodi at Paneeput, and he soon after reduced to his power all the provinces of the empire. He, however, sustained a great defeat at Futtehpore Sikri at the hands of the Rajput Rana Singha, chief of Chittore, but in 1527, Baber led his army a second time against the Rajput prince whom he overthrew and completely broke his power. After other successes, he died at Agra in 1530 at the age of 50. He was fond of literature, and himself a scholar. Were we to contrast the literary acquirements of the Chagitai princes with those of their contemporaries of Europe, the balance of lore would be found on the side of the Asiatics, even though Elizabeth and Henry IV of France were in the scale. Amongst the princes from the Jaxartes are historians, poets, astronomers, founders of systems of government and religion, warriors, and great captains, who claim our respect and admiration.—*Tod's Rajasthan, Vol. I. p.* 322.

BABI, an Affghan tribe, settled at Kelat for purposes of traffic. The appearance of the Babi merchants is rather prepossessing ; stout, well-made men, with good features.—*Pottinger's Travels, Beloochistan and Sinde, p* 46 See Kelat.

BABI. Malay. Hog.

BABIER. Syriac. Cyperus papyrus—See Babeer.

BABINGTON, Dr. Benjamin. A Madras Medical Officer ; he wrote on the Geology of the country betwixt Tellicherry and Madras. Lond. Geol. Trans. 1810 ; As. Joun. 1819. Vol. vii. 646 ; see Memoir of Lon. Geol. Trans., Vol. v. 23, 29.—*Dr. Buist's Catalogue.*

BABI-RUNG. Beng. Embelia ribes. *Burm.*

BABIRUSSA ALFURUS. One of the Suidæ, the Babirussa hog of the islands of the archipelago.

BABISARN. Malay. Morus Indica.

BABLAH. Neb-Neb. The rind of the fruit of the Acacia ferruginea. It is used as a substitute for the more expensive dye stuffs, and for communicating shades of drab to cotton. —*Faulkner.*

BABO. See Yavana.

BABOCALLY, a town in India in Long. 90° 50′ E. and Lat. 24° 40′ N.

BABOO. Amongst the hindus, a respectful appellation equivalent to the English "Esquire;" your worship or "your reverence" or to the mahomedan hazrat : It is still not unfrequently applied to Englishmen when addressed by a hindu." In Calcutta, a hindu engaged in mercantile business, a native clerk who writes English. In Goruckpore any man of family or influence, in Benares, the near relatives of Rajahs.

BABOOL. A Hindi word, applied, as a generic term, to some species of Acacia ; but, the Babul proper, is the A. Arabica (which see). In Sind, the Babool is very abundant and grows to a very large size. It is exceedingly hard and weighty. For agricultural implements and all native purposes, it is excellent. It was much used by the Indus Flotilla, for paddle flats, rudders, stanchions and boats' knees—in fact for every purpose to which good wood can be applied. Besides other parts, its bark is employed in tanning, its pods form a valuable food for cattle, its young branches are the favourite food of camels and goats, its bark yields gum and lac, and for all these articles, wood, bark, ls and lac, a sale is always found. Drs. on and Cleghorn have strongly advocated the extension of this tree by plantations. Dr. Cleghorn (Report, p. 7) suggested that the Acacia Arabica tree should be conserved along the banks of the Tumbuddra, both in the Bellary district, and in the Nugger division of Mysore. The Babool springs up in the alluvial soil on both banks (in similar ground to the Shikargahs of Sinde), and, he adds, if three trees be planted when one is cut, there will be an increased supply of useful material in a few years. Dr. Gibson, for years strove to form such preserves. He says (Report of 1857-60, p. 14) the several proposed Babul reserves in this eastern line should be kept in view, otherwise the want of tree reserves in a bare country may hereafter be felt. He tells (Report p. 18 and 19) of Babool preserves on the Bheema and Moota Moola rivers, and adds that, the net profit of all these Babool preserves for the year, after deducting every expense, including Rs. 432 per annum for keepers, reached the figure of Rupees 1,068-9-8, being the best return yet had since the commencement of conservative measures in 1846. He mentions that there are Babool preserves on the Bheema river, in the Ahmednuggur Collectorate, and that the supply of wood from these Babool forests continues to increase, not only as regards firewood, but also in respect to large wood for the Gun Carriage Manufactory and to meet the increasing demand, every opportunity had been taken for extending the preserves. He informs us that the large Babool wood which used to be obtained from Kutch and Kattywar seems now to be not procurable, but adds that the roadside Babools especially in the Sattarah Districts, will soon afford a large supply of Gun Carriage timber.

BABOON. A quadrumanous or four handed mammal, of the sub-family Papioninæ. It has received its Latin name, Cynocephalus ; from the dog-like shape of its head. The baboon is found in several parts of the South of Asia.

BABOONAH. Dukh. Hind. Pers. Anthemis nobilis, Camomile. Its root under the name of Baboona-Soorkh, is imported via Bombay ; is taken as an aphrodisiac, and general tonic : sells at one rupee a seer.—*Genl. Med. Top. of Ajmere, p.* 128.

BABOONA-SAFAID. A white root imported into Ajmere from Bombay and used as an aphrodisiac.—*Gen. Med. Top. of Ajmere, p.*128.

BABOOWAJA STRUGA. Rus. Castor.

BABRA. Three marches from Jeypore, on the road to Delhi, has one of the edicts of Asoka on a block of stone or rock on a hill, in old Pali and of dates B. C. 309. It is in the oldest Lat character. It differs somewhat in style and language from the pillar and rock edicts. The subject is the Buddhist commandment forbidding the sacrifice of four footed an The Vedas are alluded to, but not named, and condemned as, "mean, and false in their doctrine, and not to be obeyed." The Scriptures of the Munis (which must be the Vedas) are spoken of as directing blood-offerings and th sacrifice of animals. Priest and priestesses, religious men and religious women, amongst th Buddhists, are commanded to obey the edict, and bear it in their hearts.—*Vol. IX. p.* 617

BABRI. HIND. A kind of peach.

BABRIAWAR, one of the five southern districts of Kattyawar, its people, the Babria hindu cultivators are said to be the offspring of an Ahir with a Kuli woman.—See Kattywar, India

BABUAR. SANS. Cordia myxa.

BABUI-TULSI. BENG. Ocymum basilicum. Burm.—*Linn.*

BABULA. BENG. Acacia Arabica.

BABULGONG, a town in L. 75° 53' E and L. 18° 48' N.

BABUNA. HIND. Matricaria chamomilla.

BABUNA and Beena, rivers in the Maharajah Sindiah's territory.

BAHU-PHALLI. HIND; species of Corchorus, C. olitorius, depressus; acutangula.

BABRUNG. BENG. Embelia ribes.

BABUYAN OR THE FIVE ISLANDS, form a kind of circular chain fronting the Coast of Cagayan: their names are

—*Horsburgh.*

BAB-WAI. BURM.

BABYLON. There exists a strict chronology of the Babylonian empire, in south Babylonia, dating back to B. C. 3784, consequently 908 years before the immigration of Abraham. The earliest chronology of Babylon extant, has been verified by astronomy, and its ancient history has received much attention. Callisthenes, as the friend of Alexander, was permitted access to the Babylonish records, from which it was shown that they had kept a regular calendar from B. C. 2234. Babylon city was built and extended a long period after the erection of the watch tower of Babel. The temple of Belus was built B. C. 3250, the historical city according to all authorities, if not founded by Nebuchadnezzar is not of much older date, and it is supposed that Semiramis added to it. Its name 'Bab-Ilyun' means the gate of God, and the chief historical events connected with it may be thus enumerated. The first Babylonish dynasty began B. C. 3784, by a powerful Chaldee kingdom in southern Babylonia, and the historical city of ylon is supposed to have been built B. C. 3250. The Chaldean dynasty lasted for 1550 years to B. C. 2234, when Babylon was taken by Zoroaster, a Mede, who then founded there the second Babylonian dynasty. The Median dominion ended B. C. 2011, after a rule of 224 years. Babylon city was so erected, that the river Euphrates ran through the middle of it and it was surrounded with a wall of three hundred and sixty furlongs in circuit, and adorned with many stately turrets: the walls were of that breadth, that six chariots abreast might be driven together upon them (as Ctesias relates) the height was such, as exceeded all men's belief that heard of it. They were of brick, cemented with bitumen, in height, as Ctesias says, fifty orgaya; It is now known that its walls were 60 miles in circumference, 350 feet high and 87 feet thick.

The earliest dominant power in Asia was of the Turanian or Khamitic race, amongst whom Nimrod appeared, and Ch. Bunsen fixes this era at B. C. 8,000 to B. C. 7,000, and this Turanian race was afterwards overlaid by the Semitic and Arian races. Of the dynasties that have ruled in Babylon he names

I. B. C. 3784-86 Chaldean kings, for 1550 years, amongst whom was Nimrod, a Kossite Turanian, and according to Bunsen, it was in their time, somewhere about B. C. 10,000 to B. C. 7,250; that the assembly of people at the watch tower of Babel, and the Semitic polarisation and emigration occurred. The commencement of this Chaldean dynasty was 200 years after the creation of Adam, according to the Hebrew text.

II. 8 Median kings, for 224 years, amongst whom was Zoroaster and his seven successors.

III. 11 Chaldean kings who reigned 64 years.

IV. 49 do. kings who reigned 215 years.

V. 9 Arab kings, for 215 years.

VI. 45 Assyrian or Ninyad kings who reigned for 526 years, amongst whom was Ninus and Semiramis. It was during this dynasty that the Assyrian empire began to be supreme in western Asia, B. C. 1273; this progress was continuous during the first 32 years until the death of Semiramis in B. C. 1222, the 52d year of Ninus or the Derketadæ, but till towards the middle of the 8th century, B. C. 747 Media and Babylon were tributary provinces of the Assyrian empire, Ninus, when sole occupant of the throne, conquered Egypt in the 17th year of his reign; Semiramis overran Egypt and made a victorious campaign into Ethiopia or Kush. Semiramis set out on her Indian campaign, B. C. 1230.

During the 526 years of Assyrian supremacy, it, as also Media, was governed from Nineveh as the metropolis of the Assyrian empire—the kings of the race of Ninus resided at Nineveh on the Tigris, opposite Mosul. Babylon at this time was ruled by a Satrap, or viceroy, with almost independent authority. At length, Sennacherib, king of Assyria, after various struggles with the princes of Babylon, invested his son, Assarhaddon with the sovereignty of Babylon. The struggles, however, with these princes still continued, till at length Nabopolassar, the father of Nebuchadnezzar, who became Satrap of Babylon, in the 123rd year of Nabopolassar, not only made himself independent, but in alliance with the Medes checked the career of the empire of the Assyrians, and raised Babylon into the seat of empire of western Asia. The Medes had revolted, and Sardanapalus, king of Assyria had commanded Nabopolassar to march against them. But instead of doing so, he made an alliance with Cyaxares and marched with him against Nineveh, which was destroyed B. C. 606, from which time Babylon became entirely independent. Sardanapalus burned himself to death in his palace, and ended the Assyrian empire. The fall of Babylon occurred B. C. 417. Southern Babylonia, the country to the eastward of the southern portion of the Tigris, Susiana, was known as Elam. There was at one time, no other empire in western Asia, but the Babylonian. All the Babylonian and Assyrian dynastic arrow-headed inscriptions, hitherto decyphered, refer to South Babylonia, indeed to the country east of the Tigris, that is Susiana, as being " the cradle of sovereignty." There, too, are the ruins of vast cities to which Sir Henry Rawlinson first called attention. Their oldest sacred legend, mentioned by Berosus, accords also with this reference in the inscriptions, namely, that the first dawn of civilization was in southern Babylonia and that the teachers of mankind came from the shores of the Persian Gulf.

VII. The second Assyrian dynasty of 122 years, during which Sennacherib reigned, also Assarhaddon and Sardanapalus, Esarhaddon 3rd son of Sennacherib, took Babylon in 680 B. C. and reigned over it and Nineveh.

VIII. 5 Chaldee kings, 87 years.

IX. 10 Persian kings from Cyrus to Darius Codomanus, 207 years.

The period between Zoroaster and the Median conqueror of Babylon and the fall of the Babylonian monarchy was 1904 years.

Its capture by Cyrus is foretold in Is. xliv. and Jer. xliv ; Jer. l. and li. and Dan. viii. Its power must have been much detested, if the sorrowful expressions anticipatory of its after fall be considered. Isaiah xxi. 3-9. Isaiah says, Go up, O Elam ! besiege O Media !—Babylon is fallen, is fallen : and all the graven images of her gods he hath broken into the ground." While Jeremiah says " Babylon shall become heaps, a dwelling place for dragons, an astonishment, and an hissing, without an inhabitant." Jeremiah li. 37. Babylon fell before the arms of Cyrus about B. C. 504, Nicotris, the queen mother, counselled resistance and as there was an ample supply of food with walls 350 feet high and 87 thick it seemed possible to withstand the siege. But after it had lasted two years, Cyrus opened the head of the canal connected with the Euphrates, and allowed its waters to enter the trenches with which he had surrounded the city. This so drained the bed of the river where it entered the city, that by midnight the two bodies of soldiers whom he had posted at the points of its entrance and exit passed in and opened the gates for the army who poured in and surrounded the palace : within a few hours, the city surrendered. The ruins near Hillah are still, by the Arabs, designated Babel, and all historical records, as well as traditions, agree in representing these as the remains of the first city of Nimrud, the Babylon of Herodotus, Diodorus Siculus, and other historians. Four miles and a quarter N. 20° W. of the bridge of Hillah is the Mujellibeh, near which are the remains of Kasr, as well as those of the hanging gardens, and at rather more than six miles from Hillah, standing amidst, and crowning the summit of, extensive masses of ruin, is the Birs, or Bars-i-Nimrud. This has been considered by Niebuhr, Rich, and others, to be the celebrated temple of Belus, and, according to Herodotus, it was separated from the palace by the river. Lib : i. c. clxxx. L'un [des quartiers] est remarquable par le palais du roi, et l'autre par le lieu consacré a Jupiter Belus—Larcher's Translations.

Porter remarks that when we consider that so many centuries have passed, since Babylon became a deserted habitation, and that it yet lay in the neighbourhood of populous nations, our surprise ought to be, not that we find so little of its remains, but that we see so much. From her fallen towers have arisen, not only all the present cities in her vicinity, but others which, like herself, are long ago gone down into the dust. Since the days of Alexander, we find four capitals, at least, built out of her remains Seleucia by the Greeks, Ctesiphon by the Parthians, Al Maidan by the Persians, Kufa by the Caliphs; with towns, villages, and caravansaries without number.

The pre-eminent mounds are three in number: 1st, the Amran Hill, so named by Mr. Rich in his "Memoir on the Ruins of Babylon" and who designates it by that appellation, from its supporting a small tomb erected to the memory of some personage of that name, said to have been a son of the Caliph Ali, who fell at the battle of Hillah. But there must be some mistake in this tradition. Ali having had only two sons, Hassan and Hossein. The second pile is that called the Kasr, or place which is separated from the preceding by a distance of only 750 yards. The third is known by the appellation Mujeelibe, or Maclouba, "the overturned." It stands about a mile and half northward from the other.

The ancient kingdom of Babylonia comprehended a narrow tract along the river Euphrates, extending from the neighbourhood of Erech, or from about the modern town of Seikh-el Shuyukh, to Babel, a distance of about 154 miles in a direction westward of north, and continuing from thence 287 miles further, in the same direction to Kalneh, on the Khabur. The kingdom extended eastward till it joined Assyria, including Akad, and two other cities no less remarkable. One of them bears the name of El Kush, extensive ruins about 11 miles E. S. E. of Felujah, and the other is the supposed site of antediluvian Sippara, Siferah of the Arabs, (Lieut. Lynch,) which is within the Medina wall, near the southern extremity. The greater part of what was called Mesopotamia in latter times constituted, therefore, the territory of ancient Babel, the Aram naharain, or Syria between the rivers of the Scriptures. Gen. xxiv. 10; Deut .xxiii. 4. The same tract also bore the name of Padan Aram. Gen. xxviii. 2, or Champagne Syria, both of which designations agreed with the description given of the country by Strabo. Babylonia, is the modern Iraq-i-Ajem. —*Ouseley's Travels, Vol. I. p.* 104. *Mignan's Travels*, p. 168. *Porter's Travels, Vol. II.* p. 337 *and* 339. *Euphrates and Tigris Col. The flesh of swine, salted and dried; largely prepared in Ireland and America, and in the northern counties of England and southern of Scotland and exported to India. It is a coarse food, and, as that prepared in India is very liable to induce disease of the bowels, its use should be avoided.—*McCulloch, Com. Dict.*

BACONDRY DROOG, in L. 78° 11' E. and L. 12° 38' N.

BACKERGUNJE, a district of Bengal.

BACTRIA, is supposed to have been in the site of the modern Balkh and is the country watered by the Oxus and its tributaries. The name is from "bakhdi" the fortunate or the happy. It formed one of the settlements of the Arians, the third in their migration, and was the central point of their old dominions. According to Ch. Bunsen, the Arian emigration from Sogd to Bactria, took place prior to B. C. 5,000, consequently before the time of Menes. The language of the Zend books is supposed by Haug to be Bactrian and Bactria was the original seat of Zorastrian lore. The power of Bactria was broken by the Assyrians, B. C. 1,200. Semiramis had retreated into it after her defeat on the left bank of the Indus. Alexander the Great, in his advance towards the Indus, formed military stations in Bactria, and after his demise, when the generals of his armies set up for independence, Bactria was carved into a kingdom, which, with varying limits, lasted from B. C. 256 to A. D. 207. Even of that long line of Bactrian kings, through a period of 463 years, the sole existing evidence is the emanations from their mints, exhumed from time to time in and around their ancient seats of government, and, in the almost total absence of annals, whether eastern or western, their coins furnish the only available testimony of the survival, re-institution and extinction of the dominant Hellenic element on the site of Alexander's furthest conquest in the east, and of the potentates who swayed the destinies of those lands for the next four centuries. Professor Wilson gives a list of them from Theodotus I, B. C. 256 to Pantaleon, B. C. 170. Then of barbaric kings, Su Hermæus, Kadaphes and Kadphises from B. C. 100 to B. C. 50; Also of an Indo-Parthian dynasty; of the Indo Scythian princes of Kabul, and a classification of their cotemporaries. Mr. Thomas, in Prinsep's Antiquities gives Major Cunningham's Table. The countries over which they ruled were Bactria; Sogdiana; Margiana; Paropamisadæ; Nysa; Aria-Dranga, Arachosia; Gandharitis, Peukelaotis, Taxila, Patalene, Syrastrene and Larice, but their limits were incessantly varying.

The Asii, or Asiani nomades who took Bactria from the Greeks. Mr. Prinsep considers to be Scythians of Azes, who overpowered the Greek dynasties in Soghdiana and northern Bactria between 140 and 130 B. C. The Bactrian Greeks are usually termed Yavana, in Sanskrit literature, but Colonel Tod warns us not to mistake them for the *Yavana* descended from Yavana, fifth son of Yayat, third son of the patriarchal Nabus, though the Ionians may be of this race. Similarly, he says, the *Saca* of Indian history are the Sacæ races of Central Asia, (the Sac'ha Rajpoot) the *Pahlava*, the ancient Persians or Guebres; the *Chína*, the inhabitants of China, and the C'hasa inhabitants of the great snowy mountains (kho), whence *Kho-chasa* (the montes of Ptolemy, corrupted to Caucasus.

According to Col. Tod, *Rajasthan*, *Vol. I. p.* 233 the Yavan or Greek princes, who apparently continued to rule within the Indus after the Christian era were either the remains of the Bactrian dynasty or the independent kingdom of Demetrius or Apollodotus, who ruled in the Punjab, having as their capital Sagala, changed by Demetrius to Euthymedia. Bayer says, in his Hist. Reg. Bact. p. 84, that according to Claudius Ptolemy, there was a town within the Hydaspes yet nearer the Indus, called Sagala, also Euthymedia; but he scarcely doubts that Demetrius called it Euthydemia, from his father, after his death and that of Menander. Demetrius was deprived of his patrimony, A. U. C. 562. Sagala is conjectured by Colonel Tod to be the Salbhanpoora of the Yadu when driven from Zabulisthan, and that of the *Yuchi* or Yuty, who were fixed there from Central-Asia in the fifth century, and if, so early as the second century when Ptolemy wrote, may have originated the change to *Yuti media*, the central Yuti. Numerous medals, chiefly found within the probable limits of the Greek kingdom of Sagala, either belong to these princes or the Parthian kings of Minagara on the Indus. The legends are in Greek on one side, and in the Sassanian character on the reverse. The names of Apollodotus and Menander have been decyphered, but the titles of 'Great King,' 'Saviour,' and other epithets adopted by the Arsacidæ are perfectly legible. The devices however, resemble the Parthian. These Greeks and Parthians must have gradually merged into the hindu population.

Professor Lassen supposes the existence of four Greek kingdoms, viz. that of Bactria. A second, eastern, under Menander and Apollodotus, comprehending the Punjab and valley of the Indus, with Kabul, and Arachotia or Kandahar added in times of its prosperity. A third, western, at Herat and in Seestan. A fourth, central of the Paropamisus, which latter region Mr. Prinsep is inclined to give to Bactria, because of the bi-lingual as well as the pure Greek coins of Heliocles and Antimachus, kings of Bactria.

Of all the kings who followed Eukratides, Menander and Apollodotus alone are mentioned by classical authorities

The history of the country of the Kophones river, *i. e.* Bactria, Aria and Kabul, is also obtained from coins. Many of the coins have bilingual inscriptions, the one Greek, on the obverse, some of excellent workmanship but often of very barbarous forms, the other on the reverse in that called Arian, Arianian, Bactrian and Kabulian. According to the prevalent authority of Lassen, James Prinsep, Professor Wilson and others, this language is said to be Sanscrit, but Doctor Moore asserts it is Hebrew. It is written from right to left.

The first Greek king Theodotus or Diodotus, B. C. 256, reigned about the same time as Arsaces I.

Theodotus II. B. C. 240, is said to have reigned in the Kabul valley.

Euthydemus, B. C. 220, reigned in the time of the expedition of Antiochus, the great, and was defeated in battle near Merv by the united Syrian and Parthian armies. He then urged Antiochus to receive him in alliance and so extend the Greek influence to the Indus. A peace was concluded, and Euthydemus led the Syrian army through Bactria, *i. e.* by the route N. of the mountains to the Kabul valley and across the Indus in B. C. 206. There, Antiochus made peace with Sophagasenus (Asoka), which that sovereign recorded by edicts on rocks and pillars in various parts of India, in characters exactly resembling those on the coins of Agathocles. In B. C. 205, Antiochus returned by way of Arachotia. The translation of the edicts of Asoka is in the Asiatic Society's Journal for 1838, and that on the Girnar rock names Antiochus as Antiochia Yona Rajah.

Pantaleon B. C. 195, coined in Greek and Sanskrit.

Agathocles B. C. 190 coined with Greek and Sanskrit, is supposed by Lassen to have ruled Kabulistan to the Indus, and Mr. H. T. Prinsep supposes him to have been the governor left by Antiochus in Kabul, after his treaty with Asoka.

Eukratides, B. C. 178 (Prinsep B. C. 181, Bayer, Wilson B. C. 165, Visconti: Lassen B. C. 175.) He seems to have made an expedition to India in 165 B. C., and, on his return from it, to have been murdered by his son. Numerous coins of his have been found in Bactria and Afghanistan and Mr. H. T. Prinsep considers that he ruled originally in Bactria, subsequently made conquests in and south of Parapamisus in Kabul and, first of all the Greeks, coined in the bilingual Arian inscription. The first use of two languages, however, is also ascribed to Agathocles, who used Greek and Sanskrit while Eukratides used Greek and Arian.

Heliocles B. C. 155, the parricide of Eukratides, used bilingual inscriptions on coins in pure Greek and Arian. His rule, though short, extended over Bactria and the Paropamisus.

Antimachus B. C. 150 coined with Greek and Arian.

According to Bunsen, the earliest Bactrian faith was a pure nature worship as recorded in the Vedas. That was superseded by an ethical faith, when light and darkness, sunshine and storm, became represented by good and evil, but in the change, Zoroaster denotes the spirits of evil by the term Deva, common to the old Arian divinities. The Bactrian religion continued unchanged amongst the emigrants until they reached the Punjab. In the west, Zarathustra Spitama, Zoroaster of Europe, one of the mightest intellects and greatest men of all time appeared in the reign of Vistaspa, a Bactrian king, towards the year 3000 B. C. His contemporaries accounted him as a blasphemer, atheist, firebrand, worthy of death, and e was regarded, even by his own adherents and fter some centuries, as the founder of magic; a sorcerer and deceiver; but Hippocrates, Eudoxus, Plato and Aristotle looked on him as a great piritual hero and the earliest sage of a primeval poch. Zoroaster's views are expressed in a ymn, or Gatha, consisting of eleven three line trophes. It seems to have been composed on some great public occasion and offers the choice f following a true path or of continuing in the xisting superstition, and in the 3rd strophe, nnounces the presence of two twin spirits, the Good and the Base and commands them to choose between them. In the fifth strophe he names Ahura Mazda, the All Holy and All True; there is no mention of the name of Abriman, as later regarded by that of the evil principle, but in the seventh strophe Armaiti is named s the mother of the corporeal world who comes, with Power, and with Truth and with Piety, to uccour this life. Later, this religion degenerated nto magism: from this, Persians have derived heir Shah-River: Ashta, or Truth is the second, which has become the Ardi Behesht of the Parsi: nd the third is Vohu Mano, signifying the good ious mind or Piety, out of which has grown he later term Bahman.—*God in Hist. Vol. I.* 274, 271 *to* 288

Zoroasters doctrine spread from Bactria into Media. But in the year B. C. 2,234, Zoroaster a king of Media, conquered Babylon where the rue magism as taught by the disciples of Zoroaser, soon mingled with Chaldean philosophy, and under the despotisms of Xerxes and other rulers, so early as the times of Artaxerxes, rites were ntroduced into Persia, glaringly contradictory f the ethico-spiritual nature of Zoroaster's eligion, which has now-a-days degenerated into fire worship and magical formula.

Zoroastrians used the Zend language which s newer than the language of the Vedas, but lder than Sanscrit. The Bactrian language is commonly called Zend: the Vedic language is tereotyped Bactrian, the Zend is the continuaion of this old Bactrian tongue, with two hases of which we are acquainted. One of hem, the language of the Zend books, the other hat of the cuneiform inscriptions from Cyrus nd Darius down to Artaxerxes II. The Sancrit is the weakened prose form of the old Bacrian, the poetical form of which exists in the ymns of the Rig Veda. These hymns were ransmitted orally. Literature proper only commences with Sanscrit after it became a learned anguage, and it became the sacred language bout the year 1,000 B. C. at the beginning of he fourth age. Both Vedic and Sanscrit were at first living languages, spoken by the people. —Tod's *Rajasthan, Vol.* II., p. 217. Bunsen *God in History, Vol. I. p.* 270 to 298. *Bunsen's Egypt, Vols. III* and *IV.* See Afghanistan; Arians, Greeks of Asia, Iran, Koh, Kabul, Inscriptions, Semiramis ; Hindu ; Kattywar, Zoroaster.

BACTRIAN CAMEL. Camelus Bactrianus.

BACTRUS, or Dehas river, the chief river of Balkh, rises out of the Hindu Cush: near the city, it divides into hundreds of canals making the face of the country one blooming garden of richest fruits.—*Bunsen, God. in Hist. Vol.* 1, *p.* 277.

BAD. Pers. Hind. bad, evil, loss, remission.

BAD. Pers. Hind. The wind, according to Asiatics a common cause of disease. It usually means rheumatism.—*Pottinger's Travels Beloochistan and Sinde, p.* 94.

BADABANALA. Sansc. A term sometimes applied to the South Pole.

BADAKSHAN is a mountainous region, including the upper part of the valley of the Oxus. The capital is Faizabad. It lies between lat. 36° and 38° N. and long. 69° and 73° E, is on the western declivity of the Bolor Tagh in the valleys of some of the head streams of the Oxus, of which the Badakshan river is the principal. Its inhabitants are of the Tajik race, shiah Mahomedans, and speak Persian; the Tajik race here are purer Iranians than other Tajiks. The Tajik possessed the country before the inroads of the Turks and Uzbegs. They are a wild race, living in the little mountain glens, in villages, surrounded by gardens. In the remote mountains of Badakshan are the richest known mines of rubies and lapis lazuli. Marco Polo mentions that the chief of Badakshan laid claim to a Grecian origin ; Baber corroborates the story, and Elphinstone says that the chief of Darwaz, in the valley of the Oxus, was a Macedonian. Burnes also believed in the descent of many of the chiefs of Badakshan from the Greeks of Bactria. Badakshan, is a dependency of Balkh, and lying to the east of that city, on the north of Badakhshan, are the hill states of Wakkan, Shughnan, Darwaz, Kulab and Hissar, all of whose peoples claim a descent from Alexander. To the eastward of Badakshan lies the plain of Pamir, inhabited by the Kirghis, and the Siah Posh Kafirs are on the south, occupying a great part of the range of the Hindoo Cush and a portion of Belut Tagh. Marco Polo resided in Badakshan for the sake of his health, and he described Wakkan, Pamir, Bolor and Kashmir. Badakhshaan rubies were formerly of high repute. The turquoise of Badakhshan and Khokand is of a green colour and is very inferior to the blue turquoise of Neshapur in Persia. In its ruby mines, the gem is said to be found in limestone, along with great masses of lapis lazuli. Its rivulets, romantic scenes and glens, its fruits, flowers and nightingales are spoken of in rapture by the people of the neighbourhood. The Tajiks of Badakhshan are not so handsome as the men of Chatrar ; their dress is like that of the Uzbegs. Zaiback is surrounded by very high hills, and has four gates.—*Markham's Embassy, p.* 163. *Mohun Lal's Travels, p.* 250. See Afghan. Cush. Tibet.

BADADA. Singhalese. Wednesday. It is from Buda.

BADADUM. Tam. Erythrina sublobata. Roxb.

BADAGALE-YAVERU. Karn. Brahmans, followers of Vishnu, in Mysore.

BADAGE, a tribe of slaves in Kurg.

BADAK TAPA. See Semang.

BADAM. Pers. Hind. Is a term which, with affixes and suffixes, is applied to several kernel fruits. Badam, is the almond : Badam-i-Talkh is the bitter almond : Hijli Badam is the Terminalia catappa : Kaghazi (or paper) Badam is a thin shelled almond : Badam-i-shirin, is the Amygdalus communis or dulcis ; and Badam talkh i pahari, is the Prunus Armeniacus.

BADAMI, a hill fort in L 15° 55' N. and L. 75° 42' E.; in the S. Mahratta Country is S. S. E. of Kaladghi. The foot of the fort is 1,646 feet above the sea. Badami is 58 miles N. E. from Dharwar. It is a hill fort of great strength. At the close of the 18th century, it was the scene of a great disaster to a Hyderabad army, which was swept away by a pestilence, it was taken by the British in 1818 and again in 1841.

BADAM-I-HINDI. Duk. Hind. Terminalia catapa.

BADAM-I-SHIRIN. Amygdalus communis, A. dulcis. The almond.

BADAM, JANGLI. Hind. Sterculia fœtida.

BADAM-KANDI. Hind. A sweetmeat imbedding almonds.

BADAM TALKH PAHARI. Hind. Prunus Armeniaca.

BADAM-KA-TEL. Hind. Almond Oil ; Oil of Amygdalis communis.

BADANG, a Malay Hercules, a Wallace or Tell who defended Singapore against invaders.

BADANIKA. Tel. Loranthus longiflorus, L.

BADAON, a town of Rohilcund.

BADAPU, BADIDAPU CHETTU. Tel. Erythrina Indica.—*Lam.*

BADARINATH, is in Garhwal, situated in the Mana pass, within the Hamalayas. It is in 30° 46' N. L. ; 79° 32' E. L. on the right bank of the Bishen Ganga. The entrance to the hindu temple is 10,124 feet above the sea, according to Robert Schlagentweit but according to the Bengal As. Soc. Journal...10,294 feet. Near it, the upper limits of the "Amèsh and Kiùsi," fir-trees is...9,572 feet, the upper limits of the "Bilka and Deodár," fir-trees... 9348 feet ; and the upper limit of walnuts (Akrot)...8376 feet. Immediately below the village of Mana, is the hindu shrine dedicated to an incarnation of Vishnu and one of the most sacred in hindu mythology. The temple is built on the bank of the Bisheu Ganga immediately over the site of a hot spring, the existence of which no doubt led to the original selection of this remote spot. The Rawal, or chief priest, is invariably a Namburi brahmans from Malabar: no other class of brahman being allowed to touch the idol. Many temples erected in the same site have been overwhelmed and destroyed by the avalanches which occur there. Its revenues are derived from the offerings of its votaries and the rents of assigned lands.—*Professor Wilson.*—See Badarinath, Sri Sampradaya, Kunawar.

BADARINATH PEAK. (B ठ) L. 30° 43' 4" N.; L. 79° 15" 6' in Gárhwál, S. E. of Badrinath, a well known hindu temple on the right bank of the Vishnugànga. It is 22,869 feet above the sea.

BADARWAR. A town in the N. W. Himalaya containing three to four hundred houses, all, however, small and without any indication of wealth.—*Dr. Thomson's Travels in Western Himalaya and Tibet, p.* 329.

BADAWET. PERS. Hedysarum alhaji.

BADAWI. ARAB. A Bedouin Arab.

BADAWURD. HIND. Fagonia cretica.

BADDHA. HIND. of Panji Salix, *sp.*

BADDI KANDER. HIND. Saggar of the Salt Range, Ehretia asperas.

BADEK, in Java, a fermented liquor, prepared by boiling and stewing rice, with a ferment called *razi* consisting of onions, black pepper and capsicum. After frequent stirring the mixture is rolled into balls, which are piled up in a vessel, and the badek drips to the bottom.—*Hog. Veg. King.* 816.

BADGACHI. TAM. A low caste in Travancore but superior to pariahs.—*Wilson's Glossary.*

BADGER, the Hebrew Tachash. This name is given to the Meles collaris, Meles albo-gularis, *Blyth.* It is the Indian Badger, and is called the Bhalloo Soor or Bear-Pig. See Mammalia; Meles.

BADHAIL, a bold predatory race occupying Beit in Kattyawar; like the Wagher race of Dwarica, who with the Badhails of Aramra were so long the terror of the western seas, they are a spurious branch of the Jhareja family of Bhooj, one of whom called Abra, with the cognomen of Much'hwal or whiskered, came from Cutch in the time of Rinna Sewa, into whose family he married. His son had offspring by a woman of impure caste, and assumed the name of Waghair, with the distinctive office of Manik or gem. Malu Manek the last chieftain of this race, with all his motley company of Waghairs, Badhails and Arabs was slain in the storm or in the retreat after a desperate defence. See Kattyawar. The Badhail race, along with the Waghers of Dwarica, were long the terror of the neighbouring seas It is probably the Aramra of the maps, in Long. 69° 15' E., and Lat. 22° 27' N.

According to Col. Tod, Uja, the third son of Seoji, a Rhatore Rajput of Canouj, issued from the sand-hills on the Looni, carrying his forays to the Saurashtra peninsula, where he decapitated Beekumsi the Chamara chieftain of Okamundala and established himself. From this act his branch became known as the Badhail.

BADHAQ, a robber tribe of Oudh and its borders.

BADHOO, a hindu royal ceremonial: waving a brass vessel, filled with pearls, round the sovereign's head.—*Tod's Rajasthan, Vol. II. p.* 73.

BADI. HIND. The fortnight from full to new moon, the darkening half of the moon.

BADIAN. HIND. BADIAN-I-KHATAI. PERS. Illicium anisatum: Star-Anise.

BADIKI. TEL. Sapium cordifolium—*R. iii.* 693.

BADISE CHETTU. TEL. Erythrina indica. *Lam.*

BADJU LAUT. See Baju; New Guinea.

BADLA, ALSO BADLI. HIND. Substitute.

BAD-MAASH, PERS. An evil liver, a person living by defrauding others. It is from Bad, PERS. bad, and Maash, food. Bad-nam, disgrace.

BADOCHI, a red earth of Gurgaon, used in dyeing.

BAD PAI. PERS. A swift horse (wind-footed) of Turkoman breed, much prized by the Persians and always found in the stud of a person of rank.

BADR. AR. HIND. PERS. Full moon.

BADRANJBOYA. HIND. Nepeta ruderalis.

BADRARA. HIND. Gmelina Asiatica. See Sarrap, and Pashtu, also, Taxus baccata. The common yew.

BADRASIR, a famed temple of the Jains.

BADRUJ-I-ABIAZ. ARAB. Basella alba: Ocimum album.

BADSHAH, Hind. Pers. a King.

BADSHAHI RAI. HIND. Sinapis brassica, also S. ragosa.

BADRN BADSHAH.

BADSHAHI RAI.

BADUL, a young chief of Cheetore. It is in Cheetore an oath to swear "by the sin of the sack of Cheetore." Of these sacks were three and a half. In the 'half,' the city was not stormed, but the best and bravest were cut off (*saka*). It is described with great animation in the *Khoman Rasa*. Badul was but a stripling of twelve, but the Rajpoot expects wonders from this early age. He escaped, though wounded, and a dialogue [illegible] him and his uncle's wife, who [illegible] him to relate how her lord conducted himself ere she joins him. The stripling replies: "He was the reaper of the harvest of battle; I followed his steps as the humble gleaner of his sword. On the gory bed of honour he spread a carpet of the slain; a barbarian prince his pillow, he laid him down, and sleeps surrounded by the foe." Again, she said: tell me, Badul, how did my love (*peear*) behave ?" "Oh! mother, how further describe his deeds, when he left no foe to dread or admire him ?" She smiled farewell to the boy, and adding, my lord will chide my delay," sprung into the flame.—*Tod's Rajasthan, Vol. I. p.* 264.

BADULLA, a town in Ceylon, near it are hot springs. A race of people, called Pareyas, or strangers are there met with; believed to have been descendants of Portuguese captives made slaves after the re-conquest. Badulla is in L. 6° 59' N. and L. 81° 11' E. 38 miles W. from Nurelia (Newera Elia) and is 2,450 feet above the sea. The highest point of the road between Taldenia and Badulla is 2,345 feet.

BADWAIL, See Badhail.

BADYAN. HIND. Fœniculum vulgare comfits, sugared seeds of the "sonf."

BADYAN KHATAI, HIND. Illicium anisatum.

BADYPOUR, a town in Long. 85° 57' E. and L. 26° 3' N.

BAEL TREE: it is thought that there is but one species growing in India, the Ægle marmelos, which is modified and improved by cultivation; specimens of the plant in fruit and flower were procured from several districts, and compared, but the only perceptible differences were in the size of the fruit and in the disappearance of the spines on the branches as the trees improve.

BAELANG, an islet near Singapore.

BAETAN. AR. In Arabia, the only serpent that is truly formidable is that called *Bætan*, a small slender creature, spotted black and white; its bite is death, and the dead body is swollen by the poison in a very extraordinary manner.—*Niebuhr's Travels, Vol. II. p.* 333.

BÆTYLIA, stones held sacred by the Jews, probably Æreolites. They were without any resemblance to the human figure. See Bait-ul.

BAFT, PERS. Loom work, Calico.

BAFTAS. Anglo Hind. Cotton Manufactured articles.

BAG. HIND. a tiger, many towns are named from this.

BAG-ACHERA. DUK. Pisonia grandis.

BAGADHA, Jarasanda, the king of Bagadha, opposed Semiramis, B. C. 1230, defeated and drove her back to the Indus with immense loss. See Semiramis.

BAG[illegible]ans. Cucurbita, *sp ?*

BAGA[illegible] HIND. Cocculus acuminatus, D. C.

BAGANA[illegible] ALSO BANGANAPILLY, a town in [illegible] India in Long. 78° 19' E. and Lat. 15° [illegible] Near this diamonds are found. It is the chief town of a small principality of Syuds.

BAGAR. HIND. A kind of grass, Eriophorum cannabinum.

BAGA SOLEE, a town in Long. 83° 26' E. and Lat. 24° 25' N.

BAGAWA. SANSC. BHAGAWAT. SANSC. The most meritorious, a name of Budha.—*Hyder's Eastern Monachism.*

BAG-BHARENDA. BENG. HIND. and PERS., also Pahari arund. HIND. Jatropha curcas.—*Linn.*

BAGELA, the name of a Rajput Chouhone race, decended from Komarphal (died A. D. 1166) sovereign of Guzerat. The princes of Baghelcund are of this race: in Guzerat there are many petty chieftains of this tribe, as Lunawarra, Mandvie; Mahera; Godra; Dubboye, &c., &c. Another account of the Baghela is that they are a Rajput race, descendants of Sid Rae. They gave their name to Baghelcund, an entire division of Hindustan. They also occupy Peetapoor and Theraudin in Guzerat. See Baghel; Chouhone; Komarphal.

BAGELEN. A district in Java, see Karang Bollong.

BAGEREE. A nuddy or river of Dhar. The Bageree river runs near Kachrode in the Indore territory.

BAGESUR, a town in Long. 79° 44' E. and Lat. 29° 50' N.

BAGESWARA MATA, a goddess of Baghelcund, to whose shrine Komarphal of Guzerat (A. D. 1166) sent his son. See Komarphal.

BAGGA PATTI. TEL. Limnophila racemosa. —*Benth.* Cyrilla aquatica, *R.* iii. 115.

BAGGALAH, OR BUDGEROW. These vessels trade from Cutch, Guzerat, and the Malabar coast to the gulph of Persia, the coast of Arabia, and the Red Sea. They are Indian vessels, and manned with Indian seamen, called Lascars. See Boat.

BAGH, a town in Kach Gandava.

BAGH. PERS. HIND. A garden. Like the Dutch and Chinese of the present day, the Persians delight in naming their gardens and garden-houses with fancy names, as Farkh-bagh, garden of delight; Lal-Bagh, ruby garden.

BAGHAET, HIND. Garden lands.

BAGHVAN, HIND. A gardener.

BAGHICHA, HIND. Small garden.

BAGHA ? Ficus Indica.

BAGH-AKRA BENG. Prickly Pisonia, Pisonia villosa.

BAGHANDEN, ALSO BAGHI, Palanquin. Bearer in Tinnevelly.

BAGH-ANKRA. BENG. Alangium decapetalum.

BAGHANWALLA, a town in the Salt Range, has the principal seam of tertiary coal. See Coal.

BAGHBAN or **BAGWAN.** Hind. A gardener or vendor of vegetables.

BAGH-BHERENDA. Beng. Jatropha curcas.

BAGHDAD. In L. 33° 19' 50" N., L. 44° 22' 45 E. is the capital of the Turkish province of Bagdad and has a population of 65,000. It is built on both sides of the Shat-ul Arab, the connection being established by a bridge of boats. Baghdad was built in A. D. 763 by the caliph Al-Mansur, out of the remaining ruins of Ctesiphon. It flourished under the caliphs until sacked in A. D. 1259 by Hoologoo, the grandson of Changiz Khan. It has been held by the Turks since 1638. This city is the classic scene of the Thousand and One Nights. It is unequally divided by the river, two-thirds being on the left bank, and the remainder on the right or Mesopotamia side; the town is fortified by a high brick parapet wall, flanked at intervals with bastioned towers, and surrounded by a ditch ; the citadel, which is a respectable work, is situated at the north-western extremity. The bazaar built by Daood Pasha, is one of the finest in the East, and is well stocked with home and foreign manufactures. Some of the mosques are also striking, but the rest of the buildings show, as usual on the exterior, either dead walls or ruins ; but when viewed from a distance, and especially from the river, the luxuriant date groves and rich gardens, contrasted with green domes and graceful minarets, present a rich and attractive appearance. Previously to the plague, which commenced its ravages in 1830, there were 110,000 inhabitants.

Baghdad is frequently called Babylon by the early travellers, and even by the Arab geographers. The Church of Rome still gives the title of "Bishop of Babylon" to the prelate who is placed over the Roman Catholic Christians in the pashalic of Baghdad.

The Khalifs or vicegerents who succeeded Mahomed, ruled sometimes in Baghdad and sometimes in other parts of their conquered dominions. The race of Ommiah, 16 in all, ruled from Damascus, from A. D. 661-2 to 744-5. The Abbassi, reigned at Baghdad from A. D. 749-50 to 1258-9 when Baghdad was besieged and taken by Ali Khan, (Hulagu) grandson of Changis Khan.

The houses are all provided with a Sard-ab or under ground room, and some have the Areesh or open room on the roof.

The Mostanzeria mosque is of the age of the Caliphs. The Tekieh is a monastery of dervishes of the order of the Bektashi, which stands on the banks of the Tigris, on the west side of the town, and is a good specimen of early and pure mahomedan architecture.—(*Chesney's Euphrates.*)

In the 8th century, Hindu Physicians went to Baghdad, and practised at the hospitals. Two of them named Manka and Saleb, were the physicians of Harun ur-Rashid. Nine miles from Baghdad is the small Akarkouf, the ground around the ruined pile called by the Arabs Tall Namrud, and by the Turks Namrud Tapassi. Both these terms mean the hill, not the tower, of Nimrod and the term Akarkouf or Agargouf given by the Arabs, is intended to signify the ground only, around it. It is about 9 miles from Baghdad.—(*Layard's Nineveh, Vol. II. p.* 175.)

Baghdad, the capital of a Turkish Pashalik which extends in a north west direction from the mouth of the Shat-ul-Arab, to the rocks of Merdin, the Baghdad frontier towards Constantinople. In an east and west line, it stretches from the confines of Persia to the banks of the Khabour, which separates it from the pashalick of Orfa ; (the Osrhoene of the Romans, and that part of Mesopotamia which contained the Harran of Abraham, and the famous Edessa of the crusades.) The general boundaries of the pashalick of Baghdad, may be called the Euphrates and Arabian desert of Nedjid to the west and south ; Kuzistan and the stretch of Zagros to the east ; the pashalick of Diarbekir or Hollow Mesopotami, to the north-west ; and Armenia, with the Kurdish territory of Julamerick to the north. The whole, forming a kind of irregular oval comprehending ancient Babylonia, and all Assyria Proper. That portion of the pashalik which lies north-east of the Tigris, which comprised the chief part of Assyria, is now called Lower Kurdistan ; a name not very dissimilar, as Major Rennel observes, to the old Scripture appellation for Assyria, found in the Second Book of Kings and in the Prophet Amos, both of which, probably, refer to the country east of Nineveh as the land of Kir. The rest of the pashalick lies between the widely sweeping currents of the Tigris and the Euphrates, commands the no less renowned boundaries of Babylonia, including Chaldea, its most eastern quarter. This insular country was also designated by the ancients, by the name of Mesopotamia, so denoting its situation between two rivers, and modern times have changed its appellation again ; the Arabians calling it Al Jezera, and the Persians including it within the line of Irak-i-Arabi.

During the early trade in the Persian gulf, direct intercourse was for many years maintained with the Governors or Pashas of Turkish Arabia without much consideration of their relation to Constantinople. In the year 1639 there seems to have been an English factory at *Bussora* subordinate to the factory at Gombroon and protected by firmans. But the first firman on record is one granted in 1759 (No. XL) by the Pasha. In 1765 it was proposed permanently to appoint an Agent at Baghdad, but the proposal was disapproved by the Court of Directors. In 1835 the Political Agent in Turkish Arabia, who had hitherto been under the Bombay Government was put directly under the control of the Supreme Government. In 1841 consular powers were conferred on the Agent by Her Majesty's Government.

Treaties, Engagements and Sunnuds, Vol. VII. p. 175. *Porter's Travels, Vol. II. p.* 246,281. *Mignan's Travels. p.* 90, 102. *Rich's Kurdistan. Colonel Chesney's Expedition. Layard's Nineveh. Thomas Prinsep.* See Kasr, Kirkook, Khalifah, Khalif Kufa, Mosul, Namrud. Rawlinson, Tigris.

BAGHDADI TAMAKHU, Hind. A variety of tobacco from Baghdad.

BAGHEL according to Wilson, in his Glossary of Indian Terms, are a branch of the Sisodhiya Rajputs of Guzerat, who migrated eastwards. Sub-divisions of the tribe, under different denominations are widely spread through Bundelcund, Allahabad, Benares, Gopur, Cawnpore and Farakhabad.

According to Sir Henry Elliot in his Supplemental Glossary, Baghel. Hind. Lit. Tigers' whelps, are a branch of the Solunki tribe of Rajputs, who give their name to Baghelcund, also called Rewa. It lies to the south of Allahabad. They were formerly rulers of Guzerat and some Solunki chieftains are still there. Rajah Ram Baghel protected the wife of Hamayun, Akbar's mother, and Akbar gave the tribe much influence. There are Baghels in a Bundlecund, Furrukabad, Allahabad. The Baghel chief of Rewa is a Baghel. He is the descendant of the famous Sid Rai Jyi Singh, the ruler of Anhalwar Pattan from A. D. 1094 to 1145. His whole court was visited by the Nubian geographer Edrisi. Edrisi states that Jyi Singh was then a buddhist.—*Elliot.*

BAGHELCUND, a territory in Central India, whose princes are of the Baghel or Baghela race. This territory is also known as Rewa.

BAGHI. Ar. Hind. Pers. rebellious.

BAGHLAH. Arab. A ship of the eastern seas, of the Indian Ocean and Bay of Bengal, from 50 to 300 tons burthen. The name is derived from the Arabic, and is the feminine of Baghl, a mule, but is variously written by Europeans, as Bagla, Baggalow. Wellsted supposed it to be from the hindi-bagala, the crane. *Burton's Pilgrimage, i.* 262. *Wellsted's Travels, I. p.* 16. See Boat.

BAGH-LUTA, Beng. Moonseed. Cocculus acuminatus.

BAGH-NULA. Beng. Spider-Wort. Cynotis axillaris.

BAGNU. Hind. Populus ciliata.

BAGH-NUKKOSHIM. Beng. Lablab falcatum, minus.

BAGHRAM near Charikar about 30 miles north of Kabul is supposed by Mr. Prinsep to be Alexandria apud Caucasum, in which Alexander's army passed the winter of 330—29 B. C. Greco-Bactrian coins have been found here in great profusion.

BAGHUNA. Hind. Rhus cotinus.

BAGHWAN, a territory in Baluchistan, held by the Eltaiz-Zye, a branch of the Kambarari tribe, related to the Khan of Kelat. See Kambarari; Kelat.

BAGI. Can. Sweet flag.

BAGIRETTY, a river near Plassey in Kishnagurh.

BAGLA or BAGULA. Sans. The genus Ardea.

BAGLA. See Baghlah. Boat.

BAGLAN, on the crest of the western ghats, supposed to be the original residence of the Mahrattas, who there, as a mountain race, cultivated the fertile valleys or Mawals. See India.

BAGLAST. Dan. Ballast.

BAGLUNG Chaur, a town in L. 83° 14' E. and L. 28° 24' N.

BAGLYE, a river in Sylhet.

BAGMUTTEE, a river near Mullye: the Little Bagmuttee runs through Muzuffurnugur.

BAGNA, a river near Raepoor in the Sabathoo district.

BAG-NAK or Wag-nak, amongst the Mahrattas, a weapon worn on the hand in the form of a tiger's claws, made of curved steel blades set on a bar with rings through which the fingers pass. It is struck as if tearing with claws. It was a weapon of this kind with which Sivaji struck Afzul Khan. See Bowani.

BAGON. Phillip. Balachong.

BAGOON, Beng. Common Egg-plant, Solanum melongena.

BAGOOWAL, a town in Long. 74° 30' E. and Lat. 32° 57' N.

BAGORAH a town in Rungpoor district.

BAGRAM, a town in Long. 69° 8' E. and Lat. 34° 28' N.

BAGRENDI. Hind. Jatropha curcas.

BAGRI. Hindi. According to Wilson, Bagar is the tract lying between the S. W. borders of Hariana and the Sutlej, occupied by the Bagri tribe who are regarded as Jats. Bagar is also a tract on the S. W. of Malwa; and a robber race called Bagri have settled in the eastern parts of Malwa, Hissar and Bhattiana. Sir H. Elliot says they were originally Rajputs, now classed as Jats. Some Bagri are professed robbers.—*Wilson's Glossary. Elliot's Supplement.*

BAGRI, low caste hindus of Central India, professed robbers now settled in the east of Malwa.

BAG-SIRA. Hind. Gryllus monstrosus. Locust.

BAGU. Malay. Wagu. Javanese; Gnemium gnetum.—*Crawfurd's Dic., p.* 26.

BAGUI. Philippine. Typhoon.

BAGUMPETTA, in Long. 77° 50' E. and Lat. 18° 15' N.

BAGUN, a river near Singpoor in Banda.

BAGUR, a large tract of country in Malwa, its people are called Bagri. See Bagri.

BAHA, a title applied to Sikh ascetics; both this and *Shah* (king) were frequently employed by the Sikh historians when speaking of their founder. They even style him Nanuk Narinkur, or Nanuk the Omnipresent. *—Malcolm. Macgregor's History of the Sikhs, Vol. I. p.* 48.

BAHA, a water-course natural or artificial. It is from Bahna, *Hind.* to flow.

BAHADUR. PERS. The seventh title amongst Indian mahomedans and hindus, and generally given along with other titles, as Motamid-ud-Dowlah, Bahadur; Madar-ul-Umra, Bahadur; Sir Salar Jung, Bahadur.

BAHADUR KHEYL, in Afghanistan, to the east of the Joorduk Pass. There, also at Kharrah and Lutumur, are the three Trans-Indus mines. See Khyber. Waziri.

BAHADUR SHAH, Emperor of Dehli. His name was Maazzam, he was son of Aurungzebe. After having defeated and slain his brother Azim in a battle near Agra, on the demise of his father, he ascended the throne. He died at Lahore in 1712, aged 72, after a reign of 5 years, and was succeeded by his son Ferokh-sir who tortured to death the Sikh guru Banda, a byragi ascetic, successor of Guru Govind.

BAH, A-MISR, a navigable branch from the Karun river, that parts from it 7¾ miles from Mahamerah, and runs 31 miles S. E. to the Persian gulf. See Baha; Khuzistan.

BAHAN. Pashtu. Populus Euphratica; Euphrates poplar.

BAHAN BANJAR, land allowed to lie fallow: fallow land.

BAHANGI, OR **BHANGI**, in peninsular India, a postal term for the heavier book and parcel post.

BAHAR, in Long. 85° 32' E. and Lat. 25° 11' N. The chief town of the province of Bahar.

BAHAR OR **BEHAR**, one of the ancient territorial divisions of India. It is traversed by the Ganges, and now embraces the revenue districts of Bahar, Bhaugelpoor, Durrumpoot, Ramghur, Shahabad, Monghyr, Saran, Tirhoot and Patna, an area of 5,694 square miles with a population of 2,500,000. It is now a part of the Bengal Presidency, extending to the N. W. of Bengal, on the northern slope of the Vindhya mountains, from the borders of Bundelkhand or rather Rewah and Malwah to the Gangetic plain. It includes the districts of Palawan and Ramgarh, as well as the lower half of the valley of the Son, and is separated from Orissa by the watershed of the Vindhya chain. The climate is similar to that of Orissa. It is separated from the province of Bengal by the Rajmahal hills. Bahar is watered by the Ganges, the Gandak and the Sone rivers and is traversed by the Rajmahal hills, which run in a north easterly direction towards the Ganges. The origin of the name is uncertain. Hindus assert it to be from Vihara, a monastery, but Professor Wilson supposes it to be derived from the Bhar race who are distributed through that part of the country. The Kol race also extend into Bahar. *-Wilson's Glossary.* See Topes, Vihara.

BAHARA, ALSO **BALHARA**, an ancient hindu dynasty that ruled in Guzerat and Surat (Saurashtra). The capital was Balabhipura, and the dynasty was named Bahara, Balabhi and Bala Rai. Balabhipura was destroyed by the Parthians in A. D. 524. See Saurashtra.

BAHARLOO, one of the seven Turkish tribes that supported Shah Ismael, one of the first of the Suffavean kings of Persia, about A. D. 1500. They wear the red cap, and are part of the Kazzilbash. See Kajar, Kazzilbash.

BAHARPOOR, a town in the Hooghly district of Bengal.

BAHADERPOOR, a town in Long. 87° 52' E. and Lat. 24° 24' N.

BAHADERPOORAH, in Long. 75° 53' E. and Lat. 21° 43' N.

BAHAWULPUR, a mahomedan territory lying to the east of the river Indus, north of Saurashtra. The reigning family can, it is said, trace their descent to the great caliphs of Bagdad, including "Haroun-al-Rashid." But such genealogies are always doubtful. The reigning chief at Bahawalpur according to Mr. Masson is of a Jet family, called Daoudputra, or the sons of David. They formerly lived about Shikarpur, but becoming numerous, and perhaps refractory, they were expelled; and crossing the Indus, possessed themselves of the country, where they established separate and independent chiefships. Many of their leaders built towns, to which they gave their respective names; hence Bahawalpur, the town of Bahawal; Ahmedpur, the town of Ahmed; Faizlpur, the town of Fazil; Sabzul Kot, the kot or fort of Sabzal; &c., &c., Bahawalpur is seated on the skirts of the desert. The town is built a few miles from the south bank of the Gharra river and the transition from a land of sterility and solitude to one of fertility and abundance is very striking to the traveller approaching it from the east. The Bahawalpur territory is bounded on the north by the provinces of Multan, Mankirah, and Liya. To the south it has the great desert, separating it from Jessalmir. On the east it touches to the north on the lands of the Sikh chief of Patiala, and more directly east, on the frontiers of the Rajput principality of Bikkanir. Westward it is defined by the river Indus, which divides it from Mittan Kote, and a slip of territory dependent on *Dera Ghazi Khan*; and lower down, from Harrand and Dajil, provinces of the Brahui Khan of Kelat.

Bahawalpur is remarkable for the manufacture of longees, or silken girdles, and turbans. The inhabitants of this, and all the neighbouring countries on the west and north, are principally Jut and Beloch, who profess the mahomedan religion. There are many opulent and commercial towns in the Bahawalpur dominions. Amongst the first class towns, may be reckoned Bahawalpur (the capital,) Barra, or (Great) Ahmedpur, Uch, Khanpur, &c. Amongst the second class, Chuta, (or little) Ahmedpur, Allahabad, Gugujar Walla, Channi Khandi Got, Ghazipur, Kinjer, Pularah, Murut, Moz Ghar, Gudiana, &c. Bahawalpur is seated about two miles from the river Garrah. Barra Ahmedpur from having been merely a cantonment has become an extensive and commercial town, as well as the principal residence of the Khan.

Uch is, perhaps, the more ancient of the towns in the country. The name is borne by two towns contiguous to each other. One of them, Pir-ka Uch, was bestowed on Pir Nassir-ud-din, the spiritual adviser of the Khan. Khanpur is forty cosses from Barra Ahmedpur. It is surrounded by a country amazingly fertile, and is a depôt for indigo, rice, and all kinds of grain. Chuta Ahmedpur is a fair-sized town, with good bazaar, and surrounded with mud walls. Gujugar Walla, Channi Khandi-Got, Ghazipur, and Kinjer, are all small, but commercial towns, dealing principally in grain, the produce of the country. Pularah, on the frontier of Bikkanir, has a good bazaar. Gudiana a frontier town. Murut has a trade in grain, but is of little importance as to its position. Moz Ghar is not so large a town as Murut, but its contiguous fortress is a lofty structure, built of kiln-burnt bricks. The chief fortress of the state is Durawal, equi-distant from Ahmedpur and Bahawalpur, or eighteen coss form each.—*Ephinstone's Kingdom of Caubul, Vol. i. p.* 26. *Masson's Journeys, Vol. i. p.* 17 *to* 26. See Saurashtra. Bhawul-pur.

BAHDINAN, tribe in Kurdistan, along with the Sekkir, Nur-ud-din, Shinki, Gellati, Bulbasi, Jass and Mikri, are under the prince of Amadiyah and Rowanduz, and number 4,00,000 souls. See Kurdistan.

BAHI. HIND. A ledger, ordinarily pronounced Bhy.

BAHIKA, a tribe occupying the neighbourhood of the Indus near Attok, at the time of Alexander and Chandragupta. See Kabul: Chandragupta. The *Bahika* were one of the republican [illegible] known as the Arashtra (Sans.) or the ki[illegible] the republican defenders of Sangala or [illegible] They are the Adraistæ of Arrian, who [illegible] them on the Ravi. They were known [illegible] several names of Bahika, Jartikka and Takka, from which last is the name of their old capital of Taxila or Takkasila as known to the Greeks. The people still exist in considerable numbers in the Panjab Hills, and their alphabetical characters under the name of Takri or Takni are now used by all the hindus of Kashmir, and the northern mountains from Simla and Sabathoo to Kabul and Bamian. —*Elliot.* See Chandragupta. Kabul.

BAHIRA. SANS. Terminalia bellerica. Belleric myrobolan, the fruit, is very astringent considered cooling, and given in hematuria, much used in dyeing, and in mesalihs; is common in all bazaars; and sells at eight seers for one rupee.—*Gen. Med. Top. of Ajmere, p.* 128.

BAHIR-VASI, HIND. A hindu of unclean avocations who resides outside (bahir) the town.

BAHLIM, a mahomedan tribe in Dasna and Meerut. Some of the banjara of Rohilcund, take the name of Bahlim.—*Wilson's Glossary.* A mahomedan tribe near Meerut, also Banjara tribes of Rohilcund, also a gang of thugs.—*Elliot.*

BAH-MAH-THOA. BURM. A useful timber of Tavoy.

BAHMAN, the mahomedan pronunciation of brahman. See Brahman.

BAHMAN, afterwards named Ardeshir was the son of Isfendiyar, the brazen-bodied, a prince of great renown in Persian annals. He is one of the most conspicuous heroes in the Shah Namah.

BAHMANI, a dynasty of mahomedan sovereigns who ruled in Beder, in the Dekhan. They held the country towards Gulburga, in the south-west and part of Telingana in the east. The first of the dynasty was Ala-ud din Hussain Gangawi, Bahmani. When the Brahmani kingdom of the Dekhan became dismembered at the end of the fifteenth century into the five states of Bejapore, Ahmednuggur, Berar, Golconda, and Beder; these, for 150 years, continued incessantly at war and ruined the centre of the Dekhan so that it is still with few inhabitants. The Kutub Shahi dynasty of Golconda or Hyderabad commenced about A. D. 1520. See Hyderabad.

BAHMAN SAFAID, BAHMAN SURKH. HIND. Centaurea behmen.

BAHOLI OR BHAWALI. HIND. Land about the village homestead in Kangra, &c.

BAHOR in Kangra, a kind of rock.

BAHR. ARAB. PERS. The ocean, a sea, a great river, as Bahr-ul-Yemen, Bahr-ul-Abiad the white Nile; Bahr-ul-Azrek, the blue and Bahr-ul-Aswad, the Black Nile, Bahr-ul-Kulzum, the Red Sea, Bahr-i-Oman, the Arabian sea.

BAHRAM, the name of five of the Sassanian kings of Persia, whom the Romans styled Varanes and Varanus.

Smith Mordtman.

Varanes	I A. D.	274,	271 the 4th king.
	II „	277,	274 5th styled Segan Shah.
„	III „	294,	291 the 6th king.
„	IV „	390,	389 styled Kerman Shah.
„	V „	420,	420 styled Bahram Gour.

In the reign of Bahram Gour the famous imposter Mani, founder of the sect of Manichaeans, made his appearance, and was put to death by the king. Bahram Gour, was famous for his liberty, gallantry, and love of the chase. According to Colonel Tod the darkest period of Indian history is during the six centuries following Vicramaditya, during which foreign tribes were pouring into India from the north. Doubtless many of the Rajput tribes entered India from the north-west regions about this period. Gor. Pers. and Gardha. HINDI. mean the 'wild ass,' and Bahram was surnamed Gor from his partiality to hunting that animal. Various authorities state that Bahram Gor was in India in the fifth century, and left progeny by a princess of Kanouj. A passage in an ancient Jain M. S., indicates that in "S. 523, Raja Gardha-bhela, of Cacoostha, or Sooryavansa, ruled in *Balabhipoora*." It has been surmised that Gardhabhela was the son of Byramgor, a son of whom is stated to have obtained dominion at Putun. —*Tod's Rajasthan, Vol. i, p.* 232. See Afghanistan; Sassanian Kings; Valerian.

BAHRAM, general and regent during the minority of Akbar. He was displaced by Akbar, against whom he revolted, was defeated and pardoned.

BAHRAM SHAH, an emperor of Delhi, who deposed his sister Radhia, and reigned for two years at Delhi, being then killed in a revolt.

BAHREIN, the name of two islands in the Persian Gulf.

BAHREIN, also called Awal Island on the Arabian shore, is one of the finest in the gulf. It is covered with villages and date-gardens; and has the town and fort of Medina, with about eight or nine hundred houses. Bahrein, extends from Lat. 26° 14' to 25° 46½' N. and occupies a central position in the Gulf of Bahrein, it is about 80 miles in circumference, 27 miles long and 10 broad, with a mahomedan population of about 70,000. Its pearl fishery employs about 4,500 vessels and boats. Owing to the richness of its pearl fisheries, Bahrein was long a field of contention between the different powers that towards the end of last century strove for supremacy in the Persian Gulf. In the year 1799, after having often changed masters, it was conquered by the Uttoobee tribe, by whom it has ever since been held under allegiance, at one time to Muscat and afterwards successively to the Wahabees, to Turkey and to Persia, and now in independence. It furnishes the best dates of all the land of Oman. In 1820, after the capture of Ras-ool-khyma by the expedition sent against the piratical tribes in the Gulf, the two chiefs, Abdoolla bin Ahmed and Suleiman bin Ahmed, who then ruled Bahrein conjointly, signed a preliminary engagement not to permit in Bahrein the sale of property procured by plunder and piracy, and to restore all Indian prisoners then in their possession. They also subscribed a general treaty for the pacification of the Persian Gulf. The Chiefs of Bahrein were parties to the engagement in 1847 for the suppression of the slave trade.—*Kinneir's Geographical Memoir, p.* 17. *Horsburgh. Wellsted: Aitchison's Treaties.* See Khorfaken.

BAH'RWATTIAH, (bah'r, out and wat a road). This term is applied to Kattyawar Rajpoots who on some quarrel with their landlord quit their villages, which thus lie waste, and occupy the neighbouring fastnesses from whence they make inroads until hunted down, or a compromise or settlement occur. See India.

BAHU, a land measure in Java, equal to 71 acres.—*Simmonds.*

BAHU. HIND. The arm.

BAHU-DAKA, a hindu ascetic mendicant, a Sanyasi. Wilson derives the term from bahu, many and udah a water, as such mendicants beg from every house.—*Wilson.* See Paramahansa.

BAHURA. BENG. Terminalia bellerica.—*Roxb.*

BAI, BAEE, BYE, BHYE MAHR. A lady, a mistress, a respectful address for a woman. In Bengal, a dancing girl, a prostitute.

BAIA, AR. BAI, AR. A sale, Bai-namah, a of sale. Baina Earnest money.

BAIBARANG. HIND. Myrsine Africana.

BAIBARANG—KATAI. HIND. Melissa or Nepeta.

BAIBGA? A tree of Akyab, plentiful in the Sandoway district. Used for firewood.—*Cal. Cat. Ex.* 1862.

BAIB-YAH. BURM. Conocarpus robusta.

BAID, or Bed, herbalists, who search for and sell medicines. They are often quoted as authorities for the properties of plants, but they are poor and illiterate, often beggars, They are a caste or a race. A considerable number occupy the Hyderabad country near the Bheemah. See Ved.

BAID. HIND. Populus alba.

BAIDERA. CAN? The people or trib from whom the term Pindara w[illegible]btained, and many of whom are occupied [illegible]ers on bullocks. In the many cultivat[illegible]roughout the hills which extend northw[illegible] Kapaladurga, Tippoo settled ma[illegible]baidara or hunters who received 12 pagodas a year, and served as irregular troops when required. They were excellent marksman, and in following the armies spared neither life nor property. These men were the chief instruments of Hyder and his son in the depredations of the Carnatic. There are two Baidar principalities in the Dekhan, one at Zorapore (or Baider Zorapoor) and one at Ghur-ghuntah. The men are tall and good looking fond of sport. They eat the wild hog and when I passed through were urgent for to join them in hunting it.—*Buchanan's Mysore, p.* 179.

BAIDWANA, descendants of the Chowhone or Pramara Rajpoot, who embraced mahomedanism. See Chowhone.

BAIES DE GENIEVRE. FR. Juniper Berries.

BAIGAR. HIND. In the south of India, persons compelled to give their labour as porters or for public works. It is the compulsory or statute labour of Britain.

BAIGAR. Wilson says that Baigar is a name of the Kharwar tribe, but this term is not known in the Peninsula. The Kharwar are dyers with the red dye from the Morinda umbellata.

BAIKAR. HIND. Oil from Prinsepia utilis.

BAIKAL Lake in Mongolia is an expansion of the Angura river. Its length is nearly 400 miles (according to Bell 300 miles) with 45 miles of average breadth from north to south. It has steam boats plying on it. Its seal and sturgeon fisheries are valuable, and the oil of the fish called the golomynka, the Callionymus Baicalensis is valuable. Mountains encompass the lake entirely. The river Selingue falls into it from the south-west and here the lake is about 50 miles broad; the Paeur-ku-simo from the south-east, and the Gong-ko-la (Upper Angura) from the north-east. Towards the north-eastern end of the lake is an island called O-leao-han (Olchon) about 50 lee in breadth, and 200 hundred or more in length. This island is frequented by 50 or more of the families of the wandering tribes of the Mongols and the Pu-la-te (Buraty of Bell), and they bring hither with them their horses. Baikal lake is 1,715 feet above the level of the sea, Selinghinsk, 1,779 feet, and Kiakhta 2,400 feet: consequently higher than all the towns of the Harz and the Swiss Alps. "The Baikal has many and various kinds of excellent fish, particularly sturgeon, and a fish called omully, in shape and taste resembling a herring, but broader and larger. The omully come in vast shoals from the Baikal, in autumn, up the river [illegible] ue to spawn, after which they return to the lake [illegible] that many of them are carried dow[illegible] on the surface of the stream. During the progress of the omully up the river, the inhabitants of the adjacent villages assemble with their nets, and catch as many of them as they please. On this occasion the poor take what they can use, and the rest are left upon the banks. These fishes advance up the river about 10 miles a day. On their first appearance, the report is soon spread over the country, and, in two or three hours, the people catch as many as they need either for present use or winter provisions. This fish is very agreeable food either fresh or salted. They are observed to be much better and fatter the nearer they are caught to the sea.—*Staunton's Narrative, p.* 45-53, *Timbowsky's Journey to Pekin, I,* 17-18. See Souriat; Mongol; Koulk Kouren.

BAIKIE, Dr. Robert a medical officer of the Madras army, who wrote observations on the Neilgherry Hills in Mad. Lit. Trans. Vol. IV. p. 388, and Notes on the climate of Coorg. Ibid 1836, Vol. IV. part 2. p. 338.—*Dr. Buist's Catalogue.*

BAIKUNTH, the heaven of Vishnu.

BAIL KAMBAR, the Canarese name of the Taremuk or wandering blacksmith. They wander about the Mahratta country. Wilson writes the name Bailu kanomar, Kar.

BAILUCH, a river near Chota Rewuliah in Oodeypoor.

BAINA. SANS. Andropogon muricatum.

BAINGAN. HIND. Solanum melongena, Egg plant.

BAINGANI RANG. HIND. A dull purple color, like that of the rind of the baingan fruit.

BAINGAN TAMAKU. Hind. a variety of tobacco.

BAIO-JENTI. BENG. Sesbania Ægyptiaca. PERS.

BAIRAGI. HIND. A hindu ascetic mendicant. See Byragi, Viragi.

BAIRAGULLEE, a Kafir tribe in Kafiristan.

BAIRATH, a town between Delhi and Jeypur near Bhabra.

BAIRIS, a river that issues from the Oodi-Sagur lake of Rajputanah and passes within a mile of Chitore. There are two grand reservoirs within six miles of each other, the Péshola, or internal lake, having an elevation of eighty feet above the external one, the Oodi-Sagur, whose outlet forms the Bairis. The Péshola may be called the parent of the other, although it is partly fed by the minor lake at the villa of Suhailea-ka-bari. Both are from twelve to fourteen miles in circumference, in some places thirty-five feet deep, and being fed by the perennial streams from the Aravalli, they contain a constant supply of water. From the external lake to Chitore, the fall is so slight that few locks would be required; and the soil being a yielding one throughout, the expense of the undertaking would be moderate.—*Tod's Rajasthan, Vol. II, p.* 627.

BAIRIYE. Singh. A durable wood of Ceylon, weighing 57lb. 10 oz. per cubic foot, and lasting 10 to 30 years. The tree is found chiefly near the mouths of the rivers, in the northern and western provinces of Ceylon, and its timber is used for anchors and in house-building.—*Mr. Adrian Mendis.*

BAIS, according to Professor Wilson, a numerous tribe of Rajputs, in Oudh, and at Baiswara in the N.W. Provinces who give their name to a district. They assert that they came from Manji Paithun in the Dekkhan, and that they are descendants of King Salivahana (A. D. 78) They are included amongst the 36 Royal races.—*Wilson's Glossary.*

BAIS. Hind. A species of Salix or willow.

BAIS. Hind. A verbal alteration from Vais, or Vesya, the third order of the hindus.

The bankers, merchants and shop-keepers known as Marwari, call themselves Bais or Vais. See Vesya.

BAISA Bol. See Bol.

BAISAKH, amongst Hindoos the first of their luni-solar months, April and May. On the first baisakh, is a holyday, in which hindus bathe as a religious ceremonial, in rivers, canals, at Hardwar, in the Ganges or other holy rivers.

BAISHNAVA. See Vaishnava.

BAISHEE. Beng. Willow tree. Salix Babylonica.

BAISLEE. A river near Bijowlee in Gwalior.

BAIT. Arab. A house, Bait-Ullah, the house of God, Mekka, Bait-ul-makaddas, the Holy house, Jerusalem.

"**BAIT.**" Ar. Hind, Pers. A couplet in the Arabic, Persian and Hindustani poetry of the mahomedans but the poets of Sind apply the word to their peculiar triplets. The war song or that sung in battle like the Arabic Rajaz is called "Shair" in Sind, and was performed by the Mirasi, or bard, who accompanies the chief, during the combat.—*Burton's Sind, p.* 386.

BAITARA. Sans. Dry Ginger.

BAITOOL, a district in Central India, near the source of the Taptee river.

BAIT-UL-FAKIH, an inland town of the district of Tehama, a province of Yemen. The town of Arabia, from which the coffee tree was taken to Bourbon.

BAIZ. Ar. White, a mark or signature by a feudatory mahomedan, generally *the first* part of the Arabic letter *swad.*

BAIZAH, also Baidah, Arab. An egg: also, owing to the shape, the testis.

BAIZA-BAI was born towards the close of the 18th century. Her father was Shirzi Rao, Ghatgay, a Mahratta leader and minister of great notoriety, and her brother was Hindoo Rao. She was married to Dowlut Rao Scindiah with great pomp, she was a woman of imperious disposition and masculine temper, and when her husband died childless in 1827, she assumed sovereign power. Afterwards she adopted Mugut Rao, a relative of her husband, and acted as Regent till Mugut Rao came of age, when, weary of restraint, he sought British protection, and he was placed on the Musnud in A. D. 1833. On this, Baiza Bai retired to Agra, then to Furruckabad, and subsequently to her Jaghire in the Dekhan.

BAIZAWI, author of the Nizam-ut-tuarikh, a general history of the Ghaznavides.

BAIZ-I-MURGH. Pers. Fowl's egg.

BAJA. H. Musical, Baja bajantri, musical instruments.

BAJAGRIHA. See Buddha. Sakya muni.

BAJANTRI KORAWA, a branch of the Korawa tribe, who are usually the village musicians, from Baja music. They are the Bajantri or Gaon Korawa or Sonai Kolawaru. See Korawa. India.

BAJASWA. According to Colonel Tod, the three great branches of the Indu (Lunar) Aswa bore the epithet of Mida (pronounced Mede), viz., Poora-mede, Uja-mede, and Deomede, and he supposes these to be the Aswa invaders of Assyria and Media, the sons of Bajaswa, expressly stated to have multiplied in the countries west of the Indus, emigrating from their paternal seats in Panchalica.—*Tod's Rajasthan, Vol. I. p.* 58.

BAJAWAR, also Bajor, a mountain district, in Central Asia, south of Kafiristan. See India; Kafir; Khyber.

BAJAZET or **BAYAZID ANSARI**, the founder of the Roshanai sect of mahomedans: called by the opposite sects Pir-Tarik or the saint of darkness

BYAZED or **BAJAZET**, a rocky fortress on the N. W. frontier of Persia.

BAJI RAO, the name of two Peshwa or first officers of the Mahratta sovereignty of Poonah and Satarah. Balaji Baji Rao, who succeeded his father after the battle of Paniput 1740, where the Mahrattas were defeated by Ahmed Shah, Abdallah, and the second Baji Rao, who in 1818 surrendered to the British after the battle of Ashtee near Poonah. The Peshwas had usurped sovereign power. See Mahratta. Sevaji. Peshwa.

BAJPAI, H. Vajpoyi. S., a branch of the Kanouj brahmans.

BAJRA. Hind. A large boat in use for travelling on the Ganges, called budgerow by the British. See Boat.

BAJRA, ALSO **BAJRI.** SANSC. A weapon, a thunderbolt.

BAJRA. HIND. Pencillaria spicata. This very common grain in India is not so heating as Jawari or Holcus sorghum, it is made into cakes or porridge. Sown in fields at the commencement of the rains.

BAJRANGA, a name of Bhairava, it means a thunder-bolt frame from Bajra, a thunder bolt and anga the body. See Bhairava, Bairava.

BAJRI. HIND. In the Panjab. A sort of gravel of disintegrated rock used also when ground up in forming plasters and stucco. Qu. Is it kaolin or decayed felspar?

BAJU. A maritime people in the Arru Islands, who venture far to sea. Many of the Baju remain throughout the year near the Dutch settlement of Macassar, on the south end of Celebes, where they are found very useful in carrying despatches. They are chiefly employed by the Chinese in fishing for trepang, or sea-slug, and according to the policy invariably adopted by the latter in their dealings with the natives are generally involved in debt, from which extrication is nearly hopeless. The demand against each boat or family usually averages about four hundred guilders (twenty-five pounds sterling) and, extraordinary as it may appear, no instance is on record of their ever having absconded to avoid the payment of their debts.—*Earl, p.* 335. The Baju are commonly called Sea-Gipsies. They are found in considerable numbers in the sea which lies between the east coast of Borneo, and the west coast of Celebes. They are said to have come originally from Johore, in the Malayan peninsula, the inhabitants of which they much resemble in features and habits. Many of them are settled in permanent villages on the east coast of Borneo, but the greater number live in their boats, which are from five to ten tons burden, during the whole year, and shift their position with the changing monsoon, so as always to keep on the lee side of the island, and, consequently, in fine weather. They all profess the mahomedan religion, and differ but little, except in their maritime habits, from the Malays, though they are said to adhere less strictly to the tenets of their faith. They also deal in tortoise shell, and it is said engage in piratical acts, though they do not pursue it as a profession. They also manufacture a bitter saline substance from the ashes of sea-weed, nipah leaves and the marine plants of salt marshes, with which they traffic. Such of them as reside in permanent habitations, have fowls about their houses, and, in all respects, resemble the other mahomedans. Their villages are built on posts, and always over the water, and close to the sea, or near the mouths of large rivers, in which the eastern part of the island abounds. They are expert divers, and would be useful in this manner, if European capitalists should think proper to fish the rich banks of the pearl and mother-o-pearl oysters in Malludu Bay, and amongst the islands of the Soolu Archipelago, which, from having been so long neglected, would doubtless be found immensely productive. Many of the Baju are situated in the seas of Celebes, about the Dutch settlements, and are found very useful in carrying despatches, &c.—*Low's Sarawak, p. from* 342 *to* 345. See Arru Islands. Orang-laut.

BAJUR. HIND. Pashtu, Picea webbiana, Picea pinrow, the silver fir

BAJUR, a district of Afghanistan, a country north-west of Peshawar. See Bajawar.

BAK. SANS. Ardea torra and A putea.

BAK. See Bhak.

BAKAL, a shop-keeper, a dealer.

BAKAL, low caste labourers of Canara. *Wilson.*

BAKHUR, in Bundelcund, Saugor and Malwa, a sharp plough coulter.—*Ell.*

BAK'HUR, a house, a cattle-shed.—*Ell.*

BAKAIN. HIND Melia sempervirens.

BAKA-KAI. MAL. Cucumis melo.

BAKAL. SANS. Mimusops elengi.

BAKAL. HIND. A shop-keeper [illegible] a close fisted person.

BAKAM. ARAB. [illegible] Cæsalpinia sappan.

BAKAMU CHAKKA. TEL. Cæsalpinia sappan, *L.*

BAKAPUSHPAM CHETTU. TEL. Agati grandiflorum,—*Desv. var*-albiflorum.

BAKAR. Hindi of the Cis-Sutlej, Kalesar, &c., Cornus oblonga.

BAKAR ALI, nephew of Saadat-Ali, and father of Murtuzza Ali.

BAKARJAN. BENG. Melia Bukayun.

BAKAS. SANS. Justicia adhatoda or Adhatoda gandarussa.

BAKAYUN. ARAB. Melia sempervirens.

BAKCHI. SANS. Conyza (Serratula) anthelmintica.

BAKER, W. E. A Bengal officer; a writer on various subjects connected with the Natural History and productive resources of India, chiefly contributed to the Journal of the Bengal Asiatic Society.

BAKER, author of Eight Years' Wanderings, and also the Rifle and the Hound of the Wild Spirts of Ceylon.

BAKERGANJ, a town in Bengal, 120 miles east of Calcutta. It lies between the Megna and Jessore. It is low and famed for its rice cultivation.

BAKHA. PERS. Tortoise.

BAKHIL. HIND. A miser, a close fisted person.

BAKHRA, a town in Tirhoot, where there are many mounds and remains of an ancient buddhist city, with images and inscriptions. See Kesariah; Inscriptions 374-5.

BAKHSH. Pers. from Bakshidan, Pers. A gift, donation, a donor, usually Bux. Bakhshish, a present.

BAKSHI, a military chief, a paymaster.

BAKHSHI in Turkistan, a troubadour, a wandering singer.

BAKHSHISH. Arab. Hind. Pers. A present, a donation or gratuity, in Syria and Egypt, regarded as the drink-money of Europe. The mahomedans of Syria and Egypt, shout for bakhshish on every occasion. It is seldom heard in India.

BAKHTAR ZAMIN, the Bakhtar country, the present name of the country between Balkh and Kabul. Ancient Bactria.

BAKHTEGAN, a lake in the province of Fars, which receives the Kurab river. See Fars; Iran.

BAKHTIAR, a Gilji general who under the orders of Kutub-ud-Din, about A. D. 1,201 conquered Behar; in 1203, Bengal, but in his expedition against Bhootan and Assam, he was signally defeated and driven back to Bengal, where he died from vexation about A. D. 1206.

BAKHTIARI, wandering pastoral tribes of Kurds, who take up their warm winter quarters in Arabistan, at the head of the Persian Gulf, but, in summer, travel northwards amongst the mountains of Kirman Shah. The inhabitants of Luri-Bazurg are now classed under the general title of Bakhtiyari; but originally this name merely applied to a small tribe, one of the twenty-six distinct clans among whom the province was divided. The Bakhtiyari, with their dependencies, numbered recently 28,000 families. They comprise exclusive of dependencies, three divisions—the Haft—Lang, the Chahar—Lang and the Dina ruin. The Backtiyari tribe who inhabit the mountains of Luristan west of Irak between Shuster and Ispahan, and from Shuster to near Kermanshah, often wander to other parts. They have often attacked Ispahan, Nadir Shah alone having almost reduced them. They are named Πατισχοϐοεεις by Strabo, and Patiskharis in the cuneiform inscriptions. Their manners and language have scarcely changed since the days of Cyrus. They retained their independence till about 1840 when they were conquered and decimated by the Persian government, and their chiefs kept in perpetual imprisonment at Teheran. The country is famed for the expedition of Alexander and his successors rule. The country south of the great chain probably formed the site of the ancient *Elam* of Scripture, a powerful nation in the early days of Abraham, before the kingdoms of Assyria and Babylon rose into notice in the east.—*Baron C. A. DeBode's Travels in Luristan and Arabistan, p.* 522. *Ferrier's Caravan Journeys, p.* 8-500. *Malcolm's History of Persia, II.* 465. See Fars. Kashgoi, Kurdistan, Luristan, Mamaseni.

BAKING. As mahomedans object to eat the fermented loaf bread of Europeans, the following is a receipt for unfermented bread—Flour 1 lb., bicarbonate of soda 40 grains, cold water ½ a pint, muriatic acid 50 drops. The following is a receipt for the preparation of egg or Baking Powder:—carbonate of soda, 56 lbs., tartaric acid, 28 lbs., potato flour, 1 cwt., turmeric powder ¾ lb. The egg and custard powders, used in lieu of leaven or yeast, are all combinations of carbonate of soda and tartaric acid, mixed up with wheaten flour, or other kinds of starch, and are often coloured with turmeric or chromate of lead; the latter ingredient is decidedly injurious to health, and if in large quantities, is poisonous; it is extremely doubtful how far any of these preparations may be used with safety to the public.—*Hassall.*

BAKKA MEENA. Hind. Scops Aldrovandi. See Birds, Ornithology.

BAKKAL. See Bakal.

BAKKAR, built on a rocky island opposite to the town of Rohri the fortress of Bakkar, is a fortified island, and was once held by the Durani, latterly by Mir Sohrab of Sind, and now by the British. The effect of the landscape is wonderfully increased by the beautiful stream, and the immense groves of date-trees, which fringe its banks. Every traveller will be delighted with the scenery of this favoured spot. It was ceded to the British by the Talpur dynasty, 29th Jany. 1839.—*Masson's Journey, Vol. I. p.* 362.

BAKKUL. Hind. The fibrous bark of the roots of certain trees, used in Malwa, as a cheap substitute for string and cord.—*Royle.*

BAKLA, Duk. Vicia faba, the garden bean, cultivated at the same season and manner as the kidney bean.—*Riddell.*

BAKLA KUBTI, "the bean of Pythagoras." See Lotus.

BAKLAT-UL-AHMAKA. Arab. Purslane.

BAKLAZUN, Duk? Phaseolus vulgaris. Dwarf or Kidney Bean.—*Riddell.*

BAKM. Hind. The dye wood of Cæsalpinia sappan.

BAKOH, also **BAKOU,** also **BAKU,** in the north of Persia on the Caspian, a place of pilgrimage, to which even hindu pilgrims from India resort. It is now a part of the Russian territory. It has black naphtha springs, and when the weather is thick and hazy, the springs bubble up higher, and sometimes the naphtha takes fire, and runs like burning lava into the sea. The flaming soil or everlasting fire of Bakoh is the attraction to pilgrims and is not less famous than its Naphtha springs. See Kirkook, Jogi.

BAKOT. Iron of this place is largely utilized.

BAKR-EED, also Eed-us-Zoha. A mahomedan festival held on the 10th day of the twelfth month of the mahomedan year, called Zi-ul-haj. It is the festival in commemoration of Abraham offering up his son Isaac or, as the mahomedans say, Ismael. The name of this son is not particularly mentioned in the Koran, but he is generally believed by mahomedans to have been Ishmael, not Isaac. Some Indian Shiah's however suppose him to have been Isaac; but the Persians all agree that he was Ishmael. This feast is also named E'ed-i-kabeer (the great feast) and Eed-uz-zoha (feast of daylight). In India it is called *bukreed*; and in Turkey Korban Beiram. Numbers of sheep and goats, sometimes a camel or an ox are sacrificed on this day and the flesh distributed to the people.

BAKRI, A. D. 763, originator of the Moulad-i-Sherif, recitations by mahomedans of the birth, miracles and death of their prophet

BAKS. BENG. from SANS. Bakas: Adhatoda vasica.

BAKSA. BENG. Rottbölla glabra.

BAKSAR. 25° 34'; 83° 59' in Hindustan on the right side of the Ganges, 70 miles west of Dinapore. Railway bungalow is 350 feet above the sea. Ad. Schl.

BAKSHI. HIND. Gardenia tetrasperma. See Bandaru.

BAKU. See Bakoh.

BAKUDAH, a small town near Baghdad with a bazaar and mosque, it was formerly of great importance.—*Ferrier's Caravan Journeys.*

BAKUNING, a tin mine of Banka. See Tin.

BAKUR-CHEEREA, or 'the bird's nest,' also called Jodagir or Hill of Strife Joda, on the recommendation of an ascetic, erected castle on it. Doubtless its inaccessible position seconded the recommendation of the hermit, for its scarped summit renders it almost impregnable.—*Tod.*

BAKUS. BENG. Malabar nut Adhatoda vaisca.

BAL. HIND. **BALA.** HIND, young, as balamrai a young mango grove.

BAL. HIND. **BALM.** Tel. Strength.

BAL, the sun god of the hindus, identical with the Baal god of the Egyptians and western Semitic nations. The worship seems to have been originally astronomical and subsequently physiological. In the former, the sun was worshipped direct, as yet in India, every morning, and at every solstice or sakrant. In the physiological worship, the female power of Bal was Baal-tis. These formed an androgyne divinity, and their worship had a physiological bearing. The semitic emblem of Baal was the pillar on the high places, and his companion was the bull or calf—all identical with the hindu mythology, in which Ba-al or Bal is represented by Siva, whose emblem is the pillar or lingam encircled by the yoni with the vahan bull, Nandi or Basava facing in front. See Numbers xxii. 41; xxiii. 14—28.

The worship of the god Bal seems to have been adopted in Egypt and throughout south-western Asia, and sometimes to have been considered that of the creative sun; sometimes in the form of the physiological emblems. The sun worship of India seems to have had its chief place in Saurashtra, which was in constant intercourse with Egypt and Western Asia. Under one or other of these philosophical explanations, Baal or Bal or Belus was the chief god of all the Semitic nations. The Arian Brahman seems, now, to have chiefly adopted the astronomical view: the Rajput and the southern Asiatics, the physiological, but in India at present, these philosophies are all confused. At present the *Sacrant*, or *Sivrat* (night of Siva) is the winter solstice. On it, in ancient times in India, the horse was sacrificed to the Sun, or Balnath—the lord Bal. The Scandinavians termed the longest night the '*mother night*,' on which they held that the world was born. Hence the Beltane, the fires of Bal or Belenus; the Hi-ul of northern nations, the sacrificial fires on the Aswamedha, or horse sacrifice worship of the sun, by the Sooryas on the Ganges, and the Syrians and Sauromatæ on the horses of the Mediterranean. When "Judah did evil in the sight of the Lord, and built them high places, and images and groves, on every high hill and under every tree," the object was Bal, and the pillar the lingam was his symbol. It was on his altar they burned incense, and "sacrificed unto the calf on the fifteenth day of the month" (the sacred Amavas of the Hindus). The Calf of Israel is the bull (Nandi) of Baleesar or Iswara; the Apis of the Egyptian Osiris. According to Colonel Tod, (*Tod's Rajasthan, Vol I. p.* 76) The temple of SOLOMON was to Bal, and all the idolaters of that day seem to have held to the grosser tenets of modern hinduism.—

" Peor his other name, when he enticed"
" Israel in Sittim, on their march from Nile.'

Paradise Lost, Book I.

Colonel Tod tells us that Bal-nath was the God Bal of the ancient times of India, and *the bul-dan*, was the gift of the bull to the sun, and he tells us that there are numerous temples in Rajasthan of *Baalim*; and that Balpoor (Mahadeo) has several in Saurashtra, all representing the sun. There is at Balpoor a temple to Bal-poor Siva, or Siva of the town of Bal, with its lingam yoni and ball of brass, and Bal-Eswar is the lord Bal, Maha-bal-Eswar, the great lord Bal. In ancient western Asia, Bal and the brazen calf were specially worshipped on the fifteenth of the month, and, in

India, the sacred day of Bal-Eswar, with his Vahan bull Nandi, is the amavasa the moonless fifteenth day of the month. Amongst the Rajput races, according to Colonel Tod, Har is the patron of all who love war and strong drink, and is especially the object of the Rajput warrior's devotion: accordingly blood and wine form the chief oblations to the great god of the Indus. The Gosains, and the peculiar priests of Har, or *Bal*, the sun, all indulge in intoxicating drugs, herbs, and drinks. They are usually seated on a lion, leopard, or deer-skins, their bodies covered with ashes, their hair matted and braided, with iron tongs to feed the penitential fires, and their savage appearance makes them fit organs for the command of the god of blood and slaughter. The bodies of these Gosain priests, ministers of Har, the god of war, are not burned like the hindus, but are buried, and a circular *tumulus* is raised over the remains; and with some classes of Gosains, small tumuli, whose form is the frustrum of a cone, with lateral steps, the apex crowned with a cylindrical stone.—*Tod's Rajasthan*, *Vol. I. p.* 77. *Tod's Travels*, *p.* 54, 49. *Milner's Seven Churches of Asia*, *p.* 100. *Layard's Nineveh. Sonnerat's Voyage*, I, 160. See Astarte; Ashtoreth; Baal, High claces. Sundhya: Sundevan:—*Ken.*

BAL, an ear of corn.

BAL Guz. Hind. Hair. See Shawl.

BALA, Beng. Twisted Hibiscus, Pavonia odorata, also Hibiscus tortuosus.

BALA. Duk. Cuscus root.

BALA. Hind. A child, in hinduism, a minor under 16, according to British Indian Law, under 18. Bal-gopala, name of the infant Krishna. Many hindus and many hindu towns have names beginning with Bal, sometimes referring to infancy as bal-amra or young mango grove, sometimes to a deity.—*Wilson*

BALA. Hind. Young, youthful, as Bal Amrai, a mango grove plantation. Women are termed *Bala*, if under sixteen; *prude*, middle aged; *bridu*, when forty.—*Tod's Rajasthan*, *Vol. II. p.* 251.

BALA, a grub which eats the young plants of wheat or barley when about six inches high.

BALA. See Greeks of Asia.

BALA. Hind. also BALA MUSKH, Valeriana Wallichiana.

BALABAC ISLAND, lying off the S. W. extremity of Palawan and 32 miles north from the opening between Banguey and Balambangan, it is 20 miles long, and 8 miles broad. It has a peak on its eastern shore, 1,600 feet high.—*Horsburgh.*

BALA BAGH, in Long. 70° 38' E and Lat. 34° 5' N.

BALA-BAND, Hind A fillet wrapped round the turband. The *bala-bund*, or 'silken fillet,' was once valued as the mark of the sovereign's favour, and was tantamount to the courtly "orders" of Europe.—*Tod's Rajasthan*, *Vol. I. p.* 652.

BALABANDI TIGE. Ipomæa pes-caprae, —*Sweet.*

BALA BHADRA, son of Nanda and elder brother of Krishna. He is the patron of agriculture. He was of great strength and irate temper.—*Taylor.* See Baldeva.

BALABHI. An era mentioned by Tod, as occurring in an inscription found at Somnath, commencing 318 A. D. Balabhi was destroyed in 802 Samvat, from which time it may be presumed the era was discontinued. This is also written Valabhi, and in an inscription on copper plates found there, of date A. D. 328, containing grants of lands to brahmin priests, the era used in the inscription is the Valabhi era, corresponding to the 375th of Vikramditya, or A. D. 319. Balabhi, or Balhara, in Guzerat, is represented to have been destroyed under Siliditya 3rd, A. D. 524, by a Bactro-Indian army; it is supposed to be the Byzantium of Ptolemy. In the first inscription, Dhruva Sena is a follower of Bhagavata, and Dharapattah of the sun; all the rest worship Siva. The brahmans are not spoken of with any respect or veneration, as the grants simply say, I give to such and such a brahman. Very considerable doubt exists with respect to the accuracy of the date of the inscription. The character corresponds to that of the eighth century. When Huian-thsang was at Balabhi in the seventh century, there were 100 Buddhist monasteries, and 600 Buddhist priests; and the king, although a Kshatriya, was a Buddhist. See Balabhipura. Kalian. Saurashtra.

BALABHI PURA seems to have been the ancient kingdom of Balhara, ruled by Ballabhi princes. Their chief town, Ballabhipura according to Tod was destroyed by an irruption of the Parthians, Getes, Huns or Cathi, or a mixture of these tribes, and he gives the date as A. D. 524, but Thomas gives A. D. 745, the Chinese traveller Huian-thsang visited it in the seventh century. Its ruins exist, about 20 miles west of Bhownugur in Kattiwar, near the modern town of Wallay, and the extent seems to have been from the Aravala mountains in the north to the Tapti. On its destruction Anhulwara became the seat of government, its princes bearing the name of Bala Rai and this endured until the 14th century.—(*Elliot's History of India*, *p.* 356.) Colonel Tod says (*Tod's Rajasthan*, *Vol I. p.* 102) that at all events, the prince of Deo laid the foundation of Anhulwarra Puttun in S. 802 (A. D. 746), which henceforth became the capital city of this portion of India, in lieu of *Balabhipoora*, which gave the title of *Balica-rae* to its princes, the Balhara of the earlier Arabian travellers, and, following them, the geographers of Europe.

Chittore is the capital of the kingdom of Oodypore. But its dynasty claims to be the descendants of Lob, the eldest son of Rama of the Solar dynasty. They say that they were first ruling at Balabhipore, a city in the Gulf of Cambay, but their capital was laid waste by the son of Nowsharwan of Persia A. D. 524. The Rajput queen escaped the general destruction and gave birth to a son who was named Goho, from whom the rajahs of Oodeypore are descended. Goho established the kingdom of Edur, and eight princes succeeded him on the throne.

BALACHAN. OR BALACHANG. MALAY.

Gna-pi	BURM.	Bagou	PHIL.
Trasi	JAPAN.		

A condiment in general use in Burmah, and both the Malay and Philippine Archipelago. It is prepared in various ways, but ordinarily from prawns, sardines, (Engraulis meletta,) and other small fish, pounded and pickled. It is one of the largest articles of native consumption throughout both the Malay and Philippine Archipelago, Asiatic Islands, by the Burmese, the Siamese, and Cochin Chinese. It is, indeed, essentially, the article known to the Greeks and Romans under the name of Garum, the produce of an Engraulis, a mediterranean fish. A mild description of Balachang is made in Bombay, and sold as an item in Indian oilmen's stores. 13,500 tons valued at £90,000 sterling, were exported from Burmah from 1st November 1854 to 1st November 1855. It is a kind of caviare, in general its aroma is too strong for European taste, but some of the best, from Tavoy and Mergui, which we got when there is of a reddish colour and is very similar to the anchovy paste of the London oilmen. That most in use is made of a species of very small shrimp, which, in the fine season, is found in enormous numbers on the borders of the sea: it is salted and pounded in a mortar, and being made up into little parcels is sent into the interior, where it is highly esteemed. The inferior kind is made of all kinds of little fish, shrimps, &c., in the same way, but does not bear so high a price. In another mode, the ingredients are placed in a pit to undergo fermentation, and afterwards dried, pounded and preserved with spices. With the Malays, Siamese, Burmese and Cochin Chinese, Balachan has become a necessary of life, as it serves to season the daily food of these nations. In Sumatra the red Balachang is the best and it is made of the spawn of shrimps, or of the shrimps themselves, which they take about the mouths of rivers. They are, after boiling, exposed to the sun to dry, then pounded in a mortar, with salt, moistened with a little water and formed into cakes, which is all the process. The black sort, used by the lower class, is made of small fish, prepared in the same manner. On some parts of the east coast of the island, they salt the roes of a large fish of the shad kind, and preserve them perfectly dry, and well flavoured. These are called trobo.—*Ainslie's Mat. Med. p.* 144. *Faulkner's Com. Dict: Yules' Embassy. Crawfurd's Dict: p.* 27. *Marsden's Hist. of Sumatra, p.* 63—4.

BALAD. AR. A district, a town. Balad-ul Jahaf, a district in Yemen; Ibn-ul-bald, a citizen.—See Khadim. Saba.

BALADARPADA. See Inscriptions.

BALA-DITYA-CALU. A Telugu astronomer who wrote in the 4558th year of the Cali-yug.

BALAEN, a large division of the Jats.

BALÆNA, a genus of whales, species of which occur both in the northern and the southern seas. The whale of the Greenland fisheries belongs to this genus.

BALÆNA ANTARTICA, the antartic, smooth-backed-whale, is not known in the central parts of the Pacific. But in spring it resorts to the bays of Chili, South Africa, the Brazils, Australia, New Zealand and Van Dieman's Land.

BALÆNIDÆ, a family of mammalia, of the order Cetaceæ, the whale tribe. In the Balænidæ family, there are, in India, four genera and 7 species, viz. one Balenoptera, four Balæna, 1 Physeter and one Phocæna. See Mammalia.

BALAGHAT, a geographical term to designate the table land in the south of Peninsular India. It forms the collectorate of Salem, literally above the ghat.

BALAGHU, a town in Long. 69° 52' E. and L. 34° 49' N.

BALA GHUND Pusht. Ægle marmelos.

BALAGÑINI. See Kyan.

BALA-GOPALA, SANS. From bala, a child, go, a cow, and pala, a feeder, a name of the infant Krishna. See Bala; Krishna; Rudra.

BALAGUNDA, in Long. 77° 50' E. and Lat. 10° 10' N.

BALAHARA. See Kabul.

BALAHEREE, in Long. 76° 52' E. and Lat. 27° 7' N.

BALAIS FR. Brooms.

BALAJI, a brahman chief of the Mahratta cabinet, after the accession of Sahoo, secured for himself as peshwa the entire authority and power of the state. On his demise in 1721, his son, the first Baji Rao, succeeded him. Baji Rao, was ambitious. He exacted the chouth, enforcing his exactions by predatory excursions. In 1731 Baji Rao compelled the Azof Jahi dynasty to permit him to plunder the northern parts of the Moghul territory. He crossed the Nerbudda in 1732, plundered Malwa, obtained a third of the Jhansi territory; in 1736 obtained the cession of Malwa; in 1737, he exacted from Azof Jah an assignment of all the countries south of the Chumbul, the surrendêr of Benares, Gya, Mattra and Allahabad. Baji Rao, for 20 years, headed the Mahratta confederacy, and elevated it to a high pitch of glory. He died 1740 on the banks of the Nerbudda, and was succeeded by his son Balaji Baji Rao. Baji Rao, the second son of Ragboba succeeded to the peshwa or chiefship on 24th October 1745, his cousin, tired with the state of affairs, had thrown himself from a terrace of his palace, and was killed. Nana Farnavis, however, put him aside and placed Chinnaji, Baji Rao's younger brother, on the throne, but Baji Rao again got the ascendancy, and commanded the Mahratta armies. In March 1751 he opposed Ghazi-ud-din Khan, but made peace for money. In October along with Ragoji Bhonslah, he invaded the territories of the Golcondah rulers, but made peace with Salabut Jang at Beder. See Baji Rao; Peshwa; Mahratta Governments.

BALAK. Two hills, six hundred paces asunder, in the district of Balad-ul-Jahaf in Yemen. This district is the land of Sheba being so called to the present time, Ard-us Saba, and Balkees, the queen of Sheba, built a masonry dyke or dam between the two Balak hills. It is famed in Arabian story as the Sail-ul-Arun or Sail-ul-mareb.—See Balkees. Saba.

BALA KHANA Pers. Upper story, whence comes balcony in English.—*Rich's Koordistan. Vol, I, p*, 205.

BALAL, in Karnatica, an honorific appellation.

BALAM. Hind. Cymbopogon aromaticus.

BALAMBANGAN or BALAMBANG Island, called Berobangan by the Malays, nearly 15 miles long, lies in the Balabac Strait, at the north-east side of Borneo. It was once a possession of England, and from the extreme richness of that portion of the island it might have proved a settlement of great value, but it was relinquished to Holland in 1827. It has two excellent harbours. The principal station on the peninsular tongue off the southern harbour was determined to be in Lat. 7° 12' 51 N. Long. 116° 49' 8 E.—*Horsburgh.* See Kyan.

BALAM PULI. Maleal. Tamarindus Indica.—*Linn.*

BALAND, a town in Long. 82° 10' E and Lat. 22° 19' N.

BALAND. Hind. The name of a rajah of the Khurwar tribe.

BALAND, a tribe formerly dominant in Ajoree Burhur and the southern parts of Mirzapur. They were expelled by the Chundel rajputs and now occupy Munwas a principality in subordination to the raja of Rewa.—*Elliot.*

BALANITES ÆGYPTIACA, Delli: a small thorny tree common about Delhi and up to the Jumna. Its nut is about the size of an egg, and when scooped out is filled with gunpowder as a fire work. It yelds an oil.

BALANISTUM. Hind. Flowers of Punica granatum.

BALANOPHOREÆ. This order of plants contains several parasites such as the Rafflesia, and the Cytinus hypocistus, or Cisti trees of Europe, which yields the hypocistus juice. This owes all its properties to the presence of an abundance of gallic acid.—*O'Shaughnessy, p.* 569.

BALANOPHORA is a curious leafless parasite growing abundantly on maple in the Zemu valley in Sikkim and also in the N. W. Himmalaya. This species produces the great knots on the maple roots, from which the Tibetans form their drinking cups mentioned by MM. Huc and Gabet. Dr. Hooker found a small store of these knots, cleaned, and cut ready for the turner, and hidden behind a stone by some poor Tibetan, who had never returned to the spot; they had evidently been there a very long time. The Lepcha drink out of these little [illegible] cups, which are very pretty, often poli [illegible] mounted with silver. Some are supposed antidotes against poison and hence fetch an enormous price; these are of a peculiar wood, rarer and paler-coloured. Dr. Hooker has paid a guinea for one such, hardly different from the common sort, which cost but 4*d*. or 6*d*. MM. Huc and Gabet graphically allude to this circumstance, when wishing to purchase cups at Lhassa, where their price is higher, as they are all imported from the Himalaya. The knots from which they are formed, are produced on the roots of oaks, maples, and other mountain forest trees, by the above described parasitical plant, known to botanists as *Balanophora*—*Hooker Him. Jour. Vol. I., p.* 132.

BALANOPHORA GIGANTICA is a favourite astringent remedy in Burmah.—*O'Shaughnessy, p.* 569.

BALANOPHORA INDICA. *Wall. Cat.* 7224. This is found in the forests of the Central Province of Ceylon, at an elevation of 3,000 to 5,000 feet.—*Thw. En. pl. Zeyl. p.* 293.

BALANOPTERA, a genus of the wh family, Balænidæ, of the order of Mammal Cetaceæ. See Mammalia.

BALANUS, the barnacle genus, one of the Cirrhipedia of the Articulata. Some of those found on the old timbers in India are very large.

BALAPORE, several towns in India, one is in Long. 80° 56' E. & Lat. 25° 18' N., the other in Long. 80° 59' E. & Lat. 27° 20' N., a third is 20 miles S. W. of Akolah.

BALA RAI. See Bahara ; Balabhipur Saurashtra.

BALARAMA, elder brother of Krishna. His history is greatly mixed up with mythical-legends, but he seems to have married Revati.

BALA RAMA, the eighth avatar, or incarnation of Vishnu : the word Bălă in Sanscrit meaning strength. See Avatar ; Jaganath, Krishna ; Nath Rama ; Sri Sampradaya ; Saraswati ; Inscriptions.

BALAS, called also Palash and Balsaces, the 18th Sassanian king of A. D. 484.

BALARATEE. Sans. From bălă, strength and aratee, an enemy.

BALASORE, a town and bay and river in Orissa, in the N. E. of the Peninsula of India, the entrance being in L. 21° 28' N. L. 87° 4 E. The East India Company formed a factory at Balasore.—*Horsburgh.*

BALAS RUBY; Badakh-shan, has been known since the days of Marco Polo, as the country producing the real balas ruby, as well as the lajivard or lapis lazuli, from which is made the beautiful blue pigment called ultramarine.—*Paper's East India Cabul and Affghanistan, p.* 186. See Badakhshan.

BALAST. Rus. Ballast.

BALASA PANDU. Tel. Webera tetrandra.

BALAZAR, an intoxicating electuary prepared from the Malacca bean, the Anacardium, hence the name Al-Baladuri of Ahmad.

BALBAJAMUS. Imperata cylindrica. *Beauv.*

BALBAND, the Mahratta alphabetical character.

BALBAPILLI, L. 13° 47' N., L. 79° 26' S. in the Karnatik, a small village 18 miles S. of Kodur. It is from 630 to 679 feet above the sea.

BALBEC OR BAALBEC. The Ba-alith of Scripture and Heliopolis or Temple of the Sun of the Greeks is now a ruined town. It is built on the lower slopes of the Anti Libanus, 43 miles N. W. of Damascus in Lat. 34° 1 30' N., and L. 36° 11' E. The date of its origin is unknown, but Antoninus Pius built one great temple. It was sacked in A. D. 748 by the mahomedans and finally pillaged in A. D. 1400 by Timur; now contains about a hundred Arab families, cultivators and herdsmen who reside in a quarter surrounded by a modern wall. The great temple of the sun and its buildings are at the western end, outside the modern walls. There were rows of pillars in the Corinthian order of architecture, almost all of which have now fallen, as also, have the roofs of great courts, one of them 144 feet square, and vaulted passages. On the east is a court 230 feet by 118 feet, which had arches on its western and northern sides. See Baalbec.

BALBEJ OR BALTEJ. The tariff valuation of this in Bombay is Rs. 4 per cwt.

BALBI, Gaspar, a merchant dealer in precious stones who travelled to India between 1579 to 1588.

BALCH'HARU. See Jatamansi.

BALCHIR. Hind. Nardostachys Jatamansi.

BALCHUR. Hind. Beng. Jatamansi valerian. Found near standing water at Ajmere, the roots are small and knotty, and fine, like hair, hence the name : have a sweet scent : are tasteless : used to heat, strengthen and excite the system. One tola is the dose. Are very much used also in hair mesalihs ; price two seers for one rupee. Also the name of a grass, the roots of which are like fine hair, sweet-scented, and much used in cleaning the hair. This latter grass is the Andropogon schœnanthus.—*Gen. Med. Top, p.* 128. See Nardostachys ; Spikenard.

BALCONDA, in Long 78° 28' E. and Lat 18° 56' N.

BALDEO. See Krishna ; [illegible] ; Greece ; Sati.

BALDEVA, son of a prince of Mathura and nephew of Koonti, the mother of the five Pandu brothers. Baldeva was cousin of Krishna and fled with Yoodishtra from the battle field of the Mahabarata on the Jumna, into Saurashtra. After Krishna's death, Baldeva Yoodishtra went northwards, and it is supposed penetrated into Greece. Baldeva has been deified as the god of strength and is supposed to be the Hercules of the east and west. He is still worshipped as in the days of Alexander, his shrine at Buldeo, in Vrij, his club, a ploughshare, and a lion's skin his covering.—*Tod's Rajasthan.* See Bala Bhadra, Krishna, [illegible] Polyandry, Pandu.

BALD-UL-AJAM. See Ajam. Balad.

BALEARICA. See Crane.

BALEH-BALEH. Jav. A couch.

BALE of cotton weighs differently in various countries.

In America lbs.	440		In China lbs.	240	
„ Brazil	do	180	„ Bengal	do	300
„ Egypt	do	500	„ Madras	do	300
„ Turkey	do	350	„ Bombay	do	394

BALEIA-ITHI-KANI. Maleal. Zapania nodiflora—*Linn.*

BALEA. A genus of molluscs. See Mollusca.

BALEAN. See Kaya Balian.

BALEL, of Kashmir, Coriaria Nepalensis. See Tadrelu.

BALELA. Hind. Terminalia bellerica.

BALELA SUJAH, small black myrobalan, fruit of the Terminalia citrina.

BALENOPTERA. A whale or rorqual was stranded about 1836 upon Juggoo or Amherst

Island, S. of Ramu island. Each of the rami of its lower jaw measured 21 feet in length, minus an inch or two.—*Beng. As. Soc. Jour. No.* 4, *p.* 414. See Balæna.

BALEOKOURAS. See Kalian.

BALESAR. A sub-division of the Gujar tribe.

BALESHWAR, 19° 26′; 74° 10′, in the Dekhan, 10 miles S. of Sangamner, at the pagoda on the hill, it is 3,827 feet above Colaba Observatory.

BALESSAN. EGYPT. Opobalsam.

BALESWARA, a name of Siva. See Bal. Yavana.

BALFOUR, **EDWARD**, a Madras medical officer, furnished several articles to current literature. Editor of a Cyclopædia of India and of Eastern and Southern Asia, wrote on the influence of trees on the climate of a country: the Statistics of Cholera: the localities exempt from Cholera: the commercial products of the Madras Presidency: the Timber trees, Timber and fancy woods of Eastern and Southern Asia: On Cholera at Thayetmyoo in Madras *Quarterly Journal of Medical Science, Vol. VII. p.* 308. On vegetables for Europeans in Burmah. Ib. viii. p, 216. On typhoid remittent fever at Bangalore. Ib. IX. 285. On the health of Troops at Secunderabad. Ib. X. 261. On the Cantonment of Trimulgherry: In 1851 he instituted and till 1859 conducted the Government Central Museum, Madras, and in 1865 he formed the Mysore Museum at Bangalore. The Madras mahomedan Library owes its origin to him, and the introduction of English into the Madrassa-i-Azam. He published the Guldastah i-Suhn, or selections from the Persian and Hindustanipoets; published in diglot Hindustani, Tamil and Telugoo several editions a Statistical Map of the World. Translated and published Conquest's Midwifery and Tate's Astronomy. He was the Political Agent at the Court of the Nabob of the Carnatic, Persian and Hindustani Translator to Government, Commissioner for Investigating the Debts of the Nabob of the Carnatic, and Secretary to the Committees for the Great Exhibition of 1851, for the Paris Exhibition of 1855, and for the Madras Exhibitions of 1855 and 1857.

BALFOUR, Dr. Francis, Bengal Service, wrote on the Arabic poets—*As. Res., Vol. ii.* 805. On tides of the barometer, 1794.—Ibid, Vol. iv. 195. On the effects of Sol-lunar influence on fevers.—Ibid, Vol. viii. 1. On the Persian and Arabic Grammar.—Ibid, 889, and published the Insha-i-Harkern.—*Dr. Buist's Catalogue.*

BALFOUR, Major General George, C. B., an officer of the Madras, and afterwards of the Royal Artillery. He served with the Malacca Field Force in 1832-33; as Brigade Major in the campaign against Kurnool in 1839 and was present at the taking of Zorapore on the 18th October 1839; served as Staff Officer of the Madras Forces in the war against China, in 1840-1-2, and was present at the capture of Chusan on the 5th July 1840; Canton 25th May 1841; Amoy 26th August 1841; Chusan 1st October 1841; Chinghae, 10th October 1841; Ningpo, 13th October 1841; Ningpo 10th March 1842; Tsekee, 15th March 1842; Segaon, 15th March 1842; Chapoo, 18th May 1842 Woosung, 16th June 1842; Shanghai 19th June 1842; Chin-keang-koo, 21st July 1842; Nankin, August 1842; Yang-tse-kiang river September 1842; and received the Chinese medal. He was consul at Shanghai for many years, was employed as a Commissioner on the Madras Public Works Establishments, but his last labours in India from 1859, to 1862 were as Chief of the Military Finance Department of India. Towards the beginning of 1859 the last embers of the mutiny were just being trodden out; peace had been restored, but with peace had not come prosperity, for the British Empire in India had been saved from the perils of revolt and rebellion, to be compelled to struggle a second time for life against the dangers of bankruptcy, as the sepoys' revolt had burthened India with a debt, scarcely less to be dreaded than the dangers it had escaped. The large powers which, during the emergency had of necessity been entrusted to departments, and to Divisional and Station Officers, were still being exercised. Extra establishments, no longer necessary were being kept up; contracts were being renewed at war prices; and from the nature of the circumstances, the army was the chief source of expense. At this juncture Colonel Jameson, of the Bombay Army, Colonel Burn of the Bengal Army and Colonel Balfour, C. B. of the Madras Artillery were formed into a Commission on the military establishments of the country. They first examined into those of Bombay then visited Madras and finally reached Calcutta in the beginning of 1860, from which, before many months were over, Colonels Jameson and Burn left in ill health leaving Colonel Balfour to the entire work. A Military Finance Department for final control and audit was then formed, of which he was appointed chief, and from that date the whole of his efforts were directed to bringing the army military establishments down to the peace scale. The numerical strength of the army sanctioned on the restoration of peace after the revolt, was for Bengal 1,13,095; for Madras, 55,125; for Bombay, 39,270, or total of 2,07,490; of whom 71,121 were Europeans and 1,36,369 Natives. Much of the decrease which he effected in the charges, was obtained by necessary reductions; In the account establishments, alone, of the Bengal Commissariat and Pay Departments, the annual saving effected by beneficial changes amounted respectively to £7,000 and £5,000, total £12,000. Prior to the revolt of 1857, the military charges of India were £11,500,000. The European army had been lower than in any year since 1816; but, by the beginning of 1859, this charge had risen to £21,000,000 when the Military Finance Commission was established. The military estimates for 1860-61, including the carriage department were reduced to a trifle over £16,000,000, and the Indian Revenue was £39,000,000. But in the following year Mr. Laing, the Financial Member of the Supreme Council, intimated that the Military Finance Department had revised the estimates with great care, and they were stated at £12,850,000 or £2,479,000 lower than in 1860-61. And Mr. Laing further added that £12,199,242 was the estimated cost of the military establishments as fixed permanently for India, only that, in the year 1861-2, reduction of items costing £600,760, could not be completed. The 1861-62 estimate, therefore, was to that amount higher than the estimated permanent expenditure, so that the actual diminution from 1860-61 to 1861-62, in the cost of the army, was £3,220,000. It was further expected that the annual military charges would be brought down to twelve millions in India and two millions in Britain. Mr. Laing when submitting his budget estimates and explaining the changes in operation, stated that the future history of India would not be complete, without mentioning the successful labours of Colonel Balfour, and the most recent writer, the Hon'ble Mr. Thurlow, who, as Private Secretary to Lord Elgin, had rare opportunities of ascertaining and judging of events, at pp. 29 and 30 remarks that when the Military Finance Department was established after the revolt of 1857, in order to ensure economy in military expenditure, General, then Colonel, Balfour was selected for the sole controul of this department, under the personal authority of Lord Canning. He was, adds Mr. Thurlow, a man of obstinate ability, and was armed to the teeth with power and promise of support. He conducted the work of pruning with a knowledge of detail only exceeded by his zeal in execution, and Lord Elgin wrote on Colonel Balfour's return to Britain, that a man who, right or wrong, had saved his country several millions well [illegible] some reward. From the embarrassed [illegible] of the finances, the condition of India, at [illegible]; was critical: and when the task was completed; the Government of India bore ample testimony to the important services which resulted from his labours The Commission first assembled on the 18th July 1859, and early in 1860, Colonel Balfour was left alone, but so early as 1861, Sir Charles Wood showed that the reductions ordered by the Government of India, were expected to amount in the year 1860-61, to £2,500,000 which, with those of the previous year would make an estimated saving in military expenditure alone of £6,000,000, and he added that if the reductions for 1861-62 were equal to those of 1860-61 and the produce of new taxes came up to the estimate, the expenditure and income of 1861-62 would be balanced—When the accounts were made, the deficit of 1861-62 was only £50,678. To admit of an examination of the results of Colonel Balfour's labours the following tabular statements are given showing the increase and decrease of the expenditure during his Chief-ship of the Military Finance Department,

Years ending April 30	In India. Revenue.	In India. Expenditure.	In India. Deficiency.	Home charges.	Net deficiency.
	£	£.	…	£.	£.
1857-1858	31,706,776	35,078,528	3,371,752	6,162,043	9,533,795

	1866-1867	13,181,210

Martin's Statesman's Year Book 1864, 5, 6, 7, 8 and 9.

It will be observed that the military expenditure in the year 1858-59 was 15½ millions Sterling It rose to 21 millions in 1859-60. But from that year Colonel Balfour's labours began to be felt.—the military charges were reduced to £20,909,566 in 1860-61—to £13,681,900, in 1861-62, and to £12,697,069 in 1863-64. Since his return to Britain, he was, in 1866, employed on the Recruiting Commission in England. His voluminous and minute evidence before Lord Strathnairn's Committee led to his nomination in 1867 as Assistant to the Controller in-Chief at the War Office, to assist Sir Henry Storks in the re-organization of the War Office Departments, where he was remarkable for energy in meeting difficulties and indomitable perseverance.—*Martin's Statesman's Year Book 1864 to 1869.* *Thurlow's Company and the Crown, pages 29 and 30 West's Sir Charles Wood's Administration, London 1867. Home News, 19th Feby.* 1869, *p*, 33. *Madras Army*

List. Minutes of Lord Canning, Sir Bartl Frere, 11th March 1862, *of the Hon'ble S Laing and Sir Cecil Beadon, 7th April* 1862 *of Sir R. Napier, 9th April* 1862 *and Earl of Elgin and Kincardine 10th April* 1862.

BALGHAR. HIND. Russian leather.

BALHARA, According to Elliot, (*Elliot's Hist. of India*) an ancient kingdom mentioned by the merchant Sulaiman. The Balhara seem to represent the Ballabhi sovereigns of Ballabhipura who were succeeded by the Bala princes of Anhalwarra Pattan. Their territories included the country of Lata, or Larike, on the gulf of Cambay. According to Colonel Tod (*Tod's Travels, p.* 147-48.) Balhara was a title assumed by the successive sovereigns of Saurashtra. He says the earliest of the tribes which conquered a settlement in the peninsula of Saurashtra was the Balla, by some authorities stated to be a branch of the great Induvansa, and hence termed Balica-putra, and said to have been originally fromBalica-des, or Balkh, the Bactria of the Greeks. The chief of Dhank is a *Balla.* The Balla pays adoration almost exclusively to the sun and it is only in Saurashtra that temples to this orb abound ; so that religion, tradition as regards their descent, and personal appearance, all indicate an Indo-Scythic origin for this race, and in order to conceal their barbarian (*mhletcha*) extraction, the fable of their birth from Rama may have been devised. The city of Balabhi, written Wulleh in the maps, and now an inconsiderable village, was said to be twelve coss, or fifteen miles in circumference ; there is a Sun-temple at Baroda, dedicated to Surya Narayana and in Col. Tod's time, was the object of worship of the prime minister of the Guicowar, who was of the Purvoe caste, descended, from the ancient Guebre. There is also, a Sun-temple at Benares.—See Balabhi, Bednore, Inscriptions, Kalian Mewar.

BALHARY, a town in Long. 91° 49' E. and L. 23° 26' N.

BALI, in all peninsular India and in Ceylon, in the religious rites of the people, means a sacrifice, and their sacrifices are performed to local deities, to earth and air deities, to evil spirits, to the manes of deceased ancestors and to the hindu deities Siva, Vishnu, their consorts and incarnations. Bali is the word used in Ceylon, to express the worship of the heavenly bodies. The victim sacrificed is generally a cock, and Baliya are clay images, supposed to represent the controlling planet of the individual, and are destroyed at the conclusion of Bali ceremonies. In India, Bali, Bali Akhi, Bali-Dan, and Rakta-Bali S. are sacrifices of flowers, animals and other articles offered to an idol. Also, food offered to created beings, in small quantities thrown up into the air. In Canara, a woman by eating of Bali-akhi food, assumes the profession of a prostitute. The gifts to Vishnu are rice, flowers, curds, fruits, but to Siva and Durga are goats, sheep and buffaloes.—*Wilson.* See Sacrifices, Basava, Deva, Dasa, Morli, Jogin.

BALI. SANS. From Bala SANS. strength.

BALI, an island in the Eastern Archipelago. According to Mr. Earl, Bali Island, continues to indicate its Indian origin, and, with a small portion of Java, the Battas in Sumatra, the Philippine Islanders, the Dyaks of Borneo and the rude tribes of the interior of the Malayan Peninsula, exhibit hindu elements, and their religion may be styled a degraded hinduism. The Balinese entertain great aversion to a maritime life, and are more rarely to be met with at the European ports than the natives of the other islands to the eastward. They are fairer in complexion, stouter in frame, and more energetic in their dispositions than the Javanese, and in appearance and dress bear a great resemblance to the natives of Siam, from whom it is probable that they are descended. The entire population of Bali, amounting to about one million, profess the hindu religion, and the burning of widows amongst them is carried to an extent unknown even in continental India. The slaves of a great man are also consumed upon his funeral pile, and when the immense annual loss of life produced by these frightful practices is considered, it is surprising that the sland possesses so large a population. The widows and some slaves of Rajahs burn with their husband's corpse, but other widows burn or are dispatched with a kris. Captain Keppell mentions that Bali is the only island n the whole Archipelago where the two great forms in the Indian religions—the rahminical and the buddhist exist together undisturbed. The Balinese are an independent, nd comparatively civilized race, and very ealous of the encroachments of their powerful eighbours : the consequence is that Bali has been the scene of recent wars ; in the first the Balinese had some advantage. It has inland akes, or reservoirs of water, situated several thousand feet above the level of the sea. These akes all contain excellent fresh water, and are said to have tides whose rise and fall correspond with that of the sea. This is curious if true. Its surface is highly cultivated and is divided nto small patches for irrigation. Its population is said to be 700,000 or 480 to a square mile. Bali, Borneo, Java, Timor, the Philippines, the Moluccas and New Guinea possess almost similar climates, but there are great differences in their animal productions. In Bali are the barbet, fruit thrush and wood-pecker. In Lombok, the cockatoo, honey-sucker, and brush turkey. In Java and Borneo, are many kinds of monkeys, wild cats, deer, civets and many varieties of squirrels. In the Celebes and Moluccas the prehensile tailed cuscus is the only terrestrial animal seen except pigs and deer. In the western Archipelago are the wood-pecker, barbet, trogon, fruit thrush and leaf thrush, but to the eastward these are unknown and the lori and honey-sucker are the most common. But the natural productions of Borneo, Java and Sumatra, have a considerable resemblance. Sumatra has the Indian elephant, the tapir and rhinoceros; Borneo has the same elephant, and tapir; one of the Javan rhinoceros is different, but another occurs in Asia and the smaller mammals are generally the same in the three Islands. The fauna of Borneo and Celebes differ extremely, and this difference continues to the south, the line of separation passing between Bali and Lombok, though these two islands are only fifteen miles apart.—*Earl: Keppel's Ind. Arch., Vol. ii. pp.* 143-386-389. See India, Inscriptions, Siam, Sapi.

BALICA-RAE, a branch of the lunar race. Colonel Tod claims to have discovered the sites of several ancient capital cities in the north of India; of Soorpoor, on the Jumna, the capital of the Yadu; of Alore, on the Indus, the capital of the Soda; of Mundodri, capital of the Purihara; of Chandravati, at the foot of the Aravulli mountains; and Balabhipoora, in Guzerat, capital of the Balica-rae the Balhara of Arab travellers. He imagines that the Balla rajpoot of Saurashtra may have given the name to Balabhipoora, as descendants of *Balica*, from Sehl of Arore. The blessing of the bard to them is yet, *Tatta Moottan-ka Rao*, 'Lord of Tatta and Mooltan, the seats of the Balica-putra: and he deems it not improbable that a branch of these, under the Indian Hercules, Bala Ram, who left India after the Great War, may have founded Balich, or Balkh, emphatically called the 'Mother of Cities.' The Jessulmer annals assert that the Yadu and Balica branches of the Indu race ruled Khorassan after the Great War, the Indo-Scythic races of Grecian authors.—*Tod's Rajasthan, Vol. I, p.* 42.

BALI-PRATIPADA, a hindu festival in commemoration of king Bali being sent to Patal, held about the last days of October. It seems to relate to some great war against the ancient races of India.

BALI-KOMMA. Tel. Opilia amentacea, *R. ii.* 87.

BALISTES, the File fish of the South Seas.

BALIYUS, a common term in the Turkish and Persian dominions, for a consular functionary. It is not an oriental word; and it is supposed that it is originally Venetian, possibly from the Greek basileus.

BALJA. Tel. A large tribe of Sudras, scattered through Telingana. A few of them are foot soldiers, but the majority are occupied in agricultural labour: a Balja man is Balja-vadu, plural Balja wanlu.

BALJAWAR. Lieutenant Wood states that at Baljawar, one day's journey north of the Oxus, is a lead mine, so rich, that the people who work at it for two months in the year are said to be able to live on the produce the remaining ten months, and that in the immediate vicinity of this is a large hill, called the Koh-i-meeriah, from which is extracted a coal of a good quality, much resembling the Bovey coal of England, and used as firing by the inhabitants of the neighbourhood. A specimen of the coal, with a few details respecting the formation in which it occurs, were transmitted to Captain Burnes. Silk is a commodity at present produced in abundance, and which could be cultivated, if desirable, to an almost indefinite extent. The vale of the Oxus seems peculiarly adapted to its produce, and the best specimens in this market uniformly come from Koubadian and Huzrat Imam, on its north and south bank. The silk of Bokhara is spoken of as being still better.—*Papers. East India, Cabul and Affghanistan, p.* 186.

BALKASH, a lake of Central India. See Visvamitra.

BALKEES, the Queen of Sheba. See Saba.

BALKEES, who succeeded her father Hodhad, in Yemen, was properly named Balkama or Yalkama. Her existence has given rise to numerous fables, and amongst others that she was the Queen of Sheba who married Solomon. This Balkees lived about the commencement of the Christian era, and she repaired or consolidated the dam of Mareb.—*Playfair.* See Balak. Samarcand.

BALKH is in Lat. 36° 48' N. is the ancient Bactria and is about 200 miles to the N. W. of Cabul. The Province of Balkh, was formerly included in Khorassan. It is bounded on the N. E. by the Oxus, E. by Koondooz, W. by Khorassan and S. W. by the mountains of Hazara and the independent state of Mymuna. To the S. E. the country is cold and mountainous; but the N. W. parts of it are flat, sandy, and exceedingly hot in the summer. It is tolerably well-peopled by Usbeck, Afghan, and Tanjet or Tajik, who partly dwell in villages, and partly roam with their flocks in search of pasturage. The Usbeck are simple, honest, and humane; but the Tanjet are a corrupt and dissolute race of men, addicted to vices. Balkh, is regarded by the Persians as the ancient source of religion and polite education. Balkh is now in the dominions of the king of Bokhara. Its ruins extend for a circuit of 20 miles around. By Asiatics, Balkh is named Amu-l-Bălăd, the mother of cities. It is said to have been built by Kaiamurz of Persia. It was conquered by Alexander and included in Bactria. In 1830, its population was only about 2,000. Balkh stands on a plain about six miles from the hills. Its climate is very insalubrious. It is well irrigated by means of aqueducts from a river. It is built on a gentle slope which sinks towards the Oxus about 1,800 feet above the sea. Mr. Moorcroft is interred outside its walls, but he died at Andkhui. It has repeatedly sent out conquerors, and been conquered. Arsaces I is described by some as a native of Sogd; by others as of Bactria, but by Moses of Chorene, as of Balkh, and Moses adds that the dynasty was called Balkhavensis or Pahlavian. He used Greek only on his coins, and in his public letters and correspondence only, with the head of the sovereign on one side. Only one coin has a lingual inscription. The last of the dynasty, Arsaces Artabanus, became involved in a war with Rome, but was ultimately slain at Balkh, by one of his Parthian officers, Ardeshir Babekan, or Artaxerxes.—*Kinneir's Geographical Memoir, p.* 187. *Chat-field's Hindustan, p.* 31; *Kinneir's Geographical Memoir, p.* 187. See Greeks of Asia; Kabul, pp. 435-437; Persian kings; Arsacidæ; Cush, India, p. 309; Kabul, pp. 437,438,440; Koh, Mongol, Persian kings, Visvamitra, Uzbek. Kelat, p. 495.

BALKHAVENSES OR PAHLAVIAN. See Kabul.

BALKO-BANSH. BENG. Dendrocalamus balcooa.

BALLA, a Scythic race formerly ruling in Saurashtra. All the Rajput genealogists, ancient and modern, insert the Balla tribe amongst the Rajculas. The byrd, or 'blessing' of the bard is "Tatta Mooltan ca rao," indicative of their original abodes on the Indus. They lay claim, however, to descent from the Sooryavansi, and maintain that their great ancestor, Balla or Bappa, was the offspring of Sava, the eldest son of Ram; that their first settlement in Saurashtra was at the ancient Dhank, in more remote periods called Mongy Puttun; and that, in conquering the country adjacent, they termed it Baleakheter (their capital Balabhipoora), and assumed the title of Balla-rae. Here they claim identity with the Gehlote race of Mewar: nor is it impossible that they may be a branch of this family, which long held power in Saurashtra. Before the Gehlotes adopted the worship of Mahadeo, which period is indicated in their annals, the chief object of their adoration was the sun, giving them that Scythic resemblance to which the Balla have every appearance of claim. The Balla on the continent of Saurashtra, on the contrary, assert their origin to be Induvansa, and that they are the Balica-pootra who were the ancient lords of Arore on the Indus. It would be presumptious to decide between these claims; but Colonel Tod ventures to surmise, that they might be the offspring of Sehl, one of the prince of the Bharata who founded Arore. The Cattis claim descent from the Ballas an additional proof of northern origin, and strengthening their right to the epithet of the bards, "Lords of Mooltan and Tatta." The Ballas were of sufficient consequence in the thirteenth century to make incursions on Mewar, and the first exploit of the celebrated Rana Hamir was his killing the Balla chieftain of Choteela. The present chief of Dhank is a Balla, and the tribe yet preserves importance in the peninsula.—*Tod's Rajasthan, II. p.* 112. See Balhara.

BALLA, several places in India, of this name, respectively, in Long. 72° 28' E. and L. 25° 48' N.; in Long. 89° 43' E. and Lat. 26° 48' N.; in Long. 89° 10' E. and Lat. 26° 20' N., and a pass in Long. 89° 20' E. and Lat. 26° 51' N.

BALLABHA. See Balabha. Balhara. Inscriptions, p. 391.

BALLABRAI DROOG, in Long. 75° 29' E. and Lat. 13° 8' N.

BALLADS, those in the third book of the Rig Veda, are all attributed to Visvamitra or his successors.—*Bunsen.*

BALLAI OR BALLATI, HIND. The shepherd of the village community of India, who drives the village-flock to the common pasturage; and, besides his *seerano* has some trifling reward from every individual. It is his especial duty to prevent cattle-trespasses.—*Tod's Rajasthan, Vol. II. p.* 596. *Bara Ballaiti.*

BALLAJI, an incarnation of Vishnu with shrines at Punderpoor and Tripaty. The brahmans of Poona gave Major Moor the following particulars of the Avatara of Vishnu, which they call Ballaji. "In Sanskrit this Avatara is named Venkateish; in the Carnatic dialect, Terpati; in the Telinga country and language, Venkatramna Govinda; in Gujerat, and to the westward, Talkhur, or Thakhur, as well as Ballaji: the latter name obtaining in the neighbourhood of Poona, and generally through the Mahratta country. This incarnation took place at Tripaty, in the Carnatic, where, in honour of Ballaji, is a splendid temple, very rich, and much respected. Formerly, it was under control of the British who were said to derive from it and its dependencies an annual revenue of one lac and twenty-five thousand (1,25,000) Rs., about twelve thousand pounds sterling. It is related, that all acts of this temple, to which an extensive district is attached, are carried on in the name of Venkatreddy-dessye, another appellation for this Avatara. Brahmans and other hindus in the Carnatic, are sometimes sworn in the name of Venkatesh. The temple is built of stone, covered with plates of gilt copper, and is held in high estimation; said, indeed, not to be of mortal manufacture. Pilgrimages are made to Tripati, however, from all parts of India, especially from Gujerat, the trading inhabitants of which province, of the tribes of Bania and Battia, and others, are in the habit of presenting five or ten per cent. of their annual profits to this temple, whose deity appears to be the tutelary patron of traffic: rich gifts and votive offerings are likewise received from other quarters. In this avatara, or, as being of inferior importance, more strictly, perhaps, called avantara, (see Avatar) Vishnu, in his form of Ballaji, was attended by his Sacti, Lakshmi, and by another wife, Satyavama, and they are generally seen with him, as well in his avatara of Krishna, with whom Satyavama appears to have been a favourite, we find her with Lakshmi, in immediate attendance on her divine spouse in his paradise of Vaikant'ha, as well as participating with her favoured associate in promoting the tranquillity of the Preserver, while reposing on Sesha, in Chirasamudra, or the sea of milk.—*Moore's Hindu Pantheon*, p. 415. See Tripati.

BALLAKHOOR, a river near Purneah.

BALLAM or **VALLAM**, the great canoe of Ceylon, usually made from the Angelly, Artocarpus integrifolia or Ahir-suta. See Boat.

Heavy substances, iron, stones or heavy cargo placed in ships, holds to trim and steady the ship.

BALL COAL. The coal of Burdwan, which occurs in the form of rounded masses, was so termed by Mr. Piddington.

BALLI, a Tamul Raja of Mahabalipur in the Carnatic.

BALLIAH, three towns in India, viz., in Long. 84° 8' E. and Lat. 25° 45' N., a second Ballia in L. 86° 19' E. and L. 21° 41' N. a third in Long. 88° 0' and L. 22° 30' N.

BALLIAPATAM RIVER, on the Malabar Coast, 8 miles from Mount Dilli, is only navigable by boats.

BALLIAPUTTAM, or **BALORT**, in Long. 75° 24' E. and Lat. 11° 57' N.

BALLIE, a river near Billaspoor in the Umballa range.

BALLOON VINE. Eng. Syn. of Cardiospermum halicacabum.

BALLOOT. Hind. Pers. Galls. Gallnuts.

BALLORA, the name given by the people to the caves known to the British as Ellora. It is also called Yerula.

BALLOTA NIGRA W. Black Horehound is the Balloté of Dios-corides and the Ballota of Pliny B. Hispanica, Linn. Has been introduced into India.—*Voigt*, 461.

BALLS AND BATS. These materials for the cricketers are imported wholly from England, and in the four years, 1852 to 1856, Madras received to the value of Rs. 13,938.

BALLUSU-KURA. Tel. Canthium parviflorum.

BALM, a name applied to several vegetable products. Melissa officinalis of the S. of Europe is the Arabian or common balm, Calamintha nepetha is field balm; and C. officinalis is the mountain Balm. All these are natives of Great Britain, and only one M. officinalis is known in India. The resin called Balm of Gilead, noted in Scripture, is obtained from the Balsamodendron Gileadenese, which is a synonym of B. Opobalsamum and this resinous product is also known as Balm of Mecca. *pers. East* land the plant known as Balm of Gile[illegible] Abies Balsamea.—*Hogs. Veg.* [illegible] p. 576. See Evergreens, Abies Balsame[illegible] Melissa Officinalis, Balsamodendron.

BALM. Melissa officinalis, *Var.*

Baklat ul Faristum	Arab.	Badranj buyeh.	Pers.
Mekkah Sabsah	Duk.	Parsi kunjam	
Arabian balm	Eng.	,, koray	Tam.
Tzeri	Heb.		

The balm is alluded to in Gen. xxxvii, 25 xliii, 11; Jer. viii, 22; xlvi, 11; and li, 8.; and in Ezekiel xxvii, 17. It is a pot herb, the young tops and leaves are used in cookery, and, when dry, as tea; raised from seed cuttings, &c. Like all pot herbs it should be cut, to dry, when in flower, and dried in the shade.—*Jaffrey. Ainslie.*

BALM OF GILEAD. See Gums and Resins.

BALNA. Mahr. A woman's name, meaning little one.

BAL-NATH, the deity worshipped by the Saura races in Guzerat identical with the Syrian Bal. The Bul-dan, or sacrifice of the bull to Bal-nath, is on record, though now discontinued amongst the hindus. See Baal; Bal.

BALO. Jav. Lac.

BALOCH. See Baluch.

BALOLO, a name of Skardo. See Skardo.

BALOO. Sans. Sandy. Baloo-desa would be the Persian Regist'han, or desert, very applicable to Arabia Deserta.

BALOOK BALOOK in Long. 121° 50' E one of the westerly of the Philippine Islands, is a considerable island, with sloping land at its northern part.

BALOR HILLS. Fossils are found in these hills. See Balti. Skardo.

BALOTTA. See Kol.

BAL-RAKSHA. HIND. Gnaphalium.

BALOUJE. See Kelat.

BALSAM, a flowering plant, of the genus Impatiens, 76 species of which are known to occur in India and China. Towards the close of the rains, the whole of the Western Ghauts of India, the Syhadri range, are covered with the balsam, the valves of the ripe fruit opening at the slightest touch and expelling their seed, from which peculiarity, the term Impatiens has been given to the genus. It is a pretty sight to see the hills for miles clothed with flowering balsams. Balsams, on the Khasia Hills, are next in relative abundance (about twenty-five), to the orchids, both tropical and temperate kinds, of great beauty and variety in colour, form and size of blossom. In India, Balsams require to be sown thinly in a box or seed pan; after the plants are 2 or 3 inches high they should be transplanted out singly in well manured soil, if to be grown in pots, they should be put in small sized ones at first and re-potted into larger, when requisite, which will be, when the small pots are filled with roots. The soil best adapted for culture is, 2 parts strong loam approaching in appearance to brick earth, and 2 parts well decayed manure, with a little lime, which will aid in preventing mildew, so destructive to the Balsam: the pots should be well drained and the plants must never be neglected in watering; seeds may be sown every month.—*Hook. Him. Jour.* 11. 281. *Riddell's Gardening. Voigt.* 189-190. See Impatiens.

This term like the English balm, is given to the products of several vegetables, not one of which grow in South Eastern Asia, although several of them are imported into India for medicinal purposes, particularly, Balsams of Copaiba, Peru, and Elemi. Several balsamic substances are obtained in India, and Western Africa, such as Storax and Liquidamber from the genus Liquidamber, Frankincense, olibanum and Bdellium are from species of Boswellia. Myrrh and Balm of Mecca are from species of Balsamodendron. The word Balsam, according to Calmet, is supposed to be derived from Baal-shemen, Royal oil. Brazilian Elemi, called also, Accouchi Balsam; is a resin, it is obtained from the Icica heterophylla, Balsam apple is the fruit of the Momordica of Syria and is applied to wounds. Canada Balsam is from the Abies Balsamea balm of Gilead fir. Carpathian Balsam from two species of pine. Copalm Balsam is from the Liquidambar styraciflua. Garden Balsam is the flowering plant of the genus Impatiens. Hungary Balsam is from the Pinus mugho. Balsam of Copaiba is from several species of Copaifera of the West Indies and tropical America. Balsam of Peru is supposed to be got from the Myrospermum Peruiferum of Central America, and the White Balsam of commerce is made from it. But the term White Balsam or Myrrh Seed or quinquino is also obtained from the M. Pubescens.—*Voigt.* 189, 190, 301. *McCulloch's Dictionary. Faulkner. Hog. Veg. King.* 207, 253. See Liquidamber altingia.

BALSAMARIA INOPHYLLUM. LOUR. Syn. of Calophyllum inophyllum.

BALSAMIER DEKLA MEQUE. FR. Opobalsam.

BALSAMO. IT. SP. Balsam.

BALSAMODENDRON, a genus of plants of the natural order Burseraceae of Kth., three species of which, B. Berryanum; B. Roxburghi and B. Agallochum, occur in India. Royle, in his Himalayan Botany mentions that the Balsamodendron (*Amyris*) Gileadense or Terebintheae, or Balsam of Gilead-tree, known in the East by the name of Balessan, has long been accounted one of the riches of Arabia, whence, or from Abyssinia, its native country, according to Bruce, it was at an early period taken into Syria. It has also been introduced into the Botanic Garden at Calcutta as well as into the Peninsula of India. B. Opobalsamum, to which M. Kunth more particularly refers the Balessan of Bruce, and the figure of Prosper Alpinus is perhaps only a variety of the former, affording a similar product. B. Amyris, Forsk. Kataf and Kafal, are also nearly allied if not identical species; both are natives of Arabia, and both give out a most fragrant balsamic odour. The wood of B. kafal is an article of considerable commerce, according to Forskal, and is that probably which is sold in Indian bazaars as the aod-i-balessan. Forskal also mentions that he had heard of two other trees, which are like these; one the shujrut-ul-murr, or myrrh-tree, and the other called khudjush.

Though there does not appear any reason for supposing that myrrh is produced in any part of India, yet there is a substance having the closest resemblance to it which is imported into and known in Europe as Indian myrrh. This is also said very closely to resemble, if indeed it all differs from Bdellium; it is probable, therefore, that it is what in India is known by the name of googul (mooql of the Arabians), as it forms the Bdellium of commerce, and resembles an inferior kind of myrrh, as indeed Bdellium is frequently described to be. That it is also the Bdellium of the ancients would appear from the Persian authors giving budeyoon and madikoon as the Greek name of mooql.—Dr. Royle was satisfied that this must be the Amyris commiphora of Dr. Roxburgh. (Fl. Ind. 2. p. 244) of which he gives googula as the native name. There is, however, a substance famed in ancient and used in modern times, produced also by this group, and known as olibanum or Thus looban and koondur of the natives of India. Under the latter name, it is described by Avicenna, evidently referring to the λιβανος of Dioscorides, who mentions both an Arabian and an Indian kind. The latter Mr. Colebrooke has proved to be the produce of Boswellia serrata, Roxb., (B. thurifera, Colebr.) Salai or saleh of the hindoos, common in Central India and Bundlecund, especially about the Bisrumgunge ghaut. It is probably also produced by B. glabra, which has the same native name, and though extending to a more northern latitude, is distributed over many of the same localities. It is common in the low hills above Mohun Chowkee. To this kind according to Dr. Ainslie, the term googul is applied by the Telugu people. The resin of both species is employed as incense in India Central India alone furnishes the greatest portion of the Indian olibanum of commerce; as it is chiefly exported from Bombay. From the affinity in vegetable products between parts of Arabia, Persia, and India, it is not improbable but the genus Boswellia may extend into those countries and afford that which is known as Arabian Olibanum. Canarium Benghalense is another plant of this tribe, which according to Dr. Roxburgh, exudes an excellent clear amber—coloured resin, not unlike copal. In America, as in India, several valuable resins, as Elemi, Carana, Chibow, and two or three kinds of Tacamahaca are afforded by plants of this tribe. —*Royle's Ill. Him. Bot. p.* 177. *Voigt. p.* 149.

Commiphora Madagascarensis—*Jack.*

Googala ...... SANS. HIND.

This small tree grows to the East and N. E. of Bengal in Sylhet, Assam and the Garrow Hills. Dr. Royle supposes this to produce the gum bdellium of commerce and perhaps of Dioscorides, but Bdellium is got also from B. Makal and B. Africanum. The whole plant, while growing is considerably odoriferous, particularly when any part is broken or bruised and diffuses a grateful fragrance like that of the finest myrrh, to a considerable distance around. —*Voigt.* 149, 150. *Roxb. ii. p.* 244-5. *Fl. Roughau-balsan.	HIND. PER.	Balsam of Mecca.	ENG.
Balm of Gilead. ...	ENG.		

A large shrub or small tree, a native of Arabia, Ethiopia, and the East Indies, introduced into the Calcutta Garden in 1798. M. Fee ascribes to this tree three distinct products; Balsam of Mecca, a wood called Xylobalsamum, and fruits termed Carpo-balsamum. Tradition is rich in anecdotes relative to the origin of this balsam; the mahomedans affirm that it sprung from the blood of the slain in Mahomed's conflict with the tribe of Harb, and that the prophet used the balsam for the resuscitation of the dead. (*Fee.*) It is much used in medicine by the Hakims as a stimulant, tonic, and somewhat astringent remedy, and as an external application to indolent sores. It is also employed as a perfume and cosmetic. The Opobalsamum and Carpobalsamum require no particular notice. But they may be briefly described by mentioning that the best Opobalsamum was obtained from the greenish liquor found in the kernel of the fruit; the Capobalsamum made by expression from the fruit when at maturity; and the Scylobalsamum from a decoction of or by expression from the young twigs. A mixture of this balsam is made by rubbing together 8 ounces of acacia on white muslin and 2 drachms of Mecca balsam. It is much prized by the mahomedan physicians as a tonic stimulant, in doses of half to one ounce three times daily —*Beng. Phar. p.* 375. *O'Shaughnessy, page* 285.

BALSAMODENDRON COMMIPHORA. *W. and A.*, Syn. of Commiphora Madagascarensis. LIND. FL. MED.

BALSAMODENDRON GILEADENSE. See Gums.

BALSAMODENDRON MYRRHA. See Gums.

BALSAMODENDRON KATOF is mentioned by Forskal and the Balessan of Bruce is supposed to be the Opobalsamum.

BALSAMODENDRON MAKUL, according to Hog, p. 251 grows abundantly in Sind and India. It is a small stunted tree, from 4 to 6 feet high, into which incisions are made by a knife and the resin is allowed to drop on the ground.

BALSAMODENDRON MYRRHA. *Nees-ab Esen.*

BAL TAR. SANS. Borassus flabelliformis.

BALTI, a district of Central Asia in Long. 75 L. N. 35. Its chief town of Skardo is 7255 feet above the sea; Khapalu 8,285 feet above the sea. Balti, or Balty Yul is called Palolo or Balor by the Dards, and Nang Kod by the Tibetans. It is preserved in Ptolemy in Byltæ. The country is frequently called Skardo or Iskardo from the name of its well known fort and capital. Balti proper is a small table land, and with that of Deotsu, is about 60 miles long and 36 broad,—the mean height of its villages above the sea is about 7,000 feet. The Balti, are the people of Little Thibet, the Bylta of Ptolemy, though Tibetan in language and appearance, are all mahommedans, and differ from the more eastern Tibetans of Le, who call themselves Bhotia, or inhabitants of Bhot, by being taller and less stoutly made. Their language differs considerably from that of Le, but only as one dialect differs from another.—*Dr. Thomson's Travels in Western Himalaya and Tibet, p.* 247. *Latham's Ethnology. A. Cunningham.* See Byltæ; Kailas; Gangri Range; Kara-koram; Ladak, Tibet.

BALTIC. See India.

BALTI MOUNTAINS, a name of the Bulut Tag.

BALTIS, in Byblius called Beuth, or Behuth *i. e.* void of genesis, is identical which space, means the mother's womb, the primeval mother. The fundamental idea is that of the mother of life or source of life, which is the meaning of Havvah (Eve) of Genesis.

BALTI-YUL. See Balti.

BALU. HIND. A bear, BALU-Soor, the Indian badger, a species of Meles.

BALUCHISTAN comprises the extensive regions between the confines of modern Persia and the valley of the Indus. To the north, Seistan and Afghânistân, to the south, the ocean marks its boundaries. The first, or western section, comprises the sub-divisions of Nushkí, Khárân, Mushkí, Panjghúr, Keej, Kobuah and Jow. The second or maritime section, includes the provinces of Las, Hormára and Pessani. The third, or central section, is formed of the great provinces of Saháwán and Jhalawân, to which are added the districts dependent on the capital, Kalât, and which are intermediately situated between the two. The fourth, or eastern section, includes the provinces of Kach Gandâvá, Harand, and Dajil, the last two bordering on the river Indus. The Baluchistan territory from its position has been frequently traversed and Pottinger, Postans, Ferrier, Burton, Masson and Mohun Lal have minutely described it. But Dr. Cook (*in Trans. Bomb. Med. and Phys. Society,*) is the latest writer on this territory and tells us that the territories of the Khan of Kelat, comprised under the term "Baluchistan," are extensive and varied in character to no ordinary degree. They consist of lofty, rugged table land and level ground, and their climates exhibit the severest heat and the most intense cold. Viewing them geographically, they fall into the natural division of mountain and plain and may be considered under the following heads :—

1st.—The great central mountain range or table land running north and south which comprises the provinces of Sarawan, Jhalawan, and Lus.

2nd.—The mountain district extending eastward, inhabited by the Murree and Boogtee, situated to the south of Sind and Kutchee.

3rd.—The province of the plains, that is, the district of Kutch Gundava.

4th.—The province of Mekran, diversified by mountain and desert which stretches westward along the sea coast.

5th.—The great desert of Seistan to the north of the last named districts. The first of these great divisions, or rather the portion of this comprised under the name of the province of Saharawan may be thus described :

The mountainous table-land of Beluchistan extends from Cape Monze, on the south to the Afghan mountains north of Quetta, or from 25° to 30° 40' N. latitude, and is consequently about 340 miles in length.

In breadth it extends from the level plains of Kutchee eastward, to Nooshky on the borders of the Seistan desert, extending thus about 150 miles. But its breadth is by no means uniform: widest about the centre it gradually narrows southward, until, at Cape Monze, it is only a few miles broad. The height also varies in the same proportion; The greatest altitude is attained at Kelat about 7,000 feet, where the climate is European ; southward it rapidly decreases, until in the province of Lus, the elevation is but a trifling degree greater than that of Sind. It decreases also northward, the height of Quetta being about 5,900 feet.

This elevated district is composed of a succession of mountain ranges, which rising from the plains of Kutchee and valley of the Indus, tower one above the other in successive steps, until having gained their maximum, they subside in lesser and lesser ranges westward.

Their general direction is from N. N. E. to S. S W., and this uniformity of strike is wonderfully preserved throughout.

The mass is broken through at two points, viz : by the Bolan pass at its northern extremity, and by the Moola pass near Gundava. Here the ranges are twisted out of their original direction, and run in a N. N. W. manner. Through these two great channels the principal draining of the country is effected through the Bolan and Moola rivers.

Lying in the bosom of the mountains are numerous valleys, having naturally a like direction to the ranges between which they lie and varying in height according to their position ; so that almost any desired temperature and climate may be obtained from the sub-tropical one of Sind to the temperate one of Kelat. The district is naturally moderately well watered by rivulets and springs and rivers artificially so by wells and karezes, but there are, as might be inferred, no rivers of any magnitude.

The height ranges are clothed with trees (Junipers), which yield excellent firewood and durable timber for building.

The Valley of Quetta, or Shawl, is situated in 67 ° E. long, and 30 ° to 30 ° 20 N. lat. It is about 15 or 20 miles in length, and from 4 to 6 in breadth. It is bounded to the westward by the Chah'l Tan range, having a strike of S. S. W. by N. N. E.

The valley of Kanhee, is situated to the west of, and runs parallel to, that of Quetta, but extends further south. Its length is about 30 miles, and breadth 5 or 6. It is bounded on the east by the great Chah'lTan range, which separates it from the Valley of Quetta, and on the west by a parallel range of much less height, which, towards the north, separates it from the valley of Pishing.

The Valley of Moostung, is the principal and most extensive valley of the tract under consideration, and is situated to the south of the valleys of Quetta and Kanhee. It extends from about 29 ° 30' to near 30 ° N. lat., and its eastern boundary is nearly defined by the 67 ° of E. long. It is therefore about 40 miles in length, and varies in breadth from 5 to 8 miles, spreading out towards its upper end, and being gradually constricted towards its lower or southern extremity. It is bounded by parallel ranges, running N. N. E. by S. S. W. of medium height, probably from 500 to 800 feet. The range to the eastward is pierced by a pass leading to the Dasht-i-be-Daulat.

The Dasht-i-be-Daulat is an elevated valley or plain, situated to the N. E. of Moostung, at the head of the Bolan pass. Its breadth is from 15 to 20 miles. It has no towns or villages, but is occasionally dotted with the tomans of the Kurd tribe. Some portions of it are cultivated in the spring and summer months ; but during the winter it is a bleak, howling wilderness, destitute of trees, or any shelter ; the snow lies deep on it and cold winds whistle over its frozen surface. It is subject to the depredations of the Kaka tribe of Affghans, and caravans are frequently plundered by them. In the summer it is clothed with the fragrant Terk plant, and its surface diversified by fields of waving grain. It has no streams, but one or two wells have been dug and water obtained with some difficulty ; the cultivators are dependent on rain and heavy dews.

The Valley of Mungochar, is situated to the southward of that Moostung, more circular in form, and of much less extent ; destitute of trees, save a few stunted mulberries.

The Valley of Giranee, is situated south of Mungochar and is distant about 8 miles from Kalat.

The Valley of Ziaret, is situated to the westward of, and runs parallel with, the preceding, is of considerable extent, well watered, and cultivated.

Valley of Chappar, lies westward of Ziaret and extends from the vicinity of Kelat to that of Mungochar. It is therefore, of considerable size; it contains the village of Chappar and other small hamlets.

The Valley of Kelat, the most southern division of the province of Saharawan, and whose chief town is the capital of Beluchistan. The capital, Kelat, is situated about its centre, in Latitude 29 ° N. and long 66 ° 44 ° E.

Dr. Cook supposes 1st, that the original inhabitants of the country were hindoos, who fled from the conquering mussulmans who invaded Sind, Lus, and Mekran, A. H. 93; 2nd, that the Brahooee were Tartar mountaineers, who gained a footing in the country, and ultimately supplanted the former, becoming the ruling race; 3rd, that the Belooch came from the westward, but whether they were Seljuke Tartars, or Arabs from Aleppo, is a matter of doubt. Doctor Latham however classes the Belooch nation with the Persian, but considers them as a modified form. He says, "E and S. E. of the proper Persians of Kirman, come the Belooch of Beloochistan. If Rasks great theory be the correct one, which makes all the fragments of natives speaking a Tamulian dialect parts of one great continuous whole, which spread in the earlier ages over India and Europe, underlying the more recent system of Celtic, Gothic, Slavonic, and classical nations of Europe and the Indo-Germanic of India, as the primary strata in geology underlie the secondary and tertiary, but cropping out, or being exposed here and there, are the fragments of nations—of Laps, Finns and Basques in Europe, and of the Cutchwaree, Cohatee, Tudo, Ghond, Lar, and other mountaineers of India; if, adds he, I say, this theory be the correct one, then the Brahooee, being of the great Tamulian family, would be the aboriginal inhabitants of the country. Thus the Koord who inhabit the Dasht-i-be-Daulat, doubtless came from Kurdistan, probably amongst the followers of some mahomedan invader of India, and, perhaps, laden with spoil, preferring, on their return, to settle where they now are, rather than continue their march to their own country, made choice of the Dasht-i be-Daulat. Again many of the Jhalawan tribes are undoubtedly of Rajpoot origin; and until lately, the practice of infanticide prevailed amongst them.

There are two languages spoken in Baluchistan, the Baluchiki a hindi tongue of the Arian or Sanskrit stock in which the Persian, Sindi, Punjabi, and Sanskrit words recur and the Brahui, which belongs to the Scythic or Turanian or Tamulian stock. Near Bagwana is a cave in the rock filled with the dried mummy like bodies of infants, some of which have a comparatively recent appearance. The Sacæ, who formed part of Alexander's army, and whose country is stated by Wilson to have been that lying between the Paropamisan mountains and sea of Aral, still exist as a tribe of the Brahooees of Jhalawan. It is not improbable that they accompanied Alexander as far as the south of Sind, and returning with Craterus up the Moolla Pass, settled in their present position. The Beloochee also have by no means a pure and unbroken descent from any one source. Adopting Pottinger's theory, that the main body were Seljuk Tartars driven out of Persia, as he describes, yet undoubtedly many are of Arabic descent. Neither does he think with him that the Beloochees have no resemblance in any way to the Arabs. On the contrary, in many cases the outline of their physiognomy is very similar to that of the Arabs of Egypt and Syria; and if such a Belooch was dressed in the Arab dress, it would be exceedingly difficult to detect his nationality. Others are Sindians who fled to the hills on the invasion of their country by the mahomedans. The original hindoo inhabitants of the Murree and Boogtee hills were driven out by their present occupants, but the natives of Barkhan (the Khetranees) inhabiting the more mountainous district to the northward, were able to hold their own. The whole are nominally subject to the Khan of Kelat as chief of all, but his power appears to vary with his popularity. The tribes reside in tomans, or collections of tents, especially the Brahooee mountaineers. These tents are made of goat's hair black or striped; the furniture is very simple—a few metal cooking-pots, a stone hand-mill, some rough carpets with a rug, a distaff for spinning wool, and a hookah, are all that are usually found in a Brahooee tent. That of the chief may, perhaps, be better furnished, and he is richer than his neighbours in flocks and herds. The dress of the lower orders is made up of a long tunic, trousers loose at the feet, and a black or brown great-coat, or cloak, usually of felt, kummerbund and sandals. They wear a small cap, either fitting tight to the outline of the head or dome shaped, with a tassel on the top. Those of the higher classes are elaborately ornamented with gold thread. A few wear turbans. Instead of the Cholo, Belochi women generally wear the Gaghgho, a long shift resembling English night shirts, but opening behind between the shoulders, and with half arms. It is generally made of red or white stuff, and reaches almost down to the ancles. Among the lowest orders of the people, no trousers or drawers are worn under it. Beloochistan is rich in mineral productions, copper, lead, iron, antimony, sulphur, and alum, abound in various parts; while common salt is too plentiful to be advantageous to vegetation. On the high road from Kelat to Kutch Gundava is a range of hills, from which red salt is extracted. Sulphur and alum are to be had at the same place. Ferrier saw quantities of white and grey marble in the mountains to the westward of Nooshky, but it does not seem to be at all prized by the Belooches. The best timber the Belooches have is of the Upoors a species of the Zizyphus jujuba and tamarind trees, both of which are remarkably hard and durable. The Babool, Farnesian mimosa ; Lye or tamarisk ; Neem or melia azadirachta ; Peepul or ficus religiosa ; Sissoo or dalbergia sissoo (Roxburgh) : Chinar, platanus orientalis. The Bráhúí, unlike all other mahomedan people, have no syeds, pírs, mullas, or fáquìrs, or any persons pretending to inspiration or sanctity amongst them, and are compelled, while holding the craft in due reverence, to seek them amongst strangers.—*Richard F. Burton's Sindh, p.* 417. *British World in the East. Ritchie, Vol. ii. p.* 3. *Ferrier's Journal, p.* 520. *Pottinger's Travels, Beloochistan & Sinde, p.* 327. *Masson Narrative, p.* 83. *Dr. Cook.* See Jell, Kadjak. Kelat, 490-494. India 355. Kappar, Kabul 434 ; Kandahar, Kah, Karez, Kattiyawar, Kambarari, Kalora, Khaka, Nervni. Rind ; Meksi, Kerman.

BALUNG-GACH. BENG. Sweet basil ; Ocymum basilicum.

BALUNGOO.—Seeds of Dracocephalum Royleanuam : black, ⅛ of an inch long, pointed, mucilaginous and slightly aromatic.—*Royle.*

BALUSU KURA. TEL. Canthium parviflorum, *Lam-kùra* signifies "vegetable." In a verse of the Bhàrata where Krishna having been fed by a hunter or savage, his attendant asks : Is the *Balusa kùra* which you received from Pánchálikudu equal to *salyódanam* (fine rice) *apúpa* (cakes) ; *saka* (vegetables,) *supam* (pulse) ? It is a common proverb also. Whilst life remains, I can subsist on the leaves (*kùra*) of the *Balusu* :—implying submission to any necessity however grievous.

BABIT. HIND. Quercus incana.

BALUTA ; BALOTE, BALUTE or BARA BALUTE, so named either from being twelve in number or from the amount set apart for them being divided into twelve parts : the village servants in India who with the inferior servants Alute and Nárákárú vary in number in different parts of India, from 6 to 27, and have different names. In most cases the offices are paid by recognised fees and perquisites, by allotments of corn at harvest time, or by portions of land held rent free or at a low quit rent. In most cases the offices are hereditary, and are capable of being mortgaged or sold. They are a municipality and could be employed to the benefit of the country.—*Wilson.*

BA-LU-WA. BURM. Abelmoschus moschatus.

BAM. HIND. A fathom.

BAM, a river near Ramghur in Sindhiahs territory.

BAM, according to Wilson, an exclamation of salutation interchanged by Saiva mendicants carrying the water of the Ganges. Perhaps a misprint or clerical error for Ram Ram Mahadeo ?

Maggar	,,	Potu ,,	,,

Of the bamboo, the most gigantic of the grasses, there are may species, which are applied to so many useful purposes, that it would be difficult to point out an object in which strength and elasticity are requisite, and for which lightness is no objection, to which the stems are not adapted in the countries where they grow,—

hollow cases, bows, arrows, quivers, lance shafts, masts of vessels, bed posts, walking sticks, the poles of palanquins, the floors and supporters of rustic bridges, scaling ladders, durable water pipes, rafts for floating heavy timber, frameworks of houses, floorings of houses, scaffolding, planking, uprights in houses, roofing, bamboo ware, fishing rods, walking sticks, handles of parasols, tent poles, books, musical instruments, paper, pencils, rulers, cups, baskets, buckets, cages, crab-nets, fish poles, pipe sticks, sumpitan or blowing tube, chairs, seats, screens, couches, cots and tables, and, parts of it are used as pickles or candied. Mr. Morrison writing of the use of the bamboo and the bamboo ware, of China, says the shoots are boiled, pickled and comfited, the roots are carved into fantastic images, or cut into lantern handles and canes, the tapering culms are used for all purposes that poles can be applied to in carrying, supporting, propelling and measuring ; for the props of houses and the ribs of sails ; the shafts of spears, the wattles of abattis, and the handles and ribs of umbrellas and fans ; the leaves are sewed into rain-cloaks, and thatches ; the epidermis, cut into splinths of various sizes, is woven into baskets of every form and fancy, plaited into awnings, and twisted into cables. It furnishes the bed for sleeping, the chopsticks for eating, the pipe for smoking, and the broom for sweeping ; the matress to lie upon, the chair to sit upon, the [illegible] to eat on : the food to eat and the fuel to [illegible] with, are also derived from it :—the [illegible] govern with, and the book to study [illegible]pering plectrum for the lyre, and the [illegible]rument of the judge ; the skewer to [illegible], and the hat to screen the head ; [illegible]per to write on, the pencil to write with, and the cup to put the pencil in ; the rule to measure lengths, the cup to gage quantities, and the bucket to draw water ; the bird-cage, the crab-net, the fishpole, and the sumpitan, &c. &c., are one and all furnished by this plant, whose beauty when growing is commensurate to its usefulness when cut down. Bamboo ware as chairs, screens, couches, &c., is largely exported from China, but no account of the amount or direction has ever been kept. Of bamboos on the Khassia Hills there are fifteen, and of other grasses 150, which is an immense proportion, considering that the Indian flora (including those of Ceylon, Kashmir, and all the Himalaya), hardly contains 400. Uspar, Uspet, Uspit, Uskong, Uktang, Usto, Silee, Namlang, Tirra, and Battooba, are some of the names given to bamboos on the Khassia Hills. Writing regarding the bamboos of the Tenasserim Provinces, the *Bambusa spinosa, (thorny bamboo,) Bambusa gigantea, (gigantic bamboo,) Bambusa nana (Penang, or China bamboo)*, Mr. Mason remarks, that bamboo is there used for all purposes to which timber is usually applied. Most of the native houses in the provinces are built principally of bamboos tied together with rattans. Cots, seats, and tables are often formed of the same material. The Karens have names for seventeen species or varieties, one of the strongest of which is covered with large thorns, and makes an impenetrable fence ; but the China bamboo, which has been introduced from Penang, makes the closest and prettiest hedge, and when cut annually, looks like an English quick-set hedge. The gigantic bamboo, the largest bamboo in the world, is indigenous, but in the southern provinces is seen only in cultivation. He mentions that a fungus, like a mushroom, grows at the root of the bamboo in these Provinces, hence called the bamboo-fungus, and is regarded by the natives as quite a specific for worms. It has also been introduced into European practice and is believed by some physicians as superior to any anthelmintic in the Materia Medica. Mr. Mason also adds, that the young shoots of some species of bamboo are sold in the market for a vegetable. They are also used by Europeans for a pickle and a preserve, and in times of scarcity the seeds of the bamboo have often been used by the Karens as a substitute for rice. The roots says The Revd. Mr. Williams are carved into fantastic images of men, birds, monkeys, or monstrous perversions of animated nature, cut into lantern handles and canes, or turned into oval sticks for worshippers to divine whether the gods will hear or refuse their petitions. The tapering culms are used for all purposes that poles can be applied to carrying, supporting, propelling, and measuring, by the porter, the carpenter and the boatman ; for the joists of houses and the ribs of sails, the shafts of spears and the wattles of hurdles ; the tubes of aqueducts, and the handles and the ribs of umbrellas and fans.

The leaves are sewed upon cords to make rain cloaks, swept into heaps to form manure, and matted into thatches to cover houses. Cut into splinths and silvers of various sizes, the wood is worked into baskets and trays of every form and fancy, twisted into cables, plaited into awnings and woven into mats for scenery of the theatre, the roofs of boats, and the casing of goods. The shavings even are picked into oakum and mixed with those of rattan to be stuffed into mattresses. The bamboo furnishes the bed for sleeping and the couch for reclining, the chopsticks for eating, the pipe for smoking and the flute for entertaining, a curtain to hang before the door and a broom to sweep around it, together with screens, stools, stands, and sofas for various uses of convenience and luxury in the house. The mattress to lie upon, the chair to sit upon, the table to dine from, food to eat, and fuel to cook it with, are alike derived from it, the ferule to govern the scholar, and the book he studies both originate here. The tapering barrels of the "song" or organ and the dreaded instrument of the lictor—one to make harmony and the other to strike dread, the skewer to pin the hair and the hat to screen the head, the paper to write on, the pencil handle to write with and the cup to hold the pencil, the rule to measure lengths, the cup to gauge quantities and the bucket to draw water, the bellows to blow the fire, and the bottle to retain the match, the bird-cage and crab-net, the fish-pole and sumpitan, the water wheel and aqueduct, wheelbarrow and cart, &c., &c, are one and all furnished or completed by this magnificent grass, whose graceful beauty when growing is comparable to its varied usefulness when cut down. There are many kinds of bamboo in Borneo, but that most valued is the large kind, called by the natives boolu ayer,' or the water bamboo; it grows to a very large size, attaining the height of sixty feet, and appears to thrive best on the sides of mountains, in very rich soil. The small kinds are used as cooking pots by the natives when in the jungle, and by those whose poverty prevents them purchasing the pots of earth or brass called 'princk,' which the Malays bring them for *sale*. The rice called 'pulut,' is always cooked by the Malays and Dyaks in a green bamboo, this mode of preparing it being most esteemed amongst all their tribes. For the purposes of cooking, the bamboo is cut into lengths of about two to three feet; these being filled with the rice or meat cut into small pieces, and having a sufficiency of water, are placed over the fire in such a position that the point of the bamboo does not come in contact with it, but rests upon the ground beyond it, the fire being placed under the green and harder part of the cane, which resists the effects of the heat and flame until the provisions are sufficiently prepared; a bundle of leaves placed in the mouth of the cane answers the purposes of the lid of an ordinary cooking pot. When travelling in the Himalayas. Dr. Hooker observed a manufactory for making paper out of the bamboo. Large water-tanks were constructed in the fields for the purpose of steeping the bamboo stems. They appeared to be steeped for a length of time in some solution of lime. They were then taken out and beaten upon stones until they became quite soft, or till all the flinty matter which abounds in their stems was removed. Amongst the other uses to which the bamboo is put, it is sometimes formed into a wind instrument. On nearing one of these says a writer, our ears were saluted by the most melodious sounds, some soft and liquid like flute notes, and others deep and full like the tones of an organ. These sounds were sometimes low, interrupted or even single, and presently they would swell into a grand burst of mingled melody. I can hardly express the feelings of astonishment with which I paused to listen and look for the source of music so wild and ravishing in such a spot. It seemed to proceed from a clump of trees at a little distance, but I could see neither musician nor instrument, and the sounds varied so much in their strength that their origin seemed now at one place and now at another, as if they sometimes came from mid air and sometimes swelled up from the mass of dark foliage, or hovered, faint and fitful, around it. On drawing nearer to the clump my companions pointed out a slender bamboo which rose above the branches, and whence they said the musical tones issued. I was more bewildered than before, but they proceeded to explain that the bamboo was perforated, and that the breeze called forth all the sounds. Every one knows of the multiplied uses of the bamboo, how, entire or split as the purpose requires, it forms posts, masts, yards, ladders, chairs, stools, screens, floors, roof bridges, &c.; how, when smaller, it is an ela material out of which a great variety of ba and receptacles are formed for containing s and how its joints make neat and conv bottles for holding and carrying liquids, c fine, are fashioned into flutes. But he the crowning triumph of Malayan art, a most wonderful of all the applications o bamboo, for what could be more bold and i nious than the idea of converting an entire boo, rough from the jungle and thirty or feet in length, into a musical instrumen simply cutting a few holes in it. I had a portunity afterwards of getting possession one of these bula ribat, or bula perinda (storm or plaintive bambu.) As we proceeded, and when the notes had died away in the distance, our ears were suddenly penetrated by a crash of grand thrilling tones which seemed to grow out of the air around instead of pursuing us. A brisk breeze which soon followed and imparted animation to the dark and heavy leaves of the gomuti palms explained the mystery, while it prolonged the powerful swell. As we went on our way the sounds decreased in strength and gradually became faint, but it was not till we had left the bamboo of the wind far behind us, and long hidden by intervening trees and cottages, that we ceased to hear it. Marsden in his Dictionary, states buluh porindu to be "a species of bamboo supposed to yield a melodious and plaintive sound; a sort of Æolian pipe formed by cutting a slit in a bamboo fixed perpendicularly and exposed to the action of the wind," and as an example, gives the quotation, Terlalu amat mardu bunyinia seperti buluh perrindu rasania, which he translates "most melodious was the sound, affecting the sense like supernatural music." It would appear from this that the plaintive bamboo is made in Sumatra. All those seen in Rambau and Naning had a slit in each joint above a certain height, so that one bamboo possessed 14 to 20 notes, each of which varied in itself according to the strength of the breeze. The joints decrease in their bore from the bottom to the top and the slits also differ in their size and shape. Bamboos are never imported into England as merchandise, but are taken there largely as dunnage, and are bought up for similar purposes. A Fungus, like a mushroom, grows at the root of the bamboo and it is regarded by the natives as quite a specific for worms. It has also been introduced into European practice, and is regarded by some physicians as superior to any anthelmintic in the Materia Medica.

The Bamboo flowers once in 30 to 60 years, and dies. Large flowering in the Soopah forests took place in the spring of 1864, during which about 50,000 people assembled from neighbouring districts to collect the seeds, which they use as rice—fever is said to prevail where tracts of bamboos are seeding, Capt. Sleeman, tells us that all the large bamboos, whose clusters and avenues formed the principal feature in the beauty of Dehra Doon ever since the valley became known to us, or for the last quarter of a century, ran to seed and died on one season as well those transplanted from the original stock the previous season as those transplanted twenty years ago. Bamboos do not increase in diameter after they come above ground ; they shoot out as thick as they are to be, and increase only in length after they come up. The people of the hill and jungly tracts of Central India calculate ages and events by the seedings of the hill bamboos ; a man who has seen two *Kutungs*, or two seedings of the bamboo, is considered an old man—perhaps sixty years of age. The best places for bamboos are near water, wells, tanks, or streams. The stems run up to almost their entire length before they throw out any of their branches,—an interesting provision of nature ; for if the lateral shoots were developed before, they could not possibly rise through the thick network of branches above, and attain that form of grace and beauty which nothing in nature can surpass.

Bamboos are very costly near towns. They are taken to Britain chiefly as dunnage in the holds of vessels, and used principally for making umbrella sticks, light garden seats, and handloom weavers' reeds, &c.

There are many species of Bamboo : and, in the Khassia Hills alone, there are fifteen.

1. Bambusa agrestis, *Poir*. On mountainous and dry desert places in all China, Cochin-China and the Malay islands. Joints crooked, often a foot thick, a foot and a half long and nearly solid.

2. Bambusa amahussana, grows in Amboyna and Manipa, has short joints and a thick wood.

3. Bambusa apus, *Schultes*. A gigantic species growing on Mount Salak in Java, stems 60 or 70 feet high, and as thick as a man's thigh.

4. Bambusa aristata, *Loddiges*, Slender stems.

5. Bambusa arundinacea.—*Wilde ; Roxb.*
Arundo bambos.—*Linn.*
Nastus arundinaceus.—*Sm.*
Bambos arundinacea.—*Zet.*
Stems grow in clusters of 10 to 100, and are straight for 18 or 20 feet.

6. Bambusa aspera, *Schultes*. Found at the foot of mountains in Amboyna with stems 60 to 70 feet high, and as thick as a man's thigh.

7. Bambusa balcooa.—*Roxb.*
Dendrocalamus balcooa.—*Voigt.*
The Balcooa bans and Dhooli balcooa of Bengal is of gigantic size and reckoned there the best for building purposes. Before using it, it is steeped in water for a considerable time.

8. Bambusa bitung, *Schultes*. Found in Java.

9. Bambusa Blumeana, *Schultes*. A native of Java, with stems as thick as a child's arm.

10. Bambusa maxima, *Poir*. Found wild in Cambodia, Bally, Java, and various islands of the Archipelago. It grows 60 to 70 feet high, and as thick as a man's body. Its wood is however very thin.

11. Bambusa mitis, *Poir*. Cultivated in Cochin-China, wild in Amboyna. Its stems are thin but sometimes as thick as a man's leg, and 30 feet long, and are said to be very strong.

12. Bambusa multiplex, *Lour*. (Qu. B. Nana ?) Stems 12 feet long, and an inch thick, cultivated for hedges in the north of Cochin-China.

13. Bambusa nana, *Roxb*. A native of China, makes beautiful close hedges and fences.

14. Bambusa nigra, *Loddiges* ; of the neighbourhood of Canton, where its stems, not more than a man's height, are cut for walking sticks and handles of ladies' parasols.

15. Bambusa prava, forms large woods in Amboyna, which come down to the coast : its leaves are 18 inches long and 3 or 4 inches broad.

16. Bambusa picta, common in Ceram, Kelanga, Celebes and other islands of the Archipelago. Its joints are 4 feet long and 2 inches thick, and are used for light walking sticks.

17. Bambusa spinosa, *Roxb*. The *Behor bans*, spined. Common about Calcutta and in

the south of India. It has a small cavity and is therefore strong. Its stems are from 80 to 50 feet long.

18. Bambusa spina.

Canta Banso, URIA.

Extreme height 80 feet. Circumference 1½ feet. Two species of Bamboo which abound in Ganjam and Gumsur.

19. Bambusa stricta.—*Roxb.*

Dendrocalamus strictus. *Voigt.*	Nastus strictus.—*Sm.* Bar, Hind.

Somewhat spiny. Its great strength, solidity and straightness render it fit for many purposes. Lance-shafts are made of it.

20. Bambusa tabacaria, *Poir.* Grows wild in Amboyna, Manipa and Java, its stems with nearly solid joints, 3 or 4 feet long, but not thicker than the little finger, when polished, make the finest pipe sticks. The outside is so hard that it emits sparks of fire when struck with the hatchet.

21. Bambusa tulda.—*Roxb.*

Dendrocalamus tulda.—*Voigt.*

The Tulda or Pika bans of Bengal and India is common all over Bengal, and grows rapidly to 70 feet long and 12 inches in circumference, rising to their full height in 30 days. Improves in strength by steeping in water. The *Jowa bans* with long joints is one variety, and the *Basini bans* used to make baskets, is another.

22. Bambusa vulgaris, *Wendl.* Its stems are from 20 to 30 feet long, and as thick as a child's arm.

In one of his reports, Dr. Cleghorn mentions that immense quantities of fine bamboos are floated down the various rivers of the Western Coast of India. They are one of the riches of those Provinces. They are ordinarily 60 feet long and five inches in diameter near the root, these are readily purchased standing at 5 Rupees per 1000, and small ones at 3½ Rupees per 1000. Millions are annually cut in the forests and taken away by water in rafts or by land in carts. From their great buoyancy, they are much used for floating the heavier woods as (Mutte) Terminalia tomentosa and (Biti) Dalbergia arborea, and piles of them are lashed to the sides of the pattimars going to Bombay. The larger ones are selected as outriggers for ferry boats, or studding-sail-booms for small craft. He tells us that in addition to the vast export by sea, it is estimated that two lacs are taken from the Soopah talook eastward. The Malabar bamboo is much smaller than that of Pegu (Bambusa gigantea) which is 8 inches in diameter. At another place he says that immersing in water or better still, in a solution of sulphate of iron or lime water, is attended with good results, as it extracts the sweet sap which would otherwise induce decay. But, when it is intended to split the bamboos for reapers, this should be done before steeping them in the metallic bath. The merchants on the western coast of India prefer the water-seasoned bamboos which have been months in the water attached to the rafts, that are floated down the Nelambur and Sedasheghur rivers to the sea. The bamboos, there, are often eighteen yards long, and are brought down in immense floats tied together in bundles of fifty by the root ends which are turned towards the forepart of the float.—*Transactions of the Agricultural and Horticultural Society of India, Vol. III*; *Roxb. Fl. Ind., Eng. Cyc.*; *Dr. Mason's Tenasserim*; *Dr. Cleghorn's Reports*; *Dr. Hooker's Him. Jour. Poole's Statistics of Commerce, p.* 18; *Hooker, Him. Journ. pages* 311, 281 *Vol. II*; *Hon'ble M. Morrison's Chinese Products*; *Marsden's Sumatra.* See Bambusa, Mow-Chok. Himalaya, Japan.

BAMBOO CAPS the official summer caps of the Chinese mandarins are made from the rind of a crooked bamboo.

BAMBOO FUNGUS. This fungus is found at the roots of bamboos in Burmah. It is a favourite vermifuge with the Burmese, and has been used with much success by European medical officers in their practice. Dose, a piece about the size of a large cherry pounded and administered in any convenient vehicle.—*Cal. Cat. ix.* 1862.

BAMBOO HARMONICON. See Musical instruments of the Burmese.

BAMBOO SUGAR. ENG. Syn. of Tabasheer.

BAMBORI, a river in Gwalior.

BAMBOU. FR. Bamboo.

BAMBU. IT. Bamboo.

BAMBUSA Arundinacea.—*Roxb. C. P.*

Bambos arundinacea.—*Zet.*

Arundo bambus.—*Linn.*

Nastus arundinaceus.

BAMBUSA SPINOSA.

SYN.

Arundo arbor.—*Linn.*
A bambos.—*Linn*
Arundarboy spinosa.—*Rumph*

Behur Bans ...	BENG.	Wagua Khyat	... BURM

This beautiful, middling sized and very elegant species of bamboo grows from thirty to fifty feet high, in the vicinity of Calcutta. Its stems almost solid, have strong sharp spines and grow so close together as to form an almost impenetrable thicket. This bamboo has a smaller cavity in its centre than others of the genus, and a staff of it is put into the hand of a young brahman when being invested with the sacerdotal thread.—*Roxb. ii.* 198, 199.

BAMBUSA STRICTA.—*Roxb.*

Dendrocalamus strictus. *Voigt.*	Nastus strictus.—*Sm.* Sadanapa Vedaru, Tel.

Somewhat spiny. Its great strength, solidity and straightness render it fit for many purposes. Lance-shafts and bear spear-shafts are made of it.—*Roxb.* ii. 193.

BAMBUSA TULDA.—*Roxb.*

Dendrocalamus tulda.—*Voigt.*

Tulda Bans.	Beng.	Vansa Sans.
Pica	„ „	

Common all over Bengal, and grows rapidly to 70 feet long and 12 inches in circumference, rising to its full height in 30 days. Improves in strength by steeping in water. The Jowa bans with long joints is one variety, and the Basini bans used to make baskets, is another. The Bambusa Tulda in Bengal, attains its full height of 70 feet in a single month, that is at the average, an inch in an hour.—*Roxb. ii.* 193-6.

BAMBUS-BOOK of the Chinese, contains the record of the Imperial dynasties, from B. C. 1991, to A. D. 1264. The chronological connexion of its dynasties is as under:

I. dynasty Hia, the first emperor, Yu, beginning B. C. 1991, reigned 432 years.
II. dynasty Shang, began B. C. 1559, lasted 509 years
III. dynasty Tshen, began B. C. 1050, lasted 269 years, the emperor Yen Yang, began to reign B. C. 781. Confucius lived under his dynasty and he recorded the observations of the solar eclipses, from B. C. 481 upwards to 720.
IV. dynasty Tsin, began B. C. 255, and lasted 49 years.
V. dynasty Han, began B. C. 206, and lasted to A. D. 264, a total of 469 years.

BAMGHUR, in Long 76° 14' E. and Lat. 26° 38' N.

BAMIA, AR? the little edible fish known as the Bombay Duck.

BAMIAN, a pass in Afghanistan, 8496 feet above the level of the sea. It is the great commercial route from Kabool to Turkestan, the several passes to the eastward are less frequented on account of their difficulty and their elevation. It is in Lat 34° 50' Long. 67° 48,' is about 1 m. wide, and is bounded by nearly perpendicular steeps. The pass leads over a succession of ridges from 8,000 to 15,000 ft. It is the only known route over the Hindoo-Koosh for artillery or wheeled carriages.

BAMIAN TOWN, in the Bamian pass has been conjectured to be the site of Alexandria ad Caucasum, but it lies north of the Hindu-Koosh and Alexander is supposed by some to have moved to the south of that hill; there are still in existence three large idols, with the niches in which many other smaller ones had once stood, and every idol had its suit of caves, amongst which some had domes or vaulted roofs, being, as Masson supposed, temples.—*Masson's Journeys, Vol. II. p.* 383.) Vigne remarks that if the traditions of the Persians may be credited, we should look to Bamian as the residence of King Lohrasp, the patron of Zerdusht and the Magian religion, but, as these traditions have been handed down to us only through the romance of Firdousi, it is not possible to say what credence they deserve. That a city was here situated in ancient times, the position of Bamian, on the high road from India to Bactria,—lying as a valley at right angles to the path, and between the two passes of Kalu and Ak-robat,—renders extremely probably; but this probability is not confirmed by any facts derived from the accounts of the expedition of Alexander, who, there is every reason to believe, must have followed this route on his march to Bactria. He is said to have crossed the mountains from Alexandria ad Caucasum to Adrasa, in *fifteen days*. He must, therefore, have reached the table-land of Balkh in that time; and there is no notice of his having passed any city on his march. Bamian, then, was either not in existence, or it was founded by Alexander. The pretensions of Begram, however, to be Alexandria ad Caucasum, are much more tenable than those of Bamian; and we must conclude, therefore, that it was not the site of a city until subsequently to the Macedonian invasion. Although at this period there may have been no extensive city on the site of Bamian, yet it appears that the mountains were not destitute of population, and it seems likely, that, at least in winter time, the mountaineers sheltered themselves in excavation in the rocks, which will account for the multitude of caves found in this vicinity, and in other parts on the same line. Thus the Macedonians found, somewhere in the Parapamisan range, a cave, to which they attached the fiction of Prometheus, and asserted that it was in this spot that he was chained. This is proof, therefore, of such excavations being in existence, and of the purposes to which they were applied. Even at a later period, we have the evidence of Chinese writers, who, speaking of the people of Fan-yan-na,—*i. e.*, Bamian—remark, that in the winter season the inhabitants take refuge in caverns cut out of the rocks (vide Melanges Asiatiques de Remusat). They are, in fact, too numerous and too extensive to be regarded as, exclusively, either catacombs, or monastic cells, although they may have been occasionally so employed. The sculptures at Bamian are "manifestly Buddhist."—*Vigne's Personal Narrative, p. p* 185 *to* 187.

Burnes tells us of the celebrated colossal idols and innumerable excavations called "*Sumach*," to be seen in all parts of the valley for about eight miles and which still form the residences of the greater part of the population. A detached hill in the middle of the valley is quite honeycombed by them and is called the city of Gulgula. Caves are in greater number on the north side of the valley where the idols occur, on all sides of which are excavations. Bamian is subject to Kabul, its name is said to be derived from Bam. Pers. balcony,—(*Burnes.*)

This town has usually attached to it the designation of Bhut, or Idol-Bamian, from the two remarkable statues above noticed, and which are carved on the face of the rock, opposite to the hill on which stood the city. One is larger than, the other is called Sang-sal or Rang-sal, and is said to represent a male; the smaller, called Shah-muma, is considered to be a female; but the general appearance and costume of both are essentially the same, and indicate no difference of sex. On either side of the figures are numerous caves excavated in the rock, usually with vaulted roofs, which were sometimes carved flowith wers. Both figures have been mutilated, by order, it is said, of Aurungzeb. The faces and forearms of both were knocked off, and a thigh of the larger was broken. They are both clad in long loose robes, descending below the knee. The height of the smaller figure was one hundred and seventeen feet; that of the larger could not be measured, but it must have been about one-third more. Paintings of this kind had descended to within thirty feet of the ground, but the plaster had, for the most part, peeled off. An embellishment of the ground,—a white ball with a pyramid rising from it, a common ornament of sculpture in Tibet—Moorcroft found frequent here. Four figures under the spring of the arch of the alcove were of very beautiful delineation, and painted with much delicacy of colouring; below them was the head of a male figure, which resembled in expression the divinity called, by the Tibetans, Chamba. The origin and use of these excavations are matters of speculation. According to an account given to Moorcroft by an old and intelligent native of Bamian, dead bodies have been occasionally found in subterranean chambers in considerable numbers, and which have fallen to dust upon being exposed to the air. It is not impossible, therefore, that part of these excavations may have served as catacombs; but Moorcroft had no doubt that they were also, as indeed they still are to a certain extent, habitations of the living. His conviction, from the character of the buildings, of the caves, paintings, and sculptures, was that Bamian, whatever its ancient appellation, was the residence of a great Lama, bearing the same relation to the Lamaism of the west, as Lhassa does now to that of the east. The name of the smaller idol, Shah-muma, is evidently only a corruption of Shak-muni; but this is evidence of minor importance. From a somewhat intimate acquaintance, however, with the structures used as monasteries in Ladakh and Chanthan, he felt empowered to say that those excavations which were connected by means of galleries and staircases constituted the accommodations of the higher orders of the Lama clergy, and that the insulated cells and caves were the dwelling-places of the lower classes of the monastic society, as gelums, and anis, monks and nuns, and as serais or hostels for visitors. The laity inhabited the adjoining city. At a comparatively modern period the destruction of Gulgula is attributed to Changez Khan, who, from some cause not now remembered, being highly exasperated with the people, came upon them suddenly, put them without mercy to the sword and overturned and demolished the place. It was said that at a day's journey from Bamian, to the south west, were the remains of an extensive fortress, called Bandeh Berber, erected near a large lake. The political vicissitudes of Bamian must have been the same as those of Bactria and Kabul. We find there successive vestiges of Greek, Scythian and Sassanian rule, and of the buddhist and mithraic forms of worship. In the early ages of the christian era, or perhaps for a century or two before, buddhism prevailed at this place. Such of the caves as are appropriated to buddhist mendicants were embellished and the statues of Sakya muni (Buddha) were hewn out of the rock. At a subsequent period, the emblems of the fire worship and its altars, succeeded, until these were in turn displaced by the Arab and the Koran. Bamian is rich in minerals. Gold is found at Fuladst, also lapis lazuli, and in the hills of Irtalif north of Kabul. There are 10 or 12 lead mines in a defile in the neighbourhood, also ores of copper, tin and antimony. It is said, also, to have sulphureous springs.—*Moorcroft's Travels, Vol. II. p.* from 387 to 393. *Vigne, p.* 393. *Vigne's Personal Narrative, pp.* 185-6-7,193-397. *Masson's Journeys, Vol. ii. pp.* 283,295. *Tod's Rajasthan, Vol. i. p.* 22. See Affghan. Arashtra. Inscriptions, Jews. Kabul. Kafer, Kohistan. Kush.

BAMINY KOONDA, a river in Rungpoor.

BAMINGOLA, in L. 88° 3′ E. and L. 25°, 10′ N.

BAMINY, in L. 90° 8′ E. and L. 22° 21′ N.

BAMMO, in L. 97° 30′ E. and L. 24° 4′ N. Bamo, properly Mang-mo, is a frontier town, lying between Yunnan and Burmah, in the Shan territory. It has the Pu-long tribes on the Ka-Khyen around it. From Bamo, to the Burmese frontier is 46 miles: Bamo to Momin, is 90 miles, in Shan and Chinese territory now governed by the Pan-Thay. It has been proposed to open a route by Bamo, from Burmah, but it would enter China in the sterile province of Yunnan. Captain Sladen of the Madras Army was the leader in the prosecution of this attempt to open communication. See Ka-Khyen.

BAMORE and SENDULA are two nuddies of Gwalior. The Bamore river runs near Akbarpoor.

BAMUN-HATI. Beng. Clerodendron siphonanthus.

BAN. Hind. Wild, uncultivated, forest. Sandarban: Tar-Ban. or Sandar forest, or Palmyrah forest.

BAN. Burm. The purest refined silver of the Burmese.

BAN, also Bang. Hind. Quercus incana.

BAN. H., a rocket.

BAN. H., cotton.

BAN. Arab. Moringa pterygosperma.

BAN. Arab? Per. Bed-i-mushk.

BANAK, a river of Burmah, its valley is occupied by the Red Karen. See India, p. 345.

BAN-AKROT. Hind. Pavia indica, Indian horse chesnut.

BANAFSHA. Hind. Viola serpens. Also, the dried plant of the Viola odorata. The infusion is a good nauseant and diaphoretic.—*Beng. Phar, page* 305.

BANANA, a West Indian and Tropical American term of the plantain tribe Musaceæ to which, in India, the term plantain alone is given, and of which there are few species, but many varieties, their fruits are largely eaten and the fibres of the stem of one species are much used. It is the Musa textilis, of the Philippine Islands, which furnishes the important article of commerce known as Manilla Hemp. In the valleys of the south of the Peninsula of India and of the Dindigul mountains, M. superba is found. The common edible varieties of M. paradisaica, or musa sapientum, flourish even in the poorest soils and also near brackish water. The natives of Bengal generally prefer the larger and coarser fruited kinds, called banana, to the smaller and more delicately tasted fruit, known as the plantain, which is alone esteemed by Europeans. The edible varieties extend through the Indian Archipelago, northwards as far as Japan, while in China are found M. coccinea and M. Cavendishii. Again M. glauca is indigenous along the Malayan peninsula. Dr. Helfer mentions that 20 varieties are found in the Tenasserim Provinces, and M. ornata grows in Chittagong. The Malays reckon forty varieties of the cultivated banana, and the Philippine islanders carry them to fifty-seven, both people having a distinctive epithet for each variety. The qualities are as various as those of apples and pears in Europe, the ordinary sorts being a very indifferent fruit. Major Munro has seen the wild plantain at 7,000 feet above the sea, in the Khondah slopes of the Neilgherries. That cultivated in Nepal has been called M. Nepalensis, and a similar species may be seen growing below the Mussoorie range, as well as near Nabu. The fruit however in all these situations consists of little else than the hard dry seeds. A similar variety of M. sapientum, having seeds surrounded with a gummy substance, instead of a pulp-like fruit, was found by Dr. Finlayson, on Palo Ubi, near the southern extremity of Cambodia. In Batavia, also, there is stated to be a variety full of seeds, which is called Pisang batu or Pisang bidju—that is, seed plaintain. In Khasia the name of the wild plantain is Kairem; and the cultivated Kakesh.—*Hooker's Him. Jour. Vol. II. p.* 268; *Royle's Fibrous Plant, Crawfurd's Dic. p.* 31. See Manilla Hemp, Musa.

Plaintain fibre.

BANAR, a river running near the towns of Banar and Nonda in Nusseerabad and passing Jumalpoor cantonment.

BANAS and Koteree or Kotesiree, are rivers near Sanganeer in Oodeypur. The Banas river runs through Jeypore.

BANAULA. Hind. Gossypium herbaceum cotton seed.

BANAWARAM, in Long. 76° 13' N., another in Long. 77° 34' E. and Lat. 13° 7' N

BAN-BILLI. Hind., a wild cat.

BAN-BOAY. Burm. In Amherst, a strong and useful wood, a kind of Acacia employed for house posts.—*Captain Dance.*

BANBOK. See Laos.

BANCA ISLAND lies, in its northern point, in Lat. 1° 52' N., Long. 125° 24' E. It is hilly and of middling height. It has a chain of hills, generally called St. Paul's mountains, contiguous to its south end, 930 feet high, but Parmasang and Manopen hills, on the west side of the island, are respectively 1350 and 1617 feet in height. The straits of Banca are bounded on the east by this island, and on the west side by the coast of Sumatra. The straits extend from Lucepara island about 129 miles, with an undulating course to the N. W. The tides are irregular, and greatly influenced by the winds. The form of Banka is irregularly oblong. Its general direction is from north-west to south-east, nearly parallel to the southern extremity of Sumatra; the passage which separates these two islands known as the Straits of Banka, is one of the most frequented in the Indian seas. It is rather more than a hundred miles long, and in the narrowest part the Banca and Sumatra shores approach within seven miles of each other. Banca has a very picturesque appearance, the hills near the shore being covered with trees and herbage, while, in the interior, a mountain of considerable elevation, Gunung Maraj, raises its head above the neighbouring eminences. The term Banka has also been applied to different territories near the southern extremity of the island of Sumatra. Banka Plembang was the ancient denomination of the present kingdom of Plembang on the Eastern Coasts, extending in the west to Bankaulu, contracted into Bankulu. The situation of Bunko-Muso is undetermined, and this name is at present almost exclusively applied to the island of Banka. A tradition has been preserved that Banka was formerly under the dominion of Java, and the places are still pointed out where the sovereign resided. The Javanese occupied considerable tracts along the western coast, and the principal establishments were at Kuttewar-ingin, and near the discharge of the rivers of Menda, Selan and Banko-kutto. Banca is inhabited by four distinct races of people. The Orang-Gunung or hill-people, the aborigines of the country, are established in the interior, where they lead a wild kind of life, but are submissive to the regulations established by the government. The sea coasts are occupied by Malays who have emigrated from Sumatra: they are extremely indolent, all the labour, either in cultivating pepper or working the mines, being performed by the Chinese consisting of between fifteen and twenty thousand souls. The Orang-Laut or sea-people, who are similar in their habits to the Badju found upon the coasts of Borneo and Celebes, though belonging to it, can scarcely be said to inhabit the island, for they live entirely in their little prahus, and wander about the coasts. They subsist principally by fishing, and it is said that they are always ready to give information to the piratical rovers. The discovery of tin attracted numerous foreigners, chiefly Chinese, who with the working of the mines introduced the first attempts at agriculture and commerce; various settlements were formed, and a commencement was made in clearing the ancient forests, which had till then not been disturbed, for the purpose of forming permanent places of residence. The principles of civilization were offered to the rude inhabitants. During many years of this period, this small island has yielded an annual revenuein tin, which for a district of the same extent, equals the metallic wealth obtained annually from the mines of Mexico, according to an average calculation of the produce of the whole kingdom: Circumstances have contributed to reduce its produce in later periods. Anten is a district in the island containing the richest of the tin mines. — *Earl's Archipelago. Horsburgh. White's Voyage, p.* 223. See Pulotoojoo.

BANCA DEVA, also called Banga, a deity of the Gonds. See Banga.

BANCAPOR, a fort near Savanore.

BAN-CHAR. Hind. Quercus semecarpifolia, Alpine oak.

BANCHA-RAMA. Sans. from bancha, desire, and Rama.

BANCHDOW, in Long. 88° 58' E. and Lat. 26° 3' N.

BAN CHOWR. Tel. A wild yak.

BANCOONGONG or **BACOONGON BAY**, in Sumatra opposite the river and village of same name, in Lat. 2° 52' N. and Long. 97° 38' E., where ships find shelter.—*Horsburgh.*

BANCOOT RIVER in Lat. 17° 57' N. and 1½ miles E. of Bombay Castle, has 10 feet on the bar at low water. The town of Bancoot, on the northern part of the Angria country, surrendered to Commodore James, on the 8th April 1756 and was called Fort Victoria.-*Horsburgh.*

BANCURAH 101 miles fro[illegible]alcutta is in a fertile district with much [illegible] and iron ore: Coal is worked at Raniganj.

BAND. Pers. Hind. a band, a tie, a dam, a dyke, a causeway, a bank, a bundle of papers: Băndah, a slave: a servant, Bandi, a slave girl, Băndiwan, a prisoner; Band-o-bast settlement. Bănd is also an embankment a cross a valley, or across a dip of the ground to form a tank. The whole of the Carnatic is covered with such tanks, some of them very small, sufficient only for a small field, others of considerable dimensions, one near Cumbum is 8 miles in circumference and one near Hyderabad is about 7 miles in circumference. These words are all from the Hindi word bandhna to tie or bind.

BAND. Ger. Ribbon.

BANDA. Bali. Areca catechu.

BANDA. An ascetic or byragi, who opposed the doctrines of the Sikh guru-Govind. See Akali.

BANDA, a district in India forming an irregular triangle bounded on the north and north-east by the river Jumna, which separates it from the Fattehpur and Allahabad districts; on the west principally by the river Ken (Caine). Part of the Banda and Pylani divisions, moreover, extend beyond that river and are bounded by the Hamirpur district, and the Cherkhari and Jaloun states; the south-west and south are bounded by the river Ken and partly by the second range of low hills, forming the flank of the table-land of Bundelkand. But the intermediate boundary is very irregular, owing to the intermixture of villages belonging to Adjyegarh and Punna among the independent states, but principally arising from the exchange of many villages in pergunnahs Kunhas and Bhitri for the pergunnah of Kalinjar taken from the Chaubehs; this leaves a long slip of independent territory between the pergannahs of Budousa and Tirohan. The actual area amounts to 18,42,480 acres or 2,174-8 statute and geographical miles distributed as follows:— Barren, 3,49,214 acres. Culturable, 4,60,887 acres. Cultivated, 9,63,126 acres. As a civil station it was greatly disliked by the Bengal civilians.—*Mr. Edgeworth in Beng. As. Soc. Journ. No. II. of* 1850.

BANDAIR HILLS are separated from the Panna range by the valley of Lohargaon, rising from a platform from 10 to 20 miles wide. Average elevation, 1,700; but amounting on some of its indulations, to 2,000 feet. The hills are generally of sandstone, intermixed with ferruginous gravel. The basin of Lohargaon is of lias limestone. The outer limit of this hilly tract is marked by abrupt isolated hills.

BANDA ISLANDS, a group, ten in number, lying near each other. Of these, the crescent shaped island of Lontar is the largest. The area of the whole group is only 176 geographical square miles, but in five of them, all the nutmegs consumed in the world are grown, and for the last 20 years, they have annually yielded lbs. 580,000 of nutmeg and lbs. 137,000 of mace, Dutch weight. The Dutch cultivate the tree. The islands are high, liable to sudden gusts of wind. There is an anchorage in Lat. 4° 31' S. and Long. 130° 0' E. at the foot of Goonong Api. Amongst the Molucca islands, Banda is the chief nutmeg group. The nutmeg with the equally prized mace, the excellent maritime position, the superb roadstead, and the fertile soil of Banda, render it conspicuous among the Spice Islands: but, unlike Amboyna it is unhealthy, and exposed to constant danger from the Gunong Api volcano, which has many times burst in magnificent eruption, devastating the neighbouring region, and blasting it with a shower of scorching ashes. The three islands, Banda Neira, Nuthoir, and Gunong Api, form a roadstead sheltered from every wind, but the Fire Mountain is the curse of the group, not only when in eruption, but on account of the insalubrity it spreads around. The base of the volcano, called by the French the Grenade of Banda, occupies the whole surface of the islet, to which it gives a name. Its height is about 2,000 feet, covered with magnificent vegetation, commencing at the line where the waves cease to beat, and continuing upwards to the point where the lava ceases to flow, being cooled by the air. But the nutmeg is not cultivated or Gunong Api and the isle is inhabited only by a few emigrants from Timor.—(*Temminck, Possessions Neerlandaises* III. 290) *John's Indian Archipelago. Vol. I. p.* 134, 135. *Bickmore's Travels. Horsburgh.* (*Valmont de Bomare, Histoire Naturelle, IV.* 177, 181.) *Hogendrop Coup d'Œil sur Java.* See India, p. 357; Java.

BANDAH. Two towns, one in, L 74° 50' E. and L. 23° 2' N. the other in Long 80° 19' E. and Lat. 25° 30' N.

BANDALA, in the Philippine Islands, a fibre extracted from the harder and stronger outer layers of the Musa textilis employed as cordage.—*Royle.*

BANDANA. Tag. A term applied to a calico print; also to a kind of silk or cotton handkerchief with bright figures, &c. upon a red or dark ground.—*Faulkner.*

BANDA NEERA. an island of Java.

BANDA NEVALI, Adiantum lunulatum, N. L. Burm.

BANDAR. Arab. Hind. Pers: A harbour, a port; in Arabic and Persian, a prefix, as Bandar—Abbas; in Hindustani a suffix. as

Machli-bandar, Lakpat-bandar: It is from this, doubtless, that comes the harbour Bandar boat of British sailors. The harbour master or governor of a place is the Shah-bandar, or king of the harbour.

BANDAR ABBAS, formerly called Gambaroom or Gamberoon, is a sea port town in the province of Kirman. It is the ancient Harmozia. It is situated in a barren country, in a bay of the Gulf of Ormuz. It is subject to the Imam of Muskat, and fortified with double walls. It did not long benefit by the fall of Hormuz; but appears to have been nearly ruined during the reign of Nadir Shah whose tyranny extended its baneful influence even to this extremity of the Persian empire; so that in 1750 Mr. Plaisted found there nine houses out of ten deserted.—*Ousley's Travels Vol. I p.* 165. "*A Jourual from Calcutta to Aleppo, &c.*" *p.* 11. *Lond.* 1758. *Kinneir's Geographical Memoir, p.* 201.

BANDARA CHETTU. Tel. Hymenodyction excelsum.—*Wall.*

BANDAR MANCHE. A small ship. See Boat.

BANDARRIE, the aborigines of Bombay, who climb the palmyra and cocoanut trees for palm wine. From habit, these men attain extraordinary dexterity in ascending the loftiest trees with little other assistance than may be afforded by the natural rings or sheaths of their slender stems. The costume of the Bandarrie is a close crimson cap, bound round the head with a small handkerchief, the depending corner protecting its neck from the influence of the sun. A stiff leather kilt descends to the knee, fastened round the waist with a thong, which secure the necessary implements of his calling, and supports a strong hook, on which the Bundarrie swings a chattie, previous to commencing his ascent.—*Postans' Western India, Vol. I. p.* 89.

BANDARU. Tel. Dodonæa Buchanniana *D. C.*—D. angustifolia and dioica, *R. ii.* 256.

BANDARU. Hind. Gardenia tetrasperma. See Putkanda.

BANDELKHAND STATES, 32 in number. See Bundelkund.

BANDEE, a river of Ajmir and Jeypore.

BANDENG. Malay. A palatable fish, much resembling the salmon in taste. They are reared in fish ponds and the young are sold at 18 Rupees per redan of 5,500 small fish.

BANDER in Long. 79° 57′ E. and Lat. 25° 58′ N.

BANDHAGURH. See Senapanthi.

BANDHAL GOTI, a Chauhan Rajput tribe in Bundelkund and Benoudia, *Wilson's Glossary*.

BANDHARA, a hereditary elective officer of Johore.

BANDHRIK. Hind. Pentapetes Phænicea.

BANDHUJIVAKAMU—S. also Bandhujivamu—S. also Bandhukamu—S. Pentapetes phænicea, *L.* also Ixora bandhuca.—*R. i.* 376.

BANDERWA. See India p. 327.

BANDICOOT, in Australia the Perameles nasuta, of St. Hilaire, a marsupial animal. In India, the name given to the Mus giganteus: It is the English corruption of the Telugu words Pandi-Koka, pig rat and weighs 3 lbs. Its bones are fragile and it is very easily killed.

Its nests, when rifled, are frequently found to contain considerable quantities of rice, stored up against the dry season.—*Tennent's Sketches of the Natural History of Ceylon, p.* 45.

BANDJEGAUM, in Long. 77° 10′ E. and Lat. 19° 48′ N.

BAND-I-AMIR. Pers. See Bendemeer.

BAND-I-KIR, a town in Iran.

BANDI, A Court Minstrel. See India.

BAND PAT. Hind. Clitorea ternatea.

BANDRPUR LOLAB. A pass leading from Tibet to Kashmir.

BANDUNGA, a river near Bhogpur in Seharunpoor.

BANE. Flea-bane, Insect-bane, Musquito-bane, Bug-bane-bane, Rat-bane, &c. There are few residents in India who have not suffered from the attacks of insects, and from the[illegible] predations; and it may be useful to be a[illegible] that many substances are known to posse[illegible] properties, the influences of which are avoided by noxious creatures and annoying vermin. It is supposed that some species of *Ants* will drive out the termites or white ants, but this point is not yet fully ascertained. The whole family of "Apocynaceæ," termed "dogbane," are truly so. One of them, the Nerium piscidium, common in the Khassia or Sylhet mountains, and the bark of which contains much useful fibre, proves deadly to fishes.—*Dogs* refuse to sleep on rugs beneath which mint has been placed, and this simple plant thus affords a good means of ensuring cleanliness. *Deer* refuse to approach crops, in which the safflower, Carthamus tinctorius, has been intermixed. White mustard, sown round vegetables, as the cabbage, prevents the inroads of *caterpillars*. *Snakes* are said to avoid the fennel plant as well as all places strewed with fennel seed (Nigella sativa) (Syn. Siah Daneh, *Pers*; Magerela, *Bengal*; Kala jira, *Hind*:) The rasped wood of the oleander is employed as ratsbane. To destroy flies in European countries, a decoction of quassia, placed in a plate, is frequently had recourse to. In Southern India, plants of the "Ghi-gowar" or "Kulbunda," the Aloe perfoliata, are suspended with their roots upwards, with a longitudinal incision in each leaf, to permit the aroma of the juice to become apparent, and disperse musquitoes from the room. Flies, fleas and musquitoes, avoid rooms in which branches of pennyroyal have been suspended. Fortune mentions that the Chinese expel musquitoes from their rooms and boats, by the smoke of pastilles. In India they are smoked out by burning chips of wood. A species of ant, *Formica smaragdina*, well known in Malabar and the wooded parts of India, is employed in the North West Provinces to destroy the nests of wasps that have established themselves in a house. In this case they are said to destroy all the wasps, but become so infuriated that their own indiscriminate attacks are nearly as bad as those of their foes. Honigberger states that a twig of the walnut tree, Juglans regia, is kept in a room, as a means of dispelling flies. The same author mentions that bitter almonds are poisonous to wild beasts; and when writing on the Conyza anthelmintica (Vernonica anthelmintica, Serratula anthelmintica) he adds that when fleabane is roasted, flies take to flight, and when sprinkled on the floor, fleas disappear. Dr. Hooker mentions that Clerodendron leaves bruised are used to kill vermin, flyblows, &c. in cattle. The Inula pulicaria, or *Fleabane*, a common road side plant in Britain, strewed or burned in any place destroys *gnats* and *fleas*: and the same properties are attributed to the common Ox-eye daisy of England, *Chrysanthemum leucanthemum*. A powder, the *Poudre mismaque*, is sold in Paris, in boxes at from two to twenty francs, warranted effectual for destroying immediately, bugs, fleas, ants, lice, black beetles, caterpillars and all insects, "Camomille rouge" the beautiful red Pyrethrum (P. carneum, formerly Chrysanthemum coccineum), in England a pretty garden, ornamental flower, is a dread enemy to the Caucasian, Persian, Koordish and Russian flees. It is prepared from the flower heads of the plant which, when dried and crushed, form the famous Persian flea powder. When used by being sprinkled in beds, &c. It kills all disagreeable and hurtful insects, and a small quantity of the spirit distilled from it, destroys insects in green houses, or can be applied to vegetable life in the open air against green fly, house fly, &c. without injuring the plants. A half tea-spoonful of the powder sprinkled between the sheets will effectually dispel all fleas, bugs and lice, gnats and musquitoes, and it is said also to destroy maggots which breed in wounds, a property which the valuable *Decamulle* gum of India, the gum of the Gardenia lucida, and chloroform, also possess. More than twenty villages in the district of Alexandropol are occupied in the cultivation of the red chamomile, and thirty-five tons of this flea powder are manufactured annually for Russian use, in Trans-Caucasia alone, being equal to about 40,000 kilos of powder from 60 millions of pounds weight of fresh flowers. The red Pyrethrum is now largely cultivated in various circles and governments of Southern Russia. The flower heads lose vastly in weight by drying, and to get one pound of dried flowers, 1,000 lbs. of the fresh are required. It begins to flower in June and lasts more than a month. The flowers are plucked in dry weather, and a good collector will pluck 30 to 80 lbs. daily. They should be dried in the shade and care taken to stir them frequently. The Pyrethrum powder, seems the same as the well known Pireoti of Koordistan, is largely imported into Turkey and was lately greatly used in the barracks and hospitals of Turkey and the Crimea, by the British and French officers: it accomplishes very effectually the destruction of fleas, &c. Mr. H. H. Calvert, at first, considered the plant might be a Pulicaria, a Matricaria or Anthemis; but, that the Pireoti is the powder of the half ripe flower heads of Pyrethrum carneum, there now seems no doubt. The Pyrethrum carneum, does not grow in India, but its introduction merits favorable consideration. The property it possesses, of dispersing the vermin which infest beds and bed-rooms, probably depends on the pungent oil it contains; but until its introduction into India, attention might be directed to other species of Pyrethrum and to the allied genus of chrysanthemum, or Christmas flower, as likely to contain an oil with properties similar to the fleabane. Mr. Mason mentions two species of Pyrethrum, P. indicum, and P. sinense, as growing in the Tenasserim Provinces. The odour of the common fever few, of Britain, P. parthenium, is peculiarly disagreeable to bees, and these insects may be easily kept at a distance by a person carrying a handful of the flower heads: perhaps, also, the "*akarakarum*" of India, the Pyrethrum officinale or common pellitory, may have equal power. Allusion has been made to the well known Chrysanthemum, or Christmas flower, as likely to possess an oil of similar character, and perhaps possessing similar properties to that of Pyrethrum. One species, the C. Indicum, the common Gool Dawadee, and of which there are several varieties, grows all over India, and is at any rate worth a trial, as indeed is every other unexpensive suggestion [illegible]hich holds out a promise of increa[illegible] comforts of the sleeping room. It is [illegible]abit of the natives of India, to suspend in their houses a few branches of the milk hedge (Euphorbia tirucalli), to destroy fleas. They likewise make pastilles containing sulphate of copper, "Neela toota," *Hind.* which when burned destroy bugs, musquitoes and fleas, using three or four in a day. The sherifah or custard apple seed, disperses vermin. Flies are reported never to settle on the tree or its fruit, though ants will attack both. Bugs have a great antipathy to the leaves of the custard apple, and instantly quit a bed in which they are placed, and Dr. Irvine mentions that *Babai*, the roots of Ocimum pilosum have the same effect. The leaves of the American species of the sweet flag are said to be noxious to insects and to be never eaten by cattle. Sweet-flag, Eng.; Vaesamboo, Tam.; Vudya, Tel.; Vyamboo or Vashamboo, Mal.; Shwet-Buch, Beng.; Buch, Duk. The Gum Anime, is a protection against the attacks of insects; and colocynth is useful for protecting shawls and feathers against their inroads. Camphor-wood is valuable for the construction of chests and almirahs, as its powerful odour protects the contents from the ravages of white ants and other insects. Leaves of Margosa trees, Melia and Azaderachta, dried and kept in books, are much used by the people of India to preserve them from the attacks of insects. To prevent injury to furs, feathers, books, papers and clothes that are lodged in trunks, book cases, &c; it is useful to place along with them small packets of camphor; or little cups of camphor dissolved in alcohol; packets of the seeds of the small fennel flower, Nigella sativa, the "*kala jira*" of the bazaars: pieces of the roots of the Aconitum ferox, the dreadful "*bish*;" "*Ati Singeea bish*," or bishnak of the bazaars, may also be used, but its highly poisonous effects on animal life, require its use to be had recourse to with the greatest precautions. Insects are very destructive to books in India and the pastes or gums employed in the bindings, form special objects for the attacks of certain tribes: it may be useful to be known, therefore, that insects refuse to attack the gum of the cashewnut fruit, and that it or a little sulphate of copper or blue vitriol mixed with the rice or flour paste, used for joining papers, very effectually keeps these destructive pests at a distance. The leaves of the Justicia gandarussa, Lin.; Caar noochi, Tamil; Nalla Wawalee, Tel; Neela Nirghoondee, Sans., dried and powdered, are used as a preservative to keep insects from books. Various substances are employed by the Chinese to drive away musquitoes. "Our boatmen, says Fortune, who heard us talking about the musquito asked Sing-Hoo why he did not go and buy some musquito tobacco, which they said might be h[illegible] in the village, and which would drive all the [illegible]uitoes out of the boat. I immediately desp[illegible]ed him to procure some of this invaluable substance. In a few minutes he returned with four long sticks in his hand, not unlike those commonly used for burning incense in the temples, only somewhat longer and coarser in appearance. He informed me they cost only two cash each—certainly cheap enough if they answered the purpose. This which we had just purchased was made with the sawings of resinous woods—I believe procured from juniper trees—and mixed with some combustible matter to make it burn. A piece of split bamboo, three or four feet in length, is then covered all over with this substance. When finished it is as thick as a rattan or a small cane. The upper end of the bamboo has a slit in it for hooking on to any nail in the wall, or to the roof of a boat. When once lighted, it goes on burning upwards until within six inches of the hook, beyond which there is no combustible matter, and it then dies out. A somewhat fragrant smell is given out during combustion, which, at a distance, is not disagreeable. Sometimes the sawdust is put up in coils of paper, and is then burned on the floors of the houses. Various species of wormwood are likewise employed for the same purpose. The stems and leaves of these plants are twisted and dried, and probably dipped in some preparation to make them burn. The musquito has a mortal aversion to all these substances and wherever they are burning, there the little tormentors will not come. I procured the sticks in question, and burnt them daily, after this; and although the insects were often swarming when I entered the boat or an inn, the moment *their* "tobacco" was lighted they quickly disappeared, and left me to sit at my ease, or to enjoy a refreshing sleep. Whoever discovered this precious tobacco was a benefactor to his country and should have been honored with the blue button and peacock's feather at the least. But I suppose, like all other Chinese discoveries, it is so old that the name of its original discoverer cannot now be traced. Amongst the insects which infest books in India are two genera, which are usually regarded as accomplices in the work of destruction, but which on the contrary pursue and greedily feed on the larvæ of the death watch and the numerous acari which are believed to be the chief depredators that prey upon books. One of these maligned genera, is a tiny tailless scorpion (Chelifer) of which three species have been noticed in Ceylon, the Ch. librorum *Temp.* Ch. oblongum *Temp.* and Ch. acaroides *Hermman*, the last of which it is believed had been introduced from Europe in Dutch and Portuguese books. The other genus is the Lepisma, and the tiny silvery creatures of which it consists are called by Europeans the fish insect. This genus comprises several species of which however only two have been described one of which, of larger size, is remarkable for the whiteness of the pearly scales, from which its name is derived. These contrasted with the dark hue of the other parts and its tripartite tail, attract the eye as the insect darts rapidly along. Like the chelifer, it shuns the light, hiding in chinks till sunset, but is actively engaged during the night, feasting on the acari and soft bodied insects which assail books and papers. An almond tree twig kept in a room, is said to dispel flies. The bruised seeds of the custard apple are said to dispel bugs.—*Tennant's Ceylon. O'Shaughnessy. Hooker Him. Journ. Honigberger.*

BANEBERRY. Actæa spicata.

BANEPA, a district of Nepal.

BANG. Beng. Duk. Hind. Pers. Cannabis sativa.

BANGA. The river Thog of Bengal, a kind of porpoise.—*Wilson.*

BANGA, a prince or ruler mentioned in an inscription at Khajrao, 18 miles from Chitterpore, in Bundelkhand.

BANGA, in Long. 92° 27′ E. and Lat. 24° 50′ N.

BANGA. Hind. Raw Cotton.

BANGALI ELACHI. Beng. Amomum subulatum.

BANGALORE, in L. 12° 57′ 6; L. 77° 33′ 50, a large military station and town in Mysore. At the flagstaff, the mean height of the cantonment above the sea is 2,949 feet according to Ad. Schl. and 2,874 according to Babington. The climate is almost European, but at the more exposed parts is unfavorable to young children. The fruits of Europe all grow well, as also the vegetables, and many European officers are settling there. Bangalore Pettah or civil town was taken by storm by the British, on the 21st March 1791 a battle was fought on the 6th December 1791. See Silk. Tea.

BANGALOW, from banglah, Hind. A single storied house.

BANGAN, a group of islands in the Eastern Archipelago, occupied by the Manguianes, a mild and ill-used people. See Manguianes.

BANGANAPILLY, a town in the Ceded Districts, capital of a small chieftainship held by a mahomedan family of Syeds. See Baunganapilly

BAN GANGA or WYN GOWGA, a river of Seonee and in the Bhurtpore territory.

BAN-GANGA, a tank at Walkeshwar near Bombay, said to have been produced by Krishna firing an arrow at a spot, to obtain pure water.

BANGAR. Hind. of Cis-Sutlej, high land requiring irrigation by wells. See Banjar.

BANGARO MAE, a wood of the Kei islands, well adapted for masts.

BANGAR YATCHAM, a polygar chief, 60 miles N. W. of Madras.

BANGASH, the country of a people, claiming Afghan descent.

BANGDAMY, in Long. 88° 38′ E. and Lat. 24° 30′ N.

BANGHI, in Long. 83° 26′ E. and Lat. 24° 40′ N.

BANGHI. Tam. A heavy mail post.

BANG-KALLEE, a river of Chittagong.

BANGKWANG a province of Banca. See Tin.

BANGLES. Anglo-Indian.

Bangreean	... Hind.	Gazloo	... Tel.
Wallaeel	... Tam.	Kadiam	... Sansc.

Glass, gold and silver bracelets, worn by women, throughout the East. The Chinese make them of a clouded or plain vitreous substance to imitate jade stone or chalcedony. They are packed in boxes containing a thousand pairs, each box estimated to weigh a pecul. Bangles are imported into and also exported from Madras. In four years, the imports were to the value of Rs. 1,147, chiefly from Bombay. The exports were in number 19,53,000, of the value of Rs. 3,078 and to Bombay and Sinde. See Armlets, Bracelets.

BANGOL-ZYE, a Baluch tribe, occupying exclusively Isprinji, but reside also at Shall and Mustang, and in winter repair to Talli near Lehri. See Kelat, p. 492.

BANGORA, a town in Long. 75° 35′ E. and Lat. 27° 40′ N.

BANGRA. Beng. Wedelia calendulacea.

BANGRA. A cloth made from the gigantic stinging nettle of the Nipal and Sikkim hills. The preparation of the fibres is the same as the "Pooah," but the Bangra is harder and stiffer than pooah, and not adapted to making ropes or nets.—*Royle.*

BANGRI BASHA, one of the Hindi dialects. See India. (*Qu.* Rangri Bhasha)

BANGRIAN. Hind. Bangles,

BANGSIRNG. Malay. Tupaia Javanica.

BANGTULA, in Long. 83° 48′ E. and Lat. 28° 20′ N.

BANGU, a river thug in Bengal.

BANGUEY, an island 18 to 21 miles long in Lat. 7° 19′ N. Long. 117° 6′ E. in the Straits of Balabac.—*Horsburgh.*

BANGAL ZYE. Beluch occupants of Isprinji. See Kelat, p. 492.

BANI. Hind. of Kotgarh, Quercus annulata.

BANI, also Kupu, a yellow earth.

BANI, L. 32° 56′ N. Lat. 71° 23′ E. in the Panjab, E. of Kalabagh the Tower station is 1,692 feet above the sea.—*Walker.*

BANIA. Hind. Also pronounced Vania as the b and v are frequently substituted for each other in many dialects of India; this sect, for instance, being called Bania, or Wania, but known to the British as Banians, or Banyans. They are a hindu people of the Vaisya or Chetrya castes following retail trade, but the Marwarri Rajput also adopts the title. Of all hindu sects the Bania abstains the most rigidly from eating flesh: hence probably is derived the term Banyan day on board ship;

the ration of that day, which when on full allowance occurs once a week, including no meat.—*Hindu Infanticide, p.* 174. See Balaji. Tripati. Jam.

BANIAN TREE, Ficus Indica. See Banyan tree.

BANIHAL, a pass leading from Tibet to Kashmir.

BANISODA, in Long. 80° 30′ E. and Lat. 24° 50′ N.

BANIWAL. Hind. A sub-division of the Bahangi sect.

BANJ. Hind. Barren, properly, Banjh Hind, barren as a woman.

BANJ. Arab. Henbane. But the term is, as a prefix, applied to various potent drugs as Banj-i-rumi, Conium maculatum; Banj-i-dashti Datura.

BANJAR. Hind. Waste land generally; Land out of cultivation.

BANJAR, a river in Borneo occupied by the Kyan race, its banks and vicinity are said to yield gold and diamonds. See Kyan, p. 567.

BANJARA. Hind. A numerous race, mostly migratory and many of them predatory, met with from Kashmir to Cape Comorin, but all acknowledging a common origin. Those in the South of India are often styled Lambari, but their own name amongst themselves is Gohur, and wherever met with, those of Southern India claim to be of Rajput origin, and assume the titles of Rahtor, Chauhan, Powar and Tuwar. There they have been largely employed as grain dealers, searching through the hamlets, and conveying the grains on bullocks to the marts, returning when the sea coast is near with salt. They have also latterly been great cotton carriers. Their camp is called a Tanda, and it is a grand site, to meet the magnificent bullocks of a large Tanda numbering up to some thousand. They have small hair cloth tents, made of cumblies. They are not of any sect of hindus and seem to worship the leading bullock of the Tanda, a magnificent creature which moves steadily along, with tinkling bells to guide the ear. They are expert lasso throwers. The increase of roads and railways is depriving them of avocation, and they are now given to dacoity and many of them are met with in jails. Professor Wilson, writing of those in northern India, says that they are of hindu and mahomedan religions but acknowledge a common origin and live especially along the foot of the mountains from Hardwar to Gorakpur and form various sub-divisions. The most migratory are the Bahurupa Banjara of whom there are five branches, with four of the Rajput names. The fifth is the Ba, or Ban and is descended from a Gaur Brahman. Each of these is infinitely subdivided some of these Banjara have the privileges of *Charan* and *Bhat*, their persons being sacred and accepted in guarantee of engagements, the origin of these people is very obscure.—*Wilson's Glossary. Baron Hugel's Travels in Kashmir and the Punjab, p.* 81.

BANJAR, Ooti, and Pasir, three rivers of Borneo occupied by Kyans.—See Kyans, p. 567.

BANJER. Jav. an inundation.

BANJARMASSIN, a province of Borneo, in the Eastern Archipelago.

BANJHKORA, a tract of country near the Yuzufzai possession, along with Buner, Bajawar Astor and Swat.—See India, p. 336.

BANJI. Hind. Quercus incana, heavy oak.

BANJIGA. Can. A lingaet shop-keeper. See Linga-Balja vadu.

BANKA. Sans. Telugu, any viscous plant, and applied to several species of different genera. Banka-baddu, Vitis Linnæi Wall. B. Chettu, Zyzyphus, sp. B. Nakkera Cordia, myxa, L. and B. pavili, species of Portulaca. Fl. Andh.

BANK. Under the different governments of ancient nations there were doubtless treasuries, where the revenues of the country were received and disbursed. The ancient Hebrews paid taxes, and so did all nations for the support of the authorities, who were placed over them as their rulers. Such collections were then stored, whether in kind or in currency, and distributed according to the wishes of those who were exercising authority, within their territories, by officers who may be styled either treasurers or paymasters. But banks and banking as now do not seem to have existed in ancient times. The Latin words *Argentarii Mensarii* and *Nummularii* have been twisted into an analogical interpretation, of which they are not strictly susceptible. These words are derived respectively, from *argentum*, which means silver, the second is derived from mensa a table, and nummus was a piece of Roman money. Upon this fabric according to some banking is made to date long anterior to the Christian era. But Bank is a borrowed word, as found in every language of modern Europe. Its primary signification is a heap, or an extended ridge, as the bank of a river or a mound of earth, and the application of the word followed, from the fact, that there were heaps of silver usually kept in banks. In French it is Bangue. In German, Banken. In Swedish, Banck. In Danish, Banke. In Italian, Banco. In Spanish and Portuguese, Banca and banco. In Saxon, Banc. In Armenian, Banoq. The word in all these languages, shows that it is the same all over Europe. Another derivation however is from banca, a bench, the bench on which money dealers sit, and from it is the

English bankrupt; as, on any case of insolvency, the insolvents' bench was broken; there was a metallic currency, to some extent in use, among the Grecians, Romans and Assyrians. But when we seek to discover an Institution similar to that, of the modern Bank, we utterly fail in the effort. That there were treasurers and money changers in existence, we have ample proof on the pages of sacred writ and doubtless they engaged to an extent in money dealings, but a money changer and a banker are entirely different persons. To change money and sit at a table all day, requires neither skill nor talent and but very little effort. But to do the work of a Banker, demands a thorough acquaintance with the laws of trade, a knowledge of the exact valuation of various coins and currencies, in circulation throughout the world, and a very keen insight into human nature. A good banker necessarily needs to be an adept in several things. He requires not only all the knowledge, usually possessed by skilful and successful mercantile men, but he must also possess some kinds of information, which are special to his profession. Banking as understood by the moderns, took its origin during the existence of the Florentine re-public in the middle ages, and from that period, Banks have been steadily springing up, in every country and kingdom in Europe. Mr. Cooke says, the Bank of Venice is the most ancient. It commenced business in 1157. The Bank of England was first chartered in the reign of William and Mary in 1693. The first Banks in India were started respectively at Calcutta, 1770; at Madras the Carnatic Bank in 1791, and at Bombay only as late as 1840. The present Bank of Bengal was opened for business on the 1st May 1806. It is, therefore, the oldest and most successful, of all the Banks that have ever existed in India. The Government of India being the owners, of a large number of its shares, it has always received the vigilant supervision of various officers of Government. Since it commenced operations it has cleared and paid as dividends, the amount of its own present capital, to its shareholders. Its business has been wholly directed to swell the receipts of its proprietors. Taking year by year from its establishment, its average rate of dividends has been about twelve per cent. per annum. One year it paid as high as twenty, another year they fell to two and a half, when heavy frauds had taken place. There are now something like a dozen Banks, in various parts of India in Madras, Bombay, Calcutta, Rangoon, Singapore, Hong Kong and many towns in the Indian provinces, and great houses of hindus of the Vais and Bhattya castes, are also doing a large banking business. Good trustworthy Banks are of immense benefit to the people of a country. They are like reservoirs, collecting the accumulated capital of communities and distributing it for beneficial purposes. The timorous and inactive capitalist, is able to furnish means, for the prosecution of various enterprises, undertaken by men of vigour, of courage and untiring industry. Banks are usually classified under three heads, as 1st, Banks of deposit, 2d Banks of discount, 3d, Banks of circulation, and there is supposed to be, a difference between a public and a private bank. This difference however exists more in theory than in reality. Those in which the Indian Government are interested are called public, while those not so conducted are said to be private, and depend on the honor, reputation and good name, of men in high position in private or public life.—*Rangoon Times Newspaper.*

BANKAHU. Hind. of Hazara, &c., Vitex negundo.

BANKAL, a weight in the Straits of Malacca, at Singapore, 835 or 836 grains, at Penang somewhat less.—*Simmonds.*

BANKA PALEMBANG. See Banca Islands, Tin.

BANKAT, also KATKALEJI. Hind. Guilandina bonduc.

BANKAU. Hind. of Hazara, Quercus annulata.

BANKEE, in L. 85° 31' E. and L. 22° 55' N.

BAN-KHA. Burm. In Amherst, a peculiar kind of wood, color grey, used for house posts, and other common purposes.—*Captain Dance.*

BANKHOR, also BANAKHOR. Hind. Pavia indica, the Indian horse chesnut.

BANKIMU. Hind. of Sutlej valley, Corylus lacera, the hazel.

BANKOKUTTO, a tin mine in Banca. See Tin.

BANKS. In the oceans on the south of Asia are several extensive banks full of pearl to sailors, but from which fishermen draw large quantities of fish, &c. one of them is termed the Asiatic, the other the Australian Bank. Up to a very recent period the submerged banks which extend from Asia and Australia furnished several articles of commerce Agar Agar, a marine lichen extensively used in China, trepang or sea slug, and mother-o'pearl shell. The Australian bank is the most productive, probably from its not having yet been so extensively worked as the Asiatic bank. The depth of water on these banks averages about 30 fathoms, deepening rapidly as the edge is approached, and shoaling gradually towards the land. And, where the earth has not risen above the water's surface great submarine banks are to be traced from one island to another.

the ration of that daed the Great Asiatic Bank.

Hindu Infant SPECIOSA. Kœn. Co-si-chang,
pati. Jam.
BANI s speciosus. See Costus.
SERRA, in Long 88° 30′ E. and
tree. 22° 22′ N.

BAN KUCH. Hind. Viburnum cotinifolium.

BAN-MEHAL. Hind. the crab apple of the Western Himalaya, Pyrus baccata.

BAN MUNG. Hind. The dry sheath of the flower stalk of "moong" grass, used for string, &c.

"BAN MUNJ," leaves from the flower stalks of Saccharum munja.

BANKOK is about 27 miles up the Menam river of Siam. It is built upon an island, in Lat 13° 58′ N. and Long. 100° 34′ E. on both branches of the river, generally with 7 fathoms water, close to each side. From March to June, the river is crowded with not less than 100 junks of all sorts and descriptions, trading in the produce of the country, salt, cotton, sugar, pepper, teak and rosewood.—*Horsburgh.* See Karen, Kambogia, Ko, Siam.

BANNA. Hind. Viburnum fœtens.

BANNA. Hind. Vitex negundo.

BANNERS.

Alam	Ar.	Jhenda	Hind.
Bhaota	Hind.		

Banners are in use for the military and for designating the religious ceremonials of all the races and nations and religions of Asia. They are of various shapes and sizes, and of various colours, and the phrases so familiar to Europe as to lowering the colours and keeping them up, are in use in Asia. In India, the invocation Angriz kabhaota kaim, may the British flag stand fast, is common. The Eusufzai Affghan, in a late war, advanced against the British, with "scarlet" banners. But scarlet is a forbidden colour to mahomedans, it is unlawful for them to use it on banners or standards; and it is not known how these bigoted mahomedans so far transgressed the "traditions of the elders" in this matter.

BANNU. A district in Afghanistan west of Derah-i-Ismail Khan, whose inhabitants are called Banuche. It is called by them Bunnu Tank. Bannu is in the possession of a Dogra Rajput family to whom, since the conquest of the Panjab, the British gave Kashmir. It has a large extent of fertile soil, and an abundant supply of water, its capability of yielding a variety of produce is very great. The people are not, however, enterprizing agriculturists, and besides wheat, rice, mung, and a little sugar-cane, zir-chob, or turmeric, is the only exotic plant, which has been introduced. There is much pasture-land in Bannu on which without inconvenience to their own cattle, the natives can allow their neighbours, the Waziri, to graze their flocks and horses. Though on the same plain as Marwat, the Bannu people have a difference in costume, and are smaller in statue than the Marwat, people. The Marwati is generally clad in coarse white linen, in much the same manner as the Patans on the banks of the Indus. The people of Bannu wear dark clothing, and are fond of lunghis, with ornamental borders. Both in dress and appearance they assimilate with the mountain tribes. They are very brave, and remarkable for entertaining an *esprit de pays.* They are eloquent in eulogiums upon their country and the exclamation, "My own dear Bannu!" is frequently uttered by them. Three or four centuries ago the high road, followed from Kabul to India, led through Bannu as we find in the history of Taimur's Expedition.—*Masson's Journeys, Vol. I. pp.* 96, 98. See Waziri

BANPHAL. Hind. Corchorus olitorius, C. depressus, C. accutangula, and other species.

BANPHAL. Hind. in Jhang, a kind of morel.

BAN RAIHAN. Hind. Melissa or Nepeta.

BANS. Beng. Hind. Species of Bambusa. The large hollow bamboo, Bambusa arundinacea, any bamboo.

BANSA. Hind. Properly Vansa, a tribe or race of the hindu people. See Ahir, Ceylon.

BANSARI, a weed in the Doab.

BAN—SINJLI also Sinjli. Hind. of Kaghan, Cratœgus oxyacantha.

BANSA. Hind. (Vasa), Adhatoda vasica.

BANSHINI-BANSH. Beng. Dendrocalamus tulda.

BAN-SHOOLPHA. Beng. Fumana parviflora, small flowered fumitory.

BANSHOONI. Beng. Ixora bandbuca.

BANSH-PAT-LAL-NUTI. Beng. Amarantus atropurpureus.

BANSH-PAT-NUTI. Beng. Amarantus lanceolatus.

BANSK. Beng. Tabasheer.

BANS KI CHANWAL. Hind. Seed of Bambusa arundinacea.

BANS KI KAONLI SAG. Dukh. Young shoots of Bambusa arundinacea.

BANSKOTTA. The Miri tribe dwell to the north of Banskotta and Lukimpur. See India, p. 338.

BANSLOCHUN. Beng. Hind. Sans. Tabasheer.

BANSPATA. Beng. Amarantus atropurpureus.

BANSWARRA, was originally part of Mewar, but became independent of it prior to the establishment of the supremacy of the British Government, who recognized it as a separate power. In 1812 the chief of Banswarra offered to become tributary to the British Government on condition of the expulsion of the Mahrattas; but no definite relations were formed with him till September 1818, when a Treaty, (No. LV.) was concluded, by which, in consideration of the protection of the British Government the Rawul agreed to act in subordinate co-operation and settle his affairs in accordance with the advice of the British Government, to abstain from disputes and political correspondence with other chiefs, to pay a tribute equal to three-eights of his revenues, and to furnish troops when required.—*Treaties, Engagements and Sunnuds, Vol. IV. p.* 177.

BANTAM, a province of Java. The first voyage made by the Dutch was in 1595, in which year their first fleet, under the command of Houtman (who had been previously employed by the Portuguese in the East India service), sailed direct to *Bantam.* At this period the Portuguese were at war with the king of *Bantam,* to whom Houtman offered assistance, in return for which he obtained permission to build a factory at Bantam.—*Raffle's History of Java,* Vol. I. p. 22. See Java.

BAN-TANDULI. Hind. Amarantus polygonoides.

BAN-TENDU. Hind. Diospyros cordifolia, wild ebony.

BANUR-KULAY. Beng. Cantharospermum pauciflorum.

BANUR-LATHEE. Beng. Cathartocarpus fistula.

BANUR-PALA. Beng. Aglaia polystachya.

BANUT, a river of Johore. See Jakun.

BANTI CHETTU. Tagetes patula, L.—R. iii. 434.

BAN USTAKI. Hind. Aloe perfoliata.

BANYAN TREE is the Ficus Indica, the Bar-ka jhar of Southern India the Arbor de Rais of the Portuguese. It throws down aerial roots, which support the larger branches and these again throw down other roots, till, as Milton wrote (Par. Lost. ix) the tree becomes

> "Such as at this day, to Indians known,
> In Malabar or Deccan, spreads her arms,
> Branching so broad and long, that in the ground,
> The bended twigs take root, and daughters grow
> About the mother-tree, a pillared shade,
> High over-arched and echoing walks between.
> There oft the Indian herdsman, shunning heat,
> Shelters in cool, and tends his pasturing herds,
> At loop-holes cut through strictest shade."

Several of these trees, have attracted attention from their dimensions. Four miles distant from Fort Saint David was one under the shade of which Mr. Ives quotes Mr. Didge as computing that ten thousand men might stand without incommoding themselves. Dr. Frayer, saw one of those admirable trees near Surat, in the year 1673. In the Botanical Gardens at Calcutta, a great Banyan tree, has been long the pride and ornament of the garden, Dr. Falconer satisfactorily ascertained it to be only seventy-five years old. People were alive a few years ago who remembered well its site being occupied, in 1782, by a Date-palm out of whose crown the Banyan sprouted, and beneath which a Fakir sat. This tree has for the last 34 years not increased in size, having been lopped under some misapprehension, and when paced by Dr. Balfour in 1863 its dimensions were identical with those of 1834, viz. 100 yards in diameter, and 360 in circumference. The banyan hardly ever vegetates on the ground; but its figs are eaten by birds, and the seeds deposited in the crowns of palms, where they grow, sending down roots that embrace and eventually kill the palm, which decays away. Had the Calcutta tree been growing in 1849 over the great palm-stove at Kew, only thirty feet of each end of that vast structure would have been uncovered. When the banyan tree embraces a date or palmyra or cocoanut tree, and the latter are seen growing out of it, this is called a marriage of the trees. These are encouraged and many are to be seen near the Kistnah river. As the Banyan tree gets old, it breaks up into separate masses, the original trunk decaying, and the props becoming separate trunks of the different portions. Lady Faulkland tells us of the Western Coast, that about eight miles from Waee is a banyan tree, covering a space of ground of 3½ acres and four acres. The shade was so complete, she could sit in the middle of the day without any covering on her head and separate picnic parties might take place under it, and not interfere with each other. There were countless avenues, or rather aisles, like those of a church, the pale-grey stems being the columns, which, as the sun fell on them, glittered in parts like silver; and here and there were little recesses like chapels, where the roots from the boughs formed themselves into delicate clustering pillars, up and down which little squirrels were chasing each other; while large monkeys were jumping from bough to bough, the boughs cracking and creeking, as they leaped.—*Hooker Him. Jour. Vol. II. p.* 246; *Ouseley's Travels, Vol. I. p.* 80; *Tennant's Hindustan, Vol. ii. p.* 31; *Postan's Western India, Vol. i. p.* 182; *Lady Faulkland's Chow-chow.* See Ficus Indica.

BAOBAB. Eng. Adansonia digitata, one near Gumer in Fasshol was seen 95 feet in circumference. Its inner bark stripped off, beaten and dried in the sun can be made into paper.

BAO CHAN. Duk. Psoralea corylifolia. —*Linn.*

BAOLI. Hind. A well: corruption of Baori.

BAORA, a predatory vagrant tribe on the Bhutti territory and western parts of Delhi.

They resemble the Kanjar and Gundheela. See Bhowra.

BAORI. H. ALSO BAOLI. H. a well.

BAP. HIND. father. BAP-RE, the British say Bobbery, an exclamation of pained surprise.

BAPAI PANDU. TEL. Carica papaya.

BAPANABURI. TEL. Ehretia buxifolia.—*R.* i. 598.

BAPCHI. Seed of a small bush found near Ajmeer; very mucilaginous, cooling and demulcent: taken in sherbet.—*Gen. Med. Top. of Ajmere, page* 128.

BAPHIA NITIDA. See Camwood.

BAPOW, in Long. 66° 50' E. and Lat. 28° 35' N.

BAPOTA. HIND. Ancestral inheritance, in Mewar, corresponding to the Watan of western India. The Jat of Mewar to any attempt to arrest from him his Bapota, would answer in the very words of Ahab king of Israel "the Lord forbid me that I should give the inheritance of my fathers" into thee. The ryot (cultivator) is the proprietor of the soil in Mewar. He compares his right therein to the a'khye d'hooba, which no vicissitudes can destroy. He calls the land his bapota, or patrimonial inheritance. He has Menu in support of his claim, in the text, "cultivated land is the property of him who cut away the wood, or who cleared and tilled it:" an ordinance binding on the whole hindu race, and which no international wars, or conquest, could overturn.—*Tod's Rajasthan, Vol. i. p.* 494.

BAPPA. Of the twenty-four Gehlote tribes several issued from the founder, Bappa. Shortly after the conquest of Cheetore, Bappa proceeded to Saurashtra and married the daughter of Esupgole, prince of the island of Bunderdhiva. With his bride he conveyed to Cheetore the statue of Vyan-mata, the tutelary goddess of her race, who still divides with Eklinga the devotion of the Gehlote princes. The temple in which he enshrined this islandic goddess yet stands on the summit of Cheetore, with many other monuments assigned by tradition to Bappa. Bappa is not a proper name, it signifies merely 'a child.' He is frequently styled Syeel, and in inscriptions Syeel Adhes, 'the mountain lord.' The Mori prince, from whom Bappa took Cheetore, was of the Tak or Takshac race, of whom *Nágnéchá* or *Nágání Mata* was the mother, represented as half woman and half serpent. the sister of the mother of the Scythic race, according to their legends. Bappa, the founder of the Gehlotes, retired into Scythia and left his heirs to rule in India. Keneksen, was the founder of the Balabhi empire, and Sumitra was the last of Rama's line. Many rites of the Rana of Mewar's house are decidedly Scythic. According to Sir H. Elliott when Mahomed bin Kasim the general of Walid overran Guzerat about A. D. 718, and advanced to Chittore, Bappa met and entirely defeated him. After this he was raised to the throne of Chittore, where his descendants still reign. After a long and prosperous reign, Bappa abdicated and departed to Khorassan. In the reign of Khoman his great grandson Mahmun, Governor of Khorassan invaded Chittore but was defeated and expelled by Khuman after 24 engagements.—*Elliot Hist. of India. Tod's Rajasthan, Vol. i. p.* 594. See Saurashtra.

BAPTISTA TINCTORIA. See Dyes.

BAPTISM is at present, a christian rite of initiation. It was designated by the primitive christians by various names; and Gregory Nazianzum mentions it as a *seal*, because, as he states, it is a preservation, or sign of security. (*Ora.* 40.) Many ceremonies are mentioned by ecclesiastical writers, connected with the rite in the early ages; such as giving milk and honey to the baptized in the east, and wine and milk in the west. The sign of the cross, which began to be used in the fourth century, is described by Lactantius, as an impregnable fortress to defend those impressed with it, and he further adds, that such the devil cannot approach.—*Milner's Seven Churches of Asia, p.* 65.

BAPULDODY, in Long. 77° 40' E. and Lat. 15° 45' N.

BAP-RE. HIND. LIT. Oh! thou father! a disrespectful address, hence the English bobbery.

BAPUNGA. TEL. Psoralea corylifolia.—*Linn.*

BAQUAIS. French of Mauritius, Pandanus odorotissimus. See Pandanus.

BAQLA, from Baqa, Arab, Beans.

BAR, an intoxicating liquor prepared in Western India, from the Calotropis gigantea.

BAR. PERS. HIND. A load: an occasion. Bar-gir Pers. Hind. a mercenary trooper, providing his horse.

BAR, Long 85° 45' E. and Lat. 25° 27' N.

BAR. HIND. OR BARGAT. HIND. Ficus indica, the banyan.

BAR. HIND. Of Murree Hills, Quercus dilatata.

BAR, solid bamboo, the Bambusa stricta.

BAR. HIND. Of Hazara Hills, the cotton plant.

BAR, in the Panjab, central sandy tracts in the Doabs. The plants growing on them resemble those found on the wastes bordering on the Caspian Sea; and most of the genera which abound in the southern steppes of Russia, have representatives on the bar. Salsolas, Salicornias, and Suedas cover every patch of saline land in the Panjab and are largely used for the manufacture of sajji, or impure carbonate of soda; kurreel (Capparis aphylla) jhau (Tamarix indica), the furash (Tamarix orientalis), ber (Zizyphus vulgaris) which compose almost the whole tree vegetation of the bar, have analogous species on the shores of the Black Sea and the banks of the Volga.

BARA. Hind. the wind; metaphorically, the Cholera morbus disease.

BARA, a river near the Khyber.

BARADARI. *barah* means 'twelve,' dari means 'a door,' a house having twelve doors, an open building like a summer house.

BARADI, the river that waters the plain of Damascus. See Damascus.

BARAGADAM Indigofera glandulosa.—*Willd.*

BARADEE, in Long. 36° 35' E. and Lat 22° 57' N.

BARAGOZA, the modern Baroach. A native of this city was in the embassy from king Pandyon to Augustus at Antioch. His name is given as Zarmano Chidus or Zarmanochegus. He accompanied Augustus as far as Athens and there committed self-immolation before the emperor.—*Cal. Rev.* 1868.

BARAH, two towns in India one in Long. 82°46' and Lat. 25°21' N. the other in L. 69° 8' E. and L 23° 11' N.

BARAHAT and Gopesvara two towns in Garhwal from which were obtained two bronze-tridents, with inscriptions of about the 7th century. See Inscriptions, p. 377.

BARAH-SADAT, a powerful tribe of Syuds on the eastern parts of the Muzaffurnuggur district, some of their ancestors served Humayun, Ferokhser and Aurungzeb.

BARAH THAKURA. Hind. Twelve petty hill states between the Jumna and Sutlej. See Baraich. Afghans.

BARAILLY, in Long. 88° 17' E. and Lat. 25° 12' N.

BARAIREE, a small river of Banda.

BARAJATI. See Khutri.

BARAK, a river of Sylhet.

BARAK, the horse on which Mahomed ascended to heaven in his dream.

BARAK, a tributary to the Brahmapootra. It is an offset from the Jeeree, which leaves in Lat. 24° 43', long. 93° 13' W., through Cachar and Sylhet; S. W. into Megna. Length 200 m. Banks low and marshy along the valley of the Cachar.

BARAK, one of the three sons of Zirak the ancestor of the Barakzye, of which tribe Dost Mahomed Khan, the ruler in 1830-1840 of Kabul was the head.

BARA LACHA, a pass in Tibet, Lat. 32° 44', Long. 77° 31'.

BARA-LACHA, a range of mountains which forms the watershed between the Indus and its first affluents, and is regarded by Alexander Cunningham as the western continuation of the Himalaya. The Eastern Himalaya divide the waters of the Tsango-po, from those of the Ganges and its tributaries. The western as well as the eastern chain separate the great hindu family of India from the Bot of Thibet. Some mixed races are found to the south of each chain; the Lahuli and Kanawari to the west and the Ghorka and Bhutani to the east. The inferior mountains of the eastern chain generally run at right angles to its axis, whereas those of the western chain, are mostly disposed in subordinate parallel ranges. There are thus two distincts and independent ranges to the south of the western Himalaya, both stretching in the same general direction from north to south-east, which may be termed the Mid-Himalaya, and the outer and sub-Himalaya,—the term Sewalik being that applied to the lowermost sandstone ranges.—*A. Cunningham.*

BARA-MAHAL. A fertile district in Southern India now known as the Collectorate of Salem. It contains soils impregnated with soda. It is an elevated plain about 800 feet above the sea.

BARA MARECA. Maleal. Dolichos cultratus.

BARAMERY, in Long. 80° 40' E. and Lat. 26°. 35' N.

BARAMOOLA, in Long. 75° 91' E. and Lat. 34° 42' N. The Baramoola pass into Cashmere leading through the valley and by which the Jhelum leaves the valley, is open all the year round for horses and foot passengers. It is in Lat. 34° 10' Long. 74° 30' and is the only pass into Cashmere practicable for an army.

BARAN, in Long. 68° 20' E. and Lat. 28° 45'. N.

BARAN. Pers. rain. Barani, a great coat.

BARANI, land moistened only by rain.

BARANI a rain-coat, so called from baran rain; an overcoat generally pronounced in southern Persia, as baroon and barooni. The Barani and Oima are overcoats the former, confined to men of some rank, is an ample cloak, with large sleeves, that shrouds the whole person, and is made according to the fancy and means of the wearer, of coarse or fine broad-cloth, of shawl, or even of velvet lined with every kind of material, from the richest furs down to the coarsest chintz, and embroidered, often very richly, with silk, gold, or silver. The latter is more commonly used, and is more exclusively calculated for riding. It somewhat resembles a lady's riding habit, fitting tight to the shape, from the neck to the waist; where it is gathered into plaits, and swells out above the girdle, falling in ample folds to the feet. It is generally made of broad-cloth, varying in quality.—*Ouseley's Travels, Vol. ii. p. 94. Fraser's Journey into Khorasan, p. 69.*

BARANGI. Hind. Clerodendron infortunatum.

BARANGIA, a genus of mammals of the family Mustelidæ, tribe Semi-plantigrada, and Order Carnivora. See Mammalia.

BARANGAN. Malay. Sulphuret of Arsenic.

BARANKI CHETTU. Tel. Butea superba. *R?*

BARANO. Hind. of Kaghan, Quercus annulata.

BARANUS. Hind. Rhododendron arboreum.

BARAPATALU. Tel. Indigofera glandulosa, *Willd.*—It abounds in the N. W. parts of Rajahmundry the same Telegu name is given to I. trifoliata.—*W.* and *A.*

BARAS. Ar. a kind of leprosy so called.

BARASAL, a town 12 miles from Calcutta.

BARISAL, a town in the district of Backerganj, in Bengal, 136 miles from Calcutta to the north of the 24 pergunnahs.

BARAS-GANTH. Hind. Birthday on which day a knot is tied on a cord kept for that purpose, hence baras-ganth, an annual knot.

BARA-SINGHA, a stag, the Cervus Wallichi.

BARASINHA DEVA. See Inscriptions.

BARAT. Ar. Marriage procession. The Shab-i-Barat, or night of record, is a mahomedan festival held on the night of the 14th of the month Shaban. In the north of India, lamps are lighted and prayers said in behalf of deceased ancestors.—*Wilson.*

BARATHAR, in Long. 84° 0' E. and Lat. 28° 30' N.

BARAT-KHAND. The channel which separates the island of Dwarica from the main land. It is filled up, except in spring tides.

BARA-WAFAT. Arab H. The great death, a solemn festival on the 12th of the mahomedan month Rabi-ul-awal, on which date Mahomed died.

BARB, a Barbary horse. See Horse.

BARBADOES, or BOURBON COTTON. See Cotton.

BARBADOES CEDAR. See Cedar: Deodar.

BARBADOES FLOWER FENCE. Eng. Poinciana pulcherrima.—*Linn.*

BARBARA, a sort of felspar used in Delhi for making porcelain.—*Powell.*

BARBARA PRECOX. R. Br. American cress, Belleisle cress.

BARBARIAN, the Barbaros of the Greeks who applied the term to everything and race, not speaking Greek and it was afterwards taken up and used by the Romans. It was a term similar to the gentile of the Jews, to whom every person not circumcised was a gentile; to the hindu, every man not twice born is a m'lechha; to the mahomedan, every man not believing in Mahomed is a kafir. To the Chinese every one not a Chinese is a barbarian. Arabs observe that Indians, unless brought young into the country, never learn its language well and they have a term to express the vicious pronunciation of a slave or Indian, Barbarat-ul-Hunud;—the barbarism of the Indian, and the Greek "Barbaros," appears to be derived from the Sanscrit Varavaraha, an outcast, a barbarian, a man with curly hair. It was Christianity which first broke down the barriers between Jew and Gentile, between Greek and Barbarian, between the white and the black. Humanity is a word which you look for in vain in Plato or Aristotle; the idea of mankind as one family, as the children of one God, is an idea of Christian growth; and the science of mankind, and of the languages of mankind is a science which, without Christianity, would never have sprung into life. Barbarians seem to have possessed a greater facility for acquiring languages than either Greeks or Romans. Soon after the Macedonian conquest, we find Berosus in Babylon, Menander in Tyre, and Manetho in Egypt, compiling, from original sources, the annals of their countries. Their works were written in Greek, and for the Greeks. The native language of Berosus was Babylonian, of Menander, Phenician, of Manetho, Egyptian. We probably owe the translation of the Old Testament, the Septuagint, to this spirit of literary inquiry which was patronised at Alexandria by the Ptolemies. The writings of Zoroaster, also, the Zend.—Avesta, would seem to have been rendered in Greek about the same time. or Hermippus, who is said by Pliny to have anslated the writings of Zoroaster, was in all obability Hermippus, the Peripatetic philosopher, the pupil of Callimachus, one of the most learned scholars at Alexandria. Ajem in Arabic, literally means foreign; but, in the southern part of Arabia, El Ajem is applied to the opposite part of the coast of Africa. Ajem by the Turks means Turkish Arabia, Persia is Beld-ul-Ajem, and the north-eastern coast of Africa, is Bar-el-Ajem The Arabs divide the world into two great bodies, first themselves, and, secondly, "Ajemi," *i. e.*, all that are not Arabs. Similar bi-partitions are the hindu m'hlecha, and the Jew and Gentile, the Greek and Barbarians, &c., &c.—*Playfair's Aden. Burton's Pilgrimage to Meccah, Vol. II, p.* 26, 254. *Muller's Lectures, p.* 84.

BARBARIC KINGS. See Greeks of Asia.

BARBER. The castes of barbers are as under in Madras.

Reddi Bummala Vanloo.	Saljara Mungala Vanloo.
Natum Mungala Vanloo.	Arava Mungala Vanloo.
Sree do do	Palay „ „
Chāta Cooroo Vanloo.	Beree „ „
Pongkanatu Vanloo.	

BARBERO, in Long. 76° 11' E. and L. 27° 35' N.

BARBERRY, is found abundantly on the Neilgherries and most of the mountain ranges, of India. Its virtues have of late been much extolled as a remedial agent in fevers, but beyond being a good tonic in weak digestion consequent on fever, it possesses no antiperiodic powers and will never be equal to quinine or the bark of the Green Heart. The Bibiree Green Heart Tree of British Guiana, is a large forest tree attaining an altitude of 60 feet and found on the rocky hill sides, on the borders of the South American rivers, and belongs to the Laurel tribe. The active principle in Warburg is not from the barberry but is extracted from the Bibiree, and forms the essence of the drops given in those severe forms of jungle fever seen at Mysore and in the Wynaad; excellent anti periodic. See Berberis, Dyes.

BARBERY, in Long. 80° 6' E. and Lat. 6° 30' N.

BARBET, Megalaima. One species of the barbet has been shot at Darjiling, but it is not common. In the Tenasserim mountains it swarms from 3,000 to 5,000 feet elevation, not higher, nor lower,—and from the first level it suddenly and entirely supplants M. lineata, the Pokoung of the Burmese. As long as day lasts, the woods amongst the Danna hills resound with its cry—piow, piow, piow, &c., &c. There is another Barbet, smaller and resembling apparently the M. indica, which is also pretty common from 1,000 to 3,500 feet; but it settles solely on the summits of the highest trees, calling out tapral, tapral, tapral, by the hour together. The greater red-headed Barbet (Megalaima indica, *Latham*, M. Philippensis, var. A. *Lath,*) gives out from its throat an incessant din, in sounds which resemble the blows of a smith hammering a cauldron and is known by the British in India as the copper smith.—*Tennent's Sketches of the Natural History of Ceylon, p.* 242. *Captain Tickell.*

BARBOSA, Odoardus Barbosa, of Lisbon, wrote the Journal of his voyage in 1516. He speaks with much precision of Sumatra.—*Marsden's Hist. of Sumatra, p.* 8.

BARBURAMU, S. TEL. Acacia Arabica, *L.*

BARCHA. HIND. Murree Hills, Quercus floribunda.

BARCHAN. POL. BARCHENT. GER. Fustian.

BARCLAYA OBLONGATA. *Wall.* Kyaghoung-loung. BURM.

BARDANES, a Parthian King. See Greeks of Asia.

BARDASIR. A large town of Kirman, on the road leading to Khorasan, lying north-east of the town of Kirman. It is also called Kawashir.

BARD, the Bardai of the Rajpoot is the prototype of the bard of the Saxon races, reciters of warlike poetry, of whom Tacitus says, "with their barbarous strains, they influence their minds in the day of battle with a chorus of military virtue." The Bards of India are the Bhat and the Charun. The Bhat are found all through peninsular India, where they are respected, though not reverenced; the Bhat and Charan of Rajputanah and Guzerat are a peculiar hindu race. The Bhat or Bards of Central India are of three sorts, the Magadha or historian; the Sata or genealogist, and the Bardi or Court minstrel, whose duty, in older times, it was to salute the King or Chief, in the early morning, wishing him long life and prosperity. Bards from their sacred character are often employed as convoys of travellers and of their property in tandahs or caravans. Throughout Rajaputanah they are regarded as a sacred order, and as the hereditary guardians of history and pedigree. They chant their own verses, or legends from the mythology of India.

The Charan like the Bhat, are a sacred race. Formerly in Malwah and Guzerat, it was usual for travellers to hire a Charan to protect them and the sanctity of his name was generally sufficient. If robbers appeared, he stepped forward waving his long white garments and denouncing in verse, infamy and disgrace on all who should injure travellers under the protection of the holy members of Siva. If this failed, he stabbed himself with a dagger in the arm, declaring that his blood was on their heads; and if all failed, he was bound in honor to stab himself to the heart. Elphinstone mentions that the Bhat and Charan of the west of India, are revered as bards and in some measure as heralds, among the Rajput tribes. In Rajputana they conduct caravans, which are not only protected from plunder, but from legal duties. In Guzerat they carry large sums in bullion, through tracts where a strong escort would be insufficient to protect it. They are also guarantee of all agreements of chiefs among themselves, and even with the government.

Their power is derived from the sanctity of their character and their desperate resolution. If a man carrying treasure is approached, he announces that he will commit traga as it is called; or if an engagement is not complied with, he issues the same threat unless it is fulfilled. Malcolm mentions that Charans, particularly of the Maroo class, who are mendicants, attend at feasts and marriages in great numbers, and are in the habit of extorting large sums, at the latter, by threats (if not satisfied) of sprinkling their blood on the parties met on this joyous occasion; and these threats have been too often carried into execution to make them be deemed idle by the superstitious Rajpoots. The Charan women are distinct from all the other population, both in dress and manners. They often reside in separate villages, and the traveller is surprised to see them come out in their long robes, and attend him for

BARDURRANI, an Afghan tribe. S d Lat. zilbash.

BARDWAN, a very fertile province of az- gal ceded to the British in 1760. It valuable coal-fields. See Bengal.

BAREE DOAB, is that district of the Panjab in which Lahore and Umritsir are situated. It has the Sanitarium of Dalhousie, near which, is the large forest of Kala-tope. Montgomery, is a district south of Lahore, also in the Baree doab. The Doab has not less than 1,200,000 acres of untilled land, of which at least 180,000 acres are covered with jungle. The Baree Doab consists of an elevated central dorsal plateau called Ganji Bar or bald tract in the Manja or middle part. This, on both sides, makes a sudden drop, there called dhaya, down to a flat alluvial tract of several miles in width running along either river and producing tamarisk and jhand. The soil of the Ganji Bar, is intensely arid and often saline, and produces only jal and some salsalaceous plants with a few bushes of jhand.—*Cal. Rev.* See Doab. Panjab.

BAREEK ERUNDI KA. Tel. Hind. Oil of small seeded var. of Ricinus communis. See Oil.

BAREILLY, in L. 28° 22' 2 N. and L. 79° 23' 2 E. and is a large station of northern India, 152 miles E. of Delhi. The mean height of the cantonment above the sea is 693 feet. It is in Rohilcund in the N. W. Provinces. An insurrection occurred at this place on the 21st April 1816, Bahader Khan was hanged on the 25th March 1860.

BARENDA, in Long. 85° 9' E. and Lat. 24° 30' N.

BARENDRA BHOOM, a country in Hindustan.

BARENGI. Tel. Ficus ampelos.

BARFI. Hind. a kind of sweetmeat.

BARG. Pers. a leaf, hence Barg-i-murad Myrtus communis; B-i-amrit-phal, Citrus limo num, leaves; B-i-wasma Indigofera tinct leaves; Barg-i-hana, mendhi, Lawsonia Sre Barg-i-bart, Pterocarpus draco, or Calam Cho- co. oria, alba;

BARGHUBEE, a river near Peeplee in Pooree.

BARGHAT, a river of Rewah.

BARGIL. Hind. Ortolan.

BARG-I-TAMBOL. Pers. Piper betel.

BAR-GIR, a hired military horseman.

BARH, a town in North Western India, occupied by Syeds.—*Wilson.*

BARHADRATHA. According to Chevalier Bunsen, a dynasty of 17 Kings of India who ruled 220 years viz. B. C. 866 to B. C. 647 one of them, Brihadratha, was father of Jarasandha. (Bunsen, iii. 547). The kings of Magadha were of six dynasties, the first was that of Barhadratha, of the line of Pandu, the first of which was Jarasandha, a contemporary of Yudishtira and Krishna, according to Sir William Jones B. C. 3101, according to Pro- Arial Wilson in the reign of Sahadeva, B. C. prim. But according to Bunsen, (iii. 585) the or 8, emigration from the North East of the distur ve land, took place about B. C. 10,000 and it 00, at the close of the great Plutonic langua ances of the earth and climatic changes, Betwe was then that the stem of the Arian gradua e in its most general sense was formed. mans, B. C. 8,000 to 5,000 occurred the 5,000 a separation of the Arian races into Ger- ally ext laves and Pelasgians. Between B. C. B. C. d 4,000, The Irano-Arian race gradu- country ended in Central Asia. rasters 4,000, they imigrated into the Indus Th and B. C. 3,000 was the date of Zor- 3300 reform—(*Bunsen, iii.* 585).

passage of the Sutlej took place B. C. B to 3200, by emigrants towards the Saras- Bl, or modern India. The emigration was the result of a schism amongst the Aryans, one part remained in the Panjab, and worshipped Agni only and rejected Indra; B. C. 3300-3200. After this, according to Megasthenes, wars were carried on with the kingdoms on the Saraswati, for about 200 years, during which the Arian power on the Indus fell, bringing us to the year B. C. 3,100 or 3,000. About the year 3,000 B. C, therefore, the schism must have taken place, when all India, east of the Satlej adopted brahmanism and the religious views, forms, and habits of Bactria, were for ever abandoned. The monuments of the language of that period are in hymns orally repeated.

Between B. C. 3000 and B. C. 1900, the brahmanical religion was established from the land of the Saraswati to the Doab. The formation of the kingdom of Puru occurred B. C. 3000 after which, were made conquests of Matinaru, Tansu and Iliva, during which Brahma was the chief deity worshipped, castes were instituted, but the Vedic worship retained.

The kingdom of Bharata, in the centre of Hindustan followed under its third king Sahotra, this kingdom became aggressive, but it ended with Samvarama about B. C. 2,200, by the Bharata kingdom being overwhelmed by the advance of the Panchala.

A period of 300 years of anarchy ensued. From about B. C. 1900 the Panchala and Kuru became supreme, then the Pandava power. But about B. C. 1100 a bloody struggle occurred between the Kaurava and Pandava, from which a third interregnum ensued which lasted 120 years. This period of anarchy was called the Kali yoga, B. C. 986 (886?) a new realm was founded in Magadha and lasted down to Asok II. B. C. 225, under various dynasties, viz.

		B C.

A. Bhattya dynasty B. C. 578 to 447 a total of 132 years.

1. Bhattiya, B. C. 578-527 murdered by his son Ajita Satru.
2. Ajita Satru, B. C. 526-495 murdered by his son Udaya-bhadra.
3. Udaya-bhadra, B. C. 494-479 murdered by his son Anu-radhaka (Munda).
4. Anu-radhaka, B. C. 478-471, murdered by his son Nagadasaka.
5. Nagadasaka, B. C. 470-447, murdered by his successor of the house of Sisunaga.

B. Seshnaga Chaitrya.

1. Seshnaga, B. C. 446-427.
2. Kalasoka, B. C. 428-401.
3. Bhadrasena 9 brothers, B. C. 400 to 379, the last of the brothers named Pinjamakha, was dethroned by Nanda.

C. Nanda and his sons.

1. C. Nanda, not a person of princely extraction, head in a revolt against Pinjamakha, captured Pataliputra and became king, B. C. 378.
2. Nanda's younger brother dethroned and murdered by Chandragupta, B. C. 313.

D. House of Maurya.

1. Chandragupta's accession, B. C. 312 to 289.
2. Vindusara, B. C. 288-261.
3. Asoka (the great) B. C. 260 to 225.

E. Partition and downfall.

The Seshnaga family descended from a mother of inferior rank: she had been the head of the dancers of a king of Likhavi at Vaisali and subsequently became his wife. Seshnaga's son is properly the first Asoka, but the brahmins from hatred towards the second, who was the great patron of the buddhists, called him only Kaka-Varna, the raven black. It was he who removed the royal residence from Rajagriha in the south to Pataliputra. He was succeeded by his eldest son Bhadrasena.

Nanda was a man of great courage who headed a commotion in his own village.

Chandragupta (Sandracottus) was present with the army of Porus when the latter was murdered by Eumenes, the general of Eudemus II. in B. C. 317. He headed the popular party and marched towards the Ganges. His kingdom extended from the Indus on the north to the mouth of the Ganges and Telingana, also westwards to Guzerat,—the whole of Aryavarta. He died B. C. 289.

Asoka, the great buddhist king was crowned at Pataliputra in the third year of his reign B. C. 258-259, and openly seceded from the brahminical to the buddhist religion. He seems to have been converted by the son of his brother whom he had murdered. He is said to have erected 84,000 buddhist sanctuaries partly temples (Chaitya) partly tumuli (Sthupa or Topes) and inscribed on rocks and pillars, earnest inculcations of buddhist doctrines.—*Bunsen iii.* 585; *ii.* 547, *Vol. IV. p.* 590 *to* 592.

BARHAI. Hind. A carpenter. The carpenters of India are mostly hindus, and with the goldsmith, stonecutter, blacksmith, or ironsmith and brazier, form the five hindu artizan classes. In the Presidency towns a few Parsees and christians are employed on the finer and more elaborate work.

BARHANDI. Hind. Microlonchus divaricata.

Barilla, Kelp, Salsola Soda and Natron are all carbonates of soda. Barilla is prepared by burning sea weed and the plants growing in the marine lagoons or salt water lakes, of most of the sea-boards of S. Eastern Asia. In the Archipelago, quantities are produced by the settled populations or by migratory fishing races, and it is largely brought to India from the Persian Gulf. In India, Barilla is obtained from Salicornia Arabica, W of Sundurbuns and the Coromandel coast, and from S. Indica, W. of Malabar. The genus Mesembryanthemum is rich in alkaline carbonates, and usually frequents the sea shore. Dr. Roxburgh was of opinion that the two species of Salicornia and one of Salsola, which are extremely abundant on the Coromandel Coast, might be made to yield barilla sufficient to make soap and glass for the whole world. But it is doubtful, whether the manufacture could come into competition with the more economical processes for procuring this substance from dhobee's earth (native carbonate of soda), or from sea salt. Dr. Helenus Scott received the Gold Medal of the Society of Arts, for sending from Bombay the mineral alkali, the Saji Matti of Bengal, the Applicaram of the Tamil people, which occurs in immense quantities in many parts of Bengal, especially in the districts of Monghyr, Purnea, and Cawnpore. It contains from 40 to 50 per cent. of carbonate of soda, with organic matters, clay, sand, and oxide of iron. The salts can be extracted by washing the mineral without incineration, but the organic matter is dissolved at the same time and gives a deep brown solution from which pure crystals cannot be obtained. The firing destroys this substance, and then the solution is colourless, but care must be taken not to push the heat beyond low redness, for the alkali, at a higher temperature combines with the sand and clay, and the whole runs into a green glass, insolable in water. The earth of a large tract of unproductive land in the Puttoocottah and Trevandy talooks of Tanjore is greatly impregnated with impure carbonate of soda, and a small export trade goes on of dhobie's earth. In the years 1826 to 1830, the late Mr. Hart and Dr. Mcleod commenced working it on the large scale, and about 1,000 tons of barilla containing 25 per cent of pure alkali, and equal to the best Spanish, was the estimated produce. (*Scientific Records of the Madras Government.*) In Europe, this salt is prepared either by burning sea weeds and lixiviating the ashes, the product being termed kelp and barilla, or by decomposing common salt by sulphuric acid and then roasting, the resulting sulphate with chalk, sawdust, and fragments of iron. The mass when washed gives the Carbonate of Soda,—*O'Shaughnessy.*) The celebrated lake of Loonar, produces six principal varieties of Natron salts to which the natives give the following names. 1. Dulla—2. Numuck Dulla—3. Kupphul—4. Pappree—5. Khooskee, and 6. Mahd Khar. Dulla and Numuck Dulla are used for dyeing silks, fixing colors,—also as medicine and in the manufacture of bangles;—of Khuppul, there are two kinds, one of greater value than the other:—this salt is used in fixing the red dyes of cloth. Puppree is used in the manufacture of bangles, of which there are two manufactories near the lake. When these are in full operation, bangles are manufactured in large quantities, each man being able to manufacture from 6 to 700 daily. The eyesight of these men fail soon, owing to the entire want of protection from the glare of the furnaces.

BARING. Hind. Myrsine Africana.

BARISH. Hind. Hind rain.

BARITA VIRIDIS. See Chalybæus paradisæus.

BARJALA. Beng. Sida cordifolia.—*Linn.*

BARJURI. Bark of the root of a climber found in Rajwarra, is tasteless, one-fourth of a tola is a dose, is given to women after child-birth, in "luddoo," said to augment the secretion of milk, to relieve the after pains, and to strengthen.—*Gen. Med. Top. p.* 127.

The Barks, the outer coverings of trees, are largely in use in medicine and the arts in all parts of the world. In the arts, the bark of the oaks, of species of Rhus, of the Babool or Acacia Arabica, are largely used in tanning and that of one of the oaks furnishes the cork of commerce. The wattle bark of Australia is largely used, and in India that of the Acacia leucophlœa is employed as an ingredient in the arrack distillation of the country. Many of the barks of the plains of India furnish useful basts for cordage and cloth is obtained by extracting the layers of cellular tissue which form a tubular sheath enclosing the woody parts of the plants. The species of Grewia, Hibiscus and mulberry of the east Indies furnish these most abundantly as also do the Eriodendron anfractuosum and the Acacia robusta, some of them being woven into cloth. The barks of the chinchona species now introduced into India have long been employed in medicine, as also that of Michelia champaca.—*M. E. J. R.*—See Arrack; Bast: Kamut; Morus: Dyeing; Sha; Tanning: Michelia Champaca.

BARKA, a non-Aryan race of India. See India, p. 327.

BAR-KAS-A-HAN, a ghost of Java. See India, p. 355.

BARKAT. Arab. Hind. Pers. a blessing, Ap-ke-dua-ke-barkat-se, by your prayers and blessing.

BARK CLOTH. See Bast; Morus; Kamut; Sha.

BARKER, Lieut. I. N., wrote on the volcanoes in the Red Sea. Altitudes near Tadjoura groups. Bom. Geo. Trans. 1844.—On the islands of Mushakh, in Eastern Africa, when visited in 1840, with map of the Somali Coast. Lond. Geo. Trans. 1846.—On the Geographical and Geological characters of the Gulf of Tadjoura, with a chart. Lond Geo. Trans. 1849.—*Dr. Buist's Catalogue.*

BARKHAN, a district of Baluchistan, occupied by the Khetrani. See Kelat, p. 488.

BARKI. Hind. A kind of iron.

BARLERIA, a genus of plants of the natural order Acanthaceæ, nine of which are mentioned by Voigt and Wight gives figures of five, as growing in the S. E. of Asia.

bispinosa
ciliata
cœrulia
cristata
cuspidata
Courtallia
dichotoma
Hochstetteri
polytrichæ
longifolia
prionites
nitida
obovata
hirsuta

Some of these are cultivated as flowering plants. B. Roxburghii grows in the northern parts of Bengal. B. Cristata, is a large very ramous shrub, found in gardens about Calcutta, in the Panjab and wild in the forests of Sylhet.—*Roxb.*

BARLERIA CŒRULIA.—*Roxb. iii.* 39.

One of the most common and at the same time most elegant of the small shrubby plants of India. It is in flower all the year round and every soil and situation seem to suit it equally well. The juice of the leaf is slightly bitter, and rather pleasant to the taste, and is a favorite medicine of the Tamool practitioners, in those catarrhal affections of children which are accompanied with fever and much viscid phlegm; it is generally administered in a little honey, or sugar and water.—*Ainslie's Mat. Med. p.* 111.—*Roxb.*

BARLERIA PURPUREA. A shrubby spreading plant, with opposite, sub-rotund nearly sessile leaves; spines in axillary pairs longer than the leaves; flowers solitary, large, of a beautiful pink colour.

This grain is largely cultivated in Europe, Asia, Africa and America but there are several species, viz : H. cœleste, distichon, hexastichon, jubatum, maritinum, murinum and valgare,some or other of which are preferred in different localities. It is extensively grown in the north of India and occasionally on the Neilgherry mountains in the hill regions in the south. Two kinds are grown in Oude on light soils and not irrigated. The one kind is called 'Jau,' and is grown everywhere ; the other is called 'Dasawrie,' and is grown on the banks of rivers. It is there sown in October. Sells for 2 or 2½ maunds for 1 Rupee and in Guzerat, it was for many years one of the cheapest grains In the Panjab, in the Sutlej valley, Hordeum, cœleste and H. hexastichon are grown at an elevation of 15,000 feet, the beardless variety of H. Cœleste being most esteemed, but H. hexastachon is most cultivated there. Crawfurd speaking of the Malay Peninsula barley, Hordeum hexastichon, says it is not known to the natives, and when he pointed it out, they imagined it to be unripe grains of wheat. But the Burmese name for barley frequently occurs in their books. It constitutes one of their seven kinds of saba or cereal grasses, and its corresponding Pali name is identical with the Sanscrit name of barley. Hordeum distichon, or two-eared barley, is that commonly cultivated in England. As met with in commerce, the seeds or grains are usually enclosed in the Paleæ or husks : denuded of these they form "Scotch or pot barley ;" when rounded they constitute "pearl barely," and this again reduced to powder is called "patent barley."—*Mason. Hassall.*

BARLOW, Sir George, a Bengal Civilian, succeeded Lord Cornwallis as Governor General. He was afterwards Governor of Madras, and during his administration, the officers of the Madras Army mutinied.

BARNAK, an opprobrious name given by the Turks to their Christian converts. The word is derived from Burmak, "to twist," "to turn."—*Burton's Pilgrimage to Meccah, Vol. I. p.* 33.

BARMI. HIND. Taxus baccata

BARNA. HIND. Cratævia tapia.—Also C. religiosa

BARNES, Sir Edward, a distinguished officer of the British Army who was Governor of Ceylon, in 1820.

BARNES, G. C. died 1864. of the Bengal Civil Service, was an able energetic officer. He was intimately acquainted with the policy and Government of the Patiala, Jheend and Nubba Rajahs, who stood faithful to the British Government during the storm of 1857, and whose defection, it is no exaggeration to say, would have been fatal to our power in the Punjab and have rendered the siege of Delhi impossible, if indeed it would have left us a foot of ground in all North-Western India. The fidelity of those chiefs was secured by Mr. Barnes' firm and conciliatory bearing and administration ; and throughout the troubles he showed himself a man of the first class. The appreciation of his high abilities by the Indian Government was manifested by his appointment to officiate as Secretary in the Foreign Department. The climate of Calcutta immediately undermined his health and energy.

BARN ISLAND, called Square or Passage Island by the French, lies in the Straits of Singapore. It is moderately elevated, and covered with trees.

BARO. HIND. Acacia elata.

BAROACH in Long. 73° 8' E. and Lat. 21° 47' N. It is matter of history that Augustus, Emperor of Rome, when at Antioch received an embassy with letters from king Pandyon of ancient Dravira. The embassy gave valuable and curious presents, amongst others a man without arms, a serpent ten cubits long. In the letter, the king described himself as holding sway over six hundred kings, and asking the friendship of Augustus. In the embassy was an Indian named Zarmanochegus, from Baragoza or Baroach, who accompanied Augustus to Athens and there, as Calanus had done, committed self-immolation before the emperor. His tomb, known as the Indian's tomb, was to be seen as late as Plutarch's time. See Pandiya.

BARODA, in Long. 76° 49' E. and Lat. 25° 31' N. It is the chief town or capital of Guzerat over which the Gaekwar family ruled. This family, sprung in 1720 from Damaji Gaekwar, Sirdar Bahadur. He was an officer under Khandi Rao Holkar and the family ruled till the treaty with the British in 1802. The town has about 300,000 inhabitants. The ancient name of Baroda is Chandanavati, having been, it is said, founded by Chandun, Raja of the Dor tribe of Rajpoots, not unknown to legendary lore. Like all ancient cities of India it has borne various names. Chandanavati 'the City of Sandal-wood' was changed to Veravati, or 'Abode of Warriors;' and again to Burpotra, or 'Leaf of the Bur,' perhaps from some fancied resemblance in its circumvallation to the shape of the leaf of the sacred tree. From this the transition to Baroda was simple, and the Guicowars seem inclined to let it rest under its present designation.—*Tod's Travels, p.* 245. See Kols, p. 637; Inscriptions; Mahratta Governments in India.

BARODE, two towns, one in L. 73° 0' E. and L. 22° 22' N, the other in L. 75° 54' E. and L. 23° 47' N.

Colonel Sykes tells us that in the Dekhan, the day tide of the barometer is lowest at sunrise, highest at 9-10 a. m. and lower at 4-5 p. m. In the night tide the maximum is at 9-10 p. m. and is higher than at 4-5 p. m.—*Sykes. O'Shaughnessy, p.* 18.

BARON DE BODE, a German noble, who travelled in Arabistan and Luristan, and published a book of travels.

[illegible] a place of some trade on the [illegible] coast of Sumatra, in Lat. 1° 56' N. Its principal exports are camphor and benzoin. Its excellent camphor known as Baroos camphor is much prized by the Chinese.

BAROS, Tapas and Singkel, three Dutch settlements on the north-west coast of Sumatra, south of Achin. See Acheen.

BAROSMA. The leaves of various species are known in the Calcutta bazaar as Buchu, and may be used in infusion and decoction for Uva Ursi.—*Beng. Phar. p.* 422.

BAROZA, a gum resin. See Gandabaroza.

BARPHULI. HIND. of Kaghan, Euonymus fimbriata or E. Hamiltonii.

BAR PUSHTUN, also B'R PUSHTUN, the upper or higher or western Afghans, dwelling west of the Khyber pass.

BARPYAL, HIND. of Sealkot, land left for a year fallow after an exhausting crop.

BARQANDAZ. HIND. PERS. or Burkandaz an armed policeman: a matchlockman.

The word is a compound from Barq. Pers. andaz, literally lightning thrower, a peon armed or unarmed.

BARRA. HIND. a rope used on the Banta Chaudas day, the 14th of the Kooar Sudi.—*Ell*,

BARRACKPORE, a military and civil station, a few miles from Calcutta. It has a country house of the Governor General.

BARRACKS for soldiers in India are built of stone or brick and those of Burmah and Singapore are of wood, raised on piles above the ground. Barracks generally, have hitherto been ground storied, but latterly, the principle has been adopted, of building them of two storeys with verandahs, and using the lower storeys for day purposes.

BARRADA, the Chrysorrhœa or "Golden Stream" of the ancient geographer is the river of Damascus, which, as soon as it issues from the cleft in the mountains, is immediately divided into three smaller courses. The largest, which is the middle one, runs directly to the city, and is there distributed to the different public fountains, baths, and cisterns, whilst the other two branching off right and left, contribute mainly to the luxuriant vegetation which adorns the environs. South-east of the city their scattered waters unite again into one channel, and after flowing towards the eastern hills for two or three hours, are finally lost in a marsh which, from one side view, appears like a small lake. Well may Damascus be called El Sham Shereef, the noble and beautiful." —*Robinson's Travels, Vol. II. p.* 115.

BARRAL. HIND. Artocarpus integrifolia, Jack tree.

BARRAL. HIND. Himalayan sheep, the Ovis ammon; the wild snow sheep of Kamaon and Garhwal. See Capra. Ovis.

BARM RIVER is situated about 80 miles south of Labuan.

BARRAM, a river of Borneo. See Kyans. p. 567.

BARRAMUTTEE, in Long. 74° 41' E. and Lat. 18' 11' N.

BARRA SINGHA. HIND. the Sambar, Cervus Wallichii, literally twelve horns.

BARRE BACH-CHALI. Vitis setosa.—*Wall.* Cissus setosa. *R. i.* 410.

BARREE, three towns in India one in L. 78° 11' E. and L. 23° 4' N. One in Long. 77° 53' E. and Lat. 27° 3' N. One in Long. 77° 34' E. and Lat. 26° 40' N.

BARREN ISLAND, in Lat. 12° 16' N., Long. 4° 24' W. from the south end of Junk-Ceylon by chronometers, and in Long. 93° 54' E is a volcano of small extent and covered with trees except near the crater. It is a conspicuous object and white scoriæ are always visible and sometimes smoke is to be seen, but smoke was not issuing when we passed in April 1863, through the Bay of Bengal.

BARRI. HIND. A flower garden.

BARRIER REEFS. See Coral. Polype.

BARRIGLA. IT. Barilla.

BARRINGTONIA, a genus of plants, of the Nat. Ord. Myrtaceæ and Sub order Barringtonieæ, three species of which acutangula, racemosa and speciosa occur in India and the Archipelago, and Dr. Mason names a white flowered species of Baringtonia in the Tavoy and Mergui jungles with drooping spikes of white flowers three or four feet long; and which would be much admired if introduced into the cities. The leaves are very large and lyre-shaped, and both flowers and foliage would contrast well with the other trees around it. —*Mason.*

BARRINGTONIA ACUTANGULA, *Gærtn.*

Stravadium rubrum —*D. C.*
Meteorus coccineus.—*Lourier.*
Stravadium coccineum.—*D. C.*

This large handsome tree with dark scarlet colored flowers, in appearance is like a well shaped, regular middle sized oak—it flowers about the beginning of the wet season. It is met with in the hotter parts of Ceylon, up to no great elevation. It grows in Saharunpore, the Morung hills, Bengal, Chittagong, in both the peninsulas of India, and is plentiful in the Tharawaddy district. The wood by one account is of a red color, hard, and of a fine grain, used in constructing carts and equivalent to mahagony. By another account a tolerably good wood but tough to work, not recommended, being short grained. Dr. Mason says it is very abundant in the Tenasserim forests, of which it is a great ornament. The seeds are used in native medicine. —*Drs. Royle*, 216. *O'Shaughnessy*, 337. *McClelland. Birdwood. Mason. Honigberger*, 241. *Voigt. Roxb. ii.* 635, *Useful Plants. Elliot. Th. En. Pl. Zeylan. ii. p.* 119. *Rohde. MSS.*

This stout timber tree is a native of Ceylon where it grows in the warm moister parts of the island up to an elevation of 1,500 feet, also the Moluccas, Penang, the delta of the Ganges and Malabar. Its root is slightly bitter, and is considered by the hindus to be aperient, cooling and febrifuge.—*Flora Andhrica. Voigt. Thw En. Pl. Zeylan.* 119. *Roxb. ii.* 634.

BARRINGTONIA SPECIOSA, *Linn.*

Butonica speciosa, *Lam.* | Maumea Asiatica, *Linn.*

Kayai-gyee....BURM.

This large beautiful tree is a native of Ceylon on the sea shore between Galle and Matura; of the Tharawaddy Districts of the Pegu forests, the Tenasserim Provinces, the Malay Archipelago, Singapore, the Moluccas, and the South Sea Islands It is very plentiful in Pegu. Its wood is red, hard, of a fine grain, and equivalent to mahogany and used in making carts. Ainslie says its seeds are employed in Java for intoxicating fish.—*Drs. O'Shaughnessy, page* 337. *McClelland. Roxb, ii.* 636. *Voigt.* 51.

BARRISTER, a trained member of the legal profession, permitted to plead before the Judges of Her Majesty's High Courts of Justiciary at Madras, Bombay and Calcutta, and before the Judges and Magistrates of local Courts. These and another body styled Pleaders, are permitted to appear before the Judges of Provincial Courts and in the High Court when sitting as a Court of Appeal.

BARRI TUAR. HIND. Cajanus Indicus.

BARROW, a monumental heap erected over the dead of the Celtic and Scythic races. The Romans styled this a tumulus. But it is not known that any such have been found south of the mountain range that runs from the Caspian sea to China. Raised to a considerable height, the barrow was a noble and has been the most enduring sepulchral monument. In such, the remains of the departed were placed on the surface of the ground, and the earth heaped up. See Burial Ceremonies. Cairns.

BARU ZAI, an Afghan tribe N. E. of Dadar. See Kadjak.

BARSAT. Hind. the rainy seasons, also rain.

BARSATI. Hind. Scrofulous sores which break out on horses, in the rainy season.

BARSI, a town in Long. 75° 45' E. and Lat. 18° 15' N.

BART. Hind. of Kaghan, Prunus padus.

BARTAM. Malay. Eugeissonia tristis.—*Griffith.* A palm growing on the hills about Ching, Malacca and Penang, used in Penang in making mats for the sides of houses, also for thatch, and for all the purposes to which those of the Nipa fruticans are applied.

BARTANG. Plantago major.

BARTH. Hind. Hindu fast days.

BARTH, a kind of alloyed metal.

BARTHEMA, Ludovico Barthema (Vartoma), a native of Bologna who travelled in the east. He began his travels A. D. 1503 and in 1555 he visited Malacca.

BARTHOA. Hind. of Hushyarpur, Hymenodictyon excelsa.

BARTHOLOMEW DIAS had a squadron fitted out for him by John II. of Portugal and setting sail in August 1486, was the first who rounded that famous cape to which, from the storms he encountered, he gave the name of Cabo dos Tormentos, or Cabo Tormentosa.—*India in the* 15*th Century.* See Dias.

BARTHUA. Hind. Hymenodictyon excelsa.

BARTI. Hind. Panicum brizoide.

BARTONDI. Mar. Morinda citrifolia.

BARTONIA AUREA. *Loasaceæ.*—A beautiful garden flower of a yellow and white colour, opening at night, effusing a sweet odour.—*Riddell.*

BARTRIHARI. The author of a metrical Sanscrit grammar. His aphorisms are entitled Karika.

BARTTAKOO. Beng. Egg-plant, Solanum melongena.

BARTUNG. Seed of a bush, brought from Delhi, considered cooling, and astringent, used in sherbets, in diarrhœa.—*Gen. Med. Top, page* 126.

BARU, Malay; Kawal, *Javanese:* a gossamer-like substance, found at the base of the petioles of the Gomuti palm, the Arenga saccharifera. It is imported into China where it is applied like oakum, for caulking, and also for tinder.

BARU. Hind. Reed.

BARUGADAM. Tel. Indigofera glandulosa.—*Willd.*

BARUKYZE. An Afghan tribe, an offshoot from the Abdalli, one of the branches of which, the Mahomedzye, furnish the present sovereigns to Afghanistan. They number 40,000 families. See Afghan. Durani. Jallalabad. Kandahar.

BARUN. Sans. Cratævia tapia.

BARUNGI. Hind. of Hazara, Quercus dilatata.

BARUNGI. Hind. of Murree hills Quercus ilex.

BARUNGHI. Sans. See Ganta baringa.

BARUNG SADAB. Leaves of a plant from Delhi; heating and as such used in medicine to cure flatulency and dyspepsia; sells at two rupees for one seer.—*Gen. Med. Top. of Ajmere, page* 129.

BARUT, also **DARU.** Guz. and Hind. Gunpowder.

BARWOOD. See Dyes.

BARWUTTIA, is 'one expatriated,' from 'bar,' out of (bahir) and wuttun, 'a country,' and it means either an exile, or an outlaw, according to the measure of crime which caused his banishment from his country.—*Tod's Rajasthan, Vol. II. p.* 406.

BARYALA. Beng. Sida cordifolia.

BARYARA. Hind. Sida cordifolia.

BARYTA, Sulphate of.

Heavy spar ....Eng. TchwefelsauresBaryt. Ger.
Sulfate de baryte... Fr.

Occurs at Dufton in Cumberland, near Kurnool in the Ceded Districts: and at Landour.

BARZ KATUNI. Arab. Spogel seeds.

BARZAD. Hind. a very scarce gum-resin. Galbanum.

BARZHA. Hind. of Kanawar, Armeniaca vulgaris, apricot.

BARZUD. Arab. Galbanum.

BAS, in Long. 76° 10' E. and Lat. 29° 9' N.

BAS. Hind. a smell, a perfume or disagreeable odour. Basi, smelling, putrid; Badbas, bad smell.

BASAAL. Maleal. Embelia basæal, D. C.

BASALT, a rock of the older volcanic series, of a black colour and homogeneous in appearance, containing 91-2 per cent. of silica, alumina and oxide of iron. It occurs, columnar, in several parts of India in the great volcanic tract of the Dekhan, at the hill Fort of Gawilghur and on the banks of the Nerbuddah. That vast volcanic formation, extends over more than 200,000 square miles, and conceals, breaks up, or alters all the other rocks from beneath which it has forced its way.—*Colonel Sykes. Carter's Geological Papers on Western India, p.* 1. See Dekhan, Geology, Greenstone, Volcanic rocks.

BASAK. The western mouth branch of the Me-kong the great river of Kambogia. See Kambogia.

BASANT. Hind. The spring time. The Suevi, or Suiones, erected the celebrated temple of Upsala, in which they placed the statues of Thor, Woden, and Freya, the triple divinity of the Scandinavian Asi, the Tri-murti of the Solar, and Lunar races. The first (Thor, the thunderer, or god of war) is Har, or Mahadeva, the destroyer: the second (Woden) is Boodha, the preserver; and the third (Freya) is Oomia, the creative power. The grand festival to Freya was in spring, when all nature revived; then boars were offered to her by the Scandanavians, and even boars of paste were made and swallowed by the peasantry. Similarly still, with the Rajpoot, Vassanti, or spring personified, the consort of Har, is worshipped by the Rajpoot, who opens the season with a grand hunt, led by the prince and his vassal chiefs, when they chase, slay, and eat the boar. Personal danger is disregarded on this day, as want of success is ominous that the Great Mother will refuse all petitions throughout the year. In Tamul countries, on the day that the sun enters Aries, bands of twelve young women, of the non-hindu races, perambulate the streets. They have a basket of shavings which they surround, and bending low they circumambulate, clapping their hands and singing; in this they represent the twelve signs of the Zodiac, with the sun in the centre.

BASANTAGURGH, a town at the foot of the southern range of hills, running parallel to Mount Aboo. There are several ancient inscriptions in Sanscrit of date A. D. 1042. In one it is recorded Lahini wife of Vigraha, on the death of her husband, takes shelter with her brother and causes the temple of the sun in the Aravalli range to be repaired and a Baolee to be excavated.

BASANTI. HIND. a bright, pale lemon yellow colour, the favourite colour of Krishna.

BASANTI-MAIL SURKHI. Yellow colour with crimson tint.—*Powell.*

BASANT-PANCHMI. A hindu seasonal festival about the 9th February, in honour of Basanth, the spring, in hindu mythology, personified and an attendant of Kama the god of love.

BASAT. HIND. Goods, property.

BASATI. HIND. pedlar's wares, pins, looking glasses, antimony, pumice boxes, &c, &c.

BASAVA, the sacred bull of Siva.

BASAVI. TEL. the Morli of the Mahrattas, the Deva-Dasa, or women devoted to the hindu gods in the hindu temples. The Basavi women are usually devoted to the god Siva, and become prostitutes. They are called Linga or Garudu Basavi, according as they are devoted to one or other. They are called also Jogi also Morli and are married sometimes to a knife, sometimes to an idol. In many parts of the south of India, the low castes or out castes, thus devote their young women, in order that they may follow prostitution openly, under the cloak of a religious rite. It is not easy to trace the origin of this custom, but at the Mylitta festivals which were connected with the worship of Baal or Moloch the women, as slaves to the goddess were obliged to purchase exemption from being sacrificed by prostitution. Almost all the Jewish prophets down to Jeremiah complain that this service was carried on in the high places by the Jews.—*Bunsen, Vol. IV. p. 210.* See Deva-Dasa; Jogi, Morli.

BASCHKIR, a Tartar race. See Kalkas.

BASCHMAKI. RUS. Shoes.

BASDEO, a kinsman of Krishna. See Krishna, p. 545.

BASEELAN ISLAND, one of the Phillipine Islands, is high and extensive and separated by the Straits of Baseelan from the S. W. end of Mindanao. Its eastern extremity is in Lat. 6° 30' N. Long. 122° 30' E. On its S. W. side, the Maloza river disembogues into a bay of the same name, and the village of Maloza is about a mile up the river.—*Horsburgh.*

BASEHIR, a petty state near Simla. It is independent, governed by a rajah, whose dominion also extends over Kunawar; it commences a very little north of Kotgurh, and occupies the south side of the river Sutlej and the mountain slopes above it, as far east as the confines of Kunawar. The valley of the Sutlej, in the western part of Basehir, from Rampur downwards, has an elevation of little more than 3,000 feet, Rampur, 140 feet above the bed of the river, being 3,400 feet above the level of the sea. The river at the height of the rains, is an impetuous torrent of great size.—*Dr. Thomson's Travels in Western Himalaya and Tibet, page 51.* See Rampur.

BASEEPOORA, in Long. 78° 27' E. and Lat. 28° 22' N.

BASELLA, a genus of plants of the natural order Chenopodiaceæ, of which B. alba and B. cordifolia, with a variety Brubra occur in India. B. lucida is also mentioned and B. nigra is cultivated in China. The natives of the Coromandel Coast reckon five varieties of this, three of which are cultivated and two wild; the Yerra or Pota-batsalla, the Mattoo-batsalla, and the Pedda-batsalla. But Roxburgh was inclined to regard them all as varieties of one species and to think B. Japanica of Burmann, another.—*Roxb.*

BASELLA ALBA.—*Linn.*

Batan or Dampiers Grafton Island	20 17½	121 57
Sabtang or Sabtan called Monmouth Island by Dampier.		
Bashee Island Bayat, or Orange Island.		

The north Bashees consist of one large and two small islands in Lat. 21° 3½' N.—*Horsburgh.*

BASHI-BAZOUK, TURKISH, irregular cavalry, called Hyta along the valley of the Tigris and at Mosul and Bashi-bazouk in Roumelia and Anatolia. They are collected from all classes and provinces. A man, known for his courage and daring, is named Hyta-Bashi, or chief of the Hyta, and is furnished with taskara orders for pay and provisions for so many horsemen, from four or five hundred to a thousand or more. He collects all the vagrants and free booters he can find to make up his number. They find their own arms and horses, although sometimes they are furnished by the Hyta-Bashi, who deducts a part of their pay until he reimburses himself. The best Hyta are Albanians and Lazes, and they form a very effective body of irregular cavalry. Their pay at Mosul is small, amounting to about eight shillings a month; they are quartered on the villages, and are the terror of the inhabitants, whom they plunder and ill-treat as they think fit. When a Hyta-bashi has established a reputation for himself, his followers are numerous and devoted. He wanders about the provinces, and like a condottiere of the middle ages, sells his services, and those of his troops, to the Pasha who offers most pay, and the best prospects of plunder.—*Layard Nineveh, Vol. I. pp.* 38-9.

BASHINA BANS. HIND. Dendrocalamus tulda, Nees.

BASHO. THIBETAN. Sweet currants.

BASI, a drink prepared in the Philippines from sugar cane.

BASI, a town in Long. 85° 33' E. and Lat. 25° 55' N.

BASIL, Ocimum basilicum and minimum. Herbs used in salads, and soups, raised from seed, require little care in the culture: almost weeds in Madras.—*Jaffrey.*

BASSEE, two towns in India in Long. 73° 2' E. and Lat. 21° 49' N. in Long. 76° 8' E. and Lat. 26° 48' N.

BASSEIN (properly Wasi) a town in India, in Long. 72° 52' E. and Lat. 19° 20' N. The mouth of the Bassein river is in Lat. 19° 18' N. Long. 72° 49' E. Bassein is an ancient and now desolate city thirty miles from Bombay on the Gora Bunder river. The old Fort of Bassein was built by the Portuguese in the early part of the 16th century, it was taken after a protracted siege by the Mahrattas at the close of the 18th century, and by them, utterly devastated. What the invader left standing the weather and the ficus indica are rapidly overthrowing, and soon there will remain but a few shapeless heaps of stones overgrown with rank vegetation to show where the cathedrals and palaces of the famous Portuguese settlement once stood. A few fishermen and shikarries, alone occupy a spot once replete with luxury and power.—*Postan's Western India, Vol. I. pp.* 172, 179. *Horsburgh.* See Bheels, Kols. Bassein and Salsette were taken by the East India Company's troops, on the 28th December 1774, and Bassein was obtained in 1775 by treaty from Raghoba Peshwa, and on the 31st December 1802, a treaty was agreed to at Bassein. See Bhil, Kol.

BASSEIN, a town on the banks of the western branch in the Irawaddy Delta, in L. 16° 46' 30' N. and L. 94° 47' E. It forms one of the revenue districts of British Burmah, with an area of 8,900 square miles. The Bassien creek is subject to the bore, the creek joins the Rangoon river and China Buckne river. See Pegu. Rangoon.

BASSES. The Great Basses, called Raman-Paaj by the natives of India, is the name of a ledge of rocks nearly a mile in extent elevated a few feet above water, on which the sea breaks very high in bad weather. According to native tradition, a pagoda of brass was formerly erected thereon, but at present only a long flat rock appears, which is completely covered when the surge runs high. This dangerous ledge is about 9 miles from the shore, in Lat. 6° 11' N., Long. 81° 36' E. There is a safe channel between it and the main with about 7 to 14 fathoms. The *Little Basses* are in Lat. 6° 24½' N., Long. 81° 54' E. and 21 miles north east ½ E. from the Great Basses. They consist of a ledge of rocks a little above water with others contiguous projecting under water to a considerable distance, and straggling rocks projecting a great way from the dry ledge. It is distant from the shore 6 or 7 miles, the channel inside the Little Basses is not safe for large ships.—*Horsburgh.*

BASSIA, a genus of plants, of the natural order Sapotaceæ, of which several species, all furnishing useful products, occur in the south east of Asia and B. Parkii, Don, is an African tree—B. sericea Bl. is a tree of the Mauritius and B. cuneata Bl. a tree of Java.

BASSIA, Species. In the southern Provinces of Tenasserim, a Bassia tree is quite abundant in a few localities; and it is said to afford a timber in no way inferior to teak.—*Dr. Mason.*

BASSIA BUTYRACEA.—*Roxb. ii.* 527.

Indian Butter tree	Eng.	Yel-pote ...	Lepcha.
Falwa : Phalawar ..	Hind.		

This tree grows on the Almora hills and in Nepal, and has smallish white flowers. Its wood is of no value. Its fruit is eaten by some: the product that has commercial value is the solid oil which is expressed from the kernels, a beautiful, white solid fat, which concretes immediately it is expressed, but melts at a temperature above 120° Fahr. and in this respect it is superior to all other vegetable fats produced in India. The kernels are bruised into the consistence of cream, put into a cloth bag and a stone put on the top to express the oil which immediately hardens to the consistence of hogs' lard and is of a delicate white colour. It is used as a lubricant in rheumatism. It keeps for months. It is said that in Rohilcund sugar is obtained from this plant.—*Roxb. ii.* 527. *O'Shaughnessy*, 428. *Royle. Ill. Him. Bot.* 124. *Ex.* 1862. *Voigt.* 342. *Hooker, Him. Journ.* See Shea Butter.

BASSIA ELLIPTICA.—*Dalzell.*

Isonandra Cullenii.—*Drury.*

Pachoota..... CAN.

This majestic tree has been traced from Coorg to Trevandrum. It yields a substance which as was at one time thought, would be a substitute for Gutta Percha, but subsequent report is less favourable. The timber deserves attention.—*Dr. Cleghorn's Forests and Gardens, p* 13.

This middling sized timber tree has a trunk of 10 feet with 6 feet of girth. It grows in the mountainous parts of the Circars, in Bengal, in the Teraee, in Oudh, Gwalior, Punjab in Malwa, Nagpore and Guzerat. It is planted near the Oudh villages in groves. The tree is common all over the Bombay jungles, both on the coast and above the ghauts. It is abundant in parts of the Nurpur purganah of the Cangra district, where the two small talukas of "Mau" derive their name from the prevalence of the tree. In the Circars, it is never felled by the natives, and it is also preserved in Nagpore on account of its large fleshy flowers which are dried and eaten raw by the hill tribes and are fermented and used in distilling mahwah arrack. The flowers in the Punjab sell at 50 seers the Rupee for this purpose. The flowers are sweet tasted, and are eaten raw. Jackals are particularly fond of them. The flowers fall spontaneously as they ripen. They are gathered and dried by a few days exposure in the sun; when thus prepared they very much resemble a dried grape, both in taste and flavour. Either eaten raw or dressed, they afford a wholesome strengthening food.

Mahwa Oil is obtained from the kernels of the fruit, is an article of common consumption in India, and may often be met with under the names of Mowha or yallah oil in the London market. The cost of the oil extracted is 3 Rupees per maund. The proportion of oil yielded by native process is about half the weight of the seed; used only for burning but so much resembles ghee, or clarified butter, that being cheaper, it is often mixed with that commodity, and used in victuals, burned in lamps, and applied externally as a remedy for wounds and all cutaneous eruptions. The timber in Nagpore, is from 15 to 20 feet long, and in girth 4 or 5 feet, in the Punjab 10 feet long and 6 feet in girth and attains its full size in 80 years. The character of its wood seems to vary in different localities. In the Punjab, its wood is of a cinnamon colour, hard, close grained, heavy and durable; produces good timber for building purposes. Captain Sankey says that in Nagpore it is of a pinkish colour, and but a weak timber, while from being invariably rotten at the heart, 4 to 6 inches square of really good sound timber is all that can be reckoned on and it is eagerly devoured by white ants. In the Upper Provinces of India, he adds that the timber is more esteemed, and has been used for door and window frames. He does not class it as a building material. Dr. Gibson, however, says that the wood, particularly the large logs brought from the Baria forest and Kuperwunje hills, is extensively used for house and cart purposes in Guzerat, but seldom appears in the market in Bombay or elsewhere. It appears strong and tough. In the Upper Provinces of India, its wood is described as hard and strong and proper for the naves of wheels.—Mr. Powell says that the tree gives a good and durable wood but small, and though not abundant in the Punjab, the wood is hard and strong, and in request for naves of wheels, carriages, &c.—*Voigt, p.* 526. *Captain Sankey: Dr. Gibson; Mad. This tree grows in the hotter parts of Ceylon, especially in native gardens, in Coimbatore, on the Malabar coast, in the Wynaad and in the Bombay forests north of the Goa border. It is a large tree, a good deal like Bassia latifolia, but its leaves are narrow, and its flowers much more fleshy. It is a native of the Peninsula of India, and is found in plantations along the southern coast of Coromandel. It flowers during the hot season in the month of May, and the seed ripens in August and September. The oil (Epi oil, Epi nuna, TEL. Elloopeo yeànai, TAM.) stains linen or woollen cloth as animal oil does, while the fatty substance of the Bassia butyracea possesses no such property but when rubbed on cloth leaves no trace behind. The following were given as the economical uses of the Bassia longifolia, by the Rev. Dr. John of Tranquebar. The oil pressed from the ripe fruit is used by the natives as common lamp oil. It is a principal ingredient in making the country soap and keeps therefore often the same price with the cocoanut oil. It is to the common people a substitute in place of ghee and cocoanut oil in their currries and other dishes. They make cakes of it, and many of the poor get their livelihood by selling these sweet oil cakes. The cake left after the oil is expressed is used for washing the head, and is carried as a small article of trade to those countries where these trees are not to be found.

The flowers which fall in May are gathered by the common people, dried in the sun, roasted and eaten as food. They are also bruised and boiled to a jelly and made into small balls, which are sold or exchanged for fish, rice, and various sorts of small grain.

The skin is taken off from the ripe fruit as well as the unripe, and after throwing away the unripe kernel boiled to a jelly and eaten with salt and capsicum.

The leaves are boiled with water and given as a medicine in several diseases to both men and cattle.

The milk of the green fruit and of the tender bark is given also as a medicine.

The bark is used to cure the itch.

The wood is as hard and durable as teakwood but not so easily worked, nor is it procurable of such a length for beams and planks, except on clay ground where it grows to a considerable height, but in such a soil does not produce so many branches and is less fruitful than when in a sandy or mixed soil which is the best for it. In a sandy soil the branches shoot out near to the ground to a great circumference, and give more fruit. These trees require but a little attention and watering during the first two or three years in the dry season and being of so great use there could be plantations of them on high and sandy grounds, where no other fruit tree will grow. Mr. Rohde says that the Ippi of the Teloogoo country is valued for keels of ships and for planking below the water line. Exposed to the wind and sun in the log, it rends into strips, but it is considered a good wood for trenails for platform carts and for the more substantial parts of furniture, and it is comparatively free from the attacks of the Teredo navalis. It is procurable among the logs brought down the Godavery. In the Wynaad, it is known as the Oodagoo maram and is there an ordinary sized tree; its wood being much used on the Malabar side for building. Dr. Wight says it is a light colored, hard and durable wood nearly equal in these respects to teak, but much smaller. In Coimbatore it is much used in the construction of carts, where great strength is called for. In Malabar, where it attains a large size, it is used for spars. Dr. Cleghorn describes it as a good wood for trenails. It grows in the northern province of Ceylon, and its wood which is said to last from 25 to 80 years, weighs 61 lbs. to the cubic foot. It is there used as keels for dhonies, for bridges and in house building. The seeds contain about 30 per cent. of oil a bright yellow color, 12½ lbs. of seed in the ordinary native rude way of expressing, produce 2 English gallons of oil. The oil or its seed may form an important article of export as a putty oil. It makes excellent candles and soap. Its chief use is, however. for burning in lamps, and when fresh, as a substitute for butter in native cookery. In medicine, the oil is used externally to cure cutaneous disorders ; and the leaves, milk of the green fruit, and bark, are boiled in water as a remedy in rheumatism.—*Mr. Mendis. Dr. Wight. Mr. Rohde. Mr. McIvor. Mr. Rohde. Dr. Mason. Dr. Cleghorn. Flora Andhrica, Ainslie's Mat. Medica, pp.* 209, 263. *Roxb. Vol. ii, pp.* 523, 405 *O'Shaughnessy*, 428. *Voigt, p.* 341. *Veg. BASSIA PARKII, the Shea tree or Steatree of Africa, called also the African butter plant, has not been introduced into India—a solid oil is obtained from its fruit by drying them in the sun and then boiling the kernels in water.—*Vegetable Kingdom, p.* 501-2. See Shea Butter.

BASSORAH," was built by the khalif Omar, with the view of securing the trade of Guzerat and Sind. It is built on a creek, or rather canal, about one mile and a half distant from the Euphrates. The banks of the creek are fringed with foliage, among which are the walnut, apple, mulberry, apricot. It is called by the Arabs Al-Sura from Be-al-Sura, signifying the stony soil on which it is built. It was originally constructed for purposes of trade, and never having been the seat of sovereign power, it is not adorned with those structures which decorate the cities of the east. The khalif Omar, in the fifteenth year of the Hijrah wishing to combine the commerce of India, Persia, and Arabia, laid the foundation of this place near to the confluence of the Euphrates and Tigris. The Shat-ul-Arab empties itself at the distance of eighty miles into the Persian Gulf, and commands the navigation of the surrounding countries, with the coast of India;

and the caravans of Persia and Arabia. Hither merchants from all nations resorted for the sake of traffic—Greeks, Jews, Armenians, Banyans, and Moors. The site of Bussora is low, and from this circumstance is much subject to inundation when the river overflows its banks. From Basrah to Hormuz, the sea coast people principally live on fish and manuscript dictionaries describe the bread or food called Mahiabah or Mahiashnah used chiefly among the people of Lar; as prepared from fish, (more particularly a small kind found near Hormuz) by exposing it to the sun. Strabo and Arrian relate, that the ancient Ichythyophagi, made into bread, the fishes which they had dried and roasted in a similar manner. The region of the Ichthyophagi commenced at Malana near Cape Arabah and ended between the ancient Dagasira and the place now called Cape Jask, or more properly Jashk. Churchill's Collection of Voyages mentions that "the coastes of Persia as they sailed in this sea, seemed as a parched wildernesse, without tree or grass; those few people that dwell there, and in the islands of Lar and Cailon live on fish, being in manner themselves transformed into the nature of fishes. So excellent swimmers are they, that seeing a vessel in the seas though stormie and tempestuous, they will swimme to it five or six miles to begge almes. They eate their fish with rice, having no bread: their cats, hennes, dogges and other creatures which they keepe have no other dyet." Nieuhoff who travelled in 1662, says that about Gambroon, " the common people make use of dates instead of bread or rice; for it is observable that the ordinary food of the Indians all along the coast from Basora to Sinde, is dates and fish dried in the air; the heads and guts of the fishes they mix with date stones and boil it altogether with a little salt water, which they give at night to the cows after they come out of the field where they meet with very little herbage."—*Taylor's Travels from England to India, Vol.* I. *p.* 266. *Churchill's Collection of Voyages, Vol. II. p.* 230 (*first edition.*) *Ouseley's Travels, Vol. I. p.* 228. *Townsend's Outram and Havelock, p.* 297 See Basrah, Chaldea, Khorfaken, Mesopotamia, Tigris.

BASSORIN, See Gums and Resins.

BAST. Pers. from bastan to fasten, a sanctuary, a refuge; like the Kedish of Galilee, the Shechem of Samaria and Hebron in Judea, the sanctuaries of Koom, and the great mosque in particular, are famous places of refuge (or bast as it is termed) for all persons who have committed crimes, or fallen under the Royal displeasure; such is the sanctity of the holy Fatima's mosque, that the king himself dare not arrest a criminal who has there sought protection. The Persian custom of bast, somewhat resembles the Jewish cities of refuge, the Alsatia of London, and the precincts of Holyrood at Edinburgh. The custom prevailing in the East, of having places of asylum, owes its origin probably to the Mosaic Law concerning the six cities of refuge. Formerly the whole mahaleh, or quarter of Bidabad, was reckoned Bast, or sacred.—*Baron C. A De Bode's Travels in Luristan and Arabistan, p.* 50. See Asyla. Deut. iv. Numb. xxxv. 13.

BAST. Eng.

Sha ....Burm. | Nar. Hind. Tam. Tel.

The bast from plants is the liber or cellular tissue consisting of tough elongated vessels, which can often be separated and converted into fibrous material, useful for cordage and matting, That best known to Europe is a product of Russia and obtained from the Lime or Linden tree, the Tilia Europea, and converted into mats and shoes. In the East Indies, species of Grewia, of Hibiscus, and of Mulberry, are remarkable for this product and the Theng-ban-sha; the Pa-tha-you-sha, the shaphyoo; the Ngau-tscung-sha: sha-nee and Eegw-ot-sha are basts of Arracan. The basts of Akyab and Burmah, are Heng-kyo-sha. Damsha, Thanot-sha, Wapreeloo-sha and Sha-goung, all used in preparing cordage for boats, nets, &c.; wholesale market price, 2 Rs. 8 As. per maund and all are of the inner bark of large trees. The Sha-nee, Sha-phru and Thengban-sha of Akyab are more plentiful and used in preparing cordage for boats, nets, &c. and wholesale market price, 1 R. 12 As. per maund. The Guand-young-sha of Akyab is used for cables and strong nets, the wholesale market price being 3 Rs. 4 As. per maund, and all these fibres are much used by the inhabitants of that province.

The Cacha codie are the stems of a creeper used for tying bundles and other purposes instead of twine. The Mandrong rushes of Province Wellesley, grow spontaneously in the rice fields after the crop has been gathered, overspreading them like a second crop: its fibre is strong, and is locally used in the manufacture of rice and sugar bags, mats, &c., experiment may prove it to be adapted for the manufacture of paper.

The Mangkwang (Pandanus, sp.) is used for matting, in Province Wellesley.

The Glam tree bark is from the Melaleuca, viridiflora Malacca. The Talee trap (Artocarpus sp.) is used for fishing nets, at Hassang.

The Talee Taras, is of Singapore, and there is a bark used as twine, in Siam.

The Bark cloth of Malay Peninsula and Keda is manufactured by the Semang an oriental neg tribe and that of the Celebes (Kaili) is made from the bark of the paper mulberry. Mr. Jaffrey at the Madras Exhibition of 1857, exhibited a very powerful new bast from the Eriodendron anfractuosum. A bast or nar, from the large Australian or rather Cape tree (Acacia robusta) so common on the Neilgherries, was first used in January 1854 and has since been used for all purposes to which Russian bast is applied in gardens in Europe. The material is strong, tough, and durable also pliable when wetted ; this bast could be procured cheaply and in large quantities, as the roots when the trees are cut down throw up numerous young shoots to the height of from 6 to 12 feet in one year. The bark of this tree is also a powerful tan.—*Mr. McIvor. Mr. Jaffrey. Exhib.* 1862. *Madras Ex. Jur. Reports. Royle Fib. Pl. pp.* 80 to 237.

BASTAH AND KALLOO, rivers near Purgal in northern Concan.

BASTARA. HIND. Callicarpa lanata.

BASTARD, an Anglo-Indian term, employed to designate both plants and animals, which have resemblance to others.

BASTARD ALOE. ENG. Agave vivipara.—*Linn.*

BASTARD CEDAR. ENG. Syn. of Cedrela tuna.—*Roxb.* also ENG. Syn. of Guazuma tomentosa, Kunth. See. Cedar. CEDRELA TOONA.

BASTARD FLORIKEN. HIND. is one of the smaller species of bustard, the genus Otis.

BASTARD SAGO PALM. ENG. Caryota urens.

BASTARD TEAK, is a term applied to several kinds of trees with large leaves. It is given to the Erythrina Indica Lam or "Moochy wood" and the term *Chiri têku* is applied to several trees with large leaves—on the Nagari hills, the Yánádi give it to Dillenia (now Wormia) bracteata, W. Ic. 358, and it is given also to Butea frondosa.

BASTARD WOODS. An Anglo-Indian term applied to woods of India which have some outward resemblance to other woods : such as.

Bastard teak, Chiri Teku, TEL., applied to several kinds of trees with large leaves. On the Nagari hills the Yanadi apply it to Dillenia, now Wormia, bracteata. In Bombay it is applied to the Butea frondosa, the Ban-Teak or Ben-Teak, literally, wild teak) being the Lagerstræmia microcarpa.

Bastard Ebony, in Ceylon, is their Kadem-Beriye, SINGH., and probably a species of Dalbergia.

Bastard Cedars, of Southern India, are the Soymeda febrifuga, and Guazuma tomentosa.

Bastard Sago-palm, of Southern India, is the Caryota urens.

BASTI, H. a hamlet a village, a town, from Wyna. Hind. to inhabit.—*Elliott.*

BASTI, a Jain temple.

BASTRA HARANA. SANS. from vastra, clothes, and harana, to steal.

BASU, BENG. An honorific suffix in Bengal to Kayet families—which Anglo-Indians pronounce Bhose. See Kayet, Kyet.

BASUK, BENG. Adhatoda vasica.

BASUNTEE, BENG. Hiptage madablota.

BASWA OR BASAVA, is said to have originated the Jangam sect. See Jangam.

BASWA DEVA, a deity mentioned in an inscription at Kaira in Guzerat.

BAT. ENG.

Nukteris............ ...	GR.	Vespertilio........ ...	LAT.
Othelaph......... ...	HEB.	Taoos Pachi...	TAM.
Sham Gadhal......	HIND.	Gabbi Lal......... ...	TEL.
Bar-bhagul... ...	HIND.		

The Bat is mentioned in Lev. xi. 19: Deut. xiv, 18 : Is. ii. 20 and Baruch vi. 22, and is generally referred to as an unclean animal or as illustrative of unsightly things. It is of the Vespertilionidæ, 47 of which are known in Southern Asia, and of the creatures classed by the Anglo-Indians as bats may be mentioned those of the genera Pteropus, Vespertilio, Rhinolophus, Hipposideros, Rhinopoma ; Dysopus Nyctecejus, Kerivoula.

In Ceylon, some bats, as Rhinolophus affinis *var*, rubidus, Kelaart ; Hipposideros murinus, *var* fulvus, Kelaart ; also H. speoris *var* aureus, Kelaart have brilliant colours ; bright yellow, deep orange and a rich ferruginous brown inclining to red. The Pteropus Edwardsii, Geoff, is eaten by natives, and its flesh is said to resemble that of the hare.

Nine species of bats were sent by Captain Hutton from Missouri, of which four were European and included in the Fauna Britannica. These were Barbastellus communis, Gray, Myotis murinus, (Geoff.) M. pipistrellus, (Schreber), and Scotophilus scrotinus, (Schr.) Of two other species of Scotophilus, one only differs a little in colour from a specimen sent by Mr. H.E. Strickland as Sc. dacycarpus, (Leisler; and the other would seem to be undescribed. As regards Plecotus, for instance, upon the most careful comparison of fine English specimens of Pl. Auritus with the description of Pl. Homochrous, Hodgson. J. A. S. XVI, 894, the only difference detected was that the Himalayan Plecotus would seem to have shorter fur above ; a most unsatisfactory distinction, and only one specimen of it had been observed : and examples of Vesp. labiata Hodgson, detained.—*Mr. Bligh.* See Cheiroptera. Mammalia.

BAT. SIAMESE. A Siamese coin to which foreigners apply the term Tikal.

BAT. SANS. Ficus Indica.

BATABI NEBOO, Beng. Pumplemous or Shaddock, Citrus decumana.

BATAGUR, a genus of tortoises of the family Eruydidæ, order Chelonia of which several species, viz. B. lineatus; Berdmoreii dhongoka; ocellata, Thurgii and trivittata occur in India. See Reptilia.

BATAK or BATTA. See India.

BATANA. Hind. The pea: Pisum sativum.—*Linn.*

BATANGI. Hind. of Hazara and Murree hills, Pyrus variolosa, wild pear.

BATAN ISLAND, one of the Bashee group. The natives, who are a distinct race, are well proportioned, of a copper colour, and medium stature. They are very ugly: their hair is black, and cut short. Their usual dress consists of a piece of cotton, passed round the loins, and a peculiar-looking conical hat, surmounted with a tuft of goat's hair. In rainy weather they wear a cloak of rushes, through which the water cannot penetrate. The sole covering of the women is a piece of cotton, fastened below the bosom, and reaching down to the knee. Almost the whole of the Bashee group of islands are very mountainous. At the back of San Domingo the land rises to a great height, forming a remarkable peak, which can be seen many leagues distant.—*Marryat, Indian Archipelago, p.* 26.

BATANG LUPAR, a river of Borneo. See Kyans, p. 567.

BATANG LUPAR, a range of mountains in Borneo, and a river arising thereform, on which the Sarebas Dyaks live. See India 356, Kyans 570.

BATAR BUTOR. Hind. a method of rice cultivation by sowing broadcast.

BATAR NIHU. Beng. Citrus decumana.—*Linn.*

BATAS also **BATASA**, Sans., also **BATASHA.** Hind, a kind of light sweetmeat, so called from being made with potash (batasha.) Sugar cakes; little cakes of refined sugar, much used in India, in the ceremonial of marriages. In hindu mythology, Ganesa is often represented eating Batasa.

BATAS, MUNDLEE. Beng. Robinia candida.

BATATA, Malay? Convolvulus batatas.

BATATA. Port, Potatoe.

BATATAS, a genus of plants, of the natural order convolvulaceæ, of which B. cissoides, edulis; paniculata, pentaphylla and viscida have been cultivated in India; but B. bignonioides, of Cayenne and B. heterophylla of Cuba are also known. Four small roots of a batatas were sent from Australia by Mr. Dowdeswell, and planted by Mr. Rohde at Guntoor, whence it was largely distributed, and been in daily use as a vegetable preferred to the common sweet potato, as being less sweet and more farinaceous.—*Juries Reports, M. E. Voigt.* 353. *Hog. Veg. King,* 536.

This perennial plant with creeping stems was originally a native of the Malay Archipelago, but has been distributed all over the warm parts of the world, and cultivated for its edible roots. These are long and cylindrical, and are often eaten raw by the people of India, but Europeans boil them and boil and fry them, and they become mealy and sweet. They are alluded to by Shakspear who makes Falstaff in the merry wines of Windsor say "let the sky rain potatoes and hail kissing comfits," for in the reign of Elizabeth before the introduction of potatoes, these received that name, the kissing comfits being a conserve. There are two kinds, those with red and those with white roots, the red being most esteemed. In Brazil, they yield a spirit the vinto de Batatas of Brazil. There are two or three varieties cultivated in the Tenasserim provinces and the potato like roots are used in various ways. It is very abundant, but is vastly inferior both in size and quality to the sweet potato of the southern states of America.—*Mason. Merry Wives of Windsor, Roxb. Vol. i. p.* 483. *Voigt.* 353. *Hog.* 536. *Mason. Roxb.* See Vegetables of Southern India, Convolvulus batatas.

Grows all over the south of India in the Archipelago and islands of the Pacific.

BATAVIA, the ancient Jakatra, situated on the banks of the large river Tji-li-wung, in Java, has always been the capital of the Dutch possessions there. According to M. Temminck the town population in 1832, was about 118,000, as follows :—

Europeans...	2,800	Moors and Arabs,	1,000
Chinese...	25,000	Slaves...............	9,500
Natives...	80,000	Total...	118,000

The island contains about nine millions of inhabitants, chiefly mahomedans. The river is also called Jaccatra the town is in Lat. 6° 9' S, Lon. 106° 51' E. 60 miles E. S. E. of the Straits of Sunda. Batavia was founded by the Dutch in 1619. It was taken by a British force from India in 1811, but restored in Aug. 1816. It is the residence of the Dutch Governor General, is defended by a citadel and a large garrison, and has an extensive marine arsenal. The bay and harbour are well adapted for commerce, and a considerable trade is carried on in pepper, rice, sugar, coffee, indigo, spices, hides, and teakwood. The chief imports are opium and piece goods.—*No.* 3 *Jour. Ind. Arch.* See Netherland India, Pulo nyas, or Nias Sourabaya.

BATCHIAN, a large island fronting the S. W. part of Gillolo.

BATÉ, a low island of considerable size, forming the extreme northernly point of the Saurashtra peninsula. Even at the Greek invasion the daring reckless pirates, the Sangara of Bate, were notorious men steeped in crime, and hardened in defiance of all human law. According to the mythological hero worship of the hindus, it was in Bate or Pirates isle that Krishna or Kanya acted the part of the Pythian Apollo, and redeemed the sacred books, slaying his Hydra foe, the Takshac, who had purloined and concealed them in one of those gigantic shells whence the island has its name.—*Postan's Western India, Vol. II. p.* 4 & 5.

		Conda.	Sans. Tam. Tel.

Bathing, amongst the Jews, mahomedans and hindus, is a religious rite : the Hebrew legislator, Moses, has conveyed his laws, to the Jews and Mahomedans, and in Turkey, Egypt and Persia, public baths are established in the principal cities. The Rev. W. Robinson mentions (*Robinson's Travels, Vol.* II. *p.* 147.) that at one place he found the baths, an extensive building, with a front fifty-nine feet wide, occupying half a quadrangle.

The mahomedans have two kinds of abluion, or lustration, the "Ghasal" or legal washings for all classes, after any kind of bodily uncleanness such as the pollutio nocturna, menses, coitus or child-birth, for until purified it is unlawful to eat, pray, touch he koran, or go to the mosque. If the legal Ghasal be not needed nevertheless before prayer he *Wázū* or washing in a prescribed manner of the face, hands and feet is indispensable. It occupies two or three minutes. The Wazu is only needed, when any minor cause of impurity as in performing the natural functions has occurred. Where water is not to be had, the Teyammum, or rubbing the face legs and hands with fine dust or dry sand suffices.

In Persia, there are certain periods allotted 'or the women to go to the bath. Ousely notices his (Travels, Vol. I. p. 301) in mentioning hat the bath-horn, in Persian Buq-i-Hamam is ounded to announce that the city-baths are eated and open for the reception of women ; his bath trumpet being sometimes a horn sometimes a conch shell. In India there are no such baths, either for hindoos or mahomedans : in the larger towns, and in Club-Houses there are a few swimming baths for Europeans but the bath places of the British 'n India are private. Hindoos generally resort to a river side or tank, and mahomedans like the British, bathe in their own enclosures.

The priests of ancient Egypt purified themelves by bathing in the morning and plunging nto the sacred waters of the Nile.

The lustration of the Jews is described in Mark vii, 2-5 where he mentions that when he Pharisees saw some of the "disciples eat bread with defiled (that is to say with unwashd hands) they found fault ; for the Pharisees nd all the Jews except they wash their hands ft, eat not, holding the tradition of the elders. And when they come from the market except hey wash, they eat not; and many other hings there be, which they have received to hold, as the washing of pots and pans, brazen vessels and of tables." And, up to the present hour, the hindu ritual is almost identical. Along the banks of the Ganges at every large place, crowds of men and women are to be seen at certain hours of the day, bathing close together in a state of nudity.

The hindu Sthnanam, after child birth, is performed the 16th day; in this purificatory rite the mahomedans adhere to the Hebrew forty days. Amongst the hindus, the Sthnanam is the religious rite of purification, and ordinarily performed once daily, in the early morning, their evening ablution, not involving the head, but from the neck. The Abhiangana Sthnanam, is that, generally twice a week, in which the head is anointed with oil, and corresponds to the anointing of the Jewish ceremonial, and to the Indian mahomedan's Sar-Nahna, or head-washing, of which perhaps the initiatory head-washing rite of certain craftsmen in Britain is a remnant: as, possibly may, similarly, be the feet washing, as a marriage ceremony. In Britain the brides' feet are washed, and in the south of India, the engaged son-in-law, performs the ceremony palal-kal-kazhu-viradu, Tam) of washing his intended father-in-law's feet. Mr. Layard tells us that amongst the Tiyari of the Nestorians, the girls and women bathe unrestrained by the presence of men, in the streams or at the doors of their houses, the men neither heed nor interfere, and their wives, and daughters are not the less virtuous. In Japan, there are bathing houses, in which at Hakodadi both men and women of the lower ranks assemble. Mr. Hodgson tells us that on one occasion at Yedo, the bathers of both sexes indiscriminately sallied out to see them pass, from some twenty of their common cells, in all the natural simplicity of our first parents costume before their expulsion. On another occasion when Mr. Alcock went, preceded by a band of music to the Governor's Yumun all the bathers of both sexes came out, unabashed and without the slightest idea or reflection that they were naked, to gratify their curiosity by a good long gaze on the novel spectacle. But, latterly, if a European attempts to draw the curtain before the bath house, he is received with storms of abuse, and told very plainly to go about his business. The functions of the skin cannot be preserved in healthy activity, nor the changes of climate effectually guarded against without the frequent use of the bath. The warm, tepid, cold, or shower bath, as a means of preserving health, ought to be of as common use as a change of apparel. On a large scale baths are economically heated by steam. The sickly, the aged, the weak, and the intemperate should avoid the use of the cold bath, which should seldom be used in the higher table lands of India, even by the strong.—*Sonnerat's Voyage*, 161. *Hodgson's Nagasaki, p.* 252. *Layard's Nineveh, Vol. I. Robinson's Travels, Vol. ii. p.* 149. *Ousley's Travels, Vol. I. p.* 301. See Ablution Anointing, Demavend, Hamam, Lustration, Purification.

BATHU, also Bathua, Hind. Chenopodium album, much grown in the hills of the W. Himalaya.

BATIN. See Jakun.

BATINAH, the richest province of Oman.

BATIR. Hind. Quail.

BATIS. Hind. Aconitum heterophyllum. See Atees.

BATIS, a genus of the Urticaceæ, B. fruticosa is a shrub of Chittagong.

BATIS SPINOSA, Syn. Roxb. Vol. iii. p. 762. Trophis spinosa. Willde.

One of the Urticaceæ, a creeping plant, a native of the Moluccas and of the eastern part of Peninsular India.

BATKAR. Hind. of Murree hills, Celtis caucasica, nettle tree.

BATLEE. Guz. Hind. corruption of Eng. Bottles.

BATN-BAD-BATN. Arabo—Persic, from generation to generation, a form of granting land.

BATNIR. See Batnere; Kabul, p. 440.

BATNULKAR, a tribe of weavers in the Madura and Tinnevelly districts who speak a slang dialect—*Wils.*

BATOCERA RUBUS, the Cooroominga beetle, penetrates the trunks of young cocoanut trees near the ground and deposits its eggs in the centre. Its grubs when hatched eat their way upwards through the centre of the tree to the top and kill it.—*Hartw T. W.*

BATOOLA. Beng. Cicer arietinum.

BATOO POOTIE. See Pedir Point.

BATOTI. Hind. diseased pulse, caused by the east wind.

BATRACHIA, a sub-class of the class Reptilia, including all the frogs, it is arranged by naturalists into two orders, viz. (1) Batrachia salienta, and (2) Batrachia apoda. The order B. salienta has the families, Ranidæ and Discoglossidæ, Rhinodermatidæ, Bufonidæ and Polypedatidæ the order, Batrachia has but one family, Cœciliidæ. See Reptilia.

BATRACHOSTOMUS MONILEGER. See Aves; Birds: Ornithology.

BATSALI COORA. Tel. Portulaca quadrifida.

BATSHIGGAI, Pashtu, Cutler's sand.

BATTA. Hind. Difference or rate of Exchange: Extra allowance.

BATTA, a supposed aboriginal race inhabiting the island of Sumatra, are not unlike the Malay and Binua of the Malay peninsula, in feature; but are a finer race of men. They are said to eat their aged relatives, a custom mentioned by Herodotus as prevalent among the Massagetæ (Herod. Clio I. c. 216), and speaking of the eastern countries of India (Thalia III. c. 99), producing gold, and tributary to the Persians under Darius, he particularizes the Padæi, a pastoral people; amongst whom when any person falls sick, or arrives at an advanced age, his friends dispatch him, and eat his flesh with rejoicing. Rennell, in his chapter on the twenty Satrapies of Darius Hystaspes, is of opinion, that Herodotus, when he thus describes the east of India and customs of the Padæi, must have meant a tribe who inhabit the banks of the Ganges, the proper and Sanscrit name of which, he says is Padda: Ganga being the appellative only: so that the Padæi may answer to the Gangaridæ Greek writers with whom formerly it was usual for the people to eat their parents when too old for work. The old people selected the horizontal branch of a tree, and quietly suspended themselves by their hands, while their children and neighbours forming a circle, danced round them crying out 'when the fruit is ripe, then it will fall.' This practice took place during the season of limes, when salt and pepper were plenty, and as soon as the victims became fatigued, and could hold on no longer, they fell down, when all hands cut them up and made a hearty meal of them."—*Memoirs, p.* 427. *Newbold's British Settlements, Vol. II. pp.* 370-1, 2, 3. See India, p. 318. Jakun.

BATTA, a river near Kyrada in Dehra also near Kullaisur in Umballa.

BATTAL. HIND. Euonymus fimbriata or E. Hamiltonii: in Kaghàn, it is Pyrus aucuparia.

BATTAM, an island in the south side of the straits of Singapore.

BATTANTA ISLAND separates Dampier and Pitt Straits from each other, and is about 45 miles long. Mabo, its Southern cape, is in Lat. 0° 56' S; Long. 130° 25' E.—*Horsburgh.* See Pitt Strait.

BATTEE SAL. HIND. Dipterocarpus alatus.

BATTIA, a hindu sect who worship Vishnu and his incarnations as Ballaji at Panderpur and Tripati. They have a great reverence for their guru, whom they style maha raj, and place at his disposal Tan, man and dhan, body, mind and means, and recently in Bombay scandalous immoralities regarding and carelessness of their women were shown.' They are generally merchants. See Ballaji, Tirapati.

BATTICALOA, a town of Ceylon in Long. 81° 49' E. and Lat. 6° 42' N.

BATTLES OF INDIA, Anciently, the Sodha and Rahtor rajput, and the Jharijha of Guzerat dismounted in the presence of the enemy and fought on foot. After the fatal battle of Kadasiya, the Persian General, Takharjan, dismounted to fight with Zahir, the Arab champion. This was a common practice of Europe in the middle ages, the emperor Conrad's cavalry followed it in the second crusade, and the English when fighting at North Allerton the battle of the standard; Sir John Hawkwood, a knight of Edward III. introduced the practice into Italy, and the English followed it in the battle of Crevant and Verneuil. The chief battles and sieges in India from which British supremacy has resulted, have been won at Plassey, by Lord Clive in 1757 against the mahomedan power in Bengal, Plassey being the name given to the battle field from the circumstance that it was covered with the pulas tree, Butea frondosa. The siege of Seringapatam in 1799 was of importance, also the battles of Assaye and Argaum, fought by Sir Arthur Wellesley in 1803 against the Mahrattas. In 1803 Allygurh Laswarrie, both won by Lord Lake and General Fraser against Sindiah's battalions of Mahrattas, trained by Perron. The battle of Deeg in 1804: Mehidpore in 1817 against the Mahrattas: Ashti, in 1818, against the Mahrattas. In 1819 Assergur. In 1824-5-6 against the Burmese and in 1826 Bhurtpore fell: in 1840 and 1842 against the Chinese: 1845 against the Amirs of Sindh by Sir Charles Napier. In 1846 against the Sikhs at Sobraon: 1848 Multan, and again in 1849, against the Sikhs at Guzerat. In 1856 in Persia. In 1857 and 8-9 in northern India, at Delhi and Lucknow against the native soldiers in revolt and nearly the whole of north western India in rebellion. The war progress of the British in India, has been by dissimilar military tactics. When in the field, as with Lord Clive at Plassey, with Sir Arthur Wellesley at Assaye, with Lord Lake at Laswaree, Futtehghur and Afzulgurh, in 1818 at Nagpore, in 1824-5-6 in Burmah with Sir Archibald Campbell, in China 1841-2 under Lord Gough, against the Sikhs, at Guzerat, under that Commander; and against the Persians in 1856 under Sir James Outram, it was by boldly throwing the stable British troops, however few in numbers and after long marches, against the less coherent native levies, however numerous; and in the siege operations against Seringapatam, against Gawilghur, against Bhurtpore both in 1805 and 1826, by persevering determination. Lord Clyde's operations of 1858-1859, however, were marked by the wary methodical movement of vast bodies, against the revolted soldiery and rebellious races;—by the measured, ponderous, but slow tramp of splendid infantry, with the cavalry and artillery in aid. The only cavalry movement of note that occurred was after the battle of Cawnpore when on the 9th December 1858, Sir Hope Grant with the 99th Lancers, some native Cavalry and Horse Artillery moved 25 miles to the Sheo-rajpore ghaut on the Ganges, and attacked the flying rebels defeating them and capturing all the guns without, on his side, a single casualty. Sir H. Rose had defeated the army of Gwalior before that city on the 20th and on the 21st June 1858, Sir Robert Napier with the 14th Light Dragoons, some native cavalry and a battery of artillery not 600 in all went in their pursuit and came up with the 6,000 rebel sepoys with their 30 guns at Jowra Alipore where he charged into the thickest of the enemy and completed their dispersion. But of the 100,000 Native soldiers who revolted in May and June 1857, though many died from disease, probably not more than 40,000 from first to last were killed or wounded. In the revolt of 1857, from May till the 30th September the British soldier aided by the few native troops who remained staunch, in all 45,000 British and 60,000 native had to struggle for their lives against 120,000 sepoy troops and an equal number of civil rebels every one of whom in Oudh and Rohilcund had been born a soldier. The first aid that the British got was the Sikh levies sent by Sir J. Lawrence from Lahore. In all, the British and native troops rose to about 150,000 before the end of 1857, and before July 1858, there were 80,000 British soldiers in India. But up to September 1857, the smaller number of 45,000 British and 60,000 natives had to combat for their lives against not less than 300,000 combatants 120,000 of whom had been regularly trained soldiers or partially trained police. Before the end of September 1857 Delhi had fallen and the part relief of Lucknow before the receipt from England of other aid than a wing of the 5th Fusiliers and the 90th L. I.

The real relief of Lucknow took place on the 6th December 1857. After Lord Clive's arrival, Lucknow remained to be besieged, and captured, Cawnpore to be released from the Gwalior contingent, and Oudh and Rohilcund cleared from the armed rebellion, and under Sir Hugh Rose, Central India was restored to British supremacy. Towards September 1857, and from that time onwards (and amongst the first of these came Lord Clyde) British troops came in, at first in small bodies and then in large until the entire re-inforcement of 50,000 men had arrived from Britain to re-establish in the east Britain's supremacy. As a matter of history it may be well to record here the strength of British soldiers in India in the years of and immediately preceding and succeeding the revolt, to show how greatly their numbers vary.

	In India. British Soldiers.	
1852	48,709

	32,500	According to Genl. Balfour of these 4,000 in
1868	54,000	Abyssinia.

Throughout India, generally, the object of those with whom the British from their first entry on the arena had come in contact, the mahomedans, Mahrattas, Sikhs, Sindians and Afghans, had been personal, either to gain new lands or to hold such as were in their possession, and impressed by the habits and customs of age—they have mostly been ready to yield or retreat when pressed, with the belief that they could regain or return when opportunity recurred ; for except the Sind Amirs, not one of all the ruling powers in India and its borders with whom the British came in contact, had possessed authority in the country longer than the British themselves.

The battles fought by the British in the 18th century were chiefly for existence and a standing ground, and the names of the great Lord Clive, Colonel Lawrance, Sir Barry Close, Lord Cornwallis, and General Harris, were conspicuous amongst others of their countrymen.

Calcutta was taken on the 2nd Jan. 1757 and Fort William on the 5th Feb. 1757.

The battle of Plassey was fought and won in 1757, by Lord Clive against the mahomedan power in Bengal, which gave the British supremacy there. It was fought on a plain covered with the Pulas (Butea frondosa, hence the historical name of the battle plain. The Carnatic came into the English possession, partly by gift, partly by treaties, and in part as the result of battles fought in the 18th century against both mahomedan and hindu sovereigns. Amongst these may be enumerated, Sholinghur, taken 27th Sept, 1781, Negapatam surrendered 18th Nov, 1781, battle of Cuddalore of 13th June 1783.

The taking of Bangalore from Tipoo Sultan, on the 21st March 1791, gave a permanent position in Mysore, but it was eight years later, when Seringapatam was stormed, on the 4th May 1799 that the country came under British control, by the replacement of the hindu descendant of formerrulers on the throne.

The campaign of 1803, commenced on the 7th August. It was directed against Sindiah and Perron and the Bhonslah rajah of Berar: these two Mahratta powers had 72 regular battalions officered by Frenchmen, and 200,000 troops untrained, but from the sources whence they were drawn, such took even a higher social standing than their soldiers of the line. Before the end of December there were gained by the British four battles, amongst which were Assaye and Argaum and Laswarie,—the British completed eight sieges and storms, and effected the almost total distruction of the 72 trained battalions, the dispersion of the rest of their armies, the capture of 738 pieces of cannon, the British force being about 55,000 regular troops, amongst which were 10,000 British soldiers. To effect these results Sir Arthur Wellesley had been moving northwards, taking Ahmednuggar the key of the Dekhan; taking Gawilghur in the Vindhya, also Asseerghur; and Lord Lake moved southwards fighting the battle of Laswari. In those years, also, Jeswant Rao Holkar, when he opposed the British in 1803, had 100,000 regular troops, amongst whom were 600,000 light horse, and 130 guns with the fortress of Chandore and Galingurh. From the tactics adopted, this moveable force baffled the British commanders and all the military power of India from April 1804 till the 15th February 1805. On the 2nd April 1805, Jeswant Rao Holkar, was again defeated by Lord Lake who marched all night and at daybreak entered Holkar's camp, which he completely broke up In this, in going and coming, Lake marched fifty miles. Lord Lake subsequently in December 1805 marched in his pursuit 405 miles in 43 days from Secundra to the Beas river at the Rajghat. In Jeswant Rao Holkar's final overthrow, Lord Lake marched 350 miles in a fortnight to reach Delhi which Sir D. Ouchterlony was defending against Jeswant Rao Holkar. But on Holkar's abandonment of Delhi on the 14th and 15th October 1804 Lord Lake followed him, and at length with a small body of 3,000 British horse and artillery amongst which were the 8th and 27th dragoons, made a forced march of about 48 miles, defeated the forces of Holkar, about 60,000, near Furruckabad, followed 10 miles in pursuit and returned to camp, making a journey of about 70 miles in 24 hours, with a loss of 22 dragoons killed, and 20 Europeans and natives wounded.

Amir Khan, the Rohilla chieftain of Rohilcund forsook the Bhurtpore Rajah, but was followed by General Smith whom Lord Lake sent in pursuit. After a march of 700 miles in 43 days, Amir Khans army was overtaken and defeated at Afzalghar at the foot of the Himalayas on the 2nd March 1804 and Amir Khan was conveyed across the Ganges and Jumnah in March, but he rejoined Holkar's camp under Bhurtpore. At Laswari, in Central India, in 1803, Lord Lake and General Fraser fought and won a battle against the battalions of Scindia and Perron.

Delhi, battle of................	11th	Sept.	1803
Agra, city of, taken............	17th	„	1803
Agra, taken.....................	19th	„	1803
Allyghur, assault of the fortress of..................	4th	Sept.	1803

The Jato of Bhurtpore were inclined to side with Jeswant Rao Holkar, and that fortress was invested by Lord Lake in 1805, and after several determined assaults made without capturing the place, the Rajah sued for terms. In 1825, however, during the Burmese war, puffed up by the belief that their mud fort was impregnable, they again drew down the anger of the Indian Government, and the fort was taken by storm on the 18th January 1826. Bhurtpore, is on the borders of the desert of Rajputanah. When besieged by Lord Lake in 1805, with 10,000 regular soldiers and four determined assaults were made on January 9th and 22nd and February 20th and 21st but in each instance repulsed, though at the close, the besieged on the 10th April 1805 yielded to terms. In those four fruitless attacks, the British loss was 3203 killed and wounded, of whom 103 were officers. In 1826, it was again besieged and successfully stormed by Lord Combermere. The walls were built of unbaked brick or clay. Agra city was taken on the 17th, and the fortress on the 19th October 1803. Sir David Ouchterlony, a general officer of the Bengal Army, for 8 days defended Delhi against the Mahratta Jeswant Rao Holkar, repulsing repeated assaults though with open breaches, till on the night of the 15th October 1804 on the approach of Lord Lake, Holkar withdrew. From that time the moghul Emperor of Delhi became a stipendiary of the British. The Nepaul war ended on the 12th March 1816. It was successfully conducted by Sir David Ouchterlony, but there fell General Gillespie who had relieved Vellore when it was seized by rebels in 1808, and who had distinguished himself in Java in August and September 1811. Several tracts in the mountain valleys of the Himalaya, were then ceded to the Indian Government.

The territories on the north-west part of peninsular India, have been chiefly acquired from the Mahratta sovereigns, as the results of war and victories gained and fortresses taken. Bombay island, came by gift from Portugal, as part of the dower of king Charles the Second's bride. The principal battles were in the begin-ing of the 19th century, and in 1817,1818, and 1819, fought by General Wellesley, Sir Thomas Hislop and Sir Thomas Munro. Of these Ahmednuggur, surrender of city 11th Aug. 1803

Assaye, battle of................23rd Sept. 1803
Berhampore surrendered......16th Oct. 1803

Ahmednuggur city was taken by Sir Arthur Wellesley on the 11th August 1803, and immediately afterwards he received the surrender of the fortress, long regarded as the key of the Dekhan.

Amulnair, surrender of.........30th Nov. 1818
Asserghur, siege of.............30th Mar. 1819
Do. surrendered unconditionally......................9th Apr. 1819

Sind fell to the Indian Government, from the mahomedan Talpur dynasty, after the battles of Meeanee, on the 17th February 1843 and of Hydrabad, on the 24th March 1843, both fought by Sir Charles Napier, and this gave the course of the Indus, up to Multan. The Punjab was twice engaged in war, with the Indian Government, in 1845 and again in 1849, after which the entire Sikh dominions were incorporated with those of British India and a rapid increase of its resources followed.

Political difficulties with the Baruk-Zye chief, Dost Mahomed Khan induced the Indian Government at the close of 1838 to resolve on displacing him and replacing the deposed king Shah Shujah ul Mulk. This was done, after a series of successes and severe reverses, in one of which the entire army was destroyed by climate and the sword, and was the greatest disaster that ever befel the army of India. The chief battles fought were

Ghuznee, capture of............23d July 1839
Do. re-capture of............ 6th Sept. 1842

Jellalabad, battle of............. 7th Apr. 1842

The only territory now held by the British west of the Indus, is the peninsula of Aden taken on the 19th January 1839.

The possessions east of the Ganges, have fallen to the British arms from two powers. The first to engage in hostile operations were the Burmese, from whom, after a series of operations in 1824, 5 and 6, territories in Assam, in Arrakan and in Tenasserim were gained. But war again recurred in 1852 and further territories were annexed at the mouth of the Irawaddy, so that from the mouth of the Indus to Singapore, the entire sea-board became British territory: the principal occurrences were

1st War.

Ceylon, long a Portuguese and Dutch territory was taken by the British at different times, viz.

Colombo taken.............16th February 1796
Kandy taken...............18th February 1815
Kandian Country, British entered the................11th January 1815

The central parts of Peninsular India have several times needed coercion. At Kittoor, a battle was fought on the 23rd October 1824, and the fort was besieged and taken on the 5th December of that year. Badamee fort was taken by storm on the 18th February 1818 and was again captured on the 10th June 1841, and as a continuation of the same events, Punalla and Powanghur were captured on the 1st December 1844.

Kurnool, held by a feudatory Pathan chief lying between the Ceded Districts and the Hyderabad territory was surrendered to the East India Company on 15th December 1815, but on the 18th October 1839, was again taken possession of, and on the same day, a battle was fought at Zorapore a few miles off, the nabob of Kurnool captured and the territory annexed.

In 1834 cruelties carried on for a long series of years, by the rajah, brought on him the hand of the Indian Government, and after a series of operations, Coorg was captured after a battle on the 8th April 1834.

In the interval of one hundred years here reviewed the British troops, under the E. I. Company's administration were composed both of European and Native soldiery, armed according to the European mode as Artillery, Cavalry and Infantry, and similarly disciplined but aided by levies of horse and foot, with a less perfect or less extensive organization, and termed Irregular. In the early wars there were few or no European soldiery, and but small bodies of native troops, but these gradually increased with expansion of territory and more concentrated opposition and the European and Native Forces in India were in the years

	Europeans.	Natives.
1839—40	35,604	199,839
42— 3	46,726	220,947
1856— 7	45,522	232,224
8— 9	106,290	196,243
1864— 5	71,880	118,315

In 1857, there were 6,944 European and 8963 Native Artillery: 3,136 European and 30,473 Native Cavalry. In that year the revolt of the native army occurred and the policy since then has been to augment the European army, remove all natives from the scientific corps and reduce their numbers. The composition of the Indian army in 1857 and 1865 was as under.

Europeans.

				H.&C.			Total.
1857	6,944	3,136	38,254				48,334
1865	13,672	6,274	48,945	1,406	438	1,145	72,330

Natives.

Year.	Artillery.	Cavalry.	Infantry.	Staff H. & C.	Total.
1857	8963	30,478	185047		224,483
1865	1465	14,674		2823	118,315

In their opponents, the British forces have had to encounter clouds of horse, as in the Mahratta camps; brave foot soldiers as in the Affghan and Sindian and Sikh, and native armies trained by European officers, Italians, French, and Germans. But those with the native rulers have appeared in the field with every weapon and armour of defence mentioned in history, swords and spears, shields, bows and arrows, and up to 1867, in Hyderabad, soldiery with bows and arrows were still to be seen passing in review in the war pageant of the Nizams Langar even till this day, the Battas of Sumatra, wear the kallasan, a slightly curved sword, and the jono; also knives called tombak lada, and terjing, for drums the Battas use gongs, and in action set up a kind of war-whoop. The Bugis tribes inhabiting Celebes, are celebrated for the temper they give to steel, and for their arms in general; in addition to those of the Malays on the Peninsula, they use defensively the baju ranti (chain jacket), and both a long and round sort of shield. They swear by their krises, for which they have a great veneration, and on going into battle, drink the water in which they have been dipped, uttering imprecations on the foe. The inhabitants of Pulo Nias, an island off the western coast of Sumatra, wear for armour a baju made of thick leather, and a cap to match, covered with the ijo, a vegetable substance resembling black horse hair. The Lampongs, who inhabit the eastern and southern extremity of Sumatra, go into combat with a long lance borne by three warriors; the foremost of these lance-bearers, protects himself with a large shield.

The Malay pirate prahus are stockaded and armed with heavy guns; generally the mariam and lelah, to which last the Malays are very partial; matchlocks, long spears, pointed nibong stakes burned at the end, and others cut short for throwing when at close quarters, and large stones. The signal for attack is the sound of a sort of gong, called Tawa tawa.—*Newbold's British Settlements, Vol. ii. pp.* 212, 214.

BATTLE AXE OF THOR, is the cross. Pattee is the swastika of the Buddhists, and the monogram of Vishnu and Siva. Thor's symbol of governance was the last letter of the Samaritan alphabet, the tau or tao in its decussated form. It is the mark which the prophet (Ezek. ix. 4) was ordered to place on the foreheads of the faithful in Judah, and Indian women still place on their stores of grain. It is placed on the jars of the water from the Ganges and Indus, and in the South of India as the emblem of disembodied Jain saints. It is the mystical Tao Sze, of the buddhists, is the chief ornament on the sceptre of the Bon-pa deities of Thibet, and is expressed on the Artee or musical bell borne by Bal-govind.

BATTLES. The Military Gazette of Vienna makes the following comparisons of the forces engaged in the battle of Solferino and in former great battles:—"At Solferino there were more than 300,000 soldiers in the field, and the losses must have amounted to at least from 30,000 to 37,000. At the battle of Leipsic, which lasted for three days, the 330,000 allies had against them 260,000 French, the latter lost 30,000 prisoners and 45,000 killed and wounded, and the former 48,000 killed and wounded. After Leipsic, the most sanguinary battle was that of Moscow, on the 7th of September 1812. The Russians had 130,000 men and 600 pieces of cannon, the French 134,000 men and 587 cannon; the former lost 58,000 and the latter 50,000; the losses were therefore 40 per cent. At Bautzen, on the 21st of May, 1813, there were 110,000 Russians and Prussians opposed to 150,000 French; the latter lost 20,000 men and the allies 15,000 and not a single cannon. At Wagram, on the 5th and 6th of July 1809, the Austrians had 137,000 men and Napoleon 170,000; the Austrians lost 20,000, and the enemy 22,000. At Esling, there were 75,000 against 85,000; the Austrians had 20,000 killed and wounded, the enemy 13,000 killed, but the enemy left 3,000 prisoners, and was obliged to send 30,000 to Vienna to have their wounds attended to, so that out of the 160,000 men engaged, about one-half were put *hors de combat*. At Austerlitz there were 70,000 French, as many Russians, and 13,000 Austrians; the losses were 21,000 Russians with 160 pieces of cannon, 5,800 Austrians, and 10,000 French. At Jena there were 142,000 French against 150,000 Prussians. At Waterloo there were 170,000 men, of whom 70,000 were French, who lost 25,000 men and 250 cannon, whilst the allies lost 31,000 men. On an average, the losses in all these battles amounted to from 20 to 25 per cent. Whilst in the battle of Solferino they did not exceed 15 per cent."—*Havelock's Three Main Questions. Material Progress in India*, 1865-6.

BANG, a nuddy near Moondepoor in Nagpoor.

BAUGLAN is the western talooka of Kandesh. Stretching north in Bauglan are a series of valleys separated by small chains of hills. These hills form, as in the Poona Mawuls, ground naturally formed for forest reserves.—*Gibson's Bombay Forest Reports of* 1857-60, *p*. 38. See Bheel.

BAUGREECOTAH, Long. 75° 48' E. and Lat. 16° 14' N.

BAUGRI, one of the predatory tribes of Central India. Several of these in the 18th century were for many years the worst enemies to the prosperity of this country—they were the Moghi, Baugri, Bheel, Sondi, and Bheelalah. The two principal were the Baugri and Moghi, they came to Central India originally from the western parts of India, chiefly from the neighbourhood of Chittore. The Moghi hardly passed the Chumbul, but the Baugri settled in the Eastern parts of Malwa in considerable numbers: and about the beginning of the 19th century the Solunkee Rajpoots introduced no less than four hundred of them to garrison the small fort of Sattanbaree in Bersiah in which district and others in its vicinity there had been for a long period many settlers of this tribe. The Baugri are a very brave race of men, and though they till the soil and pursue occupations of industry from necessity, their favourite pursuits were thieving and plundering. In these arts they were at once expert and bold. They were also mercenary soldiers, ready to serve any one, and to engage in any cause for prey. The Baugri were foot soldiers, their Jemadars or leaders, whom they obeyed implicitly were usually mounted, whenever they settle, they remain in colonies and even when three or four families fix in a small village, they live distinct from the other inhabitants. This tribe, though scattered, preserved a correspondence, which made them formidable enemies to the internal peace of any country, in which they were numerous. There were not more than twelve hundred in the countries of Bagur and Kantul, and their immediate vicinity. The Meenah and Goojur of Hindustan who have settled in Central India (though the greater proportion of them are cultivators) have not forgotten the habits of their ancestors; and many of these classes have distinguished themselves as expert and successful thieves and robbers. The same may be said of the Gond who inhabit its southern frontier.—*Malcolm's Central India, Vol. II. p.* 185.

BAUHINIA, a genus of plants of the natural order Fabaceæ, the generic name was given to it from the twin form of the leaf, in honour of the twin-brothers Bauhin. The number of species is considerable, and Voigt enumerates 25 as occurring in India or as having been grown in the Calcutta gardens, some of the species are cultivated as ornamental flowering plants, some are shrubs, and some are trees which yield useful woods, astringent gums, fibrous barks. The leaves of various Bauhinias are used in Brazil under the names of Unha de Boy, or Ox-Hoof, as demulcent remedies.—B. Aurantiaca and Richardiana of Madagascar ; bidentata of Penang ; brachycarpa of Taong-Dong ; polycarpa of the Attaran river, and speciosa need little notice, and the same may be said of B. porrecta of Jamaica and B. microphylla, a tree of America. Dr. Hooker mentions that a thousand feet above Punkabaree in the outer Himalaya the prevalent timber is gigantic and scaled by climbing Leguminosæ, as Bauhinias and Robinias which sometimes sheath the trunks or span the forest with huge cables joining tree to tree. In the Tenasserim Provinces, scandent species of bauhinia creeps up to the tops of the highest trees. It has very large leaves, and its flowers have the fragrance of mignonette. It approaches Vahl's bauhinia in size and habit, but its petals are red and yellow while in that they are said to be white. It is probably one of the species named by Wallich. Loudon calls bauhinia, mountain ebony, an the wood, though not much like ebony, is quite hard and might be applied to many useful purposes. To the five species which are enumerated among the Burmese flowering plants, may be added a small timber tree bearing a sour leaf, and a pod containing sweet pulp, like the honey locust of America. Bauhinia esculenta of the Cape of Good Hope might be introduced into India, its yam like roots being eaten there. The flower buds of the Bauhinia variegata, kachnar, are eaten, indeed, though not generally known, the flowers of almost all the Bauhinias are eaten by the natives of India. The seeds taken from the huge pods of B. racemosa are eaten in the hills of the N. W. Himalaya. The pods look like pieces of thick undressed leather, about a foot long and an inch or two broad ; they are placed over the ashes of a fire till they roast and split open ; the flat soft seeds are taken out and eaten, the flavor is pleasant ; but the seed is not wholesome. Several of the species in India are as yet undetermined. The woods are often of a dark colour.—*Mason's Tenasserim. Hooker, Him. Jour. p.* 108. *Voigt,, pp.* 253, 45. *Powell.*

BAUHINIA. *Species.*

Ambhota...URIA.

A tree of Ganjam and Gumsur. Extreme height 20 feet, circumference 2 feet and height from ground to the intersection of the first branch, 7 feet. Useless except for firewood.—*Captain Macdonald.*

This handsome shrub, with large pure white flowers, grows throughout the year in the Mauritius, Ceylon, Assam, both peninsulas of India ; is rare in Coimbatore, and does not seem to be indigenous in the Bombay side, where it is cultivated, as also in the Punjab, the Dekhan and Tenasserim. It grows rapidly from seeds, and flowers in the second or third year.—*Drs. Mason. Roxb., Vol. ii.* p. 324, *Riddell, Gibson, Wight, Mason, Flora Andhrica, Voigt,* 253. *Powell.*

BAUHINIA ALBIDA?—*Gibson*?

Qu. B. Candida.—*Roxb., Vol. ii.* 318.

White, rose-scented Bauhinia.

Duolo Kunchun. MAHR. | Vellai-munthri-poo. TAM.

The flower buds of this pretty tree yield an excellent vegetable, for curries. The flowers of B. Albida are very handsome when open, being almost pure white, with a sweet odour. Dr. Gibson says that this tree is found in the Bombay forests, but rarely ; and is more common in the vicinity of villages. It reaches a fair size, and gives a wood of a good quality, but seldom of scantling sufficient for house purposes. This is perhaps the species called by Roxb. B. candida.—*Mr. Jaffrey, Dr. Gibson.* See Vegetables of S. India.

BAUHINIA ANGUINA.—*Roxb.*

Bauhinia piperifolia.—*Roxb.*

Nang-put.........HIND. | Nagama valle.......MALEAL.

It grows in Assam, Silhet, Chittagong and the Concans. Is an extraordinary extensively rambling shrub, with flexuose compressed stems, has very small white flowers. And is highly ornamental.—*Roxb., Vol. ii.,* 328 ; *Riddell, Voigt,* 254.

BAUHINIA BRACHYCARPA.—*Wall.*

Bwai-jin...BURM.

Attains to nearly three or four feet at Taong-Dong and in the Tenasserim Provinces, its, wood is white colored and adapted for fancy work and cabinet making. It is there of smaller size than the B. parviflora.—*McClelland. Voigt*, 255.

BAUHINIA CANDIDA, var. of B. variegata.—*Linn.*

This grows in Prome, Assam, Bengal, Nepal and Oude. It is a small handsome tree with large white flowers, which appear at the commencement of the hot season.—*Roxb. Voigt.*

BAUHINIA CANDIDA. AIT. a Syn. of Bauhinia acuminata.

BAUHINIA CORYMBOSA.—*Roxb.*

A scandent plant, a native of China, a very delicate species, with fragrant middle sized white flowers, tinged with red.—*Roxb.* 329. *Voigt, p.* 254.

BAUHINIA DIPHYLLA.—*Buch.*

Pa-lan	BURM.	Apa	TEL.
Yepi of Nellore	TEL.		

This small tree grows in Burmah, on the banks of the Irawady at Yenan-gheun and Taong-dong also at Masulipatam, Cuddapah, Guntoor and Nellore. Its flowers are pure white of middling size. Of the bark called Authee nar, Yepy and Apa, the natives make temporary ropes for securing thatch, matting or fences. The barks of several other Bauhinias are used for similar purposes. The Ara nar is the bark of Bauhinia parvifolia, of which matches for native guns are made.—*Madras Ex. Jur. Report. Voigt. p.* 254. See Yepi Tree.

BAUHINIA EMARGINATA from this, an astringent gum is also collected in the Deyra Doon, which is called Sem-ke-gond.

BAUHINIA LINGUA. DECAN. Syn. of Bauhinia scandens.

BAUHINIA MALABARICA.—*Roxb.*

Bo-ay-gy-in.—BURM.

This tree grows rapidly. It is a native of Malabar, where it blossoms in October and November. It also grows at Prome and Malloon and in Assam, indeed, it is common in the plains of British Burmah, where its wood is used for the cross pieces of harrows, house posts, &c., &c. A cubic foot weighs lbs. 42. In a full grown tree on good soil the average length of the trunk to first branch is 15 feet, and average girth, measured at 6 feet from the ground, is 4 feet.—*Roxb. Vol.* II. *p.* 321. *Dr. Brandis, Voigt* 253.

BAUHINIA NITIDA. *Irv.*

B. Acuminata ?	Kana rajah	HIND.
White Bauhinia.	B. Candida ?	

This is cultivated as a flowering plant in gardens at Kotah.—*Irvine Gen. Med. Top., p.* 191.

BAUHINIA PARVIFLORA. VAHL. ROXB. Syn. of Bauhinia racemosa.

BAUHINIA PORRECTA. See Diospyros ebenus.

BAUHINIA PURPURASCENS. VAR. of Bauhinea variegata.

BAUHINIA PURPUREA.—*Linn.*

Bauhinia Coromandeliana.—*D. C.*

Purple mountain Ebony	ENG.	Bodanta Chettu	TEL.
Kunchun	MAHR.	Pedda are	„

A tree, with very large, deep rose-colored fragrant flowers at the commencement of the rains. It grows in the Mauritius, Coromandel, Irawadi, Martaban in Burmah, Assam and Oude and the Kheree pass. It attains a large size in the mountains of India; in Canara and Sunda found both above and below: most common near the Gungawallee creek. Its wood is strong and good for agricultural implements; but seldom large enough for building.—*Dr. Roxb. Vol. II. p.* 320. *Dr. Gibson. Voigt.* 254. *Dr. Riddell, Mr. Jaffrey, Flora Andhrica.*

BAUHINIA PURPUREA. WALL. Syn. of Bauhinia acuminata, also Syn. of Bauhinia purpurascens. var. of B. Variegata.—*Roxb.*

BAUHINIA RACEMOSA, Lam. not Vahl.

Syn.

This is a magnificent climber, with small white flowers. It is found all over India and all through Burmah Dr. Hooker tells us that along the forests of the Sewalik Hills and the hot valleys of the Himalaya from the Dhoons of the North West to the valley of Assam, this magnificent climber, with its two lobed leaf, may be seen hanging in elegant festoons from the tops of lofty trees, which from the distance from the roots to the stems, one is at a loss to imagine how it could have ever ascended. But occasionally a half killed tree discloses the mode of its progress and indicates the destruction it must have created in the forest. With the bark of this plant, which when stripped off is of a reddish brown colour, the natives of these mountains make ropes; the stems are usually cut in July and August: the outer bark being stripped off is thrown away and the inner is used for ropes as wanted, by being previously soaked in water and twisted when wet. It is also said to be boiled and beaten with mallets, which renders it soft and pliable, for being twisted into ropes and string for charpaes. The fibre makes very strong ropes, but it is not over durable, and rots if kept constantly in water. Though not collected for sale, it is abundant all along the foot of the mountains. Major Swetenham describes its strong coarse ropes as answering well for suspension bridges. Its bark needs but little preparation, being stripped off and twisted it is ready for use, it is also made into matchlock matches. The wood is small, but the heart wood is exceedingly hard and fine. In British Burmah a cubic foot of the wood weighs lbs 44. In a full grown tree, there, on good soil the average length of the trunk to the first branch is 10 feet, and average girth, measured at 6 feet from the ground, is 3 feet. In Bombay, the wood is reckoned very strong, but is never found of a good size, and in British Burmah it is said to be of a white color and adapted for fancy work and cabinet makers.—*Drs. Gibson, McClelland, Wight, Brandes, Mason, Voigt,* 252. *Mr. Jaffrey, Madras Museum, Flora Andhrica. Roxb. II. Dr. Royle, p.* 296.

BAUHINIA RETUSA.—*Rox. ii,* 322.

Growing in the Calcutta Botanical Gardens; has small yellow, purple dotted flowers, by incisions, its bark yields a brownish, mild gum like that of the cherry tree.—*Roxb., Voigt.* 254.

BAUHINIA RICHARDIANA,—*Wall.*

Introduced from Madagascar. Of this wood there is no knowledge, the trees in this country being still young. But this tree deserves attention as it is probable that some useful property in it led to its introduction.—*Hort. Garden* 58. *Voigt.* 255.

BAUHINIA SCANDENS.—*Linn*; *Willde.*

Bauhinia lingua.—*DeCand.*

Myouk-hlæ-ga......BURM.	Naja balli... ...MALEAL.
Rod Bauhinia... ...ENG.	Gunda gilla of Silhet.
Esculapian do....... „	

This trailing, climbing, Bauhinia, has small whitish flowers which turn to a yellowish colour. It grows in the Moluccas, Concans, Assam, is not uncommon about Gowhatti and is a common species at Sylhet where it runs up over trees of the largest size. Dr. Mason mentions that the tree is remarkable for its contorted stem, and it is said by Loudon to have formed the type of the snake rod of Esculapius which he brought with him from India. Its fibrous bark is made into cloth and rope, but the fibres are harsh and stubborn.—*Dr. Mason, p.* 180; *Royle, p.* 296. *Roxb. Vol. II. p.* 326, *and Voigt* 254.

BAUHINIA SANDENS. *Roxb.* in E. I. M. not in Flora Indica. Syn. of Bauhinia Vahlii. See Maljhun.

A native of Ceylon, Malabar, and Coromandel; bears a large sulphur-coloured flower, and the upper petal has usually a deep purple spot on the inside. It is a large shrub never exceeding 12 feet in height. Wood very hard, but too small to be of any great value in commerce. This like the Bauhinia racemosa, has a strong very dark colored wood, hence, the name wild *ebony*. Even the younger branches show the heart-wood very dark brown, the bark of this is also employed as extemporary cordage. The plant furnished to Dr. Wight under the name of Caat Attie was the *bauhinia racemosa*, the native practitioners prescribe the small dried buds and young flowers in certain dysenteric cases; they have little sensible taste or smell, though the leaves of the plant when fresh and bruised, have a strong but not unpleasant odour. Their astringency is probably due to the presence of tannin, and of one species. Rheede tells us in the H.'s M.'s (Part 1. p 64) that a decoction of the root of the bark is given on the Malabar Coast, in cases where the liver is inflamed.—*Ainslie's Mat. Med. p.* 73. *Wight. Voigt.* 252. *Dr. Cleghorn. Mr. Jaffrey. Mr. Mendis. Roxb. Vol. II. p.* 323. *O'Shaughnessy, p.* 317.

BAUHINIA TRIANDRA.—*Roxb.*

This is a tree of Bengal and, when in flower, is one of the most beautiful of the Bauhinias. Its trunk is straight and of considerable size. Its flowers are large and white,—*Roxb. Vol. II. p.* 340. *Voigt.* 254.

This is an immense scandent shrub, with a circumference of stem of 1½ feet and largish white flowers that turn yellow. It grows in the Thull ghats, ravines at Khandalla, Morung mountains, in the Dehra Dhoon and Kamaon, it abounds in the jungles, in the North West Province of India, and near the mountains of Ganjam and Gumsur and yields a fibre which is extensively used in rope making. The leaves which are a foot in length and breadth, have rounded lobes, are used as platters for eating from and for making the "tullari" or small umbrellas worn on the head, also for packing and lining baskets and for house thatch, and bark for ropes; legumes pendulous from twelve to twenty inches long, covered with a brown velvet down. The kernels of the large and broad pods have a sweet astringent flavor, and are eaten like almonds by the natives. When the husks are fresh the natives roast them to get at the kernels, when old, they open of themselves: it is said the kernels possess tonic and aphrodisiac properties.—*Dr. Honigberger, p.* 241. *Riddell. Voigt,* 254. *Captain Macdonald, Fl. Andh., Useful Plants. Riddell. Powell. Cleghorn. Panj. Report.*

An ornamental tree with variegated flowers, the purpurascens being purplish, those of candida, white. It is sparingly found in the Bombay forests, and, there, it never reaches a size for a 10 inch plank. The wood, however, is hard and good. In Ganjam and Gumsur its extreme height is 30 feet, circumference 2 feet, and height from the ground to the intersection of the first branch 8 feet, and is tolerably common and used for firewood. Common in India, Burmah and at Ajmeer. When in blossom the tree is very splendid, and the fragrance delightful. The flower buds are eaten as a vegetable. This tree would be highly ornamental in compounds. Mason says that when in blossom this is a very handsome tree. Its buds are sold fresh in the bazaar at Lahore as a vegetable, which are eaten prepared with animal food.—*Drs. Irvine, Mason, Gibson, Riddell, Cleghorn, Voigt and Captain Macdonald, Gen. Med. Top. Dr. Honigberger, p.* 241 *p.* 191. *Jaffrey. Riddell. M. E. Jur. R.* See Koochnal.

BAVUNG-PUTI. Malay. Garlic.

BAWA. Mar. Cassia fistula.

BAWANG, a river of Sumatra. See Johore.

BAWAR, a section of the Kuli tribe of Rajputanah. The Bawar, Bawari and Baora or Bhaora are possibly parts of some great race, which were dispersed in pre-historic times. See Rajpoots.

BAWARI, a predatory tribe, scattered throughout India. Wilson describes them as robbers by profession and known in different places by different appellations, but call themselves Bawari. He says that they are all hindus, and use a peculiar dialect, which is said to be spoken in some parts of Guzerat. They seem to be the Bhaora of Southern India, who are styled Harn-pardi and Harn Shikari and are the wild hunters of the jungles and forests. See Bhaora.

BAURI. Beng., low caste hindu, a swine herd by avocation.—*Wilson.*

BAWEAN. The island of Bawean, or, following its old name, Lubek, forming a portion of the Residency of Sourabaya, lies about sixteen Dutch (forty-eight English) miles to the north of Ujong Pangka, in 5° 90′ South Latitude and 112° 38′ W. longitude (Greenwich) and contains about 36 square (Dutch) geographical miles or 44 English miles. The country in general is very mountainous, and it is only near the sea that some plains are found, on the largest of which, about 3½ miles in circumference, the principal village Sangkapura is situated. The Bawean race, are probably descendants of the Madurese, whose language with a few modifications prevails, though they differ from them in dress; but in this respect agree closely with the Bugis. The inhabitants of the dessa Dipanga employ the Javanese language.—*Journ. Ind. Arch. Vol. No.* 7. See India. p. 355. Jati.

BAYBERRY-TREE. Eng. Eugenia pimenta.

BAYAUT. Arghun Khan, Kablai Khan's great nephew. His wife was Zibellina, the Khatun Bulugan, a lady of great beauty and ability. She had been married to Abaka, but on his demise, according to the marriage customs of the Mongols, she passed to the Urda of her step-son, Arghun. On her death, Arghun sent Marco Polo for another wife, out of the Mongol tribe of Bayaut, but Arghun died before the lady Kuka-Chin was brought and she passed to Ghazan, the nephew of Arghun, for Arghun had been succeeded by Kai-Khatu, his brother.—*Quart. Rev., July* 1868.

BAYGOONA, Uria? A Ganjam and Gumsur tree leaves used in fever.

BAYLA NAVA MARAM. Tam. Dinduga Tree. Andersonia, sp.

BAYLEY, WILLIAM BUTTERWORTH, a Bengal Civil Servant, died 29th May 1860 in his seventy-ninth year. The East India Company in its best days had few better servants. He rose to the very highest position in the Government of India, for he was for a time Governor-General, and for a quarter of a century he sat in the Great Council of Leadenhall Street, one of the ablest and most respected members of the Court of Directors. In 1840 he was Chairman of the East India Company. When, in 1858, the immediate control of the Government of India was transferred from the Company to the Crown, Mr. Bayley retired into private life.

BAYNDA. Duk. Hibiscus esculentus.

BAYNES, CHARLES ROBERT, was a member of the Madras Civil Service for about 30 years up to 1862. Author of several works connected with the practice of the Courts.

BAY OF BENGAL, lies between the Malay and Indian peninsulas with its head in Lat. 21° N. at the mouths of the Ganges and Brahmaputra. It is liable every few years to be visited by severe cyclones, and advancing storm waves. Of the latter, that of 1832, which swept over the islands of the delta, up to Saugur, was attended with great loss of life; as also was a cyclone in 1859, and another in 1864, with a storm wave which submerged islands and rushed along the coast in the vicinity of Masulipatam. It receives the Ganges by its numerous mouths and the Brahmaputra from the north of India, the rivers Karnphal and Kalandong at Chittagong and Akyab, the Irawadi, Sitang, Gwyne, and Moulmein rivers from Burmah and the waters of the Cauvery, Vallar, Pennar, Palar, Kistna, Godavery and Mahanuddy from the Peninsula of India. See Cyclone, India, 308, 319, Rain, Sunderbans.

BAYPORE, a town in India in Long. 75° 53' E., and Lat. 11° 11, N. See Beypoor.

BAZANIA. See Cinnamomum.

BAZAR. Port. Bezoar.

BAZAR. Pers. Hind. The market place of eastern countries. Those in India are usually held in an open street or open quadrangle and are attended to by men. Those of Burmah are large wooden buildings and the sellers are almost exclusively women, the women of Burmah generally being active commercial agents. In all oriental countries it is the custom for the purchaser to seek out the seller and to make an offer for what he wants. These two customs are opposed to the practice in Europe, and where the purchaser is a stranger and ignorant of the ordinary value of the article he is purchasing, lead him into overpaying and to his regarding orientals as lying impostors.

BAZEEGUR and NUT, jugglers, and tumblers. The nut may be considered as the gipsies of Hindustan; both are wandering tribes, and have each a language understood only by themselves: they live principally by juggling, fortune-telling, by palmistry and other means, and are alike addicted to thieving. The gipsies are governed by their king, the Nut by their nardar bouthah. They appear to be equally indifferent on the subject of religion, and in no respect particular in their food, or the manner by which it is obtained. According to a list furnished by Captain Richardson, the languages adopted by these people would appear to possess a very strong affinity to each other. "The Bazeegur are sub-divided into seven castes viz., the Charee, At'bhyee'a, Bynsa, Purbuttee, Kalkoor, Dorkinee, and Gungwar: but the difference seems only in name, for they live together, and intermarry as one people: they say they are descended from four brothers of the same family. They practise the mahomedan rite of circumcision; they regard Tan-Sin as their tutelar deity; consequently they look up to him for success and safety in all their professional exploits. These consist of playing on various instruments, singing, dancing, tumbling, &c." "The two latter accomplishments are peculiar to the women of this sect. The notions of religion and a future state, among this vagrant race, are principally derived from their songs, which are beautifully simple.—*Cole. Myth. Hind. p.* 313. See Himalaya.

BDELLA. Greek. Leeches. See Hirudo.

BAZIRA. Aornis, was the place fixed on by the Greek dynasties for a military garrison.

There were military colonies of Macedonians established at Alexandria ad Caucasum, Arigæum, and Bazira, and garrisons at Nysa, Ora, Massaga, Peuceleotis and at Aornis, a mountain range, supposed to be the mountain of Mahaban in the Pir-Panjal or Mid Himalayan range. See Cyc. of Ind. Supp. ii. Kafir.

BAZU-BAND. HIND. Armlet.

This fragrant gum resin as met with in commerce is the product of various trees, and Dr. Ainslie, (Vol. I. p. 29) gives an excellent summary of all the information extant when his work was written. But he was not inclined to regard it as a product of any of the trees of India, and pointed to the Darakht-i-mukul of Persia as the plant producing it. That of Africa, is from Balsamodendron Africanum ; the Sicilian B'dellium is obtained from the Daucus hispanicus, D. C., but in all essential properties these are identical with the gugul of the Indian bazaars, a product of the Commiphora Madagascarensis, (Lindley) the Amyris commiphora, (Roxb.) the Balsamodrendron commiphora, (Wight and Arnott), and a native of Sylhet, Assam and Madagascar, which blossoms in the Calcutta Botanic garden about February and March, but seldom ripens its seed. At the Madras Exhibition of 1855, two varieties of the *B'dellium* from the Amyris commiphora, were exhibited—the solid gum, and the balsamic fluid, as obtained from the tree, and specimens of the tree were sent to the Horticultural Gardens of Madras. The Indian Gugul much resembles myrrh, and is said to be largely exported as that drug. Dr. Royle considered the gugul as identical with the B'dellium of commerce and indicates the Greek names of B'dellium, Badleyun & Madelkhon, as the B'δελλιoγ & μαδελχoγ of Dioscorides. The B'dellium of Genesis ii. 12, and Numbers xi. 17 is supposed to be the gum resin of Balsamodendron *Roxburghii*, ARN. (B. pubescens Stocks,? and B. Mukul, HOOKER) B'dellium, in the Bombay tariff valuation, is rated at Rs. 4 per cwt. and is imported from Cutch and the Persian Gulf. It is re-exported to China and to England under the name of myrrh.—*O'Shaughnessy, pp.* 287-8. *M. E. J. R., Royle's Ill. Him. Bot. Faulkner. Com. Dictionary.* See Gums.

B'DOLACH of Scripture. Gen. ii. 12, Numbers xi. 7, supposed to be B'dellium gum resin of Balsamodendron Roxburghii or musk.

Beads are in general use, in all countries, for personal ornament, as necklaces, ear and nose droops, and for ornamental work, and are made of glass, ivory, wood, the inferior and precious gems, as cornelians, onyxes, rubies, emeralds, pearls, seeds, alabaster, magnesite, nacre, coral, gold, steel, and date stones are all used as beads ; rosaries are likewise made of beads. The glass beads manufactured in China are sent wholly to India or the Archipelago ; those for India are shipped to Bombay. Five boxes are estimated to weigh a pecul ; 1345 boxes were shipped in 1836, at $. 18 per box. In the four years 1852-53 to 1855-56 inclusive, the import of beads into the Madras Presidency was to the value of Rs. 1,37,722, and the value of the exports for the same period was Rs. 24,491, glass beads are largely exported from England to Africa, and sometimes to the value of £10,000 to £20,000.

BEAD PLANTS. Several plants in India produce bright coloured seeds, used as beads. Amongst these is the red seed with a black eye, of the Abrus precatorius, Beng. Sweta Koonch : Tamul, Conduminnie, which is also used by the Burmese as a weight. Mr. Mason informs us that the Karen in the southern provinces cultivate one or two species of Job's tears for the seed. The Pwo race plant, a species with round seeds which are used to ornament the borders of their tunics, but they are never seen on a woman's gown. The Sgau tribe on the contrary, cultivate a species bearing an oval seed, and use them merely for embroidering female dresses. In Amherst Province, the Pwo seldom appear in their native costume, and many deny that their tribe ever had any other than that which they now wear, which is Burmese. The Abrus precatorius is a native of the East Indies, but is found in the tropical parts of Africa and America. The seeds are strung together as beads, with shells and other hard seeds, also as rosaries, hence the name precatorius. The common variety are red, with a black spot, whilst other varieties produce various coloured seeds. The leaves and roots secrete the sweet substance which characterizes the liquorice plant, (Glycyrrhiza glabra,) and in the East and West Indies it is called wild liquorice and used for the same purposes. Anislie writing of these says they are strung together into necklaces, bracelets and other ornaments. The white sort resemble pearls. Bruised into a fine powder, goldsmiths use it to join together the more delicate of golden ornaments. The shining scarlet seeds of the Adenanthera pavonina, are used as weights by jewellers, and are made into ornaments, in the form of beads, bracelets, &c. The round, hard, black seeds contained in the hairy pericarp of the Canna Indica, (Krishna Tamara, TEL: Kata-bala: Kul Valei munnie, TAM: Seela rumba, SANS Ukkilbar ke munke, HIND: Sabba jaya HIND:) are made into necklaces and other ornaments. The Utrasum beads, are the very rough seeds of the Elæocarpus lanceolatus, (Utrasum, TAM: Oodraj, DUK) They are brought to India from Java, of which country the tree is a native, are about the size of small nutmegs, and are made into bracelets for European ladies. The Saiva brahmins and pundarums, religious devotees of the saiva sect of hindoos, who live by alms, wear them round their heads and necks and form them into rosaries. The dark colored oval seeds of the Caryota urens, are made into buttons, and used as beads by Mahomedans, (koondel-panei munnie, TAM. Erimpanna, CAN.) The dark colored roundish seeds (Kodda panei, munnie, TAM.) of the Corypha umbraculifera are used as beads by hindoo devotees, the Tader, or Dassari wanloo, who live on alms. The Tolasee Beads, (Tolasee vayr munnie, TAM: Toolsikemunké, DUK) are made from the root of the holy basil, Ocimum sanctum, a plant sacred to Vishnu and held in esteem by all his followers, the Brahmins and Taders of which sect, wear it round their necks and arms. A very handsome bead is made by polishing the betel nut, called by the Tamil people Paak munnie.—*Ainslie's Mat. Med, p.* 142.. See Abrus precotorius; Adenanthera pavonina, Areca catechu; Caryota urens, Corypha umbraculifera. Elæocarpus lanceolatus; Ocimum sanctum; Melia azaderach.

BEAH, a river about six miles from Ferozepoor also runs near Umritsir.

The genus ursus, of the mammalia, a plantigrade animal, of which, four Indian species are known, viz. U. Isabellinus, Horsfield; U. Labiatus of Blainville; U. Malayensis of Raffles and U. Tibetanus of Cuvier. U. Isabellinus is, according to Gray the U. Syriacus of Hemp & Ehrenberg and that known to Himalayan sportsmen as the Brown, Red, Yellow, White, Grey, Silver or Snow bear or Tibetan snow bear and is the Harput of Kashmir, for it inhabits Tibet and the snowy regions of the Himalaya, and High Central Asia generally.

Ursus labiatus of Blainville is found all over India, Ceylon and Assam and is the Ballu or Reech. It has received several scientific synonims, attaching it to the genera Bradypus and Melurus, and its names in English, five fingered sloth, sloth Bear and Ursine sloth, have corresponded. It is readily domesticated. When wild it lives on roots and honey. Ursus Malayanus, occurs in Arakan, Malay Peninsula, Sumatra, Java, Borneo, and in Indo-Chinese countries generally.

U. Tibetanus, the black Bear of Himalayan sportsmen, inhabits the forest region of the Himalaya, and is very rare in Tibet, though met with in its eastern forests. It seems identical with U. Isabellinus, Bligh, Cat. See Mammalia. Prochilus; Ursus.

BEAR, the Great Bear in astronomy is the Dab-i-Akbar of Persian astronomers also called dum-i-gurg, or wolfs' tail.

Beard	ENG.	Barba	LAT.

Darhi	HIND.	Gadamu	TEL.
Barbe	FR.		

The beard is worn by most mahomedans, and by several of the christians of the east. The beard is never worn by a hindoo nor by a Burman. Most mahomedans of the Shafei school, however, clip their mustachios exceedingly short; some clean shave the upperlip, the imperial, and the parts of the beard about the corners of the mouth and the forepart of the cheeks. In anointing the body, the beard is also attended to, and in the utterance of any holy name or prayer, mahomedans rub their hand down over their face and mouth and beard as it were catching the sacred sound and fil[illegible] the beard with it.—*Galton's Vocation Tourists,* . 351. *Burton's Pilgrimage to Mecca, Vol. II.* p. 333.

BEARER, Anglo-Indian; a palanquin carrier; also a house servant.

BEAROOT, is trained for hunting by the Kirghis.—*The Upper and Lower Amoor, p.* 145.

BEARMEE, a river near Gysabad and Dumoh.

BEARS PAWS are regarded by the Chinese as a delicate dish.—*William's Middle Kingdom, p.* 249.

BE-AR-WOOD, a tree of Meera Forest, near Abbottabad, Hazara. Natural order, Coniferæ; Pinus longifolia: Properly Bi-ar wood.—*Cal. Cat. Ex.* 1862.

BEAS, a river of the Panjab, which with the Jelam, Chenab, Ravi and Sutlej, form the Panjnad, that joins the Indus near the southern extremity of the province. This river is well known from the writings of Moorcroft (Travels, I. 190), Gerard, and A. Cunningham; (Jour. As. Soc., Ben. X. I.) For seventy-five miles it flows southwards, through the British province of Kullu, then bends towards Mandi, and debouches from the hills at Mirthal, after a winding westerly course of one hundred and twenty-five miles. It is tributary to Sutlej rises on the S. verge of Rotang Pass, Lat. 32° 24' Long. 77° 11' 13,200 feet above the sea. It runs south 80 miles West 50 miles; then takes a wide sweep to N. W. for 80 miles; and S. 80 miles; to Sutlej, at Endrasa, length, 290 miles. Its tributaries and affluents are the Parbati; Sainj, 38; Gomati, 55 miles; Ul; Gaj. About 10,000 square miles are drained by it. It is also called Beah, is the Hyphasis of Arrian, and the Bibasis of Ptolemy. It rises in Lahoul, in the Himalayas and the name is said to be derived from the Sanscrit word Vyasa, the name of a Rishi, or sage, celebrated in the classical literature of India. The local name, Vipasa or Beypasha is supposed to have originated the Bibasis of Ptolemy, the Hypasis of Pliny and the Hyphasis of Arrian. It is still, as of old, crossed by means of a cot placed over the water bags called mashaks, the Greek name being a corruption of the Sanskrit Vipasa. It is however also said to take its name from a sacred pool at its source, called "Vyas Rishi," situated in the Rotang pass, at the head of the Kullu valley, the elevation of which is 13,000 feet above the level of the sea. The scenery of the Beas valley is particularly beautiful, and differs from that of the Sutlej and Chenab. Nine notable tributaries join the Beas in Kullu, amongst these is the Sarahi, unfordable and spanned by a wooden bridge, three miles from Burwa. In the valley of the upper Beas, above Sultanpur, there is abundance of kail (the dhar-chil of Chamba), elm, maple, oak, (two species,) and walnut. On the Parbati, not far from the sacred hot spring of Mani Karan, there is a considerable supply of box (buxus sempervirens) "Shamshad" of the cupresses torulosa (twisted cypress,) and of the olive (Kahu). A large forest of chil, pinus longifolia, is found below Karsole on the Parbati. In the higher slopes, there are dense forests of the less valuable pines and of the alpine oak, quercus semicarpifolia. There are gold washing in its sands.

The whole length of the Beas is 350 miles from its source to its junction with the Sutlej. From Manôli forest to Larji the fall appears to be nearly sixty feet per mile. From Larji to Mandi, a distance of twenty-five miles, the fall is 1,000 feet, or forty feet per mile. From Mirthal, a distance of 150 miles, the fall is only 1,600 feet, or 10·06 feet per mile. The Beas river between Amratsar and Jalandar in the Punjab, is about 898 feet above the sea at about L. 31° 29′ N. L. 75° 6′ *Arrian*; *History of the Punjab, p.* 15. *Hook. et. Thomp. Mrs. Hervey's Adventures of a Lady in Tartary. Vol. I. p.* 85. *Cunningham. Cleghorn's Punjab Report, p.* 84. See Kot Kangra.

Black wood	Eng.	Rose wood	Eng.
Bombay " "	"	Carroo Maram	Tam.

The tree producing this ornamental wood is common in the Wynaad on open and grass lands, where the tree attains a great size and it grows in Malabar and Travancore to a large size; some trees five feet in diameter, and fifty feet long, have been brought from Travancore, but the wood is generally not more than twenty or twenty-five feet long, and from twenty inches to two feet in diameter. It might be procured in great quantities in Travancore and the Cochin forests. Much of this wood is used in England, and called rosewood. Its general uses in India are for house furniture: great quantities are exported to Bombay, Madras, and Calcutta, for that purpose.—*McIvor M. E. Edye M. and C. M. C. Journal.* See Dalbergia.

BEATSON, Lieutenant General, this officer entered the Indian Army in 1820. He became Lieutenant General in the Turkish Army; and also held the local rank of Major-General in the British Army. He was 6 times mentioned in orders and despatches for actions in which he commanded. He served with Sir DeLacy Evans in Spain, was wounded, received the Cross of San Fernando; gold medal for the Danube campaign, and Crimean medal with clasps for Balaklava, Inkerman, and Sebastopol. He was mentioned by General Sir James Scarlett, on whose staff he was serving at Balaklava and Inkerman. Favourably mentioned in orders or letters by the following

Governors-General and Commander-in-Chief in India:—Lord Ellenborough, Lord Dalhousie, Lord Hardinge, Lord Auckland, Lord Gough, Sir Charles Napier, and Sir William Gomm. In Spain, by Sir deLacy Evans and Sir Duncan M'Dougall; in Turkey and the Crimea, by Lord Raglan and Sir James Scarlett."

BEAUMONTIA GRANDIFLORA.—*Wall.*

Echites grandiflora.—*Roxb.*

A gigantic climbing shrub, one of the *Apocynaceæ* growing in Chittagong, the Khassya Hills and Nepal, flowers in February, and is very showy; found by Dr. Hooker in the Terai, east of Siligoree, in full bloom, ascending the loftiest trees, and clothing their trunks with its splendid foliage and festoons of enormous funnel-shaped white flowers. B. Jerdoniana, R. Wight, of the Coorg jungles, attains similar heights.—*R. Brown. Hooker Him. Jour., Vol. I. p.* 401.

BEAVER, neither the large nor the little beaver occur in India, but the tails of the latter, the Ondatra Americana of Tiedmann, the Castor Zibethicus of Linnæus, Fiber Zithicus of Cuvier Ondatra of Lacepede, the Musk-rat of Canada, and Musquash of the cree Indians, form a considerable article of import into India, being regarded by some races aphrodisaic.

BABBEH, the chief family of the kurd clan of Kermanj; the members of which are the hereditary chiefs of the clan; and hence their whole territory and the people are now called the government of the Bebbeh or Baban. The clan was originally established at Pizhder in the northern mountains near Sikeneh on the frontier of Persia.—*Rich's Residence in Kurdistan, Vol. I. p.* 80.

BE-BAQ. HIND., an acquittance in full.

BEHOOR, a village between Fort Saint David and Pondicherry, at which Major Lawrance, in August 1752, entirely routed the French Army.

BEBA GHAUT, in Long. 92° 3' E. and Lat. 26° 22' N.

BEC-FIN. FR. Syn. for the Warbler birds.

BECHE DE MER. PORT. Holothuria, Tripang, the esculent Holothuria or sea cucumber of the seas of the Archipelago. It sells at Singapore at 18 to 70 dollars per pical. See Holothuria, Japan, Tripang. India 352. Biche de mar.

BECHETI. HIND., an Indian variety of the Camelus dromedarius.

BECHIACORI, A wood of Nepaul, called Sulla and Surrendhool, or Dhoobkee on account of its resinous quality. Its branches are used in Nepaul as torches: the fragrant turpentine which it yields is employed in sacrifices, and in medicated salves, and its wood is converted into rafts for houses.—*Smith's* 5 *Years, p.* 67.

BECHNE-WALA JOGI, a sect of the Jogi mendicants. See Jogi.

BECHUNDI. HIND. or Beh-chandee. In Raepore, this substance, if pulverized, resembles arrowroot, and is made use of by natives on fast days, prepared in various ways. It is obtained from the glutinous matter which issues from the stems of a jungle plant, after being soaked in running water for some days. The Gond race prepare the Behchandee. It can be had in any quantity in the Jubbulpore bazaar, but most of it comes from Mundla and Seonee. The specimens seen appear to consist of the dried sections of a farinaceous root containing bassorin, and allied in composition to salep.

Palang	„	Kattal	„
Charpai	„	Mancham	TEL.

John v. 8 and 9. "And the man took up the bed and walked." The bed of an oriental is seldom anything besides a carpet or mat, or a cloth as thick as a bed quilt. Men carrying such beds may be seen daily on the highways. The hindus of the South of India usually sleep on the floors of their houses, but all of them have night dresses in which to sleep, that of the women being generally a loin cloth called "Padawi," Tamil; Koka, Tel.; made of cotton or of the fibres of one of the hemp plants, though many lie down in their day dress, as in Exodus xxii. 27. Mahomedans in India all use cots to sleep on, when able to afford them, and every mahomedan bride takes a cot or char-pai to her husband's house, as part of her Jahez or furnishings. In Burmah, the poorest person sleeps on a cot with mosquito curtains. —*Ward, Hindoos.*

BED. HIND. PERS., the willow: Arak-i-bed-i mushk," willow-flower distilled water.

BED. SANS. Calamus rotang;—the cane.

BEDA, a Mysore tribe, said by General Briggs to have formed the body guard of the ruler of that country. This is probably a name for the Beder, Bedera or Vedera, a non-Arian race, who occupy several parts of India, the hill top of Ramandrug and at Zorapore where the Bheema joins the Kistnah: the plural is Baidera whence the English Pindara. This non-arian race have small sovereignties at Beder Zorapoor in the Doab of the Kistna and Bhimah. Wilson describes the Mysore Beda as a race who are considered outcasts, and live by the chase as hunters, fowlers, and are considered in Mysore as coming originally from Telingana. Many of the Baidera are grain carriers. See India, p. 327.

BEDA, in Ceylon, a race of wild men, called also Weda, they speak the Singhalese language, wear their hair long, collect it together, and tie it on the crown of the head in a bunch. Their complexions are dark, comparative to the other Singalese.—*Pennant's Hindoostan, Vol. I. p.* 192. See Veddah.

BEDALI, or Bedalika, Griffithia fragrans, *W. and A.* Posoqueria fragrans.—*R. i.* 717.

BEDANA, Hind. Be without, dana, seed, a seedless grape; also a sort of mulberry, and a kind of sweetmeat made with quince seeds.

BEDEN, Capra Nubiana. See Capreæ.

BEDDOME, Major, a Madras Military Officer, wrote on the Snakes, the Ferns and timbers of the Madras Presidency.

BEDEE. A taluk in the Belgaum collectorate with forests; but Dr. Gibson says that neither teak, seesoo, nor honee *(Peterocarpus marsupium)*, the three most valuable woods in the forest, had been spared.—*Report*, 1849 *to* 1856, p. 8.

BEDEE, a town in India in Long. 78° 32' E. and Lat. 20° 44' N.

BEDENORE, OR NUGGORE, a town in India in Long. 75° 5' E. and Lat. 13° 50' N.

BEDER, in L. 17° 53' 6 N. L. 77° 36' E., A town in the Dekhan, near the right bank of the Manjera, 75 miles North West of Hyderabad. The top of the minaret is 2,350 feet and the base is 2,250 feet above the sea. This was the capital of the Bahmani mahomedan dynasty, which ruled up to the middle of the 16th century, this dynasty joined the quadruple confederation formed by the Nizam Shahi kings of Ahmednuggur, the Adal Shahi kings of Bejapore and the king of Gulburgah, formed to overthrow the Hindu sovereignty of Bijanuggur or Vizianagr, near Bellary, when the sovereign Rama Rajah was taken prisoner. Beder is surrounded by a great curtain, now much dilapidated, and on one of its bastions is an old gun 21 feet long. Many great cupola tombs are on the plain to the S. W. The inhabitants when we saw them in 1866, 1867 and 1868 were few and poor, Beder, Bejapore, Berar, Golcondah and Ahmednuggur, in the 16th century were five independent mahomedan kingdoms. At the time of Baber's invasion Beder was absorbed by its more powerful neighbours. In 1572 Berar was absorbed by the Nizam Shahi dynasty.

BEDER WARE. This tutenague work has been described by Drs. Heyne, Buchanan, Hamilton, Smith and Captain Newbold. It is a metallurgical compound of considerable interest, and the articles are always greatly admired for the elegance of their form, as well as for the gracefulness of the patterns with which their surface is covered. Though the groundwork of this composition appears of a blackish colour, its natural colour is that of pewter or of zinc. Dr. Heyne informs us that it is composed of copper sixteen ounces, lead four ounces, tin two ounces. These are melted together, and to every three ounces of the alloy sixteen ounces of spelter, that is of zinc, is added, when the alloy is melted for use. But to give the whole the black colour which is esteemed, probably from bringing out the pattern, it is dipped into a solution of sal-ammoniac, saltpetre, common salt, and blue vitriol. Dr. B. Hamilton saw of zinc 13,360 grains, copper 460 grains and lead 414 grains, melted together, and a mixture of resin and bees-wax introduced into the crucible to prevent calcination. It was then poured into a mould made of baked clay, and the article handed over to be turned in a lathe. Artists then inlay flowers or other ornaments of silver or of gold. They first smear it over with sulphate of copper and water, which gives the surface a blackish colour, and enables the artist more easily to distinguish the figure which he draws—this he does with a sharp-pointed instrument of steel, and cuts it with small chisels of various shapes and then with a hammer and punch, fills the cavaties with small plates of silver, which adhere firmly to the Bedery. It is then polished and stained as described above. The various articles made from it are vases, wash-hand basins, and ewers, hookah-bottoms, spittoons, cups and dishes, small boxes and weights. These are inlaid commonly with silver, but sometimes with gold. The patterns are usually as much to be admired as the forms of the vessels. Though usually called Bedery, sometimes Vidry, it is also manufactured at other places. According to Captain Newbold, " The mould of the vessel is first prepared, in the usual manner, of clay turned into shape on a wheel: over the smooth surface of the mould a coat of wax and *rall* (rosin) in equal proportions, with a little oil is laid, of the thickness of the sides of the vessel required: over the wax another thick coat of clay is applied. Gradual heat is next resorted to, to harden the clay part of the mould; but principally to melt out the wax, which of course leaves a vacuum on the space it occupied. Into this space the molten alloy is poured, cooled, the mould broken and the vessel in rough taken out, polished and set aside, to receive a black colour preparatory to inlay, from a smearing of *Mor tuta* (Blue vitriol). The alloy itself is of a pewter white colour and is [illegible] the following proportion tending his flock, [illegible] to 1 Chittak or 6 shahi of a journey, or [illegible] (Copper). The patterer at the fire, the [illegible] to be inlaid either; into some ditty, the theme drawn lightly with a steel point on the blackened surface of the vessel, and then cut out to the depth of the inlay required with a tiny delicately pointed chisel, worked by a small hammer. A thin bit of paper is pressed into the excavated pattern to receive the impression—taken out and placed upon a thin plate of silver (the inlay) which is itself laid out evenly on a bed of mixed wax and rall (rosin), and cut into the exact shape of the impression. The cut-out bit of silver is then pressed into its corresponding cavity engraved on the side of the vessel, and firmly inserted by means of a steel point. This done over all parts of the vessel, it is again polished preparatory to receiving its finishing coat of black. This is done by subjecting the vessel to a gentle heat and smearing it with a mixture composed of: 1 Tola (B'hur) Shorah ki Mutti (Saltpetre) 3 Mashas—Nousagur (Sal Ammoniac) ground up into the consistence of cream with brackish water. After allowing this mixture to lie upon the vessel for a few hours, it is washed off with a little brackish water. The inlaid silver devices are little altered in colour, but the intervening portions of alloy remain of a permanent dead black. He witnessed the whole process of inlaying and could not help admiring the precision, lightness of touch, and celerity with which it was performed by a Lingayet, which caste and a Jaina are the only persons skilled in the art. It seems divided however into three branches. The mould maker, smelter and inlayer. Bedery does not rust, yields little to the hammer, and breaks only when violently beaten. According to Dr. Hamilton it is not near so fusible as zinc or tin, but melts more easily than copper. The most recent observer, however, is Dr. George Smith, who thus records the results of his examination of the process :—"Suppose a vessel to be made, resembling in form the common small hookah

account of its resinous quabd either by the hand
are used in Nepaul as torpe attached to a small
turpentine which it yields is ith the other hand the
fices, and in medicated salves, chisel, with which
the model. The

model thus carefully prepared, is next covered with a mixture of wax and oil boiled together. When dry, the whole mass is again turned, the pattern is etched by hand, a small pointed graver being used. This etching is done rapidly. The workman next takes a small chisel and hammer, and following the lines of the pattern, cuts it deeply and expeditiously, scooping out the tracing of the little leaves, &c., and leaving an indented but rough surface. This rough surface is next smoothed down by hammering gently with another blunt pointed chisel, and the space is then ready for the process of inlaying. Thin plates of very pure silver are taken, and the little leaves are cut out with a small hammer and chisel—each little leaf is then raised separately by the chisel and finger tip, and hammered gently but carefully into the depression intended for it, trimmed, carefully thinned and smoothed. Over this coating is plastered a second layer of laterite dust moistened with water, but without cow dung—this coat is rough, and is not subsequently smoothed down. The next stage consists in boring two openings in the composite mould, and in placing it in the fire—the effect of this being to melt in the intermediate layer of wax, and thus to leave a vacant space for the reception of the alloy. Into this space is poured the alloy (consisting of copper 1 part and pewter 4). The vessel has now a dull leaden look; it is hard, but easily cut. This model or shell is carefully turned and smoothed. This part of the process is tedious. In the more durable kinds of Bedery ware silver wire is substituted for the silver leaf. The vase in this state was rough & requires smoothing—this is done with a common file and with a curved scraper of a rude and clumsy form. The hole in the bottom of the vessel is filled up with lead and is smoothed down—finally the ase is gently heated, and whilst warm, it is blackened by the application of a powder supposed to consist of chalky earth and muriate of ammonia—this imparts a brilliant black polish to the shell, and careful hand rubbing brings out the lustre of the silver. The value of the ware depends upon the thickness of the silver inlaying—the common ware of the bazars rarely lasts long. Inlaying is also executed in the same way with copper leaf, but the artistic effect, I think, is inferior to the silver. The price of a small hookah bottom like that described, varies in Beder, from 7 to 10 Rupees. In 1866, there were remaining only five families, engaged in this manufacture, and they seemed poor. At Bhowngir about 12 miles E. from Hyderabad, the Hindu potters m facture a dark coloured earthenw which they fix copper and tin leaf in pe fect imitation of the tutenague work of Beder. —Royle, Arts.

BEDISA TIVVA, TEL. Vitis latifolia.—*R. i.* 661.

BEDNOR, also called Nagar a town, 4000 feet above the sea in the Nagar District of North Coorg on a spur to the westward of the chain. The rains are said to last 9 months? *Hook et Thomp.* See Bedenore.

BEDNORE at the foot of the Aravalli Hills, within the bounds of Meywar. One of its ancient chieftains was Rao Soortan, of the Solanki tribe. He was a lineal descendent of the famed Balhara kings of Anhulwara, who were expelled from Anhulwara in the 13th Century and migrated to Central India, where they obtained possession of Tonk-Thoda and its lands on the Bunas river: but Lilla, the Afghan deprived Soortan of Thoda, and restricted him to Bednore. His daughter is distinguished in Indian Annals.—*Tod's Rajasthan, Vol. I. p.* 673.

BEDOUIN, ARAB. is the plural form of Badawi, an "ism el nisbah," or adjective, derived from Badu, a desert." The word "Badawi" is not insulting, like "Turk" applied to an Usmanli, or "Fellah" to the Egyptian. But by mistaking the clan of the wild man for a lower one, "Ya Hitaymi," for instance, addressed to a Harb bedouin, makes him finger his dagger.

Mahomed and his followers conquered only the more civilised bedouins; and there is even to this day little or no religion amongst the wild people, except amongst those on the coast or in the vicinity of cities. The faith of the bedouin comes from El Islam, whose hold is weak. But his customs and institutions, the growth of his climate, his nature, and his wants, are still those of his ancestors, cherished ere Meccah had sent forth a prophet, and likely to survive the day when every vestige of the Kaabah shall have disappeared. Of this nature are the Hejazi's pagan oaths, their heathenish names (few being Moslem except Mohammed), their ordeal of licking red-hot iron, their Salkh, or scarification, proof of manliness, their blood revenge, their eating carrion (*i. e.*, the body of an animal killed without the usual formula), and their lending wives to strangers.—(*Burton's Pilgrimage to Meccah, Vol. iii. p.* 79.) Burton regards all these as remnants of some old creed.

The bedouin tribes do not dwell in towns, but in tents or under the temporary shelter of trees. The Kiab tribe of Susistan in Persia rarely encamp, but in Susistan near the principality of Havisa were five different considerable tribes of independent bedouins.

The bedouins who occupy the great western desert of Oman have neither houses nor tents, but live under the shade of trees. The genuine Arabs disdain husbandry, as an employment by which they would be degraded. They maintain no domestic animals but sheep and camels, except perhaps horses. Their sheikh government, in its constitution and operative effects, is a political phenomenon in the history of nations. Burton tells us that Sherifs and other great men sometimes bind a white turban or a Cashmere shawl round the kerchief, to keep it in its place. The Aakal varies in every part of the country. Here it is a twist of dyed wool, there a bit of common rope, three or four feet long. Some of the Arab tribes use a circlet of wood, composed of little round pieces, the size of a shilling, joined side by side, and inlaid with mother-of-pearl. The Eastern Arabs wear a large circle of brown wool, almost a turban in itself. In Barbary, they twist bright-coloured cloth round a rope, and adorn it with thick golden thread. As a rule, the Sheikh and their subjects are born to the life of shepherds or soldiers. The greater tribes rear many camels, which they either sell to their neighbours, or employ them in the carriage of goods or in military expeditions. The petty tribes keep flocks of sheep.

The tribes are very numerous; they are spread from near Damascus over all Arabia, eastwards to the great rivers, and to the shores of the Persian Gulf. The bedouin horse seldom exceeds 14 hands. The bedouin does not ride gracefully, but he rides securely; the bedouin Arab traces by the footstep, the "Athr" similarly to the Pug of Guzerat and the North American Indian. Many of the bedouin tribes kiss on meeting. They are advancing in knowledge of the arts of life, but are still very ignorant.

But the bedouins, who live in tents, and in separate tribes, still retain the customs and manners of their earliest ancestors. They are the genuine Arabs, and exhibit, in the aggregate, all those characteristics which are distributed respectively among the other branches of their nation.

The Bedouin still retains that passionate love of song for which his race has ever been distinguished. Whether tending his flock, beguiling the tediousness of a journey, or seated after his evening cheer at the fire, the Arab constantly breaks out into some ditty, the theme of which is either love or war. Seated cross-legged under the scanty shade of the date. palm, one of them will thus amuse himself for hours. The only accompaniment is a rude guitar with two strings. Combinations the most harsh and rugged form the most striking feature of their music, as often, when their movements are grave and slow, as when they are brisk and lively. In the former they often exhibit much grave and melancholy thought, in the latter they not unfrequently spring up simultaneously, and join, to the full extent of their voices, in a rude chorus. The manners of tribes differ. Benoo Kahtan, a bedouin tribe of small stature and slender, almost like Indians, are gentle and speak with a low tone of voice. Their language is to the Arabic of the Koran what the Greek of Homer is to that of Isocrates or Xenophon. The northern Bedouin, the Meteyer, Ajman and Oteybah, are more warlike, affect a boisterous roughness or swagger. Bedouins are mere creatures of the hour taking no care and without national or religious principle. The Bedouin women are not treasured up like the wives and daughters of other orientals, and indeed they seemed almost entirely free from the restraints imposed by jealously; the feint says Palgrave which they made of concealing their faces from me was always slight; they never, I think, wore the yashmak properly fixed; when they first saw me, they used to hold up a part of their drapery with one hand across their faces, but they seldom persevered very steadily in subjecting me to this privation.—(*Palgrave, Eothen's Travels in the East, pp.* 247-8.)

The Arab women have a fullness of figure not, however, approaching to corpulency. Their complexion is not darker than that of the Spanish brunette, and we may infer that this is their natùral colour, since, excepting in the morning and evening, those who reside in the oases rarely leave their date groves, and in the tôwns they preserve their complexions with the same care. On the other hand, the Bedouin women, who are constantly exposed to the rays of the sun, are very swarthy; and the same is observed of the men, although the children are equally fair at their birth. The mohammedan ladies in Oman enjoy more liberty, and at the same time are more respected, than in any other eastern country. During civil commotions, they often take a part in public affairs, and in some instances have displayed the utmost heroism. Many tribes exact black mail from the villagers. It is the "khone" (brotherhood), the tribute claimed from time immemorial by the bedouins, in return for their protection, or rather forbearance, in not touching the harvest, or driving off the cattle. Each village pays "khone" to one Sheikh in every tribe, who then acknowledges it as his ukhta or "sister," and is bound to protect the inhabitants against all the members of his own tribe.—*Wellsted's Travels, Vol. I. p.* 353. *Robinson's Travels, Vol. II. p.* 142. *Burton's City of the Saints. BEDOWREEA. See Bedaurea.

BEDNORE, a town to the North West of Seringapatam.

BED-PAI, a brahmin who wrote a book of fables, for the benefit of Dabishlim, his king: they were translated into Pehlevi in the time of Nousherwan in the 6th century; from that into Arabic by Abdullah bin Makaffa, about the middle of the 8th century, then about the close of the 9th century, into Persian, by Rudaki, who received 80,000 dirhems for his labours. About the middle of the 12th century (A. D. 1150) in the time of Bahram Shah, a Persian prose translation was made and a subsequent second translation was made by Kashifi, and named the Anwar-i-Sohili, the original fables are in the Hetopadesa and the Panchatantra. A Greek version was made by Simeon Seth, at the command of Alexis Comnenes, and they appeared in Hebrew and Aramaic, Italian, Spanish, and German. The first English edition was in the 16th century, then in French in 1644, 1709, and they are the foundation of Esop's fables.

BEDROUR, a small tract on the Eastern confines of Canara.

BEDUBARYA, Long. 90° 4' E. and Lat. 22° 32' N.

BED-US-SAR. ARAB. Calotropis procera.

BEDVEERN, also PLUIMEN. DUT. Feathers.

BEE. ENG.

Deburah	HEB.	Tena	TEL.
Shahd-ki-mekhi	HIND.	Tenu	TAM.

Bees have long been domesticated. The hive bees vary greatly in colour and size, but except the Ligurian bee the species are identical. The Egyptian bees are geographical varieties.

The traveller Moorcroft remarks that an interesting subject in the rural economy of Kashmir is the management of Bees. Every farmer in the district of Lar, and he had since found the practice general throughout the whole country, in the eastern part of Kashmir, has several hives in his house, and in some houses he had counted as many as ten. A provision for hives is made in building the house, by leaving appropriate cavities in the walls. These somewhat differ in size, but agree in their general form, each being cylindrical, and extending quite through the wall. This tube is lined by a plastering of clay-mortar about an inch in thickness, and the mortar is worked up with the chaff or husk of rice, or with the down of thistles, which latter is employed also for clay-mortar in general. The dimensions of hive are, on an average, about fourteen inches in diameter, and, when closed at both ends, about twenty or twenty-two inches in length. That end of the cylinder nearest to the apartment is closed by a round platter of red pottery ware, a little convex in the middle, but the edges are made flush with the wall by a luting of clay-mortar and the other extremity is shut by a similar dish, having a circular hole, about a third of an inch in diameter, in its centre. There is not any particular rule for the height of hives from the ground. So little difference exists betwixt the practices ordinarily pursued in Kashmir and in Europe, in respect to hiving new swarms, as not to call for notice ; but that adopted in the former country, for preserving the old swarm when the honey is taken, well deserves imitation by the bee-farmer in the latter country. The process by which this is, as I witnessed it, effected, is the following : "Having in readiness a wisp of dry rice-straw, and a small quantity of burning charcoal in an earthen dish, the master of the house, with a few strokes of the point of a short sickle, disengages the inner platter of the tube, bringing into view the combs suspended from the roof of the hive, and almost wholly covered with bees, none of which, however, offer to resent the aggression, or to enter the room. Having placed the straw upon the charcoal, and holding the dish close to the mouth of the hive he blew the smoke strongly against the combs, but removed the straw the instant it took fire, to prevent it burning the bees, and quenched the flame before he employed it again.

Almost stifled by the smoke, the bees hurried through the outer door with such rapidity that the hive was cleared of its inhabitants within a few minutes, when the farmer introducing the sickle, cut down the combs nearest to him, which were received into a dish previously slidden underneath them, and left undisturbed about one-third of the combs, which were almost close to the outer door. He then replaced the inner plater, and brushing off hastily a few bees which clung to the combs, though apparently in a state of stupefaction, threw them out of the house. Observing many other bees lying motionless on the floor of the hive, I inquired whether they were dead, or only stupified, and was answered, that they would recover. Not above one-hundredth part of the community is destroyed : by this method the produce is less than the ordinary yield of a good swarm in England. The honey was light-colored, and of a taste as pure and as sweet as that of Narbonne. I could not learn that the farmers had any suspicion of their honey ever being intoxicating or poisonous, as has been noticed to be the case occasionally with that made by the Bhoura of Garwahl. The Bhoura is compelled to take a more extensive range, and in the scarcity of food, during the short summer, to be less select in regard to its quality. The peasantry of Kashmir are unacquainted with the employment of honey as the basis of a fermented liquor, but eat it raw, or mixed with various articles of common food, whilst the most wealthy substitute it for sugar in preserving fruits. It is customary to take the hive every year, and the end of September, or beginning of October, is found the best season for this operation, a little time still remaining for the bees to add to the portion left for their support during five months.

In consequence of the bees being thus literally domiciliated, they acquire a mildness of conduct far more decided than those of Europe. The bee of Kashmir is a little smaller than that of Europe, though a little larger than the domesticated bee of Kamaon and of Garwahl. Honey sells at about threepence British a pound, but wax is considerably dearer."

In Ceylon bees are all wild. They collect largely from the Nelho. Their nests hang from the boughs of the trees, and a man ascends with a lighted torch of green leaves, which creates a dense smoke. He approaches the nest, and smokes off the swarm from the comb, a beautiful circular mass of honey and wax, generally about eighteen inches in diameter and six inches thick. The bee-hunter being provided with vessels formed from the rind of the gourd, attached to ropes, now cuts up the comb and fills his chatties, lowering them down to his companions below. When the flowers of the Nelho fade, the bees leave the district.

A bee, not of the large wax-producing species, but of a smaller kind called "hei-ying-koee" or "fly-bee," is found in the valley of Munnipore. The honey is excellent. Another species, very large, forms its nest in the ground, and is dangerous to the unwary traveller. Instances have occurred of individuals having fallen into these nests, and having been stung to death. The Munnipori when they come upon a bee of this species catch it and having attached a thread to his body let it loose. By means of the thread its flight is observed, and it can be followed to the nest. The spot is marked, and fire having been procured, the bees otherwise so formidable, are easily destroyed, and the comb filled with the young, obtained. Another larger, bee of Munnipore forms its nest dependent from the branch of a tree, or under the shelter of a wall, the nest being of a most beautiful substance resembling marbled paper.

The bee of the Indian Archipelago, suspends its nest from a branch of a tree, in which position, they may be seen forming masses of considerable bulk. Certain trees become favourites and are selected by the bees year after year for many generations although often disturbed by the taking of their nests. In Borneo these trees become private property among the eastern tribes and are handed down from father to son. Bees-wax is sold at £5-10 to £ 7-10 per 133-1-3 lbs.

The Chinese keep off bees by a few dry stems and leaves of a species of Artemisia which grows wild on the hills, and which is largely used, also, to drive the mosquito out of the dwellings of the people. This plant is cut early in summer, sun-dried, then twisted into bands and it is ready for use. At the commencement of the operation one end of the substance is ignited and kept burning slowly as the work goes on. The bees hover about, but apparently quite incapable of doing the slightest injury. When the hives are properly re-fixed in their places the charm is put out.—*Fortune's Residence. Moorcroft's Travels. McCulloch. Records of the Government of India. F. D., pp.* 32-3. *Baker's Rifle, pp* 304-5. *Indian Field.*

BEE, CARPENTER, a name given to a hymenopterous insect, the Xylocopa tenuiscapa of Westwood (X. latipes, Drury), which perforates large beams of timber as also trees, by boring holes through them. On one occasion, at Kurnool in the Ceded Districts, one of them was seen to kill a sparrow by a single thrust of its sting. Any intruder within the precincts of their nests instantly becomes an object of suspicion and attack, and as the unlucky sparrow was flying towards the corner of the hospital, the bee assailed it, struck it with its sting and the bird fell dead. On raising the skin from the bone, a small reddened spot on the fore part of the skull, indicated the point at which the sting had entered.

BEECH OIL. Oil of Fagus sylvatica.

BEE-EW. Burm. A timber of Tenasserim not identical with *Thee Bew Tha.* Its maximum girth is 3 cubits, and maximum length 22 feet. Trees very abundant near the sea or the river's edge, all over the Tenasserim provinces. When seasoned, sinks in water. It is a very hard, strong wood; used in rice mills where great strength and durability are indispensably required: recommended for handles of tools.—*Captain Dance.*

BEEF, the flesh of the bull, bullock or cow, in use amongst mohamedans and christians in India but prohibited to all hindoos. The flesh of cattle that have died is largely used by the Burmese and by all the Chakili races of India. In Europe "jerked" beef from America, gradually coming into use and the lean part especially, it is stated, is not inferior to fair English-fed beef, fresh from the shambles. The "jerked" beef is probably far superior to such as would be obtained from animals killed in India.—*Times of India, June* 8.

BEEF, POTTED, has often been found adulterated with Bole Armenian, to heighten the colour.—*Hassall.*

BEEF-WOOD. Casuarina muricata. A hard, close-grained, reddish wood, variegated with dark and whitish streaks. It is chiefly used in England in forming borders to work in which the larger woods are employed. It is procured from new South Wales. Beef-wood is imported into the United States in considerable quantities, for various purposes where a hard heavy wood is required, and the Casuarina muricata on the Tenasserim Coast can furnish almost any quantity of this timber, which there is very little used. Roxburgh says it resembles toon in appearance. The Burmese call it by the same name as the pine. —*Faulkner. Mason.* See Dyes.

BEEGAH, A land measure in use in India, but varying in length. In northern India, it is 3025 square yards or $\frac{5}{8}$ths of an acre. In Bengal, 1000 square yards or little more than $\frac{1}{3}$rd of an acre. There is a kuch-ha and a puckha begah, the former $\frac{1}{3}$rd or $\frac{1}{4}$th of the latter, the following are some of the local begahs, in every 100 acres.

	Bheeghas B, C.
Furruckhabad	175·12·0
Grouckpur, East	192·19·7
„ W. and N.	smaller
Allahabad and Azimgurh	177· 5·15
Azimgurh and Ghazipur	154· 6·8
Bijnore	187·19 5
Upper Doab (Kuchha)	582· 3·0

The smallest Begah says Sir John Malcolm may perhaps be computed at one-third, and the largest at two thirds of an acre. The common begah in central India is sixty guz square, which, taking the guz at thirty-two inches, is fifty-three yards one foot. This makes the contents three thousand two hundred English yards, very nearly two thirds of an English acre. But the guz used in land measure is often not more than twenty eight inches, which reduces the begah to about half an acre. In some parts of India the begah is not more than a third; but, as has been said before, its size differs in every province.—*Malcolm's Central India, Vol.* II. *p.* 35. *Elliot. Supp. Glos., pp.* 53,54. See Khiraj

BEEGHOTO, a tract of country occupied by the Ahir and Chouhone rajput. It includes Rewapee, Bawul, Kanon. Patody, Kot Kasim and part of the Baraitch jaghire.

BEEJAPOOR, several towns in India one in Long. 72° 49′ E. and Lat. 23° 37′ N. one in Long. 74° 57′ E. and Lat. 24° 53′ N. and Beejapoor, or Visiapoor, in Long. 75° 48′ E. and Lat. 16° 50′ N. See Bejapoor.

BEEJARA SULA. Sans. Cashew-nut.

BEEJNAGUR, a town in India in Long. 76° 33′ E. and Lat. 15° 19′ N. See Bejanagar.

BEEJNOUR, in Long. 78° 9′ E. and Lat. 29° 33′ N.

BEEJNA, a river near Guneshgunj in Seonee.

BEEKH, Pers. Root of plant. See Bekh

BEEHUR, a river near Kutra Mowharee in Rewah.

BEEMAH, a tributary to the Kistnah river of the Peninsula of India, it rises in Lat. 19° 5′ Lon. 73° 33′ in the table land of the district of Poona; 3,090 feet above the sea, and runs S. E. into the Kistnah, length, 510 miles. It receives the Goor, 100; Neera, 120; Seena, 170; Tandoor, 85 miles. About 29,000 square miles drained. At Coreyaum, where it is enclosed by trap banks it runs with great violence in the rains. Before it joins the Kistnah, it runs through the stratified, fossiliferous rocks of the centre of the Peninsula.

BEENA, a river near Khoraee in Saugor.

BEENA, a form of marriage in Ceylon in which the wife continues to reside with her brothers and her husband takes up his lot with her. See Ceylon, Polyandry.

BEENDHAL, a river near Sahespoor in Dehra.

BEER, Eng.

Biere.....................Fr. | Bier.....................Ger.

A fermented liquor made from the malt of barley, and flavoured with hops. Beer is extensively used in India, and is solely imported from Great Britain in hogsheads and in small quantities bottled. At nearly all periods in the world's history and among nearly all nations, the art of making a fermented drink from some kind of grain appears to have been known; but of all the cereals, barley is the best adapted to the making of beer. In India the bitter pale ales of Messrs. Bass and Allsop, are used to the almost entire exclusion of all others. Captain Ouchterlony about 1850 established an experimental brewery in the Neilgherry hills, and the beer produced was liked. A Joint Stock Brewery Company "Limited" was formed in the North West of India, Capital 60,000 Rupees, in 600 shares. To encourage soldiers in habits of temperance, a Commander-in-Chief of India proposed either to lessen the quantity of malt liquor daily supplied to each soldier from one quart to a pint, or to introduce a medium measure into the Canteen, viz., an Imperial half pint.—*Faulkner. Tomlinson, Universal Review, p. 566. Indian Daily News, July* 28. See Ale.

BEERA or **BEEREE**, (pan ka) a small packet of betel leaf. It is folded up to contain spices, catechu, calcined shell-lime, and pieces of the areca or betel nut.—*Tod's Rajasthan, Vol. I. p.* 327; 413.

BEERA, Beng. Asclepias rosea.

BEERBHOOM, near this at Deoghur are copper, lead, and iron ores, Deoghur, or Byjnath, is a small town in the zilla of Beerbhoom, famous for its temples, visited every year by thousands of pilgrims from the Northwest Provinces of India. It is situated in the great table-land which extends from near Burdwan to Dunwa Ghaut, in Behar. Granite, syenite, and gneiss, traversed by greenstone veins, are the prevailing rocks around—the usual matrices of copper and lead veins all over the world. The metals do not appear ever to have been worked or made use of. The vein at the surface runs east and west—it has been traced for a hundred feet continuously: the metal is partly pure, partly in the form of green carbonate. Veins of lead ore, partly pure, partly in the state of galena or sulphuret, traverse the principal vein at right angles. Both have been analysed, and found of remarkable richness:

The nearest coal is forty miles off—the nearest point on the river where the ore could be shipped for Calcutta is sixty, the road being tolerable all the way. The copper might in all likelihood be separated from the malachite, by stamping and washing. Copper has been pointed out near Beila, in the province of Lus, on the western frontier of Lower Scinde—by Captain Del Hoste and Captain Harris. In Kumaon,—by Lieutenant Gasfurd, and Captain Durand. At Porkee and Dampoor—By Captain Richards. At Almorah and in Affghanistan—by Captain Drummond. In the Nellore and Guntoor Collectorates. It is said to have been worked in Cutch, on the Neilgherries, and near the Poondah Ghaut.—*Bombay Times, June* 19.

BEERBUL, Raja, a favourite of the emperor Akbar. He fell, west of the Indus, in an attack against the Euzufzye.

BEER-EL-SOMAL, country of the Somali to the South of Cape Guardafui. An account of, and of its inhabitants, is given in Lond. Geo. Trans.—*Dr. Buist's Catalogue.*

BEERMAH, a river near Bewur in Harmeerpore.

BEERSHEBA, is twenty miles south of Hebron. Its name means "the well of an oath, or the well of seven," because here Abraham made an alliance with Abimelech, king of Gerar, and gave him seven ewe-lambs in token of that covenant to which they had sworn, (Gen. xxi, 28.) A Roman garrison was here in the time of Eusebius and Jerome. The limits of the Holy Land are often expressed in Scripture by the terms "from Dan to Beersheba," the former being the northern, the latter the southern extremity of the land.—*Robinson's Travels. Palestine and Syria, Vol. I. p.* 157.

BEESHA RHEEDII.—*Kunth.*

Syn.

Bambusa baccifera.—*Roxb.*
Mellocanna bamusoides.—*Spreng.*

Beesha	MALEAL.	Pagu-tullu	RAKHOI·
Bish-Bans	BENG.		

A bamboo, one of the Panicaceæ, growing in the peninsula of India, Bengal and Chittagong.—*Roxb. Vol. II. p.* 197.

BEESILDEO (*Visaladeva*) this name heads the inscription on the celebrated column erected in the centre of Feroz Shah's palace at Dehli. This column, alluded to by Chund, as "telling the fame of the Chohan," was placed at Nigumbode, a place of pilgrimage on the Jumna, a few miles below Dehli, whence it must have been removed to its present singular position. —*Tod's Rajasthan, Vol. II. p.* 452.

BEESWA. HIND. The twentieth part of a Begah.

BEES' WAX, YELLOW.

Mom: Peela mom.	HIND.	Ten Mazhacu	TAM.
Lilin	MALAY.	Mynum	TEL.

Secretion of the bee, Apis mellifica. Bees-wax is the chief source of the wax of commerce, it is more or less yellow, and has an odour of honey; it is brought into the market, after allowing the honey to drain from the honey-comb, and then boiling the combs in water, frequently stirring to prevent burning. The wax thus obtained is
ing th ted a second or a third time and pressed
water to gh hair bags, of increasing fineness, allow-
process, ho molten substance to drop into cold
pot with water m it and prevent sticking. Another
the former to one ever, is to put the combs into a
boiling it allow them nitric acid, one quart of
to coo, latter, and after
floats on the surface and two layers of we wax
settle, the inferior one being almost worthless.

Wax is sometimes adulterated by pease-meal; but by melting and straining through cloth, the meal remains on the strainer. It is adulterated also with tallow which cannot be detected but by the smell. The quantity of Bees' wax exported from Madras was 56,602lbs. in 1853-54, valued at Rs. 19,914. Bees wax has been introduced into China by foreigners from the Indian Archipelago and Europe, though the Chinese also collect it themselves. In the islands where the bees are found, the natives collect the wax from the nests in the forests, disregarding the honey, which is little in quantity and worthless. The islands of Timor and Timorlaut afford bee's wax in sufficient quantity to form an important article of export: the Portuguese there send away 20,000 peculs annually to China and India, at a prime cost of £5 per pecul; Chinese junks import it through Macao. Bee's wax has always been a considerable article of exportation from the Islands of the Archipelago, chiefly the produce of the wilder part of them, where the consumption is small. In the eastern parts of China, the product of the tallow tree (Stillingia sebifera), and beef and hog's tallow in the south, are used in the manufacture of candles. Wax is only employed to incase the tallow or lard, which, from the heat of the climate and its unclarified condition, never becomes hard. About 130 tons are annually taken to Britain from Africa, America and India and sold at £5 to £7 the cwt. Bees wax and camphor are exported largely from Bintulu and Serekie, at which towns these valuable commodities are collected by the mahomedans. The bee's wax and camphor are reported to be so plentiful, that the Dyaks never collect them until the arrival of the trader from the sea.—*Morrison, p.* 141. *Crawfurd, p.* 445. *Low's Sarawak, p.* 323. *Poole's Statistics, Balfour's Commercial Products.*

BEET, the root of the Beta vulgaris. It is
the mangel wurzel of the Germans ag the
muli of India. On the continent of Euror
been used for sugar making. In In
used in salads, as a pickle, and preserv
best are the small varieties.

BEETLE. ENG. Chargol Heb; The Beetles, belong to the class of insects called Coleoptera: they are very numerous in tropical India, but in one part of r. Hooker's Travels, were most rare, and tl wood-borers longicornis and curculis particularly so. A large Telephora was very common. The blistering beetles of India, are several species of mylabris, their market value in Britain is low only 5*s.* 8*d.* the pound.—*Hooker Him. Jour., Vol. II. p.* 65. See Celeoptera.

BEEVER-GEIL. DUT of Castor.

BEG. TURK., a great ma
tion of all moghul mahome n, a lord, an appella-
Bey, Bai and Boy and in th dans. It appears as
e femine as Begum.

In Turkey and Turkish Arabia, Ya Bei! "O my Lord" is prefaced to every sentence. The Shammar Arabs pronounce the word Beg, which the Constantinopolitans soften into Bey, Bej.—*Layard's Nineveh, Vol. I. p.* 106.

BEGAMI. Hind. a good quality of white rice.

BEGBIE, Major-General, Peter James, an officer of the Madras Artillery, arrived in India on 3rd August 1822. He served in the first Burmese war, and in the Nanning expedition. He translated Beeker's Art of bringing Horse Artillery into action, De Brack's Cavalry outposts, Migout and Berger's Essay on Gun Carriages, and he compiled the Services of the Madras Artillery.

BEGADA. Tel. Nauclea purpurea, R. I. 515; Cor. 54.—W. and A. 1209.—Anthocephalus Indicus.—*Rich. ib. p.* 450.

BEGAI NUNDEE, a river near Kusba Thannah in Comillah.

BEGAM and Goranji rivers near Pertabgurh in Bhopal.

BE-GAR. Hind. In India, forced labour, for the repair of roads, tanks, forts, barracks and for carrying baggage. Begari, a person so compelled to labour. The labourers are usually pariahs and tanners.

BEGATI KANDA. Tel. Amberboa Indica, D. C. Athanasia Ind.—*R. iii.* 417.—*W. Ic.* 479.

BEG-BANUFSHA. Hind. Root of a small plant brought from Delhi; used as a perfume in medicine, and in compounding At'rs. See Bekh.

BEGGUD. Guz. Hind. Tinfoil.

BEGHRAM. See Begram: Kohistan.

BEGONIA, a genus of plants belonging to the Begoniaceæ. The species are upwards of 100 of which 30 have been found in the East Indias, B. Malabarica, laciniata, porrecta, diversifolia; discolor; dipetala, picta and pedunculosa, may be named and several are cultivated as flowering plants. The great yellow-flowered Begonia is abundant in the Bablang pass in the Sikkim Himmalaya, and its juicy stalks make sauce: the taste is acid and very pleasant.—*Riddell. Hooker, Him. Jour. Vol. I. p.* 29. *Voigt.* 66 *H. f. et. T. p.* 96.

BEGONIA. Sp. A pretty little annual, a species of begonia is common in the neighbourhood of both Tavoy and Maulmain.—*Mason.*

BEGONIA GENICULATA. Ramput Udang Udang. Malay. The leaves of this plant are used by the Malays for cleaning and taking out rust from the blades of creeses.—*William Jack, Calcutta Journal of Natural History, Vol. V. p.* 347.

BEGONIA RENIFORMIS. A herbaceous succulent plant, flowers of a pale pink colour, and fragrant. Native of the moist forests of India.

BEGOON. Beng. Common Egg plant. Solanum melongena.

BEG-PURA. Beng. Citrus medica.—*Linn.*

BEGRAM about twenty-five miles in a direct distance from the present city of Kabul, has pretensions to be considered Alexandria ad Caucasum. According to tradition it was a Greek city overwhelmed by some natural catastrophe. The present hindus call the site Balram.—*Masson's Journeys, Vol. III. p.* 150.

BEGUM. Arab. Hind. Pers. Beebee, Bee, Nissa, Khanum, Khatoon and Banoo, are the respectful terms given to mahomedan women in India: many towns and hamlets are designated from this title, Begum bazar, a suburb of Hyderabad in the Dekhan Begumabad, in Long. 77° 38′ E. and Lat. 28° 50′ N. Beegamgunge, in Long. 81° 42′ E. and Lat. 26° 48′ N. Begumpett, a hamlet near Secunderabad in Long. 78° 15′ E. and Lat. 17° 38′ N. Mahomedan ladies of rank have ever been desirous of forming towns.—*Herklots.* See Beg.

BEGUM, a river near Silwanee in Bhopal.

BEGUM SAMRA, a native of India who succeeded to a principality by the demise of her husband, supposed to have been a European, of a name resembling Summers. She bequeathed her kingdom to the East Indian Government, and died on the 27th January 1836. See Thomas.

BEGUN. Beng. Solanum melongena.—*Linn.*

BEHAR, two places of this name one in Long. 78° 40′ E. and Lat. 21° 10′ N., the other in Long. 76° 56′ E. and Lat. 19° 56′ N. See Bahar.

BEHAR TOWN. There is a Sanscrit inscription of the 10th century on a broken stone pillar, to the west of the northern gate of the old fort of Behar. There is one of the 9th century near the village of Passeraya recording the erection of two bhuddhist topes. The Behar caves are in the neighbourhood of Rajagriha. The Milk-maids' cave and Brahman girls' cave have inscriptions, in the Lath character. They are about 200 B. C. and are the most ancient caves of India. The Nagarjum cave and Haft Khaneh or Satghar group, are situated in the southern arm of the hill at some little distance from the Brahman girl and Milk-maids' caves. Another group is the neighbouring Karna Chapara and Lomas Rishi caves.

BEHAR DISTRICT is a part of the ancient kingdom of Magadha, first held by the Barhadratha of the Indu,—the Chandra Vansa or Lunar race, and succeeded by other six dynasties, from B. C. 1400 to B. C. 56. Dr. Hooker mentions as to plants that in the Behar hills, acanthaceæ is the prevalent natural order at Tope Chooney consisting of gay-flowered Eranthemum, Ruellia, Barleria, and such hot-house favourites. Other plants very typical of the flora of this dry region, were Linum trigynum, Feronia elephantum, Ægle marmelos, Helicteres Asoca, Abrus precatorius, Flemingia; various Desmodiæ, Rhynchosiæ, Glycine, and grislea tomentosa very abundant, Conocarpus latifolia, Loranthus longiflorus, and another species: Phyllanthus emblica, various Convolvuli, Cascuta, and several herbacous Compositæ.—*Hooker, Him. Jour. Vol. I. p.* 16. See Chandra vansa; Bahar. Inscriptions 374,378,390, 392 : Karli; Magadha, Purbia ; Ryotwari, Topes.

BEHAT, near Saharunpoor, in the Doab. A submerged ancient town was discovered near this by Sir H. P. Cautley.—*Prin. Ind. An.* See Jelam or Hydaspes.

BEBEHAN, one of the three districts of Fars, the other being Laristan, and Fars proper. See Fars; Kab, Mommai.

BEHEHRA. Hind. Guz. Myrobalan. Terminalia bellerica.

BEH-DANA. Pers. the seeds of the quince (Pyrus tomentosa); but those brought to Ajmere appear more like dried mulberry seeds (Morus nigra): the tree in Cabul is called "bai;" the seeds are demulcent and cooling: very mucilaginous: are used in sherbets: one seer costs four Rupees.—*Gen. Med. Top. p.* 128. See Bihi, Cydonia.

BEHDI, a clan of Khetri. See Khutri.

BEHEMOTH, this animal is noticed in Job. xl., 16 : Ps. i., 10. Is. lxxiii., 22; xxxv. 11. It is supposed to be the hippopotamos. Behold, now, Behemouth whom I made with thee, he feedeth on grass like the ox.

BEHENTA. Uria? A timber tree of Ganjam and Gumsur, of extreme height 30 feet, circumference 3 feet, and height from ground to the intersection of the first branch, 10 feet. It is used for axletrees, oil presses and rice pounders. It is also burnt for firewood the tree being very common. The bark and leaves are used medicinally.—*Captain Macdonald.*

BEHERA, Some of the Joodi and Johya inhabit the range called in the native annals Juddoo-ca-dang, and by Baber the hill of Jud, skirting the Behut. The position of Behera is laid down in the memoir of Rennel, (who calls it Bheera, in 32° N. and 72° 10' E., and by Elphinstone in 32° 10', but a whole degree further to the east or 73° 15'. This city, is often mentioned in the Yadu Bhatti annals. It was one of their intermediate places of repose, on their expulsion from India and migration to central Asia. Its position was minutely pointed out by the Emperor Baber (p. 259), who in his attack on the hill tribes of Jit, Goojur, Guker, &c. adjoining Cashmere, "expelled Hati Guker from Behreh, on the Behut River, near the cave-temples of Garkotri at Bikrum," of which the annotator remarks that as well as those of But Bamian they were probably buddhist. Baber (p. 294) also found the Jit masters of Sialkote, most likely the Salpoor of the inscription (Vol I. p. 803), conquered from a Jit prince in the twelfth century by the Patan prince, and presumed to be the Salbahanpoor founded by the fugitive Yadu prince of Gujui.—*Tod's Rajasthan, Vol. II. p.* 233.

BEHIKAR. Hind. Adhatoda vasica.

BEHISTUN. This name is generally written Bisutun in the maps, it is now given to a small village near Kirmanshah, on the frontier of Persia. A rock is there, and a memoir has been written by Major Rawlinson upon the great inscription on the rock.—*Layard's Nineveh, Vol. II. p.* 168. See India, p. 309.

BEHITSIL. See Hot Springs.

BEHMEN also La Behmen. The dried roots of two varieties of a composite plant, chiefly obtained from Kabul. Used by the natives as a tonic in debility, in doses of 4 drachms; also in impotence as a deobstruent. Price 1s. per ℔. Not at present used in European medicine, but was formerly employed as an aromatic stimulant.

BEHOOYA Beng. Cyperus difformis.

BEHOR-BANS. Beng. Bambusa spinosa.

BEHRAM, a Parsi or Zoroastrian, who dwelt at Nowsaree a town about 20 miles from Surat. He wrote the Kissa-i-Sanjan, a history of the Parsi migrations.

BEHUL. Hind. Grewia oppositifolia,

BEHUT, a name of the Jhelum. In the Panjab it runs about 750 feet above the sea in Lou. 32° 55' 12 N. and Lon. 73 42' E. It is to the East of the Indus river, to which it runs almost parallel, but it is smaller.—*Rennell's Memoir, p.* 99.

BEHUT. Two towns in India of this name, one in Long. 78° 28' E. and Lat. 25° 3' N., the other in Long. 77° 34' E. and Lat. 30° 10' E.

BEIAT, a Persian tribe in Khorassan.

BEIGLERBEG or as Meninski writes it in his institute, Beglerbeg, signifies "Lord of Lords," is a Turkish title given to the ruler of a province. Under him are the hakim or governor of a large city; the zabit or chief magistrate of a town, and the ked khuda principal "house-holder;" also the Kalantar or buzurg the person who, in a village, exercises authority over the other inhabitants.—*Ouseley's Travels, Vol. I. p.* 194.

BEILSCHMEIDIA ROXBURGHIANA. *Nees.* Laurus bilocularis—*Roxb.* a tree of Tipperah, one of the Lauraceæ.—*Voigt, p.* 309. *Roxb. Vol, II. p.* 311.

BEIROUT was taken from the Saracens by Baldwin the first king of Jerusalem, in 1111, and re-taken 1187. Ten years afterwards, the christians re-captured it, and it was frequently ravaged during the crusades. Subsequently it fell into the hands of the Druses, from whom it was taken by the Turks, who still retain possession of it. Beirout, is the ancient Berytus. It is situated on the western extremity of a triangular point of land, projecting into the sea about four miles beyond the line of coast. It stands on a gentle rising ground close to the sea shore, and is about three miles in circumference. The walls by which it is encompassed on the land side are of recent date, and of no great strength, being of a soft-sandstone, and flanked with square towers at intervals. The bazaars are large, particularly that in which silk is sold, and well attended by the inhabitants of the neighbouring mountains. The chief part of the population is Maronite. *Robinson's Travels, Vol. II. p.* 1.

BEIT MYOO, the Burmese name of Mergui.

BEIT OR BETE, an island in the gulf of Cambay ; it was taken possession of by the pirates of Jugut, after they had been defeated by Kutub Shah, in A. D. 1482, Beit fell, after having fought twenty naval engagements.

BEITOOL, in Long. 77° 59' E. and Lat. 21° 51' N.

BEI-VURMA BEWA. CAN. Azadirachta Indica.

BEIZAVI, the literary takhallus of Kazi Nasir-ud-din Abdallah Bin Omar Albeizavi, who died in the year 1299, (*Hig.* 699). His book is in Persian, entitled, Nizam-ul-Tuarikh, which signifies the Order of Chronological Histories. He was a Kazi or judge. He has treated most of the Asian monarchs, and particularly of the ancient Moguls.—*History of Genghizcan, p.* 413.

BEJANAGAR. See Vijianagar.

BEJAPOOR, a ruined city between the Kistna and the Gatparbah rivers south of Sholapoor. It was the seat of the Adăl Shahi dynasty, over some of whom here and at Gogi particularly over Ibrahim Adal Shah, are grand mausoleums. The Bejapore and Ahmednuggur States known in history, as the Adal Shahi and Nizam Shahi, were constantly at war with each other. This finally fell to Aurungzebe after a siege : although they had an inner fort much stronger than the outer works, the garrison were so much in want of provisions that they were compelled to surrender about the 15th October 1686. Shirzee Khan concluded the terms through Ghazee-ood-Deen, to whom the emperor, agreeably to custom, when he received such proposals through any of his officers, was pleased to assign the nominal honour of the conquest. Beejapoor thenceforth ceased to be a capital, and was soon after deserted. Viewed as mere ruins, the remains of that city as they at present exist are exceedingly grand, and, as a vast whole, surpass anything of the kind in Europe. The ruins occupy a space of about 30 miles in circumference. The great historian Ferishta is supposed to have died here, at the early age of 36, during a pestilence that swept away a multitude of the people. A buddhist or Jaina temple, under ground, the several beatiful mosques and mausolea, and the huge gun on the ramparts into which a large man can creep, and which Rumi Khan cast at Ahmednuggur, all merit attention.—*Briggs' Nizam.*

BEJAREN ISLAND, on the north coast of Celebes in Lat. 2° 6½' N. and about 20 miles north east from Banca, is of moderate height. —*Horsburgh.*

BEJA SAL. HIND. also BIJA SAR. HIND. Pterocarpus marsupium.

BEEJUK. BENG. Citrus medica.

BEKALL SEA. The Baikal Lake. See Baikal : Kalkas.

BEKH. PERS. a root of a plant, particularly if used medicinally.

BEKH-AHMAR. PERS. Morina Wallichiana.

BEKH-I-BADYAN, roots of Fœniculum vulgare.

BEKH-I-BANAFSHA, roots of Viola serpens.

BEKH-KARAFS, root of Apium involucratum.

BEKH-KASNI, roots of Cichorium intybus.

BEKH-KURPUS, root of a small plant, comes from Delhi ; heating ; one seer costs two rupees.—*Med. Top. of Ajmere, p.* 3.

BEKH-I-MARJAN. HIND. Red Coral.

BEKH-MIHUQ. PERS., root of Glycyrrhiza glabra.

BEKH-I-NILOFUR. PERS., root of Nelumbium speciosum.

BEKH-I-SOSAN. HIND., roots of Iris florentina.

BEKH-I-ZAFRAN. Aristolochia rotunda.

BEKH-UNJUBAZ. Red colored root of a plant that is brought from Delhi ; considered as cooling and astringent.—*Genl. Med. Top. of Ajmere, p.* 130.

BEKH-I-ZANJABIL-I-SHAMI. PERS. Elecampane.

BEKHUR, a town at the end of the Keloobrung pass, in Chinese Tartary. See Kunawer.

BEKRUL. HIND. Prinsepia utilis.

BEGGING POT, three religious garments, with a begging pot, razor, sewing needle, waistband and bathing cloth, are peculiar to the Bhikshu, or hindu mendicant ascetic.

BEIS, one of the 36 royal races of rajputs who give the name to Beiswara.

BEL. Hind., a place were sugar boiler pans are placed.—*Powell.*

BEL. Hind., a line marked out for a proposed work.—*Powell.*

BEL. Hind., a climber plant, creeper, tendril.

BEL, a hoe; beldar, a labourer. The beldar of northern India are of the Cachi, Kurmi and Chamar races. In India there are of the Wad ara tribes.

BEL, BELOS, or BELUS, a Babylonian deity.

BEL was a patriarch, known to the Greeks. He was the Elam of the Hebrews.

BEL, HURMAN BEL, supposed by Movers to be the serpent of Bel, is explained by Bunsen to mean the combater of Bel or struggler with Bel, called in the Canaanitish dialect Yesrael or Israel. He was the struggler with El, God, the Hercules Palamedes of the Greeks.—*Bunsen, Vol. IV. p.* 284. See Lud.

BELANUS. According to Colonel Tod, the Syrian Bal and Belanus is the Bal-Nath (god) of the Sauras, whose grand temple of Somnath is the counterpart of the Syrian Balbec, Soma-Nath being merely a figurative appellation of Bal, as the ruler of the lesser orb, Soma, or the moon. Add to the grand object of worship, the sun, his symbolic representatives, "the pillar raised on every high hill, and the brazen calf under every tree," of the demoralized Israelites, and we have the Lingam, or Phallus, and the Bull Nanda, similarly placed on hills and under trees, specially sacred to these mysteries. Nothing is wanting to complete the picture, but the day set apart by the Syrians for this worship, and followed by the chosen people, "when their hearts were turned away from the Lord;" this was the 15th of every month. Here we have another coincidence with the Sauras and other tribes of India; it was on the day termed Amavus, which divides the lunar month into periods, called Crishna-pacha and Sookul-pacha, when Surya and his satellite appear face to face in the horizon, the one setting, and the other rising, in perfect fulness, that the hindu, like the Sabeans, "threw up their caps at the new moon, and proclaimed a feast."—*Tod's Travels, pp.* 253-54.

BEL. Hind., also, Belgar, fruit of the Ægle marmelos, Cratæva marmelos or Bengal quince. With hindus, the leaves are sacred to Mata jee, (from the milk of whose breast this tree is believed to have sprung up). The punsari or druggists of Ajmere believe that one pice's size of the bark of the root of this tree, rubbed up with ghee, will, if given soon, recover a person who has taken an overdose of opium. A chemical examination of the fruit shows it to contain tannin, either pure or in combination; a large amount of mucilage; a concrete essential oil; and an aromatic as well as a bitter principle. It would also appear that a sedative or narcotic property exists in one or other of these. According to Lindley, a decoction of the root and bark of Ægle marmelos, is used on the Malabar Coast, in hypochondriasis, melancholia, and palpitation of the heart: a decoction of the leaves in asthmatic complaints, and the fruit, a little unripe, is given in diarrhœa and dysentery. Roxburgh adds that the fruit is laxative. The decoction of the dried fruit is aromatic, slightly bitter and astringent, gummy and mucilaginous, something like a mixture of a decoction of quince and pomegranate, but bearing an aroma peculiar to the Bel. It does not confine the bowels, but appears rather to strengthen and regulate their action. Its great value is doubtless in diarrhœa and chronic dysentery. Made into jam and eaten at meals, like marmalade, every morning, it is found very useful to women and children, whom it is injurious to accustom to continual purgation. The oath of Bel-bundar, or "the pledge of the Bel," is one of the most sacred a hindu can take. The Bel-tree is rendered holy by its leaves being used in the worship of Mahadeva. When this oath is taken, some of its leaves are filled with turmeric, and interchanged with solemn pledges by the parties.—*Genl. Med. Top. of Ajmere, p.* 128. *Malcolm's Central India, Vol. I. p.* 196. See Ægle marmelos.

BELA. Hind. Sans. Jasminum zambac.

BELA. Hind. alluvial soil on the banks of river.—*Powell.*

BELA, Beng. Sapium bacciferum.

BELA, two towns in India, one in Long. 72° 18' E. and Lat. 33. 31' N. The other in Long. 84°, 50' E. and Lat. 26° 51' N.

BELA, the chief town of Las, in Beluchistan, is built on a strong and rocky site on the northern bank of the Purali river. It is the Arma-Bel of the ancient Arab authors; also called Kara bela. It is now decayed, has about 300 houses, but coins, trinkets and funereal jars are found near, and in the neighbouring hills are numerous caves and rock cut temples now ascribed to Farhad and fairies, but are the earthly resting abodes of former chiefs and governors, there are also near old mahomedan tombs. One-third of the houses are occupied by hindus. Supplies of common necessaries are procurable, but articles of luxury are scarce, and consequently high-priced.—*Elliot's History of India. Masson's Journeys, Vol. II. page.* 28. See Kama. Kelat.

BELADUR. Arab. Semecarpus anacardium. See also Bhilawa, also Marking Nut.

BELADERI, Author of an account of the early Arab invasions of Candahar. See Kandahar.

BELAI, a river of Jubbulpore.

BELAMCONDA. See Moræa Chinensis.

BELAM-KONDA-SULA MANI. Maleal. Pardanthus Chinensis, *Ker.*

BELAMEANDA SCHOLARMANI. Tam. in Hort. Mal. Morea Chinensis.

BELAMKANDA CHINENSIS. D. C. Syn of Pardanthus Chinensis, *Ker.*

BELAMUDAGAM. Maleal. Scævola belamudagam.—*Linn.*

BELANDAS, A tribe in Kedah. See Kedah.

BELASCHORA of Rheede, Hort Mal. Lagenaria vulgaris, Cucurbita lagenaria.

BELAWN, the outermost of the Philippines; on the south side of the channel, is the largest of these islands. The east point of the island is in Lat. 6° N. bearing S. from Tapeantana. —*Horsburgh.*

BELASPOOR, in L. 76° 44' E. and L. 21° 20' N. It is built on the banks of the Sutlej, 1,500 feet above the sea.

BELAWAL, a seaport in Kattyawar.

BELDAR, a delver, a digger, from bel, Hind. a spade or pick and, dar Pers. holder. In the Omraoti district there were, in 1868, 1,200 of this race, but they migrate from place to place as work is heard of. They are stone cutters, construct dry walls, and wells. They have no houses but dwell in small patents. Those from Poonah wear enormous turbans, containing about 80 yards of cloth. Their tongue is marathi, but they speak also Hindi : they are hindus, worship Marri Ai or the Death Mother, who is known also as Devi, Sitla or Small Pox, Mata, Bhavani, Ai. They sacrifice rams. They marry when they have the means when young, bury the dead and offer water libations and rice on the third day. They do not eat beef, but eat mutton. One or two can write. They claim to be dissimilar from the Waddaru with whom they neither eat nor intermarry. The Waddaru have two castes, one of them earth-diggers who eat rats. The other are stone-cutters and cart stones from quarries.—*Wils.*

BELELAH also **BELEYLEH.** Pers. Arab. Myrobalan. Terminalia bellerica.

BELEMNITES fossils, are very common in the limestones of Trichinopoly and in the Himalaya. Belemnites, are officinal in Arabic medicine.—*Honigberger*, *p.* 242. See Calc. Spar. Salagrama.

BELERIKA. Maleal. White var. of Calotropis gigantea.—*Brown.*

BELEYLUJ. Arab. Terminalia bellerica. T. rubrica : also Myrobalan.

BELGAR. Hind. See Bel.

BELGAUM, three towns in India, one in Long. 88° 26' E. and Lat. 18° 35' N. one in Long. 77° 44' E. and Lat. 20° 36' N. and one in Long. 74° 40' E. and Lat. 15° 54' N. The last of these Belgaum towns with its adjoining suburb of Shahpur, is at an altitude of 2,260 feet above the sea, from which it is distant 70 miles. It contained 15,244 inhabitants in 1851, but the population was increasing. Cholera is not known to occur within the Fort. The average fall of rain for 7 years 1850 to 1856, was 52·40 inches. It is a large British cantonment, and its climate is pleasant. Natives of India to distinguish it from other towns of the same name, style it Shahpur Belgaum. See India, p. 324.

BELGAUM or **COUNTRY WALNUT.** Eng. Fruit of Aleurites triloba. See Oil.

BELGAUM WALNUT OIL, Aleurites triloba—Hidjlee Badam ka Tel. (Hind). This is, the Mollucca tree which produces the "Lumbang nut" it grows plentifully near Hyderabad. The nuts yield a very large per-centage of oil, and the tree is found to be very prolific. The nuts, strung upon a thin strip of bamboo and lighted, will burn like a candle.—*Transactions, Agri-Horticultural Society of India, Vol. VIII. p.* 220. *Mad. Ex. Jur. Rep.*

BELGAR. Hind. Ægle marmelos. See Bel.

BELGIRI. Hind. Ægle marmelos.

BELI. Singh. Ægle marmelos.

BELI, a monarch of India to whom the god Vishnu, as Vamana, appeared. See Vamana.

BELIDEUS AUSTRALIS, of Waterhouse and Shaw, the long tailed squirrel of N. S. Wales. It is one of the Phalangistidæ.

BELINGU. See Tin.

BEL-KE BUCHLA KI BHAJI. Hind. Duk. Basella alba.

BEL KA PAT. Duk. Leaf of Ægle marmelos,—Cratæva religiosa.

BELKI, Cattle breeder.

BELL, Major, an officer of the Madras army, who from about the year, 1860 to 1870 wrote on several subjects connected with the Political Administration of India.

Bell	Burm.	Manni	Tam.
Ganthi	Hind.	Gautha	Telugu.
atbi..			

The biggest bell in Burma is on a low circular terrace north of the temple at Mengoon, and is said to contain about 90 tons (55,500 viss) of metal. Its external diameter at the lip is 16 feet 3 inches : and its interior height, 11 feet 6 inches. It is therefore fourteen times as heavy as the great bell of St. Paul's; though but one-third of that given by the empress Anne to the cathedral of Moscow. Bells are used by the christian hindu and buddhist worshippers, about their temples and churches. The largest known is that of Moscow cast in the reign of the empress Anne. It weighs nearly 193 tons. The great bell of Pekin weighs only 53½ tons.—*Yule's Embassy, p.* 172. *Statistics of Commerce.* See Ganthi.

BELLA. Duk. Myrobalan.

BELLADONNA. Atropa Belladona, the deadly night shade, preparations of which are largely used in medicine.

BELLA GADA. Tel. Bella manda. Tel. Ceropegia juncea, *R. Cor.* 10.—*W. contr.* 30; *Ic.* 1260.

BELLAL, a dynasty which ruled in Telingana from the eleventh to the 14th century. They called themselves a Yadoo branch of rajputs, and their authority extended over Carnata, Malabar and Telingana. They were destroyed by mahomedans in A D. 1310.

BELLAMA. Guz. Semecarpus anacardium. Marking nut.

BELLARY, in Lat. 15° 8′ 9″ and Long 76° 53′ 8, is a large town and military station W. of the Hägri. Its Dāk bungalow is 1,538 feet (Schl. A. D.) above the sea, but according to General Cullen is 1,575 feet. The highest point near the flag-staff in the upper fort is 2,018 feet. Bellary is the centre of the Peninsula of India, and gives its name to a collectorate of the Madras Presidency. The Collectorate has 1,229,599 inhabitants and forms part of the Ceded Districts allotted to the Nizam after the fall of Seringapatam, and re-transferred or ceded to the British after the Treaty of 1803. It has the Tumboodra river running through it and a sanitorium at Ramanmalay. An independent chieftain, one of the Ghorpara family has his residence at Sandur, in a valley below the hill others of the Ghorpara being at Ganjandarghar, and near Kaladghi. It is the most arid district in the Madras Presidency. In the neighbourhood are Ramanmalay and Comarasamy hills near the valley of Sandur. When Bellary and Cuddapah Balaghaut were ceded in 1803, under treaty by the Nizam, the revenue was deemed scarcely sufficient to pay for the Hyderabad Subsidiary Force, but in 1867, its revenue amounted to 53,52,060 Rupees or £535.206. It is the Head Quarters of the Ceded Districts Military Division of the Madras Presidency.

BELLARY CUMBLIES. See Cumbly.

BELLA SHORA. Maleal. Lagenaria vulgaris, Ser.

BELLAWAN, also BHELA. Duk. Marking Nut, Semecarpus anacardium.

BELLE DE NUIT. Fr. Mirabilis jalapa.

BELLERIC MYROBALAN. See Myrobalan. Terminalia.

BELLEROM, the Tamil name of a Malabar wood, which is called in Malabar and Canara Kyndle. It resembles the wood named Angely at Cochin and in Ceylon. The Company's cruiser, Aurora, was built, by way of experiment, of this wood, procured from the forests in the north of Malabar; and it appeared to answer its purpose.—*Edge M. and C.*

BELLEW, a Medical officer of the Bengal Army, accompanied General Lumsden to Candahar on a political mission during the siege of Dehli. He wrote a General and Medical Report on Affghanistan; report on the Yuzufzai, and a brochure on the Panjab and Affghan policy.

BELL-FLOWER. Companula lilifolia.

BELLINJER. Maleal. Ben-teak.

BELLIS. In India, a species of this well-known flower is easily cultivated by seed after the rains.

BELL METAL.

Klokspys	Dut.	Koloklnaja-mjed	Rus.
Bell metal	Eng.	Campanil	Sp.
Metal de Fonte	Fr.	Venjalam	Tam.
Metal de cloches	„	Kantan	Tel.
Glockengut	Ger.		

An alloy consisting of three parts of copper and one of tin, of which bells are made. The bells of Tanjore, are excellent in tone, superior in finish, and very moderately priced.—*Faulkner.* McCulloch.

BELLONIA. See Osiris.

BELOO, Tel. Uria? A tree of Ganjam and Gumsur, extreme height 30 feet, circumference 3 feet, and height from the ground to the intersection of the first branch, 15 feet. Its wood is sometimes employed for making bandies, but it is chiefly used for firewood the tree being extremely common: the leaves are used for making a sort of umbrella which is worn on the head by the ryots and coolies in that part of the country.—*Captain Macdonald.*

BELLOTAS. Sp. Acorns.

BELLOWS. Eng. Pankha. Hind. Those used in eastern countries are different in form from those of Europe. For the household fires, the bamboo blow pipe is employed. The blacksmiths of India use sheep skins sewed, with a cleft, edged with wooden rods, which the bellows-blower opens, raises and depresses. The Chinese bellows consist of cylindrical tubes of wood, of about eight inches diameter, about five feet long each, and placed vertically in the earth contiguous to each other, with pistons inserted in each, which are alternately depressed, in the manner of churning, by a native sitting beside them. The air is pressed out of a lateral tube in each, and communicates with the forge. Above these tubes are two apertures furnished with valves, to admit fresh supplies of air.—*White's Voyage, p.* 278.

BELNA. Hind. A roller press to extract sugar from the canes: also, a machine for cleaning cotton from its seed.

BELLUM. coarse sugar, Tel. See Goor, Jagri.

BELLULIJ. Can. Garlic.

BELUCHISTAN, A mountainous region to the south of Affghanistan and west of the Indus river, its coast is craggy, but not elevated, and is in some places a sandy shore; inland, the surface becomes higher. The most remarkable features of Beloochistan, are its rugged and elevated surface, its barrenness, and deficiency of water. It may be described as a maze of mountains, except on the N. W., in which direction the surface descends to the great desert on the S., where a low tract stretches along the sea shore. The latitude and longitude and elevation of its chief towns are as under :— Kelat, 28° 53′ 66° 27′; 6,000 feet. Sohrab, 28° 22′ 66° 9′; 5,800 feet. Munzilgah, 29° 53′ 67°; 5,793 feet, Angeera, 28° 10′ 66° 12′; 5,250 feet. Bapow, 28° 16′ 66° 20′; 5,000. Peesee-Bhent, 28° 10′ 66° 35′; 4,600 feet. Sir-i-Bolan, 29° 50′ 67° 14′ 4,494. Putkee, 28° 5′ 66° 40′; 4,250 feet. Paeesht-Khana, 27° 59′ 66° 47′; 3,500 feet. Nurd, 27° 52′ 66° 54′; 2,850. Ab-i-goom, 29° 46′ 67° 23′; 2,540. Jungikoosht, 27° 55′ 67° 2′; 2,150 feet. Bent-i-jah, 28° 4′ 67° 10′; 1,850 feet. Beebee Nanee, 29° 39′ 67° 28′; 1,695 feet. Kohow, 28° 20′ 67° 12′; 1,250 feet. Gurmab, 29° 36′ 67° 32′; 1,081 feet. Kullar, 28° 18′ 67° 15′; 750 feet.

The chief town is Kelat and is the residence of a chief who has the title of Khan, and is paramount amongst the various tribes who occupy that region. The inhabitants of Kelat and Beluchistan, may be comprised under four grand divisions, Brahui, Beluch, Dehwar and Babi, with a few hindus, engaged in commerce. The Beluch and Brahui form the bulk of the population of Beluchistan, the former inhabiting the skirts of the mountain ranges, and the latter the mountain districts especially in Sahar Saharawan and Jhalawan. The Brahui are supposed by Dr. Caldwell to be a Dravidian race, and one tribe claim to have come from the shores of the Mediterranean. They are robust, large made men. The southern part has the sea as its boundary, the products of the west find their way through the passes of the Bolan, Mulla and Guler. See Baluchistan Daood Putra, Kelat, Khanazad; Kiang, Kerman Khyber; India, Pisheen; Shawl.

BELUGA CATODON, of Pallas also placed by Gray, Gerard, Lesson and Lacepede, as of the genera Physeter, Delphinus, Delphinapturus, and Catodon—one of the Delphinedæ found in the North Pacific, North Atlantic and Arctic Ocean.

BELUMBU. DUK. fruit of Averrhoa bilimbi.

BELUN and Seote, rivers at the foot of the Kattra pass in Allahabad.

BELUNNAN. HIND? A tree of Chota Nagpore, with hard brown timber.—*Cal. Cat.*

BELUR TAGH, a mountain range in Central Asia, the principal mountain from which the great rivers of that region have their origin. It is the slopes of the Belur Tagh, in the highland of Pamir, between the 40° and 37° of North Lat. and 86° and 90′ of West Longitude that Ch. Bunsen indicates as the Uttura-Kuru of the Arian hindus. The Belur Tagh, is called also Belut Tagh or cloud mountain. It is also the Tian shang or Celestial Mountain of the Chinese and he considers that on the western slope of it and of the Mustagh, the Haro Berezaiti (Albordsh) is likewise to be looked for.

The Belur Tagh is also called Kouen Lun, and is one of the many names given to the Kouen Lun chain forms the northern boundary of western Thibet is not less elevated than the Himalaya, and is covered throughout a great part of its length with perpetual snow. Dr. Thomson reached its axis in the Karakoram pass, elevated 18,300 feet. The Kouen Lun chain has been called the Belur Tagh or Bulut Tag, which Captain Cunningham regards as synonimous with the Balti mountains. It is also called Mustagh, Karakoram, Hindu Kush and Tsun lung or Onion mountains, because of a species of Allium growing there. Its continuation is the Pamir range.

This mountainous range is of great interest in examining the origins of nations. The vast climatic change which took place in the northern countries is attributed in the Bible to the action of water. But, by the Vendidad, the sudden freezing up of rivers is the cause assigned.

Both may have resulted from the same cause, the upheaving of the land by volcanic action, elevating some portions and depressing other into basins, such as the Caspian sea. Ten months of winter is at the present day, the climate of Western Thibet, Pamer, and Belur, and corresponds with that of the Altai country, and the district east of the Kouen Lun, the Paradise of the Chinese. The country at the sources of the Oxus and Jaxartes, therefore, is supposed to be the most eastern and most northern point whence the Arians came. Wherever the Indians may have fixed the dwelling places of their northern ancestors, the Uttaru-kuru, we cannot venture to place the primeval seats of the Arians anywhere, but on the slopes of the Belur Tagh, in the highland of Pamer, between the 40th and 37th degrees of N. latitude, and 86° and 90° of longitude. On the western slope of the Belur Tagh and the Mustagh (the Tian-Shang or Celestial Mountains of the Chinese) the Haro-berezaiti (Albordsh) is likewise to be looked for, which is invoked in the Zendavista, as the principal mountain and the primeval source of the waters. At the present day, the old indigenous inhabitants of that district, and generally those of Kashgar, Yarkand, Khoten, Turfan, and the adjacent highlands, are Tajik who speak Persian, and who are all agriculturists. The Turkoman either came after them and settled at a later period, or else they are aborigines whom the Arians found there, but its slopes are the primeval land of the Arians.—*Ch. Bunsen, Vol. p.* 406. See Arian, Cush, Kaffer.

BELUS, a temple in the City of Babylon, built about B. C. 3,500 or B C. 3,250, in the era of the largest pyramid, but five centuries before the pyramids generally. This temple was built many thousand years after and was quite distinct from the watch tower mentioned in Genesis. The temple of Belus, was in the centre of the city of Babylon and was the vastest monument in Babylon, and the world, and seems to have been erected 323 years before the birth of Abraham. It was a temple but also meant as the watch tower of Babylon, *Bunsen, Vol. IV. pp.* 479, 491, *&* 654. See Hercules.

BELUS, the sun-god of the Babylonians. See Bal, Bel, Hercules.

BELUS, Long. 81° 0' E. and Lat. 25° 34' N.

BELUTA POLA-TALI. MALEAL. Crinum asiaticum—*Willd.*

BELUTTA-CHAMPAGAM. MALEAL. Mesua ferrea.—*Linn.*

BELVIDERE, a house in Bombay, called Mazagong House, once occupied by Mrs. Draper, the Eliza of Sternes Letters. She left her husband about 1770.

BELWA. KARN, a race whose business it is to gather the juice of the palmyra Borassus flabeliformis, speaking Malayalum though settled in Mysore.

BELWIN, a river and town in Mirzapoor.

BELZUINO. IT. Benjamin.

BEM TAMARA. MALEAL. Nelumbium speciosum.—*Willd.*

BEN? BURM. Amomum cardamomum.

BEN. HIND. Eremurus spectabilis.

BENAUDA, also called BENAWAT, the country between Allahabad and the Sarju river.

BEN NUT OIL OR Moringa Oil.

Morunghy yennaiT...AM.	Sahujna ....HIND.
Morunga noona....TEL.	

This oil, the product of the nut of the Moringa pterygosperma is seldom made in
ing lia, nor does it form an article of export.
BELLlong been valuable on account of the
lapa. period, which it may be kept with-
BELLERICg rancidity. The tree is com-
balan. Terminaliof Southern Asia, the flowers,
BELLEROM, there eaten by the natives,
wood, which is called i. used by Europeans as a
Kyndle. It resembles thlish, to which circum-
at Cochin and in Ceylon. name of "horse-
cruiser, Aurora, was built. Indies, it is used for
ment, of this wood, procury watch-makers, and
in the north of Malabar; sdelicate flowers. The
answer its purpose.—*Edge* used by perfumers
in the manufacture of scented oils. Two species of Hedychium and a species of Dendrobium, on the western coast of India, would give a perfume, which we have no doubt would be highly prized in Europe. It is obtained in Egypt from the seeds of Moringa aptera.—*Mason; Faulkner; Hogg. p.* 289.

BEN TREE. In India, the Moringa pterygosperma: in Egypt, Guilandia moringa, Moringa aptera.

BENA. BENG. Scented grass, Andropogon muricatus.

BENABA, also BIA, also BIBLA. DUK. Peterocarpus marsupium.

BENA-JONI. BENG. Sporobolus diander, Diandrous bent grass.

BEN AMMI the Ammonites, the descendants of Ben Ammi, son of Lot, by his younger daughter Ammi, the other son was Moab. See Moab. Ammi.

BENARES, the name of a district and a town in the N. W. Provinces of India. The town of Benares is built on the left bank of the Ganges, in Lat 25° 18' 4 N. L. 82° 59'8 E. 347 feet above the sea level and 74 miles East of Allahabad. The people call it Kasi. It has many temples and shrines, and hindus resort to it in pilgrimage. The river Ganges bends round the town and looking from the river is a beautiful prospect. Its population is estimated at near 20,000. The hindu temple of Vis-weswara, has been, for many centuries, the chief object of veneration at this town. The old temple was partially destroyed by the mahomedans in the reign of Aurungzeb, the present was built up by Ahalya Bai, a Mahratta princess and is remarkable for the beauty of its minute architectural embellishment. Its length along the river front is about 4½ miles. The houses are built of stone, and some of them are three or four stories high, and tastefully ornamented on the outside. The ghâts, or bathing-places, are large buildings many stories high, with handsome verandas and majestic portals; but their distinctive characteristic is seen in the flights of wide stairs. The manufacture of gold and silver brocade in Benares, is well worth seeing. The looms, which are very simple in their construction, are situated at a short distance from the city. The gold and silver pass through many hands before they are formed into thread. Indeed, Benares has ever been a great place of trade and is so at this day. Brocades (kamkhab), gold woven scarves (dopatta), and silks are consigned from this city together with a kind of yellow silk dhoti, called "pitambar," and a dark-blue silk with white spots, called "bùnd;" also the silk sari or scarves, exclusively for women's wear, forming both a skirt and a scarf. Its lacquerware is good. Two kinds of resin are used, one called rahl, is sold at eight annas the seer, and is said to be brought from Mirzapoor to Benares. The fine lacquer is made of a resin called gaharba, for a seer of which one Rupee and two Annas are paid. There is a Maha Rajah of Benares. This family was founded by Munsa Ram, Zemindar of Gungapore, who died in 1740, and was succeeded by Rajah Bulwunt-sing, who joined Shah-Alam and Shujah-o-Dowla in their invasion of Bengal in 1763. He joined the British camp with the emperor after the battle of Buxar, and in the arrangements made with the emperor in 1764, his zemindary was transferred from Oudh to the British Government. The insurrection of Vizier Ali occurred on the 14th January 1769. In March 1862 the Maharajah received the assurance by Sunnud, that in the event of failure of natural heirs Government will permit and confirm any adoption of a successor made by himself or by any future chief of his state that may be in accordance with hindoo law and the customs of his race. The Maharajah receives a salute of 13 guns.—*Aitchison's Treaties, p.* 41. *Schlagentweit; Schonberg's Travels in India and Kashmir, Vol. I. p.* 99. See Buddha; Bhairava, Chandra-Vansa, Gour. BENDALU. Corruption of Pind-Alu. PERS. Dioscorea aculeata.

BEND-AMIR, is a town of sixty houses, named from a dyke or band, constructed in the tenth century by Amir Uzun Delemi, and from whom the river Kum Feruz, after its junction with the Murghab, (the Palvar and Medus of the ancients) derived its name. A flat bridge of thirteen arches is thrown over the stream, the waters of which form a beautiful cascade, just beneath it. As the bed of the river is very deep, seven other dykes have been constructed in its lower course to procure water for the irrigation of the fields. It has been made famous by the bewitching strains of Moore, whose language surpasses the reality, though in the spring time Bendamir is doubtless a lovely spot.

There's a bower of roses by Bendemeer's stream,
And the nightingale sings round it all the day long,
In the time of my childhood 'twas like a sweet dream,
[illegible] hear the birds' song.
[illegible] bower and its music I never forget,
But oft, when alone in the bloom of the year,
[illegible] there yet?
[illegible] by the
[illegible] soon withered that hung o'er [illegible]
But some blossoms were gathered, while
And a dew was distilled from their flowers, that gave
All the fragrance of summer, when summer was gone.
Thus memory draws from delight, ere it dies,
An essence that breathes of it many a year;
Thus bright to my soul, as 'twas then to my eyes,
[illegible]s that bower on the banks of the calm Bendemeer."

BENG. TAM. Bignonia suaveolons.

BENGAL, a province of India, through which the great rivers Ganges and Brahmaputra flow to the bay of Bengal. Its early history is obscure. The rajas of Bengal, capital Kanauj, Gaur? who have been identified as the first, were the family of Bhupala. Abu'l Fazl however enumerates three dynasties as prior to this family. The first of the Vaidya Rajas, was Sukh Sen, in A. D. 1063. Its last hindu king was Lakshmanan. He had been placed on the throne in infancy, and during his long reign had been a just and liberal ruler. In A. D. 1203. Bengal was overrun by Bakhtiar, a general of Mahomed Gori and the last hindu king escaped to Orissa. Bengal was amongst the first of the places of India with which the English E. I. Company traded. Mr. Aitcheson tells us that "in 1599, an Association was formed in London to trade with the East Indies, and on 31st December 1600 they obtained an exclusive Charter of privilege, constituting them a body politic and corporate, by the name of "The Governor and Company of Merchants of London trading to the East Indies." This was the origin of the British empire in India, and the Company's factory was established at Surat. In 1624, an order, commonly called a "farman," was obtained from the moghul emperor, permitting the English to trade with Bengal, but restricting them to the port of Piplee in Midnapore. The regular connection of the Company with Bengal, however, did not commence until 1642, when a factory was established at Balasore, and in 1652, permission was obtained for unlimited trade without payment of customs dues, on an annual payment of Rs. 3,000. In 1661 Charles II. granted a new Charter, vesting the Company with power to make peace and war and to send to England unlicensed traders, [illegible] a fresh Charter issued in 1693, limited [illegible] company's powers to twenty-one years. [illegible] a rival Company was formed, called the new [illegible] English Company, but in 1702, this amalgamated with the older London Company, and the two parties styled themselves the United Company of Merchants Trading to the East Indies. During the administration of Shaista Khan, subadar of Bengal, the English were subjected to much oppression. Shaista Khan exacted a duty of 3½ per cent. on their merchandize, and his officers arbitrarily extorted large sums from the factors, till in 1685 it was resolved to seek redress by force of arms. The hostilities of the English exasperated the emperor Aurungzebe, who ordered that the English should be expelled from his dominions. The Company's factories were seized, and their affairs were brought to the brink of ruin, when negotiations for peace were set on foot, and a reconciliation was effected.

In 1698 the English obtained permission from Azeem-oos Shah, grandson of Aurungzebe, and governor of Bengal, to purchase the towns of Chuttawutty, Govindpore, and Calcutta. The sunnud is not supposed to be extent; but it is more a matter of antiquarian interest than of historic importance. Ali Vardi Khan in 1740, rose to be subadar of Bengal.

In 1756 Suraj-ud-Dowla became subadar of Bengal. He had previously manifested aversion to the English. The Governor of Calcutta having refused to deliver up one of the principal officers of finance under the Nabob's late uncle, the Governor of Dacca, whom the Nabob had resolved to plunder, Suraj-ud-Dowla attacked and captured Calcutta on 5th August. One hundred and forty-six English fell into his hands and were thrust into a guard room, since called "the Black Hole," where all save twenty-three perished in the night. On 2nd January 1752 Calcutta was re-taken by a force which had been despatched from Madras under Clive and Admiral Watson, and on the 4th of February the Nabob's army was surprised and defeated by Clive. Overtures were then made by the Nabob, and on 9th February 1752 a treaty was concluded, by which the Nabob agreed not to molest the Company in the enjoyment of their privileges, to permit all goods belonging to the Company to pass freely by land or water without paying any duties or fees, to restore the factories and plundered property, to permit the Company to fortify Calcutta, and to establish a mint. Three days after, a contract with the Nabob, offensive and defensive was signed. War having broken out between France and England, Clive attacked the Settlement of Chandernagore, but Seraj-ud-Dowlah furnished the French with arms and money, and was preparing to make common cause against the English. At this juncture a confederacy was formed among Seraj-ud-Dowlah's chief officers to depose him. The English joined this confederacy and concluded a Treaty with Meer Jaffir Ali Khan [illegible] the battle of Plassey, which was fought on the 23rd June 1757, the power of Seraj-ud-Dowlah was completely broken and Jaffir Ali was installed by Clive as Subadar of Bengal.

In 1758 the Shahzada, afterwards Shah Allum, having, in consequence of some dispute with his father, the emperor Alam-gir II., fled from Delhi entered into a league with the subadars of Oudh and Allahabad for the conquest of the Lower provinces. The prince advanced into Behar with about 40,000 men, and laid siege to Patna. Meer Jaffir was greatly alarmed by the prince's advance, and at his solicitation Clive marched with all the force he could muster to the relief of Patna; but ere he reached that place the Shahzada's army had almost entirely dispersed.

On Clive's return the nabob Mir Jaffir granted him as a jagheer, the quit rent, about three lakhs per annum, which the Company had agreed to pay for the Zemindary of Calcutta.

In 1759 an armament of seven ships from Batavia unexpectedly made its appearance in the mouth of the river.

To meet his pecuniary engagements, Mir Jaffir had recourse to the severest exactions. He resigned himself to unworthy favorites; and it became necessary to depose him in favor of his son-in-law, Meer Kasim Ali Khan, with whom a Treaty was concluded on 27th September 1760, by which the British obtained possession of Burdwan, Midnapore and Chittagong.

Serious disputes arose between Mir Kasim and the British regarding the right of the servants of the Company to trade and to have their goods passed free of duty which led at last to war. In 1764 Mir Jaffir agreed in addition to the sums for which he had contracted in the recent Treaty, to pay five lakhs a month towards the expense of the war then being carried on against the vizier of Oudh, so long as it lasted.

Meer Jaffier died in January 1765, and was succeeded by his son Nujum-ud-Dowla, with whom a new treaty was formed, by which the Company took the military defence of the country entirely into its own hands, and among other conditions the Nabob bound himself to appoint, by the advice of the Governor and Council, a Deputy to conduct the Government, and not to be removed without the consent of the Council."

"In 1764 Shuja-ud-Dowla, the vizier of Oudh under the pretence of assisting Meer Kasim, Ally, had invaded Behar, but his army was completely routed, and the vizier was obliged to throw himself on the generosity of the English.

"Nujum-ud-Dowla died on 8th May 1766, and was succeeded by his brother Syf-ud-Dowla, a youth of sixteen.

" Syf-ô-Dowla was succeeded in 1770 by his brother Mubarak-ud-Dowla, with whom a new engagement was made. By this engagement the Nabob's stipend was fixed at 81,81,991 Rupees. This is the last treaty which was formed with the Nabob. The office of subadar had now become merely a nominal one, all real power having passed into the hands of the British. In 1772 the stipend was reduced to sixteen lakhs a year, at which rate it is paid to this day. Bengal was declared to be the chief presidency on the 16th June 1773. By the Treaty of 22nd February 1845 with Denmark, the British Government obtained possession of Serampore. Bengal proper is the lower part of the plain of the Ganges, and includes the delta, the mouth of the Fenny, and Balasor. It is bounded on the west by the hilly districts of Behar and Orissa, on the east by the Assam valley, the Khassia, Tipperah and Chittagong hills, to the north the base of the Himalaya, and on the north west the Cosi river. Near the base of the Himalaya the surface is a little elevated. But, elsewhere, Bengal is flat intersected by the water-courses formed by the branching of the Ganges and Brahmaputra and their tributaries. The climate is comparatively equable. The rainfall ranges from 60 to 100 inches. Calcutta mean temperature is 78° its fertility is celebrated. Eastern Bengal extends from the slopes of the Himalaya mountains below Darjeeling in the north, to the head of the Bay of Bengal in the south, or, roughly, is enclosed within the 22nd and 27th parallels of north latitude. The eastern boundary commencing at Chittagong, becomes interlaced with the hills which limit the empire of Burmah, and stretches out through the extensive valleys of upper and lower Assam, as far as the gorge in the Himalaya mountains, through which the great river Brahmaputra descends from Thibet. The western limit follows the course of the rivers Hooghly and Bhagiruttee, and passes through Calcutta, Moorshedabad, and Dinagepore up to Darjeeling. Its length from north to south is about 350 miles; its breadth 300 miles. The total area of this country is about 100,000 square miles. That of Great Britain being 120,000. The population, estimated at fifteen millions, may be looked upon as a simple, rural people, covering the cultivated area of the country very evenly, and but moderately condensed in towns, save in the metropolis of the Bengal Presidency. Per square mile, it is perhaps the most densely populated country of equal extent on the face of the globe. 'Eastern Bengal' is certainly a most fertile and prolific tract of land, and is suited to the most economical modes of cultivation. Watered by the two great rivers, Brahmaputra and Ganges, supplied with innumerable tributary rivers traversing the country like net work, there are abundant means at all points for irrigation, and a most extensive system of water carriage at all seasons of the year for the usual country boats. The country is mostly covered with crops of rice and oil seeds, and open pastures, studded with beautiful groves of trees, which shelter and nourish the cattle belonging to the many villages that stud this interesting locality. The native of Bengal, alike hindu and mahomedan in his physical organization, is feeble even to effeminacy. His pursuits are sedentary, his limbs delicate, his movements languid. During many ages, he has been trampled upon by men of bolder and more hardy breeds. Courage, independence and veracity are qualities to which his constitution and his situation are equally unfavorable. His mind is weak, even to helplessness, for purposes of manly resistance, but its suppleness and its tact move the children of sterner climates to admiration, not unmingled with contempt. Large promises, smooth excuses, elaborate tissues of circumstantial falsehoods, chicanery, perjury, forgery are the various weapons offensive and defensive of the lower Ganges. All these millions do not furnish one sepoy to the native army. On the South West frontier of Bengal, are Chota-Nagpore, Sir-Goojah, Palamow, Ramgurh, Hazareebagh, Mynpat and Amarkantak. The elevation of Chota-Nagpore, is 3,000 feet with hills running E. and W., but of little heighth; Sirgoojah, is mountainous, rising 600 to 700 feet above the level of Chota-Nagpore. Mynpat is a table-land, about 30 miles S. E. from Sirgoojah town and about 3,000 or 3,500 feet high. Palamow district is very mountainous. Hazareebaugh town, 24°, 85° 54′; 1,750 feet. Slope of country to S. towards Sumbulpore N. and E. parts of district. Very mountainous, but level, and even depressed towards Mahanudy. Sumbulpore town, only 400 feet. Orissa table-land then rises on the southern side of Mahanuddy, in some places to 1,700 feet backed by the chain of E. Ghauts. Amarkantak, jungly table-land, 22° 40′ 81° 5′ 3,500 feet. The soil in the plains is generally fertile, producing abundant crops of wheat, barley, rice, pulse, excellent vegetables, cotton and sugar-cane. The uncultivated parts are overrun with a coarse grass. A great part of the region quite unknown. (—*Aitchison's Treaties, &c.* *E. Calcutta Railway*, p. 158-9. *Macauly.*)

The second tract, consists of the districts lying between the Ganges and the Burhampooter, extending northwards to the foot of the Himalaya. The character of the country is similar to the cleared portion adjoining the Soonderbunds, it is however a slightly higher tract of country and is specially suited for the growth of fibrous plants, for which the neighbourhood of Rungpore is greatly celebrated. The population inhabiting this tract of territory is scarcely less dense than the first tract, whilst the general appearance of the country, always flat, is much the same as in the other parts of Eastern Bengal.

The districts immediately East of the Burhampooter, including Dacca and Sylhet, constitute the third tract, and presents greater resources than either the first or second. The greater portion of its surface is occupied by the plains of Mymensing and Sylhet through which the river Soornia meanders. The old channel of the Burhampooter, now nearly dry, winds along by Dacca from the Eastward. This tract affords a great variety of produce, such as cotton, sugar-cane, rice and other grains.

Assam is a great valley stretching from the head of the Bay of Bengal to the north-east, towards China. It is the ancient Kamrup, and its history (' Assam Buranji') by Huli Ram Dhaikiyal Phukan, of Gohati, who, after bringing down the genealogies to the Kshatriya dynasty of Dravir (Dharmapala) says, he invited brahmins from Gaur to his court, north of the Brahmaputra, and gives the following dynasties.

[illegible] Brahmaputra dynasty, reigned 240 years. [illegible] A. D. 1478, Assam was divided into [illegible] petty states, and in 1498, it was invaded [illegible] Ghazi, son of Hoossain Shah.

Indrayansa (Indu) dynasty reigned [illegible] D 1330 to 1780, with the interregnum caused by the invasion of Hoossain Shah, [illegible] became independent in 1230, and [illegible] nquests and was named Assama (unequalled), hence Assam. The language spoken, the Assamese, is almost, or identically, the same as the Bengali. This long valley runs from the eastern side of Bengal proper from the 90° of east longitude in a north-easterly direction as far as the Mishmee hills in longitude 97° east. The valley is about 60 miles in breadth and 350 miles long, and has the river Brahmaputra running through its centre. It is, in fact, the valley of the Brahmaputra, and is now called Lower and Upper Assam, being bounded on the north by the Mishmee, Aboor and Meeree hills and, on the south, has the Naga, [illegible]ossya and Garrow hills. Assam in ancient [illegible] was of the buddhist faith, the brahminical religion was introduced about A. D. 78. [illegible] all Assam there are 983 mouzzah, containing 4,006,610 begahs, the rental of rice land is 1*s.* 10*d.* an acre and 1s. 6*d.* for all other kinds. The whole of Assam, omitting the permanently settled district of Goalpara, pays only £100,000 of land revenue. The whole population from the baby at the breast to the very few old men use opium, and in 1864-5 the population consumed £143,543 worth of that drug. Before the incursions of the Burmese, Assam had its roads, bridges, cities and civilization, but under British rule it has fallen off. Assam is one of the most fertile districts in India, the mahomedans found its people in Upper Assam, hardy and courageous but towards the middle of the 19th century they had become apathetic and unambitious, though those of Kamroop were less so. But the Assamese were to the mahomedans what the Numidians and Mauritanians were to the Romans.

In the military commands of the Bengal Presidency about 100,000 soldiers are employed. Most of the places in Kumaon are four and five thousand feet in height above the sea; in Sirhind, Umballah and Ferozepore are low, while Subhatoo, Simlah and Juttogh have elevations of six, seven, and eight thousand feet.

The countries on the right or south bank of the Ganges have a lower altitude than those on the north, but the features of the country are still well marked. One part on the right bank includes the provinces of Allahabad and Malwa, is a strongly marked natural division, the country north of the Nerbudda, being crossed from east to west by the Vindhya mountains, between the 22° 23° of north latitude, and their eastern extremity is continued onwards towards the Rajamahal hills which jut into the Ganges at Sicrygully, Pointy, and Pattengottah about latitude 25° 12′ north. The Vindhya range near their western extremity, again, is met at right angles by the Arravalli, which run between the 73° and 76° of east longitude, northwards for 200 miles towards Delhi, and, thus enclose a triangular tract of table land elevated from 1,300 to 2,200 feet above the sea, which has received the name of Central India. The greater part of these districts is held by about 40,000 soldiers in all, part Madras and in part the soldiers of the Bengal and Bombay Presidencies, the troops being distributed on the table lands and towards the passes of the mountains and the fords of the Nerbudda. In that central tract the thermometer ranges from 28° in the cold season to 98° in the hot weather, and the rains fall in July, August, and September. To the south-west and west of the Arravalli, Rajpootanah countries extend as far as the river Indus, and several of them consist of sandy, inhospitable deserts with few inhabitants round the Oasis. This tract belongs to tributary princes who have been under British protection since the beginning of the 19th century. It is, like Central India from which it is separated by the Arravalli mountains, from 1,000 to 2,000 feet above the level of the sea, the land declining to the west towards the valley of the Indus. Though deluged with rain in the rainy season, from the nature of the soil and the absence of all contrivance to preserve the waters much of the country remains a desert; perhaps Ulwar, Jeypore, Kotah, Bundi and Oudeypore have very fair land, but Jesselmere, Bickaneer and parts of Jodhpore or Marwar are particularly barren.

Amongst the provinces last added to British dominion were those conquered from the Sikhs in 1846, and 1849, which have long been known as the Punjab, or country of the five rivers, Peshawar and Mooltan.

Peshawar lies between the Indus above and below Attock, and the Khyber mountains, through which leads the Khyber pass,—being bounded on the north, by Suhwat, and the region lying between it and the Indus, on the east, by part of the last mentioned territory the Indus and the territory of the Affghans holding the Salt or Hala range; on the south by the possessions of the same Affghans, and on the west, by the Khyber mountains and the Affghan province of Jellalabad. Its climate is very hot in summer, the thermometer frequently reaching 110° or 112° in the shade. The heat is, however, occasionally mitigated by the breeze from the neighbouring mountains and as the country, naturally fertile, is well watered by the Indus, the Cabool river, the Bara and some other streams of less importance, and is moreover, well cultivated, it is amazingly productive. In annexing all the Sikh states, Jummoo excepted, as well as Peshawar and the Derajat between the river and the mountains, the British frontier was advanced beyond the Indus, adding thereby, 100,000 square miles to British territory, with a population of three and a half millions, yielding a revenue of about a million sterling, and giving promise of containing great mineral wealth.

The Bengal army is now distributed over 629,022 square miles of territory, amongst a population of 66,484,538 inhabitants, speaking the Persian, Pushtoo, Punjabee, Hindustanee, Hindee and Bengalee languages; besides the Oorya language in Orissa and the Rakhooi in Arracan.

BENGAL ALMOND. ENG. Terminalia catapa.

BENGAL BAY, this great bay lies between the Peninsulas of India and Malayanesia. It receives many great rivers, the Ganges, Bramahputra, Irawaddy, Sitang and Moulmein, and has a coast line of about 4,800 miles. Pliny does not make mention of any voyages of the Romans to the gulf of Bengal, or to the Malay Peninsula (the golden Chersonese,) although it is clear from Strabo who wrote before Pliny that the Ganges have been sailed up as high as Palibrotha. Ptolomey's Geography, said to be composed about 60 years after Pliny, mentions the diamonds found in the banks of the Sumbulpore river, also speaks of Arcati, the capital of the Sorae (or Sora-mandalum, from whence corruptly Coramandel), Mesolia, the district which contains Masulipatam; the river Cauvery, under the name of Chabaris. Ptolemy scatters islands over the Bay of Bengal, probably meant for the Andaman and Nicobar Islands, and most of them said to be inhabited by Anthropophagi, and this idea has also been adopted by modern navigators. The Bay of Bengal is liable to be swept by hurricanes, which travel quite across the bay, and by earthquakes, often followed by a storm wave.—*Rennells' Memoir, p.* 39. See Bay of Bengal. Cyclone.

BENGAL CURRENTS. ENG. fruit of Carissa carandas.

BENGALEE, a river near Chyliabaree in the Bograh district.

BENGAL GRAM, ALSO Chick Pea. ENG. Cicer areitinum.

BENGALI BADAM. MAR. Fruit of Terminalia catapa.

BENGALI-SAN. This is identical with the Saka solar year. See Fasli.

BENGAL MADDER. Rubia cordifolia.—*Linn.*

BENGAL QUINCE. See Dyes.

BENGAL ROOT, an old name in Europe for the root of Zingiber casumunar, still known in commerce as the Casumunar.—*Hog. p.* 784.

BENGAN. HIND. Solanum melongena, The Valayati or foreign bengan is the Solanum lycopersicum.

BENGAN. HIND. Also Brinjal. ANGLO-HIND. Solanum melongena. The Eggplant.

BENGAN. A mountainous district in Mindoro, occupied by the Negrito race. See Mindoro.

BENGH. PERS. Bhang; Cannabis sativa.

BENGI. HIND. Cannabis sativa.

BENGY. An aboriginal race in India. See India, p. 327.

BENI. Arab. when the bedouin Arabs speak of tribes they say *Beni*, which signifies *the sons* of some persons; thus Beni *Leghat* means the tribe of Leghat. These small tribes have each its shaikh who is commonly dependent on the grand shaikh of some more potent tribe. The Aenezi, according to Burckhardt, are the most powerful Arab nation in the vicinity of Syria, and if we add to them their brethren in Nedjd, they may be reckoned one of the most considerable bodies of bedouins in the Arabian deserts. They are nomades, in the strictest acceptation of the word, for they continue during the whole year in almost constant motion. In spring, they approach the fountains of Syria and form a line of encampment extending from near Aleppo to eight days' journey to the south of Damascus. Th[illegible] cipal residence, however, d[illegible] [illegible]chase and the Haouran, and its neighbourhood, when they encamp near and among the villages, while in the more northern country, towards Homs and Hamah, they mostly keep at a certain distance from the inhabited grounds. In these parts, they spend the whole summer seeking pasture and water, purchase in autumn, their winter provision of wheat and barley, and return after the first rains into the interior of the desert. They are the only true bedouin nation of Syria, the other tribes in the neighbourhood of this country having more or less degenerated in manners, and several being reduced to subjection; while the free born Aeneze is still governed by the same laws that spread over the desert at the beginning of the mahomedan era.

Beni Szakhr are a tribe of free Arabs. According to Burckhardt, they rove in the plain from the fourth to the fifth station of the Hadj, and thence westward towards the mountains of Belkaa. They were employed by the pasha of Damascus for the defence of the caravan against the other tribes. They live by the breeding of camels, for the use of the pilgrim caravan, of which they have a very considerable number. Though smaller than the Anadolian, Turkman, or Kurd camels, they are better able to bear heat and thirst than the latter, are chiefly of a light or reddish grey colour, with very little wool about their necks. The beni Khaled in Niebuhr's time were one of the most powerful tribes of Arabia: they conquered the country of Lachsa and advanced to the sea.

The beni Hakim, a tribe eastward from the Euphrates, are given to husbandry.

The bedouins who occupy the great western desert of Oman have neither houses nor tents, but live under the shade of trees.—*Wellsted' Travels, Vol. I. p.* 365. *Niebuhr's Travels, Vol. I. p.* 207. *Robinson's Travels, Vol. II. pp.* 169, 183, 238, See Arabs, Bedouin Arab, Wahabi.

BENINCASA CERIFERA Savi. *W. and A.*

Syn.

Cucurbita cerifera.—*Fisch.*

Benjamin is a word of Hebrew origin which has in the lapse of time been adopted for several substances now in use. In Upper India, Benjamin is the name given to the resin of Boswellia thurifera, but in commerce it is generally applied to the resin of the *Styrax Benzoin* or Benjamin tree, which grows in Sumatra,* Borneo, Siam, and Java chiefly in Java and Sumatra. Crawfurd mentions that the Styrax benzoin tree is raised from the seed, is of moderate size, and confined to the islands of Sumatra and Borneo. In Sumatra, in the country of the Batakrace, and in Borneo on the northern coast of the Brunai territory. The balsam is obtained by incision in the trunk of the tree practised after it has attained the age of five or six or seven years. The juice which first exudes is the purest and most fragrant, it hardens on exposure to the air and becomes brittle and semi-transparent. The resin is white and transparent at first. About 3 lbs. are given by each tree for six years. The white Benjamin, is termed Cowrie luban in India, and is a superior kind.

It is a gum-resin, and is generally met with in the form of dry hard grey masses, rather shining, brittle, formed of ovoid, whitish tears, like stripped almonds. The best comes to India from Sumatra. It is much used as a perfume, and as incense in places of worship, in the composition of frankincense and in the manufacture of the pastiles called ud-batti. Benzoic Acid is procured from this substance. About 120 tons are imported into England for Java, Sumatra and Borneo, and the prices range from £100 to £900 the ton.—*Stat. of Com. McCulloch's Com. Dictionary, p.* 61. *Crawfurd, Dict. Archipelago, p.* 50. *Faulkner. Com. Prod. Hogg. Vegetable Kingdom. Cat. Exbit. of* 1862. *Ainslie Mat. Med., p.* 5. *Marsden's Hist. of*

Ven-taku	Can.	Nana	Mahr.
Bandara	Mahr.	Bellinger	Maleal.

This tree is the Lagerstrœmia microcarpa. It is common in Wynaad and on the western ghauts; wood prized for making coffee cases much used by the native carpenters for house-building and masts for dow pattamah, and other country vessels. It grows to ninety and one hundred feet long, and from twelve inches to three feet in diameter; it is perfectly straight and without branches, excepting at its top; the leaves are small and very thick. This wood is not so durable as the poon, but it may be considered of the same texture, although it is very much lighter in colour, and in this respect much resembles the American red oak.—*Edye, M. & C. McIvor.*

BENTENNE, in 7° 21'; 81° 11', a town in Ceylon, on the right bank of the Mahavelli Ganga, north of Ba'dula, mean height of the village 343 feet.

BENT GRASS, species of Agrostis.

BENTHAM, a Bengal Civil Servant, who aided largely in extending a knowledge of the botany of India. See Botany.

BENTHAMIA, a genus of plants of the Himalayas, China and Japan, B. floribunda extends from the eastern Himalaya to the Sutlej.—*H. et. Thw. p.* 105,193.

BENTHAMIA FRAGIFERA.

Thurnel. Punjabi.

This is found in Nepaul and in the Sutlej valley between Rampur and Sungnam at an elevation of 6,000 feet. The wood is small, fruit is large of the shape of a strawberry edible, and is used as a preserve.—*Cleghorn, Punjab Report, p.* 64. *Hogg. Veg. King, p.* 367. *Powell, Punjab Products.* See Cornus.

BENTINCK, Lord William, a military officer of the British Army, who was governor of Madras from 1803 to 1806, was afterwards employed in Spain, and from 1827 to 1834, was Governor General of India to which he added the office of Commander-in-Chief. In his latter service, in India, he did much for education, and he abolished the rite of Suttee. He died in England on the 17th June 1839.

BENTUL. Malay. Name of a vegetable in use at Bawean.

BENUA, a negro race of the Malay Peninsula. See Kedah.

BENU MASH. Pers. Phaseolus max.

BENZA, P. M. A native of the Ionian Islands, a Madras medical officer, a writer on the geology of the country betwixt Madras and Neilgherries, *vid* Bangalore also on the geology of the Neilgherry and Koonda mountains. Notes on the geology of the Northern Circars in 1835.—*Dr. Buist's Catalogue.*

BENZOE. Ger. Benjamin.

BENZOIN NEESIANUM. Its fruit, called Nipal berries, have a smell of Cajeput oil. A bush 8-10 feet high, bark highly aromatic and tonic, infusion of twigs vermifuge, berries yield aromatic oil. Its small branches are used in decoction as a gentle stimulant: and its dried berries in lieu of all-spice. The name has been applied from its strong odour of Benjamin, but it is not a source of that article.—*O'Shaughnessy, page* 558. *Hogg. p.* 623.

BENZOIN ODORIFERUM. Nees. Laurus Benzoin, Linn. Oil of the berries aromatic, bark highly stimulant, and tonic. It is mentioned by Hooker and Thompson as a plant of the E. Himalaya.—*O'Shaughnessy, p.* 548. *Voigt.*

BENZOIN. Eng. Fr. or Benjamin; Benzoinum. Lat. an odoriferous gum-resin exported from Sumatra, Borneo, Java, and India. It reaches Britain in small chests, about 120 tons a year and the price ranges from £5 to £45 per cwt. according to quality.—*Statistics of Commerce.* See Benjamin.

BEO. Hind. Gracula religiosa.

BEOHAR. Hind. Money lending; traffic.

BEOOR-BANSH. Beng. Bambusa spinosa.

BEOS, a river of the Saugor district, near Saugur cantonment.

BEP-THAN.—? In Amherst, a timber used for making handles for spears and swords; it is a superior wood, and looks like white Jarrool. A timber of same name in Tavoy, used for building.—*Captain Dance.*

BEP-WON. In Tavoy, a timber used for building.—*Captain Dance.*

BER. Hind. Amongst Rajputs, a feud.

BER. Hind. The people of India apply this term to several plants species of Zizyphus, Z. flexuosa jujuba nummularia and vulgaris, also, to a Capparis spinosa and a species of salix.

BERA. Hind. Nima quassioides also Glochidion sp. also Ficus Indica.

BERA. Hind. A sheep.

BERAD. Mahr. A predatory tribe in the south Mahratta country inhabiting the hills and thickets and subsisting by chase and plunder. Wilson says they are the same as the Ramoosi, but this does not seem correct It may be the Bedar.—*Wilson's Glossary.*

BERAMBA. A town of ancient Chaldea.

BERAR, a province in the northern part o the peninsula of India. It included Ellichpur and Nagpore, but part is now designated the Hydrabad assigned territories and part is in the Central Provinces. The Mahratta power was established in Berar by Ragoji Bhonslah in 1730 and Nagpore was then taken. The southern part of it reverted to the Nizam of Hydrabad, but it was assigned to the British in 1861, at an estimated value of 32 lakhs, or £320,000 a year. The Nizam had left the contingent perpetually in arrear. The claims liquidated by the British Government, amounted at least to fifty lakhs of Rupees and Government demanded that territory should be assigned sufficient to provide for the contingent, and the interest of the debt. Five districts, viz., the two divisions of Berar, the western districts, and the two divisions of the Raichore Doab were accordingly taken over ; their estimated size being

	Sq. Miles.	Population.
North Berar,.........	12,900	800,000
South Berar,.........	12,900	800,000
Western Districts....	5,100	400,000
E. Raichore Doab....	3,300	200,000
W. Raichore Doab....	3,300	300,000
	37,500	2,500,000

A territory larger than Ireland, and half as large again as Denmark. The north and south Berar have alone been retained as the Hydrabad assigned territories and in 1868 had a population of 2,231,565 in a total area of 17,125 Sq. miles. For this there were 2,546 police, of all grades, or 1 to every 855 people and to every sixth square mile ; and in 1867, the revenue had reached 62 lakhs. The great increase of revenue was the result of a settled country. The districts had been utterly neglected by the local Government. There were no roads, and in bad weather no means of communication. The country covered in parts with jungle in which soldiery were useless, was also crossed and surrounded by hills, the constant refuge of banditti. In some places Arab chiefs held possessions, executed justice, and wielded the power of feudal barons. In others, hereditary landholders fought with each other and their sovereign, maintaining bands of armed men, and paying them in plunder. Others were infested entirely by tribes, who had been plunderers since the Aryan race crossed the Suleiman. Over the whole country, Rahtore, Rohilla, Arab, Pardee, some with quasi legal rights, and some with only their swords wandered at will. A commission was formed and within six weeks of their arrival, riotous crime had ceased in the Assigned Districts. The Arabs who had laughed at a generation of Farmers-General fled the moment they were told by a quiet Englishman that they must go. The Rajpoot, Rohilla, and others were formed into Police Corps, and proved admirably efficient, the predatory tribes slunk back to the hills. The Zemindars dismissed their retainers, and for the first time in the memory of man, there was internal peace in Berar. The Hydrabad Assigned Districts' Commission, consists of 2 Commissioners, Deputy Commissioners, and Officers and Subordinates employed under the Civil Departments of Government. The head quarters of the five Civil Districts are fixed respectively at the stations of Akola, Oomrawttee, Yeotmahl. Ellichpoor and Bassim the important military station of Ellichpore is garrisoned by a Battery of Artillery, a Regiment of Infantry, and two Squadrons of Cavalry of the Hydrabad Contingent. There is also in Berar the hill-station of Chickuldah, on the Sautpoora Range, about 20 miles from Ellichpore frequented by civil and military officers employed in Berar, as well as by other visitors from various parts of Central India.

The district is traversed throughout its extreme breadth from west east to by the G. I. P. Railway. The length of railway within the limits of District is from 180 to 200 miles.

The chief towns are Oomrawttee, Karinjah Ellichpoor, Akolah, Kamgam Balapoor, and Dewalgam, the rivers are the Tapti and its tributary the Purna, also the Godavery river.

The results of the trial census of Berar, or the Hydrabad Assigned Districts, taken in November 1868 and tabulated by Mr. Lyall, have been published.

There are 5,694 towns and villages, 495,760 houses, and 2,231,565 people; the average number to each square mile is 128 and the average number to each house 4, but in Akola only 3. The percentage of children under thirteen years of age to adults is 55·4, larger even than it is in the North-West.—*Friend of India, April* 17, 1856. See Maharatta Governments ; Kol: Inscriptions, 379. India, pp. 323-328.

BER-BAIT. MALAY, means to make Pantuns. A pantun consists of 4 lines, the two first consist generally of a simile or natural image and the two last a moral drawn from the simile. The Malays take great delight in listening to two poetical champions pantuning at each other till one is obliged to give in from want of further matter—*Journ. In. Arch. No.* XI. *Vol.* V.

BERBER. The Berber of Africa, according to General Ferrier are shiah mahomedans as are a small number of the Pusht-koh Hazarah : He adds that the Berber tribe are to be met with in every part of the East—*Ed. Ferrier Journ. p.* 223.

BERBERAH, or Maratha is described as a sub-division of Abhira : it is the Barbarike of Arian's Periplus.

BERBEREH in Lat. 10°26' N. Long. 45° 1' E.—is situated on a low sandy shore. It is frequented by trading vessels from the Coast of Arabia. Berbereh, is the Mosallyon of the author of the Periplus, and is a sea port in Africa, directly south of Aden, in Lat. 10° 25′ 45″ N. and long. 46° 6′ E. It was the grand mart of the ancients on this coast and is still the great outlet for the commerce of north-eastern Africa. It has a large trade in sheep, cattle, ghee, coffee, various gums and resins and in ostrich feathers. An annual fair is held from October to April, the inhabitants, meanwhile living in tents to the number of 20,000 bartering their goods with merchants of Muscat, Bahrain, Bussora, Porebunder, Mandavie and Bombay, or carrying them over to Aden where a ready market exists for their produce.—*Horsburgh, Blackwood's Magazine.*

BEER-EL-SOMAL. See Semetic races, Somal.

BERBERIS, a genus of plants belonging to the Berberaceæ. The genus has about 60 species, of which 2 are Chinese, 5 in Japan and 9 in India. Of the later, 6 are Himalayan and 2 in the Neilgherries. Drs. Hooker and Thompson, (pp. 216,228) enumerate the following species ·

angulosa.
aristata.
asiatica.
concinna.
insignis.
lycium,
macrosepala.
nepalensis.
ulicina.
umbellata.
vulgaris.
wallichiana.
xanthoxylon.

There are three medicinal substances obtained from the species of this genus, an extract, known as Rusot, a tincture and the Berberine which is the active principle of these.

The species generally used for making the tincture and extract, are the Berberis Asiatica and the Berberis aristata ; the former is the common Berberry found on the outer hills of Kumaon, and is abundant near the Nihal bridge and Koorpa on the road to Nainee Tal; it is also found at Nainee Tal itself, and Almora. The native name is " Kilmora, and it is from the roots of these species that the bark is stripped for making the tincture. The B. aristata is also very common and is well suited for the purposes of making tincture. It is from this that much of the Rusot is prepared, its hill name is " Chotra." " Berberine" is the name given to the active principle of this bitterness ; but it is a troublesome (and an expensive) process to extract it pure ; it was procured by Buchner from the bark of the root of the Berberis vulgaris ; it is very bitter, yellow, not easily soluble in water, more readily in spirits of wine. In Europe it has not been much used and chiefly as a tonic in indigestion n doses of i to vi. grains, but has been given up to 10 grains. B. tinctoria of Leschenault, grows in the Neilgherries : B. Nepaulensis in Nepal ; B. Wallichiana and B. Angulosain, E. Himalaya.—*Ind. Ann. Med. Sci. for April* 1856, *p.* 379. *H. f. et. Th.*

This plant is widely distributed over the mountains of India, and assumes many various forms, which has caused botanists to give it a host of specific names. It is found in the Sutlej valley, between Rampur and Sunguam, at an elevation of 6,000 to 10,000 feet, also, on the Neilgherry and Pulney Hills at from 6 to 7,000 feet. It is generally known, from its yielding a dye, as Berberis tinctoria. The berries are much esteemed in the countries where they grow for their agreeable acid flavour. A yellow dye is obtained from the root.—*Cleghorn, Punjab Report. Ind. Ann. Med. Science.*

BERBERIS CONCINNA, HOOK & THOM. —angulosa, *Wall.* grows at Ramri and Pindari 9,000—12,500. A small shrub, only a foot and a half high, flowers solitary, red fruit, the leaves and stems very spiny. In the Ryott valley in Sikkim at Laghep, Iris was found by Dr. Hooker abundant, and this small bushy barberry with oval eatable berries.—*Hooker Him. Jour. Vol.* II. *p.* 197.

BERBERIS FLORIBUNDA. Var. of Berberis aristata.—*Hooker and Thomson Fl. Ind.*

BERBERIS INSIGNIS, a plant of the Sikkim Himalaya. It is a magnificent species, and forms a large bush with deep green leaves seven inches long and bunches of yellow flowers.—*Hooker, Him. Jour. Vol.* I, *page* 364.

BERBERIS KUNAWARENSIS, is found in Kunawar and employed for making Rusot.

BERBERIS LESCHENAULTII.—*Wall.*

Syn.

Mahonia Nepaulensis, *D. C.*
Berberis pinnata.—*Roxb.*

A plant with small bright yellow flowers, it is the Berberis acanthifolia of some, a fine pinnated plant with round black fruit, found on the Neilgherry mountains at an elevation of 8,000 feet.

BERBERIS LYCIUM.—*Royle.*

Huziz-Hindi............	AR.	Kashmal...	HIND.
Raisin Berberry. ...	ENG.	Surulu...	„
Ophthalmic „	„	Sambal.....	„
Chitra......	HIND.		

This is found on the Himalaya, at 3,000 to 9,000 feet, at Missuri, and Kaghan, but not west of Hazara. It is considered by Dr. Royle, to be the Lycium of Dioscorides, and its extract under the name of Rasot, is used in India in ophthalmia, its fruit is dried for currants, "Zirishk tursh," and its yellow juiced root and wood yield the extract called "ras," "rasaut" or "raswal" used as an external application in ophthalmia. It is likewise considered an extremely valuable febrifuge. It is prepared by digesting in water sliced pieces of the root, stem, and branches in an iron vessel, boiling for sometime, straining and then evaporating to a proper consistence. It is principally manufactured at Nepaul and the Dhoon, sold at 8 annas the seer. Wood too small to be of much use, except for firewood.—*Powell Ecom. Prod. Punjab. Cleghorn, Punjab Report. Hooker and Thomson.*

BERBERIS NEPALENSIS.—*Spr.*

Berberis miccia, *Ham.*
acanthifolia, *Wall.*
„ leschenaultii, *Wall.*
„ pinnata, *Roxb.*
Mahonia Nepalensis, *D. C.*
Ilex Japonica, *Thunb.*

This shrub is found on the Neilgherry, Pulney, and Travancore Hills, at an elevation of from 5 to 8,000 feet. It is also on the Himalaya, Bhotan, Garwhal, and Khassia mountains. The wood is small and of little use. See Dyes.

BERBIANG, KYAN. Syn. for Brother-making.

BERBICE COCOA. See Chocolate.

BERCHEMIA FLORIBUNDA.—*Wall.*

Syn.

Zizyphus floribundus.—*Wall.*

A plant of the Khassya hills, Nepal and Kumaon. The fruit of a Punjab species is eaten by goats and men.—*Voigt.*

BERCHEMIA ACULEATUS is common in the Holy Land and called Christ's thorn, from the tradition that the platted crown of thorns was made of its twigs.

BERDA. MAR. also Yehela. MAR. Terminalia belerica.

BERDURANEE, A great tribe who were removed from Eastern Afghanistan to Herat, by Nadir Shah; they are now nearly extinct. In Herat, of 3,000 families about one-fourth remain.—*Papers East India, Cabul and Afghanistan, p.* 133. See Afghan. Kandahar.

BEREE. Hind Irons for the leg-fetters.

BEREKEDE ARABS, a branch of the Asir tribe, said to lend their wives, like the Jakuri Hazara.—*Sale's Koran.* See Polyandry.

BERENICE. A port established by the Ptolemies on the Red Sea, from whence goods brought from the East were conveyed by caravans, to Coptis on the Nile, and thence to Alexandria. Thus Egypt became the principal point of communication with India and Europe. It was the opinion of Major Rennell that under the Ptolomies, the Egyptians extended their navigation to the extreme points of the Indian continent, and even sailed up the Ganges to Palibothra; and it is certain that Strabo, who wrote a little before the commencement of the Christian era, states that some, though few, of the traders of the Red Sea had reached the Ganges. The entire distance from Coptis to Berenice occupied twelve days. The ruins of Berenice were discovered by Captains Moresby and Careless at the bottom of the inlet known as the Sinus Immundus or Foul Bay. The distance from Coptis was 257 miles—*Ind. in* 15*th Cent.* See Saba.

BERFA. HIND. Populus balsamifera.

BERGAMOT; also Bergamotte a name of the lime tree, Citrus limetta;—also, the name of the small pear shaped fruit of the tree; also, the name of an essential oil obtained from the rind of the fruit.—*Hogg. p.* 140.

BERGAMOT OIL, is the Oil of the rind of the bergamot lime, the Citrus limetta. To prepare this, rasp the rind, express the raspings between flat porcelain slabs, allow the oil to settle, and then filter. The exquisite flavor of this oil is injured by distillation. It is used chiefly as a perfume, colour yellow, sp. gr. 0·888, freezes at 32°. Bergamot obtained by distillation from the root is inferior. More than 22,000 lbs. of this essence was imported into England in 1848.—*Beng. Phar. p.* 378. *Simmonds, page* 566.

BERGAMOTTE. ENG. Citrus bergamia, Risso.

The Leaf.

Caraway pillay	TAM.
Karay pak	DUK.
Karri-vaym-pakoo	TEL.
Kristna	SANS.

A small or tolerably sized tree, common throughout India and Ceylon. It is of easy culture, and is cultivated generally in gardens for its leaves, which retain their fragrance when dry, and are used to flavour curries, mullaga tawny, chatnies, &c. and are mixed in the curry pastes and powders prepared in India for transmission to England and other parts of the world; the mixture of these leaves not only imparts a peculiar flavour to these condiments, but adds a zest to them. It grows to a tree of tolerable dimensions, with pinnate leaves strongly scented; flowers in February and March; fruit of a deep purple colour, wood hard and close grained; medicinally, the leaves are considered stomachic and tonic, used raw i dysentery and when roasted are administered i cholera, in decoction to stop vomiting also i fomenting. The bark and root are employed as stimulants.—*Royle Ill. O'Shaughnessy, page* 232. *Voigt, Flora Andhrica, Useful Plants. Powell, Hand-book Econ. Prod. Punjab Thw. Enum. Pl. Zeyl. I. p.* 46. *Cleghorn. Panjab Report. Ainslies' Materia Indica, p.* 262. See Fruits.
